Fertiberia's Vision

Fertiberia's vision is to lead the development of green hydrogen and green ammonia in Europe to decarbonise agriculture and other "hard-to-abate" sectors, and to continue spearheading the development of sustainable and high value-added crop nutrition solutions.

Fertiberia is well-positioned as a key player in green hydrogen and green ammonia. Its main operations are located in Iberia, an attractive market that combines low-cost renewable power and a robust energy and logistics infrastructure with a growing, high value-added agricultural sector.

Fertiberia also benefits from a unique position thanks to its strategically-located distribution infrastructure, its expert know-how across the whole value chain and its significant deep-water access into Europe.

Fertiberia boasts a first-mover advantage in the green hydrogen and green ammonia transition, underpinned by its green ammonia facility in Puertollano – the world's first on an industrial scale – as well as by a compelling pipeline of additional projects. Fertiberia is a key enabler for the green hydrogen transition thanks to its strong strategic position as a key off-taker.

Business

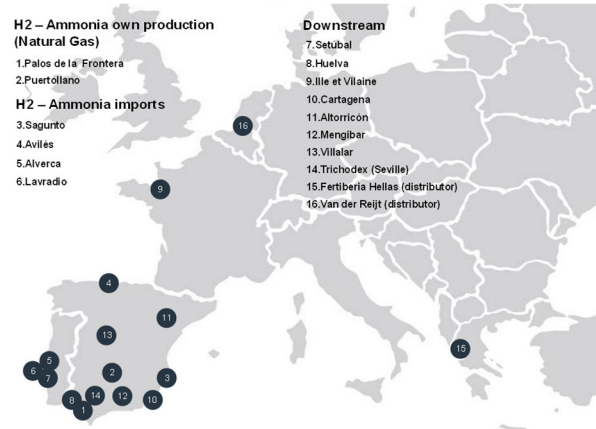

Grupo Fertiberia ("Fertiberia") is a European leader in sustainable specialty crop nutrition solutions and mission-critical industrial and environmental solutions.

The Company is a key player in green hydrogen and green ammonia and has become a prime enabler for the energy transition.

The company, headquartered in Madrid, employed a total of 1,679 professionals as of December 2022.

Fertiberia develops, produces and sells:

- Essential and specialty crop nutrition solutions for all types of crops, including the world-first green ammonia-based specialty solutions.
- Mission-critical industrial and environmental solutions to primarily abate greenhouse gas emissions, especially in the industrial and transportation sectors.

Fertiberia operates a network of 14 production and blending facilities located across Spain, Portugal and France, and also benefits from a unique strategic asset infrastructure in Iberia. The Company has a further 10 logistics and distribution facilities spread across Spain, Portugal, France, Netherlands, Belgium, and Greece.

The Company has achieved both high brand recognition and a solid market presence in Southern Europe, the UK & Ireland and the broader European Atlantic Coast thanks to its strategically-located production and distribution structure.

Fertiberia has a large and diverse group of approximately 1,000 customers across c.80 countries. These range from large wholesale groups to cooperatives and farmers, as well as broader industrial clients who purchase Fertiberia's mission-critical industrial and environmental solutions.

The Company's broad portfolio comprises more than 520 different products and solutions.

Crop nutrition solutions are necessary for the stability and growth of global food production and food security. The continued growth of the world's population, coupled with increasing demand for protein and vegetable-rich diets, is resulting in an ever-greater need for efficient crop nutrition solutions that support food production growth, especially against the current backdrop of decreasing crop acreage and the need to increase the yield of existing arable land.

Fertiberia's mission-critical industrial and environmental solutions help abate harmful emissions from different industries and businesses

by turning them into vapor and water, thus contributing towards global sustainability goals.

The need for decarbonisation across all economic sectors requires action from all stakeholders. Fertiberia's leading position in green hydrogen and green ammonia makes the Company a key enabler for the energy transition both at the European and the global level.

Fertiberia's vision is underpinned by its three key strategic pillars:

- **European leader in sustainable, high value-add crop nutrition solutions)**

Fertiberia is focused on offering a complete portfolio of sustainable, value-added crop nutrition programmes and solutions to the agricultural sector. These solutions are generally attractive in terms of the margins and earnings stability that they offer.

Fertiberia's R&D programmes are focused on further expanding its portfolio in sustainable, specialty solutions such as biostimulants, micronutrients and foliar products.

This is combined with the strengthening of its direct sales force to support growth in specialty solutions, expanding its geographical reach and increasing its services to customers through the use of smart farming and digital tools focused on increasing yields and efficiency.

