Intrasense introduces Myrian® at the « 3D Anatomy Days » of Varna University in Bulgaria

Development of Myrian® new features

Intrasense (FR0011179886 - ALINS), specialist in medical imaging software solutions, announces that its solution Myrian® will be presented as a PACS built-in solution, during the « 3D Anatomy Days » at Varna Medical University (Bulgaria), a training center with a European dimension.

Myrian®, a recognized clinical expertise

During this event, organized from March 15 to March 30 2018 by the Department of Anatomy and Cell Biology of Varna Medical University, students and lecturers from 44 countries will discover three most advanced systems for three-dimensional visualization of CT and MRI imaging tests, including Myrian®.

Intrasense will be presenting Myrian® new features for an optimized and accelerated diagnosis – such as « Quick Patient » or virtual 3D reconstruction of imaging – and also proving its seamless integration capabilities within any health information system.

Integration within health information systems

At these sessions, Myrian® clinical applications will be presented as built-in solutions in the PACS of Software Company, an Intrasense partner and leading actor of the Bulgarian market.

« Myrian® solutions are now part of the key clinical tools for medical imaging. That's probably why more and more industrial partners want to integrate Myrian® Imaging Layer within their own solution, whether they are e-health, PACS, VAN or RIS companies », says Philippe Michelon, Product Director at Intrasense.

« We are happy to participate in this event taking place in Varna University. We pay special attention to support academic research and thus remain very committed to collaborate with universities like Erasmus University Medical Center of Rotterdam (Netherland) or the Canadian Mc Gill University. » he concludes.

About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device called Myrian®, a software platform that facilitates diagnosis, decision-making and therapeutic follow-up and makes them more secure. Thanks to Myrian®, more than 800 health institutions spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies, Myrian® also provides a universal image treatment solution that can be fully integrated in any health information system. Intrasense includes 45 employees among which 20 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and invested more than 10 million euros in Research & Development since its creation.
