Embention achieves unprecedented growth and global impact in the UAS industry

Alicante, Spain — Embention commemorates a remarkable milestone: 18 years of relentless innovation and exponential growth in the field of autopilots and critical avionics systems for autonomous vehicles. Since its foundation in 2007, the company has evolved from a startup vision into a global leader, serving over 600 customers across more than 70 countries.

This sustained trajectory has been defined by technological breakthroughs, international partnerships, and a steadfast commitment to safety and excellence, which has positioned Embention as a leader in the industry.

Financial results mark a new era of success

The last three years have marked a period of historic financial performance for Embention. Since its entry into Euronext in 2022, the company has seen its net profit increase fourfold, while revenue has tripled — reaching **€12.25 million in 2024** from €3.27 million in 2022. **EBITDA also hit a record €6.11 million in 2024**, highlighting the company's solid financial structure and scalability.

These results demonstrate not only Embention's market traction but also its ability to meet the growing demand for reliable, certifiable UAV and eVTOL technology worldwide.

Certified quality and a growing team

Embention's success is firmly supported by its investment in human capital and certified operational excellence. With a team that has grown from just 46 employees in 2021 to **over 150 by mid-2025**, the company boasts a highly skilled workforce committed to engineering and aerospace innovation.

Certified under ISO 9001, ISO 27001, and EN 9100 standards, and compliant with DO-254, DO-160, and DO-178 standards for aircraft certification, Embention exemplifies best practices in aerospace quality systems and information security.

A promising future ahead

With a solid foundation built on innovation, certified quality, and a growing global presence, Embention is well-positioned to continue leading the next generation

of autopilots and critical avionics systems for autonomous vehicles. As demand for UAVs, eVTOLs, and safety-critical systems continues to accelerate worldwide, the company is committed to pushing technological boundaries and enabling safer, smarter, and more sustainable skies.

Looking forward, Embention aims to deepen its international collaborations, expand its product portfolio, and continue driving regulatory advancements — shaping the future of aerial mobility applications. The path ahead holds immense potential, and Embention stands ready to lead it.

About Embention:

Leading provider of advanced control systems for autonomous vehicles with 18 years of experience. Embention offers reliable autopilot systems, motor controllers, and avionics for drones and eVTOL. With over 150 employees, it has a strong dedication to safe, efficient, and innovative autonomous flight. Listed on Euronext stock exchange, the company showcases its commitment to transparency and to address company growth to create value for stakeholders.
