Furthermore, in response to ever-increasing societal expectations and growing regulatory requirements, the Crédit Agricole Group intends to continue its efforts to prevent and control the risks of infringement of fundamental human rights and freedoms and risks to health and safety to which its employees may be exposed.

For example, the operational implementation of the Code of Ethics will take the form of an update to the Crédit Agricole S.A. Parent Company's Code of Conduct. This new version will be adopted by Crédit Agricole Group entities in 2026.

In particular, with the aim of improving the working conditions of its employees by freeing them from repetitive or tedious tasks, Crédit Agricole S.A. has rolled out training in generative artificial intelligence, first in France and then, in the first half of 2025, in all the countries where it operates. In addition to the partnerships with its long-standing suppliers, the Group also intends to continue its partnership with LinkedIn via the LinkedIn Learning platform, allowing its employees to develop their potential through constant learning and self-training.

PURCHASING

The Group Purchasing Department is working on defining systems to provide greater oversight of the supply chains and subcontracting of the Group's suppliers.

CHANGES TO ACCOUNTING POLICIES AND PRINCIPLES

Changes to accounting policies and principles are described in Note 1 to Crédit Agricole S.A.'s consolidated financial statements for the year ended 31 December 2025.

CHANGES IN THE SCOPE OF CONSOLIDATION

Changes in the scope of consolidation are described in Notes 2 and 12 to Crédit Agricole S.A.'s consolidated financial statements for the year ended 31 December 2025.

ECONOMIC AND FINANCIAL ENVIRONMENT

2025 RETROSPECTIVE

A YEAR MARKED BY AMERICAN POLITICS

Uncertainty, already considerable due to the unprecedented shocks that the planet has experienced since the start of the decade, was the keyword for 2025, a year marked by profound economic and geopolitical upheaval.

Tariffs on US imports were raised for all countries and a large number of sectors. "Liberation Day" on 2 April, announcing a series of so-called "reciprocal" tariffs, followed by backtracking a few days later, marked the peak of trade tensions; agreements were then signed, including one with the European Union at the end of July, marking a gradual de-escalation. While there is now greater visibility on tariffs, uncertainties remain. And although things have calmed down for now, the fact remains that tariffs have been increased substantially, triggering major disruptions and a rapid reorganisation of trade flows. The impact of these tariffs is gradually becoming apparent, but it remains difficult to fully assess the consequences.

Geopolitically, many countries around the world have been led to rethink their dependencies and strengthen their strategic autonomy, from an economic, technological and military point of view, leading to larger investment programmes, especially in defence. In particular, 2025 saw a spectacular budgetary turnaround in Germany, with the roll-out of an unprecedented public spending plan for infrastructure and defence.

GROWTH REMAINS RESILIENT DESPITE A CHALLENGING INTERNATIONAL ENVIRONMENT

Despite sharp increases in tariffs, the global economy remained resilient, both in developed countries and emerging economies.

In the United States, the economic slowdown has been less severe than anticipated. With average annual growth of around 2%, the US economy held up well in 2025, despite the uncertainty. Admittedly, this represents a sharp decline from the very strong pace of 2.8% in 2024, but it is still a long way from the recession that some feared in the aftermath of Liberation Day. On a quarterly basis,

growth has been uneven, with volatile components of GDP, such as net exports and inventories, fluctuating sharply as a result of trade policy. Growth continued at a strong pace in the third quarter, which again surprised significantly on the upside. Growth is expected to be more moderate in the fourth quarter of 2025, due to the effects of the shutdown. The resilience of the US economy is due in particular to the financial health of households, whose overall net wealth has increased by nearly \$60 trillion compared to the pre-COVID period, although there are pockets of weakness, concentrated in the low-income household segment. The rise of AI has also played a key role, boosting investment.

Furthermore, the inflationary impact of tariffs has so far been more contained than expected. Inflation ended the year at 2.7% and remains significantly above the Fed's target. The labour market is rather mixed, with clear signs of a slowdown since the summer, notably a marked decline in job creation. The rise in the unemployment rate remains contained (4.4% at the end of 2025). However, this weaker employment was what guided the Fed's monetary policy, rather than the persisting inflation: after nine months of status quo, the Fed cut its policy rates by 25 basis points at each of its last three monetary policy meetings in 2025, bringing the upper limit of the Fed funds rate to 3.75% at the end of the year.

In China, 2025 was marked by the trade war with the United States, which ended in November with a one-year agreement covering tariffs and rare earths. The 5% growth target is expected to be met once again, despite the slowdown in activity observed in the second half of the year. The Chinese economic environment remains marked by deflation, fuelled by weak private consumption and the ongoing property crisis, with no real signs of improvement. Retail sales continue to grow at a significantly slower pace than economic activity, raising questions about the sustainability of a growth model that lacks internal momentum and relies primarily on foreign trade. This reached record levels in 2025, despite the decline in exports to the United States, as the country quickly redirected its trade flows to other partners in Asia, Latin America and Europe.

In the eurozone, mirroring developments in the United States, quarterly GDP growth was marked by fluctuations in exports to the United States. These rose sharply in the first quarter in anticipation of higher tariffs, then declined; but the backlash was significantly less severe than feared and growth proved surprisingly resilient. Thus, despite foreign trade being undermined by tariffs, the strength of the euro and competition from Asia, the good health of private agents and the resilience of domestic demand enabled the eurozone to post accelerating growth of around 1.4% in 2025, after 0.8% in 2024. Inflation returned to its target (2% in December), leaving the ECB in a comfortable position to keep its rates unchanged after June 2025 (deposit rate at 2%), after a 100 basis point cut in the first half of the year.

In France, economic activity slowed on an annual average in 2025 (0.8% after 1.1% in 2024), but remained particularly resilient despite a continuing unstable political environment. The slowdown in activity is mainly due to foreign trade, which, after supporting growth in the previous two years, had a negative impact of 0.6 points in 2025 (after a contribution of +1.3 points in 2024), due to a slowdown in exports and an upturn in imports. Furthermore, despite a smaller decline in investment compared with 2024 (-0.2%, after -1.3%), final domestic demand excluding inventories was curbed by the sharp slowdown in household consumption (+0.3% after +1.0%), despite the increase in purchasing power. Households continue to behave cautiously and the savings rate remained above 18%, a historically high level. Public administration consumption expenditure, meanwhile, remains relatively buoyant. Only the contribution from inventory changes has recovered. Inflation dropped again in 2025, to 0.9% (as measured by the consumer price index), after 2.0% in 2024. This is one of the lowest rates in the Eurozone. The unemployment rate rose slightly (7.6% on average in 2025) but remains far from the levels reached during the 2010s (9.6% on average).

In Italy, despite a difficult international context, the economy proved resilient. Growth nevertheless remained moderate at an average of 0.5% in 2025, despite a clear recovery in investment. The year was marked by high volatility in foreign trade – due to US tariff policy – to which the Italian export sector remains particularly exposed (10% of total exports). While front-loading in anticipation of US tariff barriers has boosted exports for the time being, it also led to strong growth in imports and significant destocking, clouding the readability of economic trends over the year. Employment continued to grow, resulting in a drop in the unemployment rate, which fell below 6% in November. Although household disposable income recovered, household consumption failed to pick up, still hampered by precautionary savings behaviour.

MARKETS LARGELY UNAFFECTED BY INTERNATIONAL CONCERNS

The differences in the timing of the monetary policies of the Fed and the ECB, as well as slowing activity in the United States versus an acceleration in the eurozone, led to a divergence in the interest rate trend on both sides of the Atlantic in 2025.

In the United States, the Liberation Day period resulted in some movements out of US assets and an upturn in interest rates in the spring, which continued into the early summer due to the prospect of budgetary expansion through the One Big Beautiful Bill Act in July. However, the overall trend for the year was a sharp decline in interest rates as the slowdown in the labour market became apparent and indications of monetary policy easing became clearer: two-year sovereign rates (US Treasuries) lost 76 basis points, ending the year at 3.5%, and ten-year rates fell by 43 basis points to 4.14%, resulting in a further steepening of the yield curve.

In the eurozone, the steepening of the curve was even more pronounced, but resulted from a rise in long-term rates (+61 basis points for the 10-year Bund, to 3% at the end of the year), partly driven by Germany's budget announcements, while short-term rates remained stable (at 2.1%). At the same time, sovereign spreads narrowed, with the spread between Italian 10-year BTPs and the German Bund decreasing by 51 basis points, while Italian 10-year yields remained stable over the year. At 66 basis points, the Italian spread fell slightly below the French spread, which, at 71 basis points at the end of the year, lost only 12 basis points, suffering from the deterioration in the fiscal outlook. The euro benefited from the narrowing of spreads between US and European yields, gaining 13.4% in 2025 to end at 1.17 against the dollar.

Despite the uncertainties and concerns dominating the international climate, equity investors remained very optimistic, continuing to bet on the performance of the technology and AI sectors, and encouraged by the growth prospects of the defence industries as well. Despite the high volatility, and in particular the sharp correction of the stock market indexes in April, the S&P 500 and Euro Stoxx 50 broke new records, gaining 16.4% and 18.3%, respectively, over the year, while the CAC 40 rose by "only" 10.4%, penalised by the political uncertainty.

Only precious metal prices reflect the serious concerns surrounding global geopolitical developments. The price of gold rose sharply in 2025, by more than 64%.

CRÉDIT AGRICOLE S.A. OPERATIONS AND CONSOLIDATED RESULTS

In 2025, net income Group share amounted to €7,074 million, stable compared to €7,087 million in 2024.

Revenues were **€28,079 million**, up **+3.3%** compared to 2024, driven by all business lines.

Operating expenses rose by +4.9%, mainly due to support for the development of the business lines and the integration of scope effects. The cost/income ratio stood at 55.7% for the period, up +0.9 percentage point compared to 2024. **Gross operating income** thus came to €12,451 million, up +1.3% compared to 2024.

Cost of risk rose by +6.6% over the period, reaching -€1,973 million compared to -€1,850 million for the full year 2024.

