

OCCASIONAL PRESS RELEASE Crescent enters connected safety applications market

Leuven, Belgium – November 10 2022 – 7h30, Crescent NV, Geldenaaksebaan 329, 3001 Leuven (Euronext Brussels: OPTI)

Crescent NV announces a strategic partnership with Dunlop® Protective Footwear for the development and manufacturing of its next generation safety footwear.

Based on Remoticom's sensor technology and Option's connectivity platform the partnership will supply smart sensors as well as safety boot charging stations and API's (data access to third parties).

Dunlop® as the leading Personal Protective Footwear Tech company will market these smart boots under the DUNLOP BoSS brand (Dunlop® Boots on Smart Services) as a data driven subscription service that tracks and monitors worker activity levels, posture and location through smart sensing IoT technologies.

Data driven wearable technologies are revolutionizing industrial Health & Safety initiatives enabling worker safety, workflow, process automation and compliance. Through this partnership, Crescent enters and unlocks the potential of connected safety applications. Development is in final stages of completion and first deliveries are scheduled Q4 2022 with volume shipments scheduled for 2023 and beyond. The potential for next year will approximate one million euros.
