2. HIGHLIGHTS

This document is applicable to the Euronext Short and Leverage Indices (“Index Family”), which consists of all the Indices as mentioned in the Reference Table.

The Index Family is designed to reflect the price level trends in the trading of shares listed in Europe.

Euronext Paris is the Administrator of this Index Family.

Euronext N.V. or its subsidiaries (hereinafter jointly “Euronext”) owns all intellectual and other property rights to the index, including the name, the composition and the calculation of the index. Information regarding trademarks and intellectual property rights of Euronext is located at <https://www.euronext.com/terms-use>.

VERSION NOTES

Version	Effective date	New or changed parts	Reference/announcement
21-01	15 Dec 2021	restyled version in view of newly published Calculation and Corporate Actions rulebooks	

3. CALCULATION

3.1 DEFINITION AND COMPOSITION OF THE INDEX

The leverage index tracks the performance of a strategy that has a multiple (K) exposure to an underlying index with the support of short-term financing.

The Short or Bear index tracks the performance of a strategy which reverses a multiple (K) exposure to the underlying index by combining a short position on the underlying index and exposure to a risk-free money-market instrument, (STR or another rate). The latter exposure consists of the money invested in the index plus the multiple (K) short positions.

3.2 CALCULATION OF THE LEVERAGE INDICES

The general formula of the Leverage indices is defined as follows:

$$LI_t = LI_T \left[1 + K \left(\frac{UI_t}{UI_T} - 1 \right) \right] - (K - 1) LI_T \left[\frac{IR_T}{360} \right] D_{t,T} - a(K - 1) \times LI_T \left[\frac{SPR_T}{360} \right] D_{t,T}$$

Where:

T	= Rebalancing date; for daily indices this is the previous business day.
LI_t	= Leverage index level at time of calculation t
LI_T	= Closing Leverage index level on the previous calculation day
UI_t	= Underlying index level (see Index summary) at time of calculation t
UI_T	= Closing Underlying Index level on the last rebalancing day T
IR_T	= Applicable interest rate as at the rebalancing date T. For daily indices this is €STR.
$D_{t,T}$	= the number of days between the day of the calculation and T, the rebalancing day
SPRT	= Applicable interest rate spread over the IR_T
a	= Applicable factor to apply spread over IR if not applied, a=0
K	= Leverage factor

3.3 CALCULATION OF THE BEAR AND SHORT INDICES

The general formula of the Short indexes is defined as follows:

$$BI_t = BI_T \left[1 - K \left(\frac{UI_t}{UI_T} - 1 \right) \right] + (K + 1) BI_T \left[\frac{IR_T}{360} \right] D_{t,T} - K.a.BI_T \left[\frac{FIN_T}{360} \right] D_{t,T}$$

T = Rebalancing date; for daily indices this is the previous business day.

BI_t = Short or Bear index level at time of calculation t

BI_T = Closing Short index level on the previous calculation day

UI_t = Underlying index level (see Index summary) at time of calculation t

UI_T = Closing Underlying Index level on the previous calculation day

$D_{t,T}$ = the number of days between the day of the calculation and T, the rebalancing day

IR_T = Applicable interest rate as at the rebalancing date T. For daily indices this is €STR.

FIN_T = Financing Adjustment rate. The rate reflecting the cost specifically associated with the strategy. The rate may be different for some underlying indices or may not be applied for specific indices.

a = Applicable factor to apply FIN. If FIN rate is not applied $a=0$.

K = Short factor

3.4 REVERSE SPLIT OF INDEX LEVEL

If an index has dropped below 10 it may qualify for a reverse split. This rule is applied to the indices with a factor 4 or higher or -4 or less. For the reverse split the Compiler will use a standard reverse ratio of 1 000.

Periodical Review

Indices are reviewed each month on the first Friday. If an index level has reached a closing level below 10 on the previous day, the index level will be adjusted 2 weeks later by a reverse split.

Implementation of reverse split

After close of business on the 3rd Friday of the month, the closing level will be multiplied by 1,000 (one thousand).

In case the Friday is not a trading day, the review or implementation will be on the day before.

3.5 SPLIT OF INDEX LEVEL

If an index has risen above 750.000 it may qualify for a split.