The contribution of **equity-accounted entities** stood at -€527 million in 2025, compared with +€194 million in 2024, impacted by the effect of the first consolidation of Banco BPM for -€607 million in the fourth quarter of 2025. **Net income from other assets** was

€452 million in 2025, compared with a -€4 million loss in 2024, benefiting from the inclusion of the +€453 million gain on the deconsolidation of Amundi US in the second quarter of 2025. **Pre-tax income** before discontinued operations and non-controlling interests was -2.1% lower at €10,402 million. The **tax charge** was -€2,349 million, compared with -€2,472 million in 2024. This includes the impact of the exceptional additional corporate income tax charge of -€147 million and benefits from a -2.2 percentage points reduction in the effective tax rate compared to 2024.

Net income before non-controlling interests came to €8,053 million, down -1.2% compared to 2024. **Non-controlling interests** amounted to -€979 million in 2025, down -8.3% compared to 2024, impacted in particular by the CACEIS minority buyout (+€140 million) in 2025.

Earnings per share was **€2.18** in 2025, compared with €2.11 in 2024.

The **RoTE⁽¹⁾** reached **13.5%** in 2025, stable compared with 2024.

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	28,079	27,181	+3.3%
Operating expenses	(15,628)	(14,895)	+4.9%
GROSS OPERATING INCOME	12,451	12,286	+1.3%
Cost of risk	(1,973)	(1,850)	+6.6%
Equity-accounted entities	(527)	194	ns
Net income on other assets	452	(4)	ns
INCOME BEFORE TAX	10,402	10,625	-2.1%
Tax	(2,349)	(2,472)	-4.9%
Net income from discontinued or held-for-sale operations	-	-	ns
NET INCOME	8,053	8,153	-1.2%
Non-controlling interests	(979)	(1,067)	-8.3%
NET INCOME GROUP SHARE	7,074	7,087	-0.2%
EARNINGS PER SHARE (in euros)	2.18	2.11	+3.4%
COST/INCOME RATIO (%)	55.7%	54.8%	+0.9 pp

(1) RoTE (Return on Tangible Equity) is a measure of profitability on tangible equity. It relates the annualised net income Group share, excluding impairment of intangible assets and goodwill and net of ATI coupons, to the average Group share of equity adjusted for intangible assets, unrealised gains and/or losses, ATI debt stock and the planned distribution for the following financial year.

SOLVENCY

At 31 December 2025, Crédit Agricole S.A.'s solvency ratio was above the Medium-Term Plan target, with a Common Equity Tier 1 (CET1) ratio of 11.8% on a phased-in basis, up 0.1 percentage points compared with the end of December 2024. Thus:

OVER 2025

- The CET1 ratio benefited from a positive impact of +90 basis points related to retained earnings. This impact corresponds to the net income Group share net of AT1 coupons (impact of +174 basis points) and the distribution of 50% of income, i.e. a provision for dividends of €1.13 per share for 2025 (-83 basis points).
- The change in risk weighted assets linked to organic growth of the business lines had a negative impact of -59 basis points on the CET1 ratio.
- M&A transactions during the year impacted the CET1 ratio by -48 basis points, notably including the impact of the buyout of minority shareholders in CACEIS (-24 basis points), the finalisation of the transaction with Victory Capital (-8 basis points) and the first consolidation of BBPM using the equity method.
- Methodology and other effects had a favourable impact of +24 basis points, including in particular the CRR3 impact of +44 basis points and an unfavourable impact of -20 basis points related to the model review.

The **phased-in leverage ratio** was 3.9% at the end of December 2025, stable compared to the end of 2024 and above the 3% requirement.

The phased-in **Tier 1 ratio** stood at 13.6%, while the phased-in total ratio was 17.2% at end-December 2025.

LIQUIDITY

Liquidity is measured at Crédit Agricole Group level.

Customer deposits, diversified and granular, amounted to €1,180 billion at 31 December 2025, up +€21 billion compared with September 2025.

The Group's liquidity reserves, at market value and after haircuts ⁽¹⁾, amounted to €485 billion at 31 December 2025, down slightly by €3 billion compared to 30 September 2025.

Liquidity reserves covered more than twice the short-term debt net of treasury assets.

This change in liquidity reserves is notably explained by:

- the increase in the securities portfolio (HQLA and non-HQLA) for +€10 billion;
- the decrease in collateral already pledged to central banks and unencumbered for -€7 billion, linked to the decline in self-subscribed securitisations for -€4 billion and the decrease in central bank eligible receivables for -€3 billion due to Banque de France's discontinuation of the refinancing channel for state-guaranteed private loans (PGE) in the fourth quarter of 2025;
- the decrease in central bank deposits for -€6 billion.

Crédit Agricole Group also continued its efforts to maintain immediately available reserves (after recourse to ECB financing). Central bank eligible non-HQLA assets after haircuts amounted to €129 billion.

Standing at €1,732 billion at 31 December 2025, the Group's liquidity balance sheet shows **a surplus of available stable funding over required stable funding of €194 billion**, stable over the quarter.

Long-term debt was €324 billion at 31 December 2025, up +€2 billion compared with end-September 2025. This included:

- senior secured debt of €97 billion, up +€2 billion;
- senior preferred debt of €167 billion, up +€2 billion;
- senior non-preferred debt of €39 billion, down -€1 billion;
- and Tier 2 securities amounting to €21 billion, down -€1 billion.

Credit institutions are subject to a threshold for the LCR, set at 100% since 1 January 2018.

At 31 December 2025, the average LCRs (calculated over 12 rolling months) stood at 136% for the Crédit Agricole Group (representing a surplus of €85 billion) **and 141% for Crédit Agricole S.A.** (representing a surplus of €83 billion). It should be noted that the Crédit Agricole Group's LCR exceeds the 2028 Medium-Term Plan target of 110% to 130%.

(1) The securities comprising the liquidity reserves are valued after applying an idiosyncratic stress discount from December 2024 onwards (previously systemic stress) in order to best reflect the liquidation value of the securities in the event of liquidity stress.

Furthermore, at 31 December 2025, the NSFRs of the Crédit Agricole Group and Crédit Agricole S.A. stood at 119.1% and 113.9%, respectively.

The Group continues to follow a prudent policy as regards medium-to-long-term refinancing, with a very diversified access to markets in terms of investor base and products.

At 31 December 2025, the Group's main issuers raised the equivalent of €30.9 billion ⁽¹⁾, in medium/long-term debt on the markets, 83% of which was issued by Crédit Agricole S.A.

In particular, the following amounts are noted for the Group excluding Crédit Agricole S.A.:

- Crédit Agricole Assurances issued €750 million in RT1 Perpetual NC10.75 years;
- Crédit Agricole Personal Finance & Mobility issued:
 - €1 billion in EMTN issuances and €0.9 billion in securitisations through Crédit Agricole Auto Bank (CAAB);
 - €1.4 billion in securitisations through Agos;
- Crédit Agricole Italia issued one senior secured debt issuance totalling €1 billion;
- Crédit Agricole nextbank (Switzerland) issued two tranches in senior secured format for a total of 200 million Swiss francs, of which 100 million in green bond format.

At 31 December 2025, Crédit Agricole S.A. raised the equivalent of €23.1 billion through the market ⁽²⁾.

The bank raised the equivalent of €23.1 billion, of which €11.2 billion in senior non-preferred debt and €3.4 billion in Tier 2 debt, as well as €2.8 billion in senior preferred debt and €5.7 billion in senior secured debt at end-December. The financing comprised a variety of formats and currencies:

- €5.25 billion ⁽³⁾;
- 6.9 billion US dollars (€6.4 billion equivalent);

- 1.6 billion pounds sterling (€1.9 billion equivalent);
- 179.3 billion Japanese yen (€1.1 billion equivalent);
- 0.4 billion Singaporean dollars (€0.3 billion equivalent);
- 2.1 billion Australian dollars (€1.2 billion equivalent);
- 0.9 billion Canadian dollars (€0.5 billion equivalent);
- 0.6 billion Swiss francs (€0.7 billion equivalent).

At end-December, Crédit Agricole S.A. had issued 70% of its funding plan in currencies other than the euro.

In addition, Crédit Agricole S.A.:

- issued, on 13 February 2025, a PerpNC10 AT1 bond for €1.5 billion at an initial rate of 5.875% and announced on 30 April 2025 the regulatory call exercise for the AT1 with €103 million outstanding (XS1055037920) – ineligible, grandfathered until 28 June 2025 – redeemed on 30 June 2025;
- issued, on 2 September 2025, a PerpNC10 AT1 bond for US\$1.25 billion at an initial rate of 7.125%, launched a parallel public buyback offer on a US\$ bond (US225313AJ46/USF2R125CD54) and £ bond (XS2353100402/XS2353099638) and announced on 30 October 2025 that it would exercise the call option on the US\$ AT1 with an outstanding amount of US\$458 million (US225313AJ46/USF2R125CD54) with repayment on 23 December 2025.

The 2025 MLT market funding programme had been set at €20 billion, with equilibrium between senior preferred or senior secured debt and senior non-preferred or Tier 2 debt. The programme was 115% completed at 31 December 2025.

The 2026 MLT market funding programme was set at €18 billion, with €6 billion in senior preferred or senior secured debt and €12 billion in senior non-preferred or Tier 2 debt.

ANALYSIS OF THE ACTIVITY AND THE RESULTS OF CRÉDIT AGRICOLE S.A.'S DIVISIONS AND BUSINESS LINES

CONTRIBUTION OF BUSINESS LINES TO NET INCOME GROUP SHARE OF CRÉDIT AGRICOLE S.A.

(in millions of euros)	2025	2024
Asset Gathering and Insurance	3,232	2,875
Large Customers	2,735	2,448
Specialised Financial Services	333	625
Retail Banking in France – LCL	663	790
International Retail Banking	876	836
Corporate Centre	(764)	(488)
TOTAL	7,074	7,087

Unless mentioned otherwise, the results by business will be commented on the basis of the stated results.

(1) Gross amount before buy-backs and amortisations.

(2) Excluding AT1 issuance.

(3) Excluding senior secured debt.

