

For Immediate Release

Cambi wins contract for Western Australia's largest wastewater treatment plant

Asker, Norway, 27 September 2023

Cambi has signed a contract for the Woodman Point Water Resource Recovery Facility, the largest wastewater treatment plant in Perth and in Western Australia.

The facility, owned by Water Corporation, will utilise thermal hydrolysis process (THP) technology to increase sludge treatment capacity without needing to build additional digesters. This will enable the utility to achieve its goal of continued recovery of 100% of its biosolids for beneficial reuse.

"We're eager to help Woodman Point make this shift towards innovative sludge treatment, the latest step undertaken to make it into one of the most efficient wastewater treatment facilities of its kind. THP will help Water Corporation address the increase in sludge treatment to 120 tonnes of dried solids per day, increase renewable energy production, and achieve better energy balance" remarked Cambi CEO Eirik Fadnes.

Biosolids from the new facility will be used as fertiliser for broad-acre crops and in forestry applications while biogas will be used as an energy source either on-site or within industries. Woodman Point currently caters to 900,000 residential, commercial and industrial customers, in Perth's southern metropolitan area.

Cambi is set to work with the Integrate Alliance, which comprises the end user and client Water Corporation, Clough Projects Australia, and Jacobs Group (Australia). Delivery of the THP system is expected in mid 2025 with handover to the client to occur in early 2026.

About Cambi:

Cambi is a global biogas technology and solutions supplier for wastewater treatment plants and anaerobic digestion facilities. Since 1992, Cambi has retained market leadership through continuous innovation and a robust portfolio of proven and patented technologies. With strong project delivery and customer support capabilities, the company has delivered many well-performing installations in 27 countries on six continents.

Cambi's thermal hydrolysis process increases renewable energy output, reduces operational costs, and minimises greenhouse gas emissions. It is suitable for all biosolids outlets, including land application and thermal processes such as drying, pyrolysis, and incineration. Thermal hydrolysis is compatible with all sludge and waste treatment regulations and easy to integrate at new and existing anaerobic digestion sites.

Cambi is listed on Euronext Growth Oslo, a multilateral trading facility in Euronext, Europe's largest stock exchange platform. Find out more at cambi.com.