This rule is applied to the indices with a factor 4 or higher or -4 or less. For the split the Compiler will use a standard ratio of 1 000.

Periodical Review

Indices are reviewed each month on the first Friday. If an index level has reached a closing level above 750 000 on the previous day, the index level will be adjusted 2 weeks later by a split.

Implementation of split

After close of business on the 3rd Friday of the month, the closing level will be divided by 1 000 (one thousand).

In case the Friday is not a trading day, the review or implementation will be on the day before.

3.6 FINANCING ADJUSTMENT RATE (FIN)

The Financing Adjustment Rate is replacing the Repo rate and is determined on 20 bps from 1-Nov-2017.

3.7 EXCEPTIONAL MARKET CONDITIONS AND CORRECTIONS

3.7.1 Unavailability of the underlying index level

In case the level of the underlying index is not available during a period outside the regular closing time of the Euronext markets, the level of the index will not be calculated.

If the unavailability extends over the closing auction time of the Euronext markets, the closing value of the index will be the last level known before the unavailability of the underlying index.

3.7.2 Extreme market movements

In case the level of the underlying index rises or falls more than a predefined percentage relative to the close of the previous trading day, the index will be either suspended or reset (see index summary).

3.7.3 Procedure for Suspension

If an index is **suspended**, the Compiler will confirm the index level to be considered as the closing index value at the market close.

3.7.4 Procedure for reset of daily leveraged/short indices

In case the level of the underlying index rises or falls by more than a predefined percentage relative to its close of the previous trading day, the Leverage or Short Index will be reset. If an index is **reset**, the index will be adjusted intraday:

- For leverage calculations only downtrend movements will trigger a reset
- For short calculations only uptrend movements will trigger the reset.

Numerically, the intraday reset condition is defined as follows (with $\alpha > 0$):

$$\frac{UI_t}{UI_T} < \alpha\% \quad (\text{C1-L}) \text{ for Leverage indices}$$

Or

$$\frac{UI_t}{UI_T} > \alpha\% \quad (\text{C1-S}) \text{ for Short/Bear indices}$$

Where:

- UI_t is the real-time price of the index at time of calculation time t;
- UI_T is the official closing level of the index on the previous rebalance day;
- $\alpha\%$ = as per the Index Summary section above under the column "Rule in case of extreme market movements".

For Leverage indices, if condition (C1-L) is met at calculation time t:

- The calculation of the index is suspended temporarily (i.e. the level that was published just before the condition is met will keep on being published).
- The prices of the Underlying Index are observed during 5 full minutes.
- The **minimum price** of the Underlying Index during the 5-minute observation period is used to reset the Leverage Index.

For Short/Bear indices, if condition (C1-S) is met at calculation time t:

- The calculation of the index is suspended temporarily (i.e. the level that was published just before the condition is met will keep on being published).

- The prices of the Underlying Index are observed during 5 full minutes.
- The **highest price** of the Underlying Index during the 5-minute observation period is used to reset the Leverage Index.

Once the observation period is over the calculation of the index is resumed as per the formula below:

$$LI_t = LI_{R1} \left[1 + K \left(\frac{UI_t}{UI_{R1L}} - 1 \right) \right]$$

Or

$$SI_t = SI_{R1} \left[1 - K \left(\frac{UI_t}{UI_{R1H}} - 1 \right) \right]$$

Where:

UI_{R1L} is the lowest recorded index level over an observation period of 5 minutes following calculation time t (time when the threshold was crossed);

LI_{R1} is the level of the index using index level UI_{R1L} ;

ON_T : is the Overnight rate: €STR

$$LI_{R1} = LI_{T-1} \left\{ 1 + K \left[\frac{UI_{R1L}}{UI_T} - 1 \right] - (K - 1) * \left[\frac{ON_T}{360} \right] * D_{T,T-1} - (K - 1) * \left[\frac{SPR_T}{360} \right] * D_{T,T-1} \right\}$$

UI_{R1H} is the highest recorded index level over an observation period of 5 minutes following calculation time t (time when the threshold was crossed);

SI_{R1} is the level of the index using index level UI_{R1H} ;

$$SI_{R1} = SI_{T-1} \left\{ 1 - K \left[\frac{UI_{R1H}}{UI_T} - 1 \right] + (K + 1) * \left[\frac{ON_T}{360} \right] * D_{T,T-1} - K * \left[\frac{FIN_T}{360} \right] * D_{T,T-1} \right\}$$

Note that no additional refinancing costs are calculated after an intraday reset occurs.