ASSET GATHERING DIVISION

The Asset Gathering division encompasses Insurance (Crédit Agricole Assurances), Asset management (Amundi) and Wealth management (CA Indosuez Wealth Management).

ASSET GATHERING (AG) – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	8,000	7,648	+4.6%
Operating expenses	(3,747)	(3,365)	+11.4%
GROSS OPERATING INCOME	4,253	4,284	-0.7%
Cost of risk	(38)	(29)	+31.3%
Equity-accounted entities	201	123	+63.2%
Net income on other assets	451	(23)	n.m.
INCOME BEFORE TAX	4,867	4,355	+11.8%
Tax	(1,052)	(973)	+8.0%

NET INCOME	3,815	3,381	+12.8%
Non-controlling interests	(583)	(506)	+15.2%
NET INCOME GROUP SHARE	3,232	2,875	+12.4%
COST/INCOME RATIO (%)	46.8%	44.0%	+2.8 pp

At the end of December 2025, the assets under management of the Asset Gathering division stood at €3,051 billion, up +€77 billion over the quarter (or +2.6%), mainly due to positive net inflows in asset management and insurance and a favourable market and foreign exchange impact over the period. Over the year, assets under management rose by +€184 billion, or +6.4%.

In 2025, the asset gathering division generated **revenues** of €8,000 million, up +4.6% compared to 2024. Expenses increased by +11.4% to €3,747 million. The cost/income ratio was 46.8%, up +2.8 percentage points compared to 2024. Gross operating income amounted to €4,253 million, down -0.7% compared to 2024. **Equity-accounted entities** contributed €201 million, up +63.2%, mainly due to the contribution of Victory Capital from the second quarter of 2025 in the asset management division; the stake in Victory Capital is now 26.7%. **Net income from other assets** was impacted by the recognition of a €452 million capital gain also related to the deconsolidation of Amundi US. Tax amounted to -€1,052 million, up +8.0%.

Net income Group share of the asset gathering division includes the additional corporate income tax charge in France and amounted to €3,232 million, up +12.4% compared to 2024 (+26.0% for asset management, +5.7% for insurance and +19.7% for wealth management).

At end-December 2025, the Asset Gathering, contributed 41% to the underlying net income Group share of the Crédit Agricole S.A. core businesses and 28% to underlying revenues (excluding the Corporate Centre division).

At 31 December 2025, equity allocated to the division amounted to €14.3 billion, including €11.3 billion for Insurance, €2.1 billion for Asset Management, and €0.9 billion for Wealth Management. Risk weighted assets of Asset Gathering account for €52.4 billion including €24.7 billion on Insurance, €19.4 billion on Asset management and €8.3 billion on Wealth Management.

RoNE (Return on Normalised Equity) of the asset gathering division stood at 27.1% at the end of December 2025.

INSURANCE (CA ASSURANCES)

The Insurance business line reflects the results of Crédit Agricole Assurances, a wholly owned subsidiary of Crédit Agricole S.A., which covers all insurance businesses: savings/retirement, property & casualty, death & disability, creditor and group insurance.

INSURANCE – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024

The insurance business (Crédit Agricole Assurances) performed very well, with total revenues reaching a high level of €13.1 billion, up +20.4% ⁽¹⁾ compared with the fourth quarter of 2024. Annual revenues reached a record €52.4 billion.

In Savings/Retirement, revenues reached €39.7 billion, up +24% year-on-year in an environment particularly favourable to savings.

Assets under management (savings, retirement and funeral insurance) continued to grow and came to €373.0 billion (up +€25.7 billion year-on-year, or +7.4%). Growth in assets under management was driven by record net inflows of €15.9 billion and positive market effects. Unit-linked contracts accounted for 31.1% of outstandings, up 1.2 percentage points compared to the end of December 2024.

The Policy Participation Reserve (PPE) amounted to €6.3 billion at 31 December 2025, representing 2.7% of total euro outstandings.

In property and casualty insurance, premium income totalled €1.5 billion in the fourth quarter of 2025, up +22.7% ⁽²⁾ compared to the fourth quarter of 2024. The average premium benefited from a positive price effect resulting from rate increases driven by climate change and inflation in repair costs, as well as changes in the product mix and a volume effect, with a portfolio of 17.9 million policies at the end of December 2025 (up 7.3% ⁽³⁾ year-on-year).

The number of individual customers in the Crédit Agricole Group's banking networks continued to grow over the year, both in the Regional Banks (44.7%, up +0.8 point), at LCL (28.5%, up +0.6 point) and at CA Italia (20.3%, up +0.3 point). Finally, the combined ratio at the end of December 2025 stood at 94.6% ⁽⁴⁾, up +0.2 percentage point year-on-year.

In death & disability/creditor insurance/group insurance, fourth-quarter 2025 premium income stood at €1.7 billion, up +24.0% ⁽⁵⁾ compared with the fourth quarter of 2024. Individual death & disability insurance posted growth of +17.3% ⁽⁶⁾ due to an increase in the average price of coverage. Creditor insurance remained

stable over the period, with slight growth in mortgage lending partially offset by a decline in international consumer finance. Group insurance rose sharply (+27.6% compared to the fourth quarter of 2024), notably with the entry into force of the IEG contract on 1 July.

The CSM (Contractual Service Margin) stood at €27.5 billion at the end of December 2025, up +9.1% compared to the end of December 2024. It benefited from a new business contribution that exceeded the CSM allocation and a positive market effect. The allocation factor was 7.5% (down -0.2 point compared to 2024).

Revenues of the insurance business for 2025 reached €2,987 million, up +5% compared to 2024, reflecting significant growth in assets under management (record net inflows for the year and positive market effect), the change in the scope of consolidation at the end of 2025 with the addition of PiùVera Assicurazioni, PiùVera Protezione and Abanca SG for +€56 million, and a contained claims experience with no major climate impact in 2025. Revenues for the year include the impact of Tier 2 debt coupons replacing AT1 debt (the cost of which was recognised in non-controlling interests). Non-attributable expenses amounted to -€426 million, up +25.1%, also taking into account the change in the scope of consolidation. **Gross operating income** was €2,561 million (+2.3% compared to 2024). The cost/income ratio was 14.3% at the end of 2025. The tax charge was -€561 million, compared with -€572 million in 2024. **Net income Group share** reached €1,992 million, up +5.7% compared with 2024.

Insurance contributed 25% to the net income Group share of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at the end of December 2025 and 10% to their revenues (excluding the Corporate Centre division).

Crédit Agricole Assurances remains solid with a Solvency 2 regulatory prudential ratio which amounts to around 195% at 31 December 2025.

(1) On a like-for-like basis (excluding Abanca SG, PiùVera Assicurazioni and PiùVera Protezione), total revenues rose by +16.7%.

(2) On a like-for-like basis (excluding Abanca SG and PiùVera Assicurazioni), premium income rose by +8.8%.

(3) On a like-for-like basis (excluding Abanca SG and PiùVera Assicurazioni), the portfolio volume stood at 17.1 million contracts, up +2.3% compared to the end of 2024.

(4) Combined ratio for property and casualty insurance in France (Pacifica), including discounting and excluding undiscounting, net of reinsurance: (claims + operating expenses + fee and commission income)/gross premiums earned. Non-discounted ratio: 96.7% (+0.3 pp year-on-year).

(5) On a like-for-like basis (excluding Abanca SG, PiùVera Assicurazioni and PiùVera Protezione), premium income rose by +6.7%.

(6) On a like-for-like basis (excluding Abanca SG), premium income rose by +10.1%.

ASSET MANAGEMENT (AMUNDI)

The Asset Management business line reflects the results of Amundi, a subsidiary that is 68.4%-owned by Crédit Agricole Group, 67.1% of which is held by Crédit Agricole S.A.

ASSET MANAGEMENT – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024

Total assets under management stood at €2,380 billion at end-December 2025, up 6.2% compared with end-December 2024.

Over the year, **the Retail segment** was driven by continued strong momentum from third-party distributors. Annual outflows on Unicredit amounted to -€16 billion.

The Institutional segment performed very well, driven by inflows into medium- to long-term assets, which tripled over the year.

In the **JV** segment, 2025 was marked by high inflows in all countries.

In 2025, revenues totalled €3,342 million (-1.9%). Excluding the scope effect related to the deconsolidation of Amundi US, they rose by +6.2% over the period. Operating expenses rose by +2.4% and were impacted by an -€88 million provision for restructuring. Excluding the scope effect related to the deconsolidation of Amundi US, restructuring and acquisition costs, they rose by +5.9% over the period. The cost/income ratio was 57.9%, up +2.4 points compared to 2024 (54.4% pro forma Victory, excluding

restructuring and acquisition costs). As a result, gross operating income was down -7.2% compared to 2024, and up +6.6% after restatement for the scope effect related to the deconsolidation of Amundi US, restructuring and acquisition costs. Income from equity-accounted entities increased by +63.2% (from €123 million in 2024 to €201 million in 2025), reflecting in particular the integration of Victory Capital's contribution since the second quarter of 2025. Income from Asian joint ventures increased by +10%. **Net income from other assets** was impacted by the recognition of a non-monetary gain of €453 million also related to the completion of the transaction with Victory Capital in the second quarter of 2025. In all, **net income Group share** for 2025, which includes the additional corporate income tax charge in France, amounted to €1,070 million, up +26%.

Asset Management contributed 14% to net income Group share of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at end-December 2025 and 12% of their revenues.

WEALTH MANAGEMENT ⁽¹⁾ (CA INDOSUEZ WEALTH MANAGEMENT)

The assets under management mentioned in the business line's figures include those of CA Indosuez Wealth Management as well as the assets of LCL's Private Banking clients (also included in LCL's assets under management). The income statement items relate exclusively to CA Indosuez Wealth Management.

WEALTH MANAGEMENT – CONTRIBUTION TO RESULTS

In wealth management ⁽²⁾, total assets under management (CA Indosuez Wealth Management and LCL Private Banking) stood at €298 billion at the end of December 2025, up +6.8% compared with December 2024.

