Overview

Sustainalytics' ESG Risk Ratings are designed to help investors identify and understand financially material ESG risks at the security and portfolio level and how they might affect the long-term performance for equity and fixed income investments. The ESG Risk Ratings combined with qualitative analyses, provide a differentiated risk signal and deeper insights into the materiality of certain ESG issues for a company and how effectively the company is managing these issues.

Benchmark

ESG Risk Rating (Unmanaged Risk)

Page 3-4

The ESG Risk Rating measures the degree to which a company's economic value is at risk driven by ESG factors, as assessed through Sustainalytics' calculation of the company's unmanaged ESG risks.

The portfolio's ESG risk is considered **Low**, and is 30% lower than the benchmark.

| Overall Risk Rating | |

Overall, the portfolio's management of ESG issues is 8% stronger than the benchmark.

ESG Risk Rating

Overall Risk Rating (Unmanaged Risk)

The ESG Risk Rating measures the degree to which a company's economic value is at risk driven by ESG factors, as assessed through Sustainalytics' calculation of the company's unmanaged ESG risks. Companies are placed into one of five risk categories (negligible, low, medium, high, severe). These risk categories are absolute, meaning that a "high risk" assessment reflects a comparable degree of unmanaged ESG risk across the research universe, whether it refers to an agriculture company, a utility or any other type of company. One point of risk is the same, no matter which company or which issue it applies to, and points of risk add up across issues to create overall scores. Companies with lower Risk Ratings scores have lower ESG risk.

The portfolio's ESG risk is considered **Low**, and is 30% lower than the benchmark.

| Overall Risk Rating | |
|---------------------|----------|
| Score | Category |
| 1 11.3 | Low |
| 16.1 | Low |

Portfolio

| Europe | 100.0% | 11.3 | 16.1 | 32.9 | 38.6 | 67.1 | 62.0 | |

Glossary of Terms

ESG Risk Category

Companies' ESG Risk Rating scores are assigned to five ESG risk categories in the ESG Risk Rating. Note that because ESG risks materialize at an unknown time in the future and depend on a variety of unpredictable conditions, no predictions on financial or share price impacts, or on the time horizon of such impacts, are intended or implied by these risk categories.

ESG Risk Rating Score (Unmanaged Risk Score)

The company's final score in the ESG Risk Rating; it applies the concept of risk decomposition to derive the level of unmanaged risk for a company.

Event Category

Sustainalytics categorizes events that have resulted in negative ESG impacts into five event categories: Category 1 (low impact); Category 2 (moderate impact); Category 3 (significant impact); Category 4 (high impact); and Category 5 (severe impact).

Event Indicator

An indicator that provides a signal about a potential failure of management through involvement in controversies.

Exposure

A company's sensitivity or vulnerability to ESG risks.

Management

A company's handling of ESG risks.

Management Gap

Refers to the difference between what a company has managed and what a company could possibly manage. It indicates how far the company's performance is from best practice.

Material ESG Issue

A core building block of the ESG Risk Rating. An ESG issue is considered to be material within the rating if it is likely to have a significant effect on the enterprise value of a typical company within a given subindustry.

Unmanaged Risk

Material ESG risk that has not been managed by a company, and includes two types of risk: unmanageable risk, as well as risks that could be managed by a company through suitable initiatives but which may not yet be managed.

Weighted Scores

Sustainalytics normalizes the security weights of the matched security results within the selected portfolio and benchmark to equal 100% of the total portfolio weight, by evenly redistributing unmatched security weights. If there are no security weights available, Sustainalytics will assign equal weights to all securities. Weighted Scores are calculated by aggregating normalized security weighted scores.