In pursuit of its ambition to become a global company through the development of high added value products with a minimal environmental footprint, in Q2 Fertiberia completed the acquisition of the company Van de Reijt, adding a renowned fertilizer wholesaler with logistics assets in Belgium and the Netherlands, with more than 150 years of history and nearly €160 million in revenue last year.

Van de Reijt operates two waterfront bulk terminals, one close to Breda in the Netherlands and another in Grobbendonk in Belgium, enabling it to efficiently serve not only customers from Benelux, but also customers in Germany.

This acquisition follows the completion of the integration of Trichodex, a specialty biological solutions business acquired in 2022, which benefits from a strong R&D team and advanced products based on patented bioprocesses that select microorganisms optimal for producing

bioactive components that improve crop protection and yield.

Fertiberia has further reinforced its international presence with the recent commencement of operations in the Greek and Balkan markets through its subsidiary, Fertiberia Hellas. The goal is for Fertiberia Hellas to establish itself as a prominent brand among farmers in the Greek and Balkan regions, capitalising on the unique and innovative solutions for Mediterranean crops developed by Grupo Fertiberia. These solutions hold significant potential in optimising agricultural yield and enhancing environmental performance for crops in these markets.

- **A sustainable low carbon producer based on strategic, high-performing assets**

Fertiberia is rolling out an ambitious operational excellence programme based on an exhaustive list of identified and validated initiatives designed to optimise its business in order to achieve more efficient and sustainable operations.

Fertiberia has already reduced its emissions by c.63% since 2010 and is committed to continuing on this journey. Moreover, Fertiberia is the first major company in the crop nutrition sector to commit to achieving net-zero emissions by 2035.

- **Leading player in green hydrogen and green ammonia for the decarbonisation of agriculture, energy, transportation and other hard-to-abate sectors**

Fertiberia's strategy seeks to invest and grow in green hydrogen and green ammonia, supporting the decarbonisation of several sectors and positively contributing to the energy transition. Green hydrogen and green ammonia are not only expected to be used in the agricultural markets, but also in industries such as transportation, energy, metallurgy, and chemicals.

Fertiberia aims to leverage its strategic position in Iberia and its industrial and commercial expertise to lead the development of the green hydrogen market.

Fertiberia started producing green ammonia on an industrial scale at its Puertollano plant in May 2022, becoming the first company worldwide to achieve this.

Fertiberia has unveiled a new line of products called Impact Zero, which are the world's first net-zero crop nutrition solutions made with green ammonia. Following the product's launch, Fertiberia has observed a significant level of interest from beverage and food companies as these net zero products represent a way to facilitate the decarbonisation of the food supply chain.

In this regard, Fertiberia, Marks & Spencer, and Bartholomews Agrifood signed an agreement, demonstrating their commitment to low-impact farming. Starting from Spring 2024, Marks & Spencer's dedicated milk pool comprising 27 English and Welsh farms will adopt Fertiberia's Impact Zero products which will be exclusively distributed in the UK by Bartholomews.

Compared to traditional fertilizers, the Impact Zero fertilizer achieves significantly higher nitrogen-use efficiency, providing the opportunity to use less fertilizer and potentially reduce applications and leaching.

Beyond its agronomic benefits, the key advantage of Impact Zero lies in its eco-friendly production process, which utilises green hydrogen. This leads to a reduction of approximately 3 tonnes of CO₂e per tonne of ammonia used, compared to conventional fertilizers.

Q2-2023 in brief

The market trend that began in Q4 2022 of slow demand due to a notable drop in urea and natural gas prices has continued into H1 2023, with customers postponing their purchases amid the falling price trend, which has had a ripple effect on nitrate prices and margins.

As a result, most companies in the sector are reporting weaker results with lower sales and margins, compared to the extraordinarily robust H1 2022.

Fertiberia's overall deliveries decreased by 5%, which was attributed to customers delaying their orders due to the downward price trend. Production was also impacted by curtailments in some plants.

In terms of revenue, net sales decreased -33% in H1 2023 to €543M vs. €811m in H1 2022, mainly on the back of lower prices.

Fertiberia continues to move forward as planned with its growth strategy and its goal to become a fully sustainable European leader in crop nutrition solutions and green ammonia via decarbonised high-performance assets. Progress made in H1 2023 included:

- The development of its transformational diversification agenda towards increasingly differentiated green products that are highly efficient both in agronomic and environmental terms and that also generate higher margins with lower earnings volatility. Sales volumes of Specialty solutions accounted for 60% of total sales in H1 2023 (vs. 56% in H1 2022).
- Fertiberia's operational excellence programme delivered recurring savings of €40.0m in LTM June 2023.
- Further advances in its decarbonisation and green hydrogen economy efforts, with the operation since May 2022 of the world's first industrial-scale Green Ammonia plant in Puertollano, manufacturing the Impact Zero new range of emissions-free crop nutrition solutions produced with green hydrogen.