In 2025, revenues from the wealth management business increased by +19.6% compared to 2024, benefiting in particular from the integration of Degroof Petercam ⁽³⁾ in June 2024, and reached €1,671 million. Expenses increased by +22.2%, mainly due to the impact of the integration of Degroof Petercam in June 2024 and integration costs. The cost/income ratio, restated for Degroof Petercam integration costs, was 78.3%. Gross operating income thus increased by 8.4% to €286 million. The cost of credit risk worked out at -€29.8 million, compared with -€15.3 million in 2024.

Net income from other assets was close to zero in 2025, compared with -€23 million in 2024, corresponding to Degroof Petercam acquisition costs. **Net income Group share** amounted to €170 million for 2025, up 19.7% compared to 2024.

With regard to the integration of Degroof Petercam, the **progress rate of synergies** is approximately 30%. The estimated integration costs in 2026 are -€40 million to -€50 million. The target of additional net income Group share of €150 million to €200 million by 2028 is confirmed.

Wealth management contributed 2% to the net income Group share of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at the end of December 2025 and 6% of their revenues (excluding the Corporate Centre division).

(1) Indosuez Wealth Management scope.

(2) LCL Private Banking and Indosuez Wealth Management.

(3) Degroof Petercam scope effect in 2025: January to May 2025: Revenues of €260.1 million and expenses of -€186.2 million.

LARGE CUSTOMERS DIVISION

The Large Customers division includes the Capital Markets, Investment Banking, Structured Finance and Commercial Banking business lines housed within Crédit Agricole Corporate & Investment Bank (Crédit Agricole CIB), as well as Asset Servicing, housed within CACEIS.

LARGE CUSTOMERS (LC) – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	8,883	8,651	+2.7%
Operating expenses	(5,171)	(5,039)	+2.6%

NET INCOME GROUP SHARE	2,735	2,448	+11.7%
COST/INCOME RATIO (%)	58.2%	58.2%	-0.0 pp

Over 2025, the revenues of the Large Customers division were a record high of €8,883 million, up +2.7% compared with 2024. Operating expenses rose by +2.6% compared to 2024, to €5,171 million, mainly due to employee expenses and IT investments. As a result, gross operating income for 2025 amounted to €3,712 million, up +2.8% compared to 2024. Cost of risk ended 2025 with a net addition of -€127 million, up from 2024 (net addition of -€117 million). The business line's contribution to net income Group share was €2,735 million, up +11.7% compared to 2024.

The business line contributed 35% to the net income Group share of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at end-December 2025 and 31% to revenues excluding the Corporate Centre division.

At 31 December 2025, the equity allocated to the division was €15.1 billion and its risk weighted assets were €137.1 billion.

RoNE (Return on Normalised Equity) of the Large Customers division stood at 16.4% at the end of December 2025.

CORPORATE AND INVESTMENT BANKING

Crédit Agricole CIB ranks #1 for Green, Social & Sustainable bonds in EUR ⁽¹⁾ and #4 for All bonds in EUR Worldwide, confirming its leading position in syndicated loans (#1 in France ⁽²⁾ and #2 in EMEA).

The average regulatory VaR stood at €9.7 million in the fourth quarter of 2025, down from €12.7 million in the third quarter of 2025, in line with the trend on financial markets and the positions. It remains at a level that reflects prudent risk management.

Over 2025, revenues rose by +3.3% compared to 2024 (+5.2% excluding the foreign exchange impact) to €6,783 million, a record level for both capital markets and investment banking and financing activities, despite an unfavourable foreign exchange impact. Operating expenses increased by +4.9%, mainly due to business development and IT investments. As a result, gross operating income rose by +1.4% compared to 2024, to €3,083 million. The cost of risk recorded a net addition of -€97 million in 2025, compared with

an addition of -€93 million in 2024. The tax charge amounted to -€677 million, down -9.5%. As a result, net income Group share for 2025 stood at €2,261 million, up +5.1% over the period.

ASSET SERVICING

For Asset Servicing, business growth was supported by customer capture and positive market effects during the quarter and the year.

Assets under custody were up +3.4% at the end of December 2025 compared with the end of September 2025 and +11.4% compared with the end of December 2024, totalling €5,896 billion. Assets under administration rose by +3.7% over the quarter and +9.1% over the year, reaching €3,705 billion at the end of December 2025. Settlement-delivery volumes increased sharply, by +27.4% compared to the fourth quarter of 2024, mainly driven by France and Germany.

In addition, the fourth quarter was marked by the completion of the integration of ISB following the full migration of customers and the decommissioning of the former RBC IT systems, and thus recorded the final integration costs related to this acquisition. For this transaction, the progress rate of synergies achieved in 2025 stands at 66% and the target of additional net income of more than €100 million expected in 2026 is confirmed.

Revenues for 2025 were up +0.8% compared to 2024, despite the planned exit of former RBC customers, with good commercial momentum, a favourable trend in the interest margin over the period and the positive scope effect linked to the takeover of Degroof Petercam's depositary banking activities in particular. Operating expenses were down by 2.6% and included -€33.8 million in integration costs related to the acquisition of the former RBC activities (compared with -€97 million in integration costs in 2024). Gross operating income was up +10.0% compared to 2024. The cost/income ratio stood at 70.1%, down -2.5 percentage points compared with 2024. In all, the business line's contribution to net income Group share for 2025 amounted to €474 million, a sharp increase of +59.9% compared to 2024, which included Santander's non-controlling interests.

The commercial production of Crédit Agricole Personal Finance & Mobility (CAPFM) reached €12.1 billion in the fourth quarter of 2025, up +3.1% compared to the fourth quarter of 2024, balanced between the Personal Finance and Mobility activities, although the automotive business was impacted by an unfavourable market environment: Leasys' production was relatively stable, while CA Auto Bank's production declined. The upturn observed in China since the third quarter of 2025 was confirmed in the fourth quarter. Automotive financing ⁽¹⁾ accounted for 49% of quarterly production. The **average customer rate for production** was virtually stable, down -3 basis points compared to the third quarter of 2025 ⁽²⁾. CAPFM's **outstandings** stood at €122.5 billion at the end of December 2025, up +2.6% compared to the end of December 2024, across all segments (Automotive +1.8% ⁽³⁾, LCL and Regional Banks +4.5%, Other entities +2.6%), benefiting from the expansion of the portfolio managed with the Regional Banks and the development of car rental with Leasys and Drivalia, as well as the inclusion of GAC Leasing in the scope. Lastly, **consolidated outstandings** totalled €67.6 billion at end-December 2025, down -2.1% from end-December 2024.

The commercial production of Crédit Agricole Leasing & Factoring (CAL&F) was up +22.4% from the fourth quarter of 2024 for leasing, benefiting from the integration of Merca Leasing. Excluding this scope effect, leasing production rose by +11.7%, driven by production in France, which was buoyed by all markets, particularly renewable energy. Internationally, production also increased across all entities. **Leasing outstandings** rose by +7.1% year-on-year, both in France (+4.2%) and internationally (+5.6%), and this quarter included Merca Leasing's outstandings, to total €21.7 billion at the end of December 2025 (including €16.6 billion in France, €4.6 billion internationally and €0.5 billion in outstandings contributed by Merca Leasing). **Commercial factoring production** was strong this quarter but down -28% compared to a very high fourth quarter 2024, both in France (-17%) and internationally (-39%), mainly in Germany. **Factoring outstandings** at the end of December 2025 were up +5.5% compared to the end of December 2024, and factored revenues were up +4% compared to the same period in 2024.

For 2025, the Specialised Financial Services division's revenues amounted to €3,540 million, up slightly by 0.6% compared to 2024, driven on the one hand by positive price and volume effects in personal finance, which offset the decline in revenues from mobility and insurance activities, and by the strong performance of the leasing business at CAL&F, and on the other hand impacted by an unfavourable base effect of €30 million in the fourth quarter of 2025 at CAPFM and the integration of Merca Leasing at CAL&F. **Operating expenses** increased by +2.8% compared to 2024 to -€1,829 million, and were impacted by IT investments and the integration of Merca Leasing at CAL&F. **Gross operating income** thus stood at €1,710 million, a decrease of -1.7% compared to 2024. The **cost/income ratio** stood at 51.7%, up +1.1 percentage points compared to the same period in 2024. The **cost of risk** increased by +12.2% compared to 2024, to -€1,076 million, notably impacted by a total of +€61 million in legal provisions for UK auto loans (+€20 million in the third quarter of 2025 and +€41 million in the fourth quarter of 2025), compared to legal provisions of +€30 million in the fourth quarter of 2024, also including provisions for UK auto loans. The contribution of the **equity-accounted entities** dropped sharply from the same period in 2024, mainly linked to the decline in remarketing revenues, the revision of remarketing values at Leasys, the deterioration of CAPFM's business in China, and a depreciation of goodwill for CAL&F (in the second quarter of 2025). **Net income Group share** for the division includes the additional corporate income tax charge in France and reached €333 million, down -47% compared to the same period in 2024.

The business line contributed 4% to the **net income Group share** of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at end-December 2025 and 12% to revenues excluding the Corporate Centre division.

At 31 December 2025, the **equity allocated** to the division was €8.8 billion and its **risk weighted assets** were €79.9 billion.

RoNE (Return on Normalised Equity) of the Specialised Financial Services division stood at 3.2% at the end of December 2025.

(1) CA Auto Bank, automotive JVs and auto activities of other entities.

(2) Excluding automotive JVs.

(3) CA Auto Bank and automotive JVs.