An intraday reset may occur more than once during the same scheduled calculation date. After a first intraday reset occurs, the condition becomes the following:

$$\frac{UI_t}{UI_{R1L}} < \alpha\%$$

(C2-L) for Leverage indices

Or

$$\frac{UI_t}{UI_{R1H}} > \alpha\% \quad (C2-S) \text{ for Short/Bear indices}$$

Where:

UI_t is the index level used at time of calculation t;

UI_{R1L} as defined above;

UI_{R1H} as defined above;

$\alpha\%$ as defined above.

If the above condition (C2) is met, another intraday reset is triggered. The calculation in real-time resumes as follows:

$$LI_t = LI_{R2} \left[1 + K \left(\frac{UI_t}{UI_{R2L}} - 1 \right) \right]$$

Or

$$SI_t = SI_{R2} \left[1 - K \left(\frac{UI_t}{UI_{R2H}} - 1 \right) \right]$$

Where:

UI_{R2L} is the lowest recorded index level over an observation period of 5 minutes following calculation time t (time when condition (C2-L) is met).

$$LI_{R2} = LI_{R1} \left[1 + K \left(\frac{UI_{R2L}}{UI_{R1L}} - 1 \right) \right]$$

UI_{R2H} is the highest recorded index level over an observation period of 5 minutes following calculation time t (time when condition (C2-S) is met).

$$SI_{R2} = SI_{R1} \left[1 - K \left(\frac{UI_{R2H}}{UI_{R1H}} - 1 \right) \right]$$

The same procedure is followed for any other intraday reset following another crossing of the predefined threshold.

The closing level of the index will be calculated in accordance with the last parameters defined for the last reset event as described above.

In case $LI_{R1} \leq 0$ or $SI_{R1} \leq 0$, the index level will be fixed at 0.001. This index level will continue to be broadcasted for 4 weeks after the reset occurred. Subsequently the index will be discontinued.

Overview of Rulebooks and other documents applicable for Euronext Indices

The following documents, all available on or via the following link: <https://www.euronext.com/en/indices/index-rules> should be read in conjunction with this document or provide other relevant information for the reader.

BENCHMARK STATEMENT

The Benchmark Statement identifies the primary features of an index family or families of indices in the context of the EU Benchmark regulation. For ESG based indices it also contains disclosure of ESG factors and reporting of scores.

COMPLIANCE STATEMENT

The Compliance Statement provides details, for both significant and non-significant benchmarks, for which provisions the Administrator has chosen not to apply, and offers an explanation as to why it is appropriate not to apply each provision.

GOVERNANCE EURONEXT INDICES

The purpose of the 'Governance Euronext Indices' is to describe the role and responsibilities of each of the governance bodies that are part of the Benchmark Administrators of Euronext.

RULEBOOK OF EACH FAMILY OF INDICES

Each index is part of an index family that shares the basis for selection (universe) and which is managed in a comparable way. A separate rulebook is provided for each index family that will describe the specific features of that index family as well as specific elements of each index within that family.

INDEX CALCULATION AND PERIODICAL REVIEW Euronext Indices

The Methodology Euronext describes all common aspects that apply for the

- periodical reviews, and
- the calculation of indices

EURONEXT INDICES CORPORATE ACTION RULES

- treatment of corporate actions

of indices provided by Euronext Indices.

EURONEXT ESG PROVIDERS METHODOLOGIES

An overview of various methods applied by providers of ESG scorings and labels

PROCEDURES EURONEXT INDICES

These rulebooks describe the various procedures that are applied for all Euronext Indices:

- Correction Policy
- Announcement Policy
- Complaints Procedure
- Consultations Procedure
- Procedure For Cessation of Indices

RULES OF PROCEDURE INDEPENDENT SUPERVISORS

For each Independent Supervisor Euronext publishes a 'Rules of Procedure' that describes the responsibilities and composition of each Independent Supervisor.

BENCHMARK OVERSIGHT COMMITTEE CHARTER

The Benchmark Oversight Committee Charter describes the role and responsibilities of the Benchmark Oversight Committee.