Fertiberia's H1 2023 consolidated Adjusted EBITDA¹ amounted to €28.9m, compared to an Adjusted EBITDA of €97.2m in H1 2022. Reported EBITDA¹ H1 2023 was €27.9m vs. H1 2022 of €88.4m.

The company has continued to focus on developing its operational excellence programme, diversifying towards higher value products that provide increased margins, managing inventory, and implementing measures that rely on its flexible asset footprint to preserve operational flexibility.

¹Inventories provision included

Fertiberia's consolidated Adjusted¹ Net Profit (Loss) amounted to €-9.6m in H1 2023 (€-8.9m after non-recurring operational items) compared to an Adjusted Net Profit of €+41.1m in H1 2022 (€+47.7m after non-recurring operational items).

H1 2023 CAPEX (additions in Property, Plant and Equipment and variations of CAPEX suppliers) amounted to €29.8m, in line with the H1 2022 figure of

€28.4m. Capital expenditure continues to be mainly focused on transformational investments in diversification toward increasingly differentiated green products, operational excellence, and decarbonisation.

Net Debt² during H1 2023 increased by €74.2m (June 2023 to €210.9m versus €136.7m in December 2022). The Leverage Ratio³ as per June 2023 stands at 2.37x.

¹ Adjusted net profit excludes non-recurring operational items in the amount of €0.973m (net of taxes €0.73m).

² Net Debt definition as per bond documentation. Includes "Long-term bank borrowings", "Short-term bank borrowings", and "Discounted bills of exchange", excluding "Accrued Interests".

³ Calculated following EBITDA and Incurrence Test definitions as per bond documentation. Last Twelve Months Adjusted EBITDA amounted to €97.4m, €89.0m excluding IFRS 16 adjustment.

All figures are unaudited and hence potentially subject to change. Figures are shown on a consolidated basis at Fertiberia, S.A.R.L. level and presented following IFRS criteria.

| NON-RECURRING ITEMS | 973 | 8,804 |
| ADJUSTED EBITDA | 28,916 | 97,174 |

(1) Restatements refer to:

- Administrative authorisation process to restore the phosphogypsum ponds in Huelva completed during H1 2023, with works expected to begin during 2023. In order to adapt the cost of the initial project to the latest technical requirements raised during the authorisation process, the Fertiheria Group recognised an environmental provision of €11.9m in December 2022.
- An inventory provision of €31.2m was recognised in December based on a conservative working capital management policy.

The effect of both provisions is presented in equal parts in each quarter of 2022, so as to ensure a true and fair view.

Safe Harbour Statement

Disclaimer regarding forward-looking statements in the interim report

This interim report includes “Forward-looking Statements” that reflect Fertiberia’s current views with respect to future events and financial and operational performance.

These Forward-looking Statements may be identified by the use of forward-looking terminology, such as the terms “anticipates”, “assumes”, “believes”, “can”, “could”, “estimates”, “expects”, “forecasts”, “intends”, “may”, “might”, “plans”, “should”, “projects”, “will”, “would” or, in each case, their negative, or other variations or comparable terminology. These Forward-looking Statements are, as a general matter, statements other than statements as to historic facts or present facts and circumstances. They include statements regarding Fertiberia’s intentions, beliefs or current expectations concerning, among other things, financial strength and position of the Group, operating results, liquidity, prospects, growth, the implementation of strategic initiatives, as well as other statements relating to the Group’s future business development, financial performance, and the industry in which the Group operates.

Prospective investors in Fertiberia are cautioned that Forward-looking Statements are not guarantees of future performance and that the Group’s actual financial position, operating results and liquidity, and the development of the industry and potential market in which the Group may operate in the future, may differ materially from those made in, or suggested by, the Forward-looking Statements contained in this report. Fertiberia cannot guarantee that the intentions, beliefs, or current expectations upon which its Forward-looking Statements are based, will occur.

By their nature, Forward-looking Statements involve, and are subject to, known and unknown risks, uncertainties, and assumptions as they relate to events and depend on circumstances that may or may not occur in the future. Because of these known and unknown risks, uncertainties and assumptions, the outcome may differ materially from those set out in the Forward-looking Statements. These Forward-looking Statements speak only as at the date on which they are made. Fertiberia undertakes no obligation to publicly update or publicly revise any forward-looking statement, whether as a result of new information, future events or otherwise. All subsequent written and oral Forward-looking Statements attributable to Fertiberia or to persons acting on Fertiberia’s behalf are expressly qualified in their entirety by the cautionary statements referred to above and contained elsewhere in this report.