PERSONAL FINANCE AND MOBILITY

In 2025, CAPFM's revenues reached €2,780 million, up +0.6% compared to 2024, up +1.7% excluding exceptional items of €30 million recorded in the fourth quarter of 2024, benefiting from positive volume and price effects, particularly in the personal finance business, offsetting the decline in revenues from the mobility business, which suffered from the unfavourable automotive market environment, and the decline in insurance revenues. Expenses stood at -€1,392 million, stable at +0.7% compared to 2024. Gross operating income thus amounted to €1,388 million, up +0.4% (2.7% excluding exceptional items of €30 million recorded in the fourth quarter of 2024). The cost/income ratio stood at 50.1%, up +0.1 percentage point compared to 2024. The cost of risk increased by +12.6% compared to 2024, to -€988 million, mainly due to a deterioration at international subsidiaries and impacted by a total of +€61 million in legal provisions for UK auto loans in 2025 (+€20 million in the third quarter of 2025 and +€41 million in the fourth quarter of 2025), compared with a +€30 million in legal provisions in the fourth quarter of 2024, including provisions for UK auto loans. The contribution from equity-accounted entities was down sharply, from a profit of €133 million in 2024 to a loss of -€64 million in 2025, due to lower remarketing revenues and the revision of remarketing values at Leasys, as well as the deterioration in business in China since the fourth quarter of 2024. Net income Group share, including the additional corporate income tax charge in France, amounted to €178 million, down -58% compared to 2024.

CRÉDIT AGRICOLE S.A. RETAIL BANKING**RETAIL BANKING IN FRANCE (LCL)****RETAIL BANKING IN FRANCE (LCL) - CONTRIBUTION TO RESULTS**

(in millions of euros)

	2025	2024	Δ 2025/2024

Outstanding loans stood at €173.8 billion at end-December 2025, a +0.5% increase quarter-on-quarter and +1.9% year-on-year (of which +1.1% for home loans, +2.6% for loans to professionals, +4.7% for loans to corporates). Customer assets totalled €259.3 billion at end-December 2025, up +1.7% year-on-year, driven in particular by off-balance sheet resources, with balance sheet savings showing a very slight decline. Over the quarter, on-balance sheet deposits rose by +0.5% compared with the end of September 2025, with

LEASING & FACTORING

For 2025, revenues were up slightly (+0.6%) compared with 2024, at €760 million, benefiting from the integration of Merca Leasing. Excluding this scope effect, revenues fell by -2.3% over the year, with the increase in revenues stemming from the momentum of the leasing activity over the year being offset by a decline in factoring revenues (notably due to the lower interest rates). Operating expenses rose by 9.9% to -€437 million, including the Merca Leasing scope effect and impacted over the year by IT investments and non-recurring items in the fourth quarter. Gross operating income was down -9.8% from 2024 to €323 million. The cost/income ratio stood at 57.5%, up +4.9 percentage points compared to 2024. The cost of risk rose over the year (+7.9%), impacted by an increase in risk in the fourth quarter on a few factoring files in Spain and by the effect of the integration of Merca Leasing, partly offset by a reversal of provisions on performing loans of +€20 million in the second quarter of 2025. The contribution of the equity-accounted entities amounted to -€20 million in 2025, down sharply from 2024 at -€8 million due to a depreciation of goodwill in 2025. Finally, net income Group share including the additional corporate income tax charge in France amounted to €155 million, down -24% compared to 2024.

demand deposits up +0.3% and term deposits up +2.0%. Off-balance sheet deposits benefited from positive net inflows driven by life insurance and a positive market effect.

Gross customer capture stood at 262,000 new customers over 2025. The equipment rate for car, multi-risk home, health, legal, all mobile phones or personal accident insurance rose year-on-year by 0.6 percentage point compared to the fourth quarter of 2024 to stand at 28.5% at end December 2025.

In 2025, LCL revenues totalled €3,945 million, a +1.9% increase compared to 2024. The net interest margin increased (+0.9%), benefiting from the gradual repricing of loans and lower resource costs. Fee and commission income rose by +2.8% compared to 2024, particularly for insurance. Expenses rose by +3.1% over the period and the cost/income ratio was higher (+0.8 percentage point compared with 2024) at 64.0%. Gross operating income was stable at -0.2% and the cost of risk rose by +9.9%. Lastly, the business line's contribution to net income Group share, including the additional corporate income tax charge in France, amounted to €663 million (-16.1% compared to 2024).

In 2025, International Retail Banking **revenues** were down by 0.8% at €4,027 million (stable at constant exchange rates). **Operating expenses** amounted to -€2,175 million, up +1.3% (stable at constant exchange rates) compared to 2024, benefiting from a lower contribution to the DGS (deposit guarantee fund in Italy) in 2025, which was recorded at -€58 million in the fourth quarter of 2024 (compared to -€5 million in the fourth quarter of 2025), a reversal of expenses for +€34 million in the third quarter of 2025, but impacted by a net addition of -€65 million in restructuring costs in the fourth quarter of 2025. **Gross operating income** totalled

The business line contributed 8% to the **net income Group share** of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at end-December 2025 and 14% to **revenues** excluding the Corporate Centre division.

At 31 December 2025, the **equity allocated** to the business line was €6.3 billion and its **risk weighted assets** were €57.1 billion.

LCL's Return on Normalised Equity (RoNE) stood at 9.6% in 2025.

€1,852 million, down -3.1% (-0.5% at constant exchange rates). The **cost of risk** rose by +6.0% (+8.3% at constant exchange rates) to -€332 million compared with 2024, taking into account non-recurring items of -€30 million relating to the Banca Progetto provision. In all, **net income Group share** of International retail banking was €876 million, up +4.7% compared to 2024.

In full-year 2025 the International Retail Banking business line contributed 12% to the underlying net income Group share of Crédit Agricole S.A.'s core businesses (excluding the Corporate Centre) and 14% to underlying revenues excluding the Corporate Centre.

ITALY

CA Italia's loan outstandings at the end of December 2025 stood at €62.8 billion, up 1.0% compared to the end of December 2024 (in a recovering Italian market ⁽¹⁾), driven by the individual customers market, where loan outstandings increased by 2.3%, and stable in the corporate market (including SMEs). The loan stock rate was stable compared to the third quarter of 2025 (+1 bp Q4/Q3) and down -83 basis points compared to the fourth quarter of 2024 (less than the market ⁽²⁾).

Loan production for the quarter was strong, up +5.4% compared to the fourth quarter of 2024, driven by the corporate and individual markets. Loan production for the year rose by +2.4% compared with 2024.

Customer assets at end-December 2025 totalled €123.7 billion, up 3.1% compared with end-December 2024; on-balance sheet deposits were up 0.7% compared with end-December 2024, particularly in the individual market (less expensive deposits). Finally, off-balance sheet deposits increased by +6.0% over the same period and benefited from positive net inflows and positive market effects.

The equipment rate for automotive, home, health, legal, mobile phone and personal accident insurance was 20.3% at CA Italia, up +0.3 percentage points compared to the fourth quarter of 2024.

For 2025, revenues for **Crédit Agricole Italia** were stable at €3,054 million. **Operating expenses** amounted to -€1,675 million, up 0.9% on full-year 2024, benefiting from a lower DGS contribution in 2025 (-€5 million in 2025 compared to -€58 million in 2024) but penalised by non-recurring items (reversal of expenses of +€34 million in the third quarter compared with -€65 million net of restructuring expenses recognised in the fourth quarter of 2025). **Gross operating income** thus came to €1,379 million, down -1.2% compared with full-year 2024. **Cost of risk** stood at -€272 million, up 10.4% compared with full-year 2024. All in all, **net income Group share** of CA Italia totalled €596 million, a decrease of 2.1% compared to 2024.

CA Italia's RoNE (Return on Normalised Equity) was 18.6% at 31 December 2025.

RESULTS FOR CRÉDIT AGRICOLE GROUP IN ITALY ⁽³⁾

For full-year 2025, **underlying net income Group share** of entities in Italy was €1,097 million ⁽⁴⁾. The breakdown by business line is as follows: Retail Banking 56%; Specialised Financial Services 11%; Asset Gathering and Insurance 21%; and Large Customers 12%. Lastly, Italy's contribution to net income Group share in 2025 was 14% (excluding the Corporate Centre).

INTERNATIONAL RETAIL BANKING – EXCLUDING ITALY

For **International Retail Banking excluding Italy**, loan outstandings stood at €7.8 billion, up 6.8% at current exchange rates at end-December 2025 compared with end-December 2024 (+7.6% at constant exchange rates). Customer assets rose by 5.0% to €12.7 billion over the same period at current exchange rates (+7.4% at constant exchange rates).

In Poland in particular, loan outstandings increased by 3.7% compared to end-December 2024 (+2.2% at constant exchange rates) and on-balance sheet deposits by 5.4% (+3.9% at constant exchange rates). Loan production in Poland was up this quarter compared with the fourth quarter of 2024 (+8.1% at current exchange rates and +6.3% at constant exchange rates). In addition, gross new customer capture in Poland reached 58,000 this quarter.

In Egypt, commercial activity was dynamic across all markets. Loan outstandings increased by +15.0% between end-December 2025 and end-December 2024 (+22.3% at constant exchange rates). Over the same period, on-balance sheet deposits were up by +8.4% (+15.4% at constant exchange rates).

Liquidity showed a net surplus of inflows over loans in Poland and Egypt amounting to +€2.5 billion at 31 December 2025, and reaches €3.9 billion when Ukraine is included.

In 2025, revenues for **International Retail Banking excluding Italy** totalled €973 million, down 3.0% (+1.1% at constant exchange rates) compared to 2024. **Operating expenses** amounted to -€501 million, up 2.7% compared with 2024 (+4.3% at constant exchange rates). The **cost/income ratio** stood at 51.4% at the end of December 2025, decreasing by 2.8 percentage points compared to 2024. **Gross operating income** amounted to €472 million, down -8.3% (-2.2% at constant exchange rates) compared to 2024. **Cost of risk** stood at -€60 million, down -10.3% (-12.6% at constant exchange rates) compared to 2024. **Corporate income tax** amounted to -€93 million in 2025, compared to €169 million in 2024, a decrease of -45.2%. This decrease is mainly due to a reduction in the corporate income tax rate in Ukraine (25% in 2025 compared to 50% in 2024) and accounts for approximately +€37 million in positive tax effects this year. In addition, the corporate income tax rate will be increased to 50% in Ukraine in 2026 and will rise from 19% to 30% in Poland in 2026. All in all, **International Retail Banking excluding Italy** contributed €280 million to the **net income Group share**.

At 31 December 2025, the **entire Retail Banking business line** contributed 20% to the net income Group share of **Crédit Agricole S.A.**'s core businesses (excluding the Corporate Centre division) and 28% to revenues excluding the Corporate Centre.

At 31 December 2025, the division's equity amounted to €11.9 billion. Its risk weighted assets totalled €107.6 billion.

The RoNE (return on normalised equity) of Other IRB (excluding CA Italia) stood at 27.4% at 31 December 2025.

(1) Source: Abi January 2026: +1.6% December/December for all loans.

(2) Euribor 3M average down -96 bp Q4/Q4.

(3) At 31 December 2025, this scope corresponded to the aggregate of the Group's entities in Italy (CA Italia, CA Auto Bank, Crédit Agricole CIB, CAIW, Agos, Amundi, Vera Assicurazioni, Vera Protezione, CACI, CA Vita, CA Assicurazioni, CACEIS, CA Factoring).

(4) Excluding the effects of the first consolidation of Banco BPM but including €21 million equity-accounted for 2025.

CORPORATE CENTRE

This division comprises three types of so-called structural activities:

- Crédit Agricole S.A.'s Corporate Centre function, asset and liability management and management of debt connected with acquisitions of subsidiaries or equity investments and the net impact of tax consolidation for Crédit Agricole S.A.;
- the results of the private equity business and results of various other Crédit Agricole S.A. companies (notably CA Immobilier, Uni-médias, Foncaris, BforBank, etc.); this division includes the Crédit Agricole Transitions & Énergies (Transitions & Énergies) business line, which will be 50% equity-accounted at the end of 2024;
- the results of resource companies carrying out dedicated activities on behalf of Crédit Agricole Group and its subsidiaries: IT production (CAGIP), payment activities (CAPS) and real estate operations (SCI).

This segment also includes other non-structural items, such as the volatile technical impacts of intra-group transactions.

CORPORATE CENTRE (CC) - CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	(315)	(570)	-44.6%
Operating expenses	(181)	(116)	+56.7%
GROSS OPERATING INCOME	(496)	(685)	-27.5%
Cost of risk	10	(59)	n.m.
Equity-accounted entities	(673)	(82)	x 8.2
Net income on other assets	(0)	23	n.m.
INCOME BEFORE TAX	(1,160)	(803)	+44.5%
Tax	405	336	+20.3%
Net income from discontinued or held-for-sale operations	-	-	ns
NET INCOME	(755)	(466)	+61.9%
Non-controlling interests	(9)	(22)	-60.2%
NET INCOME GROUP SHARE	(764)	(488)	+56.5%

Over 2025, the net income Group share of the Corporate Centre division was -€764 million, a deterioration of -€276 million compared with 2024. The structural component contributed -€795 million, and other items of the division recorded a positive contribution of +€31 million in 2025.

(in millions of euros)	2025	2024	Δ 2025/2024
Of which structural net income	(795)	(539)	-262
Balance sheet & holding Crédit Agricole S.A.	(1,007)	(1,120)	+107
Other activities (CACIF, CA Immobilier, BforBank,...)	197	549	-353
Support functions (CAPS, CAGIP, SCI)	15	32	-17
Of which other elements of the division	31	51	-13

The “structural” component contribution was down €262 million compared with 2024 and can be broken down into three types of activities:

- the contribution of **Crédit Agricole S.A. Parent Company's corporate centre activities and functions** amounted to -€1,007 million in 2025, up +€107 million compared with 2024;
 - **businesses not attached to the business lines, such as CACIF (private equity), CA Immobilier and BforBank, and other investments (including Banco BPM)** contributed +€197 million in 2025, down -€353 million compared to 2024.
- In 2025, the stake held in Banco BPM generated +€229 million in net income Group share (including +€834 million in income comprising +€515 million in revaluation of securities and instruments

at fair value and +€318 million in dividends, +€21 million equity-accounted, -€19 million in taxes, and a -€607 million impact of first-time equity-accounted consolidation) compared to net income Group share of +€590 million generated in 2024 (including +€607 million in revenues consisting of +€462 million in revaluation of securities and instruments at fair value and +€114 million in dividends, and -€16 million in taxes). Following its consolidation in the fourth quarter of 2025, the 20.1% stake in Banco BPM should generate approximately €400 million ⁽¹⁾ in net income Group share per year from 2026 onwards;

- lastly, the contribution of the Group's **support functions** amounted to €15 million in 2025, down -€17 million compared to 2024.

At 31 December 2025, risk weighted assets stood at €42 billion.

(1) Taking into account a one-quarter delay compared with Banco BPM's publication, as Banco BPM publishes after Crédit Agricole S.A.

EARNINGS PER SHARE

Earnings per share represent a company's net income Group share divided by the average number of shares outstanding excluding treasury shares. It indicates the portion of profit attributable to each share (not the portion of earnings paid out to each shareholder, which is the dividend). It may decrease, assuming the net income Group share remains unchanged, if the number of shares increases.

CRÉDIT AGRICOLE S.A. – DATA PER SHARE

(in millions of euros)		2025	2024	Δ 2025/2024
Net income Group share		7,074	7,087	-0.2%
– Interests on AT1 including issuance costs, before tax		(556)	(463)	+20.2%
– Foreign exchange impact on reimbursed AT1		80	(266)	n.a.

MAIN CHANGES IN THE CONSOLIDATED BALANCE SHEET

At 31 December 2025, the consolidated balance sheet of Crédit Agricole S.A. amounted to €2.374 billion, up €64.5 billion, i.e. 2.8% compared to 31 December 2024.

This increase mainly stemmed from:

- the €42.6 billion increase in financial assets at fair value through profit or loss;
- the €18.3 billion increase in financial assets at amortised cost.

ANALYSIS OF THE MAIN ITEMS

Loans and receivables due from customers and credit institutions totalled €1,129.4 billion at end-December 2025, an increase of 1.4% compared to 2024, i.e. +€15.9 billion.

Loans and receivables due from customers totalled €559.2 billion at 31 December 2025, compared with €548.1 billion a year earlier, i.e. an increase of 2.0%. This increase is mainly due to a rise in customer outstandings, primarily at Crédit Agricole CIB (+€5 billion) and LCL (+€3 billion).

Loans and receivables due from credit institutions were up to €570.1 billion (0.8%) at 31 December 2025 compared with €565.4 billion at end-2024. The increase is mainly due to a rise in outstandings at Crédit Agricole CIB.

Amounts due to credit institutions and customers totalled €1,080.6 billion at end-2025, up 3.3% compared to end-2024, or €34.0 billion.

This increase was mainly driven by amounts due to customers, which rose €26.4 billion (3.0%) to €894.5 billion. This increase is mainly due to the rise in customer deposits at Crédit Agricole CIB.

Amounts due to credit institutions rose by +€7.6 billion to €186.0 billion (+4.3%), mainly due to the increase in customer deposits at Crédit Agricole CIB.

Financial assets at fair value through profit or loss amounted to €643.6 billion at 31 December 2025, up 7.1% year-on-year, i.e. +€42.6 billion. This increase is mainly attributable, at Crédit Agricole CIB,

to growth in debt and equity portfolios and in repo activity, and, at Crédit Agricole Assurances, to growth in unit-linked contracts and debt portfolios.

Financial liabilities at fair value through profit or loss amounted to €423.9 billion at 31 December 2025, up +€10.4 billion year-on-year (2.5%). At Crédit Agricole CIB, this increase was mainly due to a rise in repo outstandings, partially offset by a decrease in the MtM of derivatives.

Financial assets at fair value through other comprehensive income amounted to €234.0 billion at end-December 2025, up +€10.4 billion (4.6% year-on-year).

The amount of **investments in equity-accounted entities** amounted to €7.1 billion at the end of 2025, up +€4.2 billion, mainly attributable to the consolidation of Banco BPM S.p.A. for €3.0 billion.

Central bank deposits increased by +€2.5 billion, i.e. +1.5%, to stand at €164.8 billion at the end of December 2025. This increase is mainly due to an increase in deposits made by the various Group entities.

Hedging derivatives in assets and liabilities decreased by -14.8% and -13.2% respectively over the year, mainly due to changes in the rate curves.

Accruals, prepayments and sundry assets amounted to €44.5 billion at 31 December 2025, down -€7.5 billion compared to 2024. This decrease was mainly due to a decline in deposits and margin calls on derivatives and repos.

Insurance contracts issued that are liabilities were up 7.0% in 2025 from 2024, reaching €388.4 billion. This €25.5 billion rise is due in particular to the insurance liability increases (mainly under the VFA model) associated with greater assets.

The **debt securities** item stood at €285.1 billion at the end of 2025, stable compared with the end of 2024.

Equity amounted to €85.9 billion at 31 December 2025, a year-on-year increase of 3.1%. Equity Group share increased 4.0% over the year to reach €77.7 billion at the end of 2025.

PRESENTATION OF THE CRÉDIT AGRICOLE GROUP'S CONSOLIDATED FINANCIAL STATEMENTS

CHANGES TO ACCOUNTING POLICIES AND PRINCIPLES

Changes to accounting policies and principles are described in Note 1 to the Crédit Agricole Group's consolidated financial statements for the year ended 31 December 2025.

CHANGES IN THE SCOPE OF CONSOLIDATION

Changes in the scope of consolidation are described in Notes 2 and 12 to the Crédit Agricole Group's consolidated financial statements for the year ended 31 December 2025.

CRÉDIT AGRICOLE GROUP OPERATIONS AND CONSOLIDATED RESULTS

For full-year 2025, stated net income Group share was €8,754 million, compared with €8,640 million in 2024, representing an increase of +1.3%.

(in millions of euros)

	2025	2024	Δ 2025/2024
Revenues	39,558	38,060	+3.9%
Operating expenses	(23,568)	(22,729)	+3.7%
GROSS OPERATING INCOME	15,990	15,332	+4.3%
Cost of credit risk	(3,452)	(3,191)	+8.2%
Equity-accounted entities	(423)	283	ns
Net income on other assets	437	(39)	ns
Change in value of goodwill	0	4	-97.8%
INCOME BEFORE TAX	12,552	12,388	+1.3%
Tax	(3,018)	(2,888)	+4.5%
Net income from discontinued or held-for-sale operations	0		ns
NET INCOME	9,535	9,500	+0.4%
Non-controlling interests	(781)	(860)	-9.2%
NET INCOME GROUP SHARE	8,754	8,640	+1.3%
COST/INCOME RATIO EXCL. FRU (%)	59.6%	59.7%	-0.1 pp

Revenues amounted to €39,558 million, up +3.9% compared to the end of 2024, driven by all business lines.

Underlying **operating expenses** amounted to -€23,568 million, up +3.7% compared to 2024, due to the support for the development of the businesses, IT expenditure and the integration of scope effects detailed in the divisions. The **cost/income ratio** for 2025 was 59.6%, stable (-0.1 percentage point) compared to 2024.

Gross operating income thus reached €15,990 million, up +4.3% compared to 2024.

The **cost of risk** for 2025 was up at -€3,452 million (including -€78 million in cost of risk on performing loans (levels 1 and 2), -€3,202 million in cost of risk on non-performing loans and -€172 million in other risks, mainly corresponding to legal provisions), representing an increase of +8.2% compared with 2024.

At 31 December 2025, risk indicators confirmed the **quality of the Crédit Agricole Group's assets and the level of coverage of its risks**. Provisions totalled €22.2 billion at end-December 2025 (including €12.6 billion for the Regional Banks), of which 41% were provisions on performing loans (46% for the Regional Banks). Prudent management of these provisions enabled the Crédit Agricole Group to report a high overall coverage ratio for non-performing loans of 82.2% at end-December 2025.

Income from equity-accounted entities amounted to -€423 million, compared with +€283 million at the end of 2024, impacted by the first consolidation of Banco BPM for -€607 million in the fourth quarter of 2025.

Net income from other assets was €437 million, compared with -€39 million in 2024, benefiting from the +€453 million capital gain from the deconsolidation of Amundi US in the second quarter of 2025.

Pre-tax income before discontinued operations and non-controlling interests was thus up +1.3% at €12,552 million. The tax charge was -€3,018 million, up +4.5%, impacted by the additional corporate income tax charge of +€280 million.

Net income before non-controlling interests amounted to €9,535 million, up slightly by +0.4 percentage point compared to 2024. **Non-controlling interests** were -€781 million, down -9.2%, impacted in particular by the CACEIS minority buyout (+€140 million) in 2025.

Net income Group share for 2025 was €8,754 million, up +1.3% compared to 2024.

SOLVENCY

At 31 December 2025, the Crédit Agricole Group's phased-in Common Equity Tier 1 (CET1) ratio stood at 17.3%. The Crédit Agricole Group therefore had a substantial buffer of 7.4 percentage points between the level of its CET1 ratio and the 9.9% SREP requirement.

Over 2025, the phased-in CET1 ratio increased by +12 basis points.

- The CET1 ratio benefited this quarter from a positive impact of 109 basis points linked to retained earnings.
- Changes in risk weighted assets related to business line organic growth impacted the CET1 ratio by -76 basis points.
- The implementation of CRR3 (Basel 4) regulations from 1 January 2025 impacted the CET1 ratio by +56 basis points.

- Model and methodology effects impacted the CET1 ratio by -51 basis points.
- Lastly, M&A and other effects had an unfavourable effect of -26 basis points and included, in particular, the impact of the buyout of the CACEIS minorities for -15 basis points (and of the Banco BPM stake, increased to 19.8% in the second quarter of 2025 and then to 20.1% in the third quarter of 2025, the partnership with Victory Capital), as well as active balance sheet management, particularly through SRT transactions, for +7 basis points.

The phased-in Tier 1 ratio stood at 18.5%, while the phased-in total ratio was 20.9% at end-December 2025.

The phased-in leverage ratio stood at 5.5%, well above the regulatory requirement of 3.5%.

MAXIMUM DISTRIBUTABLE AMOUNT (MDA) TRIGGER THRESHOLD

The transposition of the Basel regulations into European law (CRD) introduced a mechanism restricting distributions applicable to dividends, AT1 instruments and variable remuneration. The principle of the Maximum Distributable Amount (MDA), the maximum amount that a bank can allocate to distributions, aims at restricting distributions where they would result in non-compliance with the combined capital buffer requirement.

The distance to the MDA trigger threshold is therefore the minimum between the respective distances to the SREP requirements for CET1 capital, Tier 1 capital and total capital.

At 31 December 2025, the **Crédit Agricole Group** had a safety margin of **676 basis points above the MDA trigger threshold, i.e. €45 billion in total capital**. At the Crédit Agricole Group level, it is the distance to the MMA trigger threshold that determines the distance to the distribution restriction.

Failure to comply with the leverage ratio buffer requirement would result in a distribution restriction and the calculation of a maximum distributable amount (L-MDA).

At 31 December 2025, the **Crédit Agricole Group** had a safety margin of **204 basis points above the L-MDA trigger threshold, i.e. €45 billion in Tier 1 capital**.

At 31 December 2025, **Crédit Agricole S.A.** had a safety margin of **301 basis points above the MDA trigger threshold, i.e. €13 billion in CET1 capital**. Crédit Agricole S.A. is not subject to the L-MDA requirement.

TLAC

The Crédit Agricole Group must meet the following TLAC ratio requirements at all times:

- a TLAC ratio above 18% of risk weighted assets (RWA), plus – in accordance with the European directive CRD 5 – a combined capital buffer requirement (including, for the Crédit Agricole Group, a capital conservation buffer of 2.5%, a G-SIB buffer of 1% [which will increase to 1.5% on 1 January 2026 following the ACPR notification on 27 November 2024], a countercyclical buffer set at 0.78%, and a systemic risk buffer of 0.10% for the Crédit Agricole Group at 31 December 2025). Considering the combined capital buffer requirement, the Crédit Agricole Group must comply with a TLAC ratio of above 22.4%;
- a TLAC ratio of above 6.75% of the Leverage Ratio Exposure (LRE).

The target of the 2028 Medium-Term Plan is to maintain a TLAC ratio for Crédit Agricole Group of around 27% of RWAs excluding eligible senior preferred debt.

At 31 December 2025, the **Crédit Agricole Group's TLAC ratio stood at 27.0% of RWA and 8.1% of the LRE, excluding eligible senior preferred debt⁽¹⁾**, well above the requirements. The TLAC is characterised by seasonality linked to issuance, hence it is normal to see it decline at the end of the year. On an annual basis, the TLAC is stable compared with 31 December 2024, in connection with pre-funding transactions carried out in the fourth quarter of 2025.

The Group thus has a TLAC ratio excluding eligible senior preferred debt that is 460 basis points, or €30 billion, above the current requirement of 22.4% of RWA.

In 2025, €14.6 billion equivalent was issued on the market (Tier 2 and senior non-preferred debt) in addition to €2.6 billion in AT1. At the end of December, the amount of Crédit Agricole Group senior non-preferred securities included in the TLAC ratio calculation stood at €37.7 billion.

MREL

The minimum levels to be met are determined in decisions made by the resolution authorities and notified to each institution, then reviewed periodically. At 31 December 2025, the Crédit Agricole Group must meet a minimum total MREL requirement of:

- 21.79% of RWA, plus – in accordance with the European directive CRD 5 – a combined capital buffer requirement (including, for the Crédit Agricole Group, a capital conservation buffer of 2.5%, a G-SIB buffer of 1% [which will increase to 1.5% on 1 January 2026 following the ACPR notification on 27 November 2024], a countercyclical buffer set at 0.78%, and a systemic risk buffer of 0.10% for the Crédit Agricole Group at 31 December 2025). Taking into account the overall capital buffer requirement, the Crédit Agricole Group must comply with a total MREL ratio of more than 26.2%;
- 6.25% of the LRE.

⁽¹⁾ As part of its annual resolvability analysis, the Crédit Agricole Group has chosen to continue to waive the option provided for in Article 72 ter-(3) of the CRR to use senior preferred debt to meet the TLAC requirement in 2025.

At 31 December 2025, the **Crédit Agricole Group** had a **total MREL ratio of 31.8% of RWA and 9.5% of the LRE**, well above the requirement.

An additional subordination requirement ("subordinated MREL") is also determined by the resolution authorities and expressed as a percentage of RWA and the LRE. At 31 December 2025, this subordinated MREL requirement for the **Crédit Agricole Group** amounted to:

- 17.19% of RWA, to which the combined capital buffer requirement is added. Taking into account the combined capital buffer requirement, the **Crédit Agricole Group** must comply with a subordinated MREL ratio of more than 21.6%;
- 6.25% of the LRE.

At 31 December 2025, the **Crédit Agricole Group** had a **subordinated MREL ratio of 27.0% of RWA and 8.1% of the LRE**, well above the requirement.

The distance to the trigger threshold for the maximum distributable amount linked to MREL requirements (M-MDA) corresponds to the minimum between the respective distances to MREL, subordinated MREL and TLAC requirements expressed in RWA.

At 31 December 2025, the **Crédit Agricole Group** thus had a safety margin of **460 basis points above the M-MDA trigger threshold, i.e. €30 billion in CET1 capital**; the distance to the M-MDA trigger threshold corresponds to the distance between the TLAC ratio and the corresponding requirement.

LIQUIDITY

Liquidity is measured at **Crédit Agricole Group** level.

Crédit Agricole Group's liquidity position is solid. Standing at €1,732 billion at 31 December 2025, the Group's liquidity balance sheet ⁽¹⁾ shows a surplus of stable funding resources over stable application of funds of €194 billion, up €17 billion compared with end-December 2024.

The Group's liquidity reserves, at market value and after haircuts, amounted to €485 billion at 31 December 2025, up +€12 billion compared to 31 December 2024. Liquidity reserves (without Cash and Central Bank deposits) covered more than twice the short-term debt net of treasury assets.

At 31 December 2025, the average LCRs (calculated over 12 rolling months) stood at 136% for the **Crédit Agricole Group** (representing a surplus of €85 billion) and 141% for **Crédit Agricole S.A.** (representing a surplus of €83 billion). It should be noted that the **Crédit Agricole Group's** LCR exceeds the 2028 Medium-Term Plan target of 110% to 130%.

Furthermore, at 31 December 2025, the NSFRs of the **Crédit Agricole Group** and **Crédit Agricole S.A.** stood at 119.1% and 113.9%, respectively.

The Group continues to follow a prudent policy as regards medium-to-long-term refinancing, with a very diversified access to markets in terms of investor base and products.

At 31 December 2025, the Group's main issuers raised the equivalent of €30.9 billion in medium/long-term debt on the markets, 83% of which was issued by **Crédit Agricole S.A.**

In particular, the following amounts are noted for the Group excluding **Crédit Agricole S.A.**:

- **Crédit Agricole Assurances** issued €750 million in RT1 Perpetual NC 10.75 years;
- **Crédit Agricole Personal Finance & Mobility** issued:
 - €1 billion in EMTN issuances and €0.9 billion in securitisations through **Crédit Agricole Auto Bank (CAAB)**;
 - €1.4 billion in securitisations through Agos;
- **Crédit Agricole Italia** issued one senior secured debt issuance totalling €1 billion;
- **Crédit Agricole nextbank (Switzerland)** issued two tranches in senior secured format for a total of 200 million Swiss francs, of which 100 million in green bond format.

At 31 December 2025, **Crédit Agricole S.A.** raised the equivalent of **€23.1 billion through the market** ⁽²⁾.

The bank raised the equivalent of €23.1 billion, of which €11.2 billion in senior non-preferred debt and €3.4 billion in Tier 2 debt, as well as €2.8 billion in senior preferred debt and €5.7 billion in senior secured debt at end-December. The financing comprised a variety of formats and currencies:

- €5.25 billion ⁽³⁾;
- 6.9 billion US dollars (€6.4 billion equivalent);
- 1.6 billion pounds sterling (€1.9 billion equivalent);
- 179.3 billion Japanese yen (€1.1 billion equivalent);
- 0.4 billion Singaporean dollars (€0.3 billion equivalent);
- 2.1 billion Australian dollars (€1.2 billion equivalent);
- 0.9 billion Canadian dollars (€0.5 billion equivalent);
- 0.6 billion Swiss francs (€0.7 billion equivalent).

At end-December, **Crédit Agricole S.A.** had issued 70% of its funding plan in currencies other than the euro.

In addition, **Crédit Agricole S.A.**:

- issued, on 13 February 2025, a PerpNC10 AT1 bond for €1.5 billion at an initial rate of 5.875% and announced on 30 April 2025 the regulatory call exercise for the AT1 with €103 million outstanding (XS1055037920) – ineligible, grandfathered until 28 June 2025 – redeemed on 30 June 2025;
- issued, on 2 September 2025, a PerpNC10 AT1 bond for US\$1.25 billion at an initial rate of 7.125%, launched a parallel public buyback offer on a US\$ bond (US225313AJ46/USF2R125CD54) and £ bond (XS2353100402/ XS2353099638) and announced on 30 October 2025 that it would exercise the call option on the US\$ AT1 with an outstanding amount of US\$458 million (US225313AJ46/USF2R125CD54) with repayment on 23 December 2025.

The 2025 MLT market funding programme had been set at €20 billion, with equilibrium between senior preferred or senior secured debt and senior non-preferred or Tier 2 debt. The programme was 115% completed at 31 December 2025.

The 2026 MLT market funding programme was set at €18 billion, with €6 billion in senior preferred or senior secured debt and €12 billion in senior non-preferred or Tier 2 debt.

(1) At 31 December 2024, changes have been made to the liquidity balance sheet: See Chapter 5, part 2.6 "Balance sheet management" for further information.

(2) Excluding AT1 issuance.

(3) Excl. senior secured debt.

ANALYSIS OF THE ACTIVITY AND THE RESULTS OF THE CRÉDIT AGRICOLE GROUP'S DIVISIONS AND BUSINESS LINES

CONTRIBUTION OF THE BUSINESS LINES TO NET INCOME GROUP SHARE OF CRÉDIT AGRICOLE GROUP

(in millions of euros)	2025	2024
Retail Banking in France	2,238	2,250
International Retail Banking	956	916
Asset Gathering and Insurance	3,235	2,889
Large Customers	2,786	2,502
Specialised Financial Services	333	625
Corporate Centre	(795)	(542)
TOTAL	8,754	8,640

Unless mentioned otherwise, the results by business will be commented on the basis of the stated results.

RETAIL BANKING IN FRANCE – REGIONAL BANKS

(in millions of euros)	2025	2024	Δ 2025/2024

Gross customer capture stood at 1,186,000 new customers over the year. The share of customers using their current accounts as their main accounts and the proportion of customers using digital tools continue to rise. The market share of loans (total loans) stood at 22.8% (at the end of September 2025, source: Banque de France).

Loan production remains buoyant, up +16.5% compared with the fourth quarter of 2024, in line with the +17.6% increase in home loans and 16.9% increase in specialised markets. The average production rate for home loans reached 2.98%. The overall rate for the total loan portfolio improved over the year (+6 basis points). Loan outstandings reached €658 billion at the end of December 2025, up +1.6% over the year and rising across all markets, with a slight increase of +0.6% over the quarter.

Customer assets rose by +3.6% year-on-year to €944 billion at the end of December 2025. This growth was driven both by on-balance sheet deposits, which reached €616 billion (+1.7% year-on-year), driven by demand deposits (+3%) and passbook accounts (+3.9%), and by off-balance sheet deposits, which reached €328 billion (+7.6% year-on-year), benefiting from strong inflows into life insurance. **The market share of on-balance sheet deposits**

increased compared to last year, reaching 20.4% (source: Banque de France, data at end-September 2025, up 0.1 percentage point compared to September 2024). **The equipment rate for property and casualty insurance** stood at 44.7% at the end of December 2025 and continued to rise (+0.8 pp compared to December 2024). In terms of **payment instruments**, the number of cards rose by +1.7% year-on-year, as did the share of premium cards in the total number of cards, which increased by 2.8 percentage points year-on-year and now represents 19.2% of the total.

The contribution of the Regional Banks to Crédit Agricole Group's income for 2025 amounted to €1,545 million (+8.5% compared with 2024), with revenues of €13,912 million (+6.1%), expenses of -€10,252 million (+3.0%) and cost of risk of -€1,471 million (+11.5%).

For 2025, **revenues including the SAS Rue La Boétie dividend** were up (+6.2%) compared to the same period in 2024. **Operating expenses** rose by +2.9% and the **cost of risk** increased by +11.8%. **Net income Group share for the Regional Banks, including the SAS Rue La Boétie dividend**, amounted to €3,753 million, up +8.1% compared to 2024.

RETAIL BANKING IN FRANCE (LCL)**RETAIL BANKING IN FRANCE (LCL) – CONTRIBUTION TO RESULTS**

<i>(in millions of euros)</i>	2025	2024	Δ 2025/2024
Revenues	3,945	3,872	+1.9%
Operating expenses	(2,524)	(2,448)	+3.1%
GROSS OPERATING INCOME	1,421	1,424	-0.2%
Cost of risk	(410)	(373)	+9.9%
Net income on other assets	4	5	-34.0%
INCOME BEFORE TAX	1,015	1,056	-4.0%
Tax	(321)	(229)	+40.0%
NET INCOME	694	827	-16.1%
Non-controlling interests	(0)	(0)	+20.6%
NET INCOME GROUP SHARE	693	827	-16.1%
COST/INCOME RATIO (%)	64.0%	63.2%	+0.8 pp

Outstanding loans stood at €173.8 billion at end-December 2025, a +0.5% increase quarter-on-quarter and +1.9% year-on-year (of which +1.1% for home loans, +2.6% for loans to professionals, +4.7% for loans to corporates). Customer assets totalled €259.3 billion at end-December 2025, up +1.7% year-on-year, driven in particular by off-balance sheet resources, with balance sheet savings showing a very slight decline.

Gross customer capture stood at 262,000 new customers over 2025. The equipment rate for car, multi-risk home, health, legal, all mobile phones or personal accident insurance rose year-on-year by 0.6 percentage point over the year to stand at 28.5% at end December 2025.

In 2025, LCL revenues totalled €3,945 million, a +1.9% increase compared to 2024. The net interest margin increased (+0.9%), benefiting from the gradual repricing of loans and lower resource costs. Fee and commission income rose by +2.8% compared to 2024, particularly for insurance. Expenses rose by +3.1% over the period and the cost/income ratio was higher (+0.8 percentage point compared with 2024) at 64.0%. Gross operating income was stable at -0.2% and the cost of risk rose by +9.9%.

Lastly, the business line's contribution to net income Group share, including the additional corporate income tax in France, amounted to €693 million (-16.1% compared to 2024).

The business line contributed 7% to the net income Group share of the Crédit Agricole Group's business lines (excluding the Corporate Centre division) at the end of December 2025 and 9% to revenues excluding the Corporate Centre division.

INTERNATIONAL RETAIL BANKING

INTERNATIONAL RETAIL BANKING (IRB) – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	4,122	4,153	-0.8%
Operating expenses	(2,258)	(2,225)	+1.5%
GROSS OPERATING INCOME	1,864	1,928	-3.3%
Cost of risk	(327)	(316)	+3.2%
Equity-accounted entities	-	-	ns
Net income on other assets	0	0	+44.7%
INCOME BEFORE TAX	1,538	1,612	-4.6%
Tax	(435)	(536)	-18.9%
Net income from discontinued or held-for-sale operations	0	-	ns
NET INCOME	1,103	1,076	+2.5%
Non-controlling interests	(147)	(160)	-8.0%
NET INCOME GROUP SHARE	956	916	+4.4%
COST/INCOME RATIO (%)	54.8%	53.6%	+1.2 pp

Over 2025, international retail banking revenues remained stable (-0.8% compared with 2024) at €4,122 million. Expenses were kept under control at -€2,258 million, up +1.5% compared to 2024, benefiting from a lower contribution to the DGS in 2025, which was recorded at -€58 million in the fourth quarter of 2024 (compared with -€5 million in the fourth quarter of 2025), a reversal of expenses of +€34 million in the third quarter of 2025, but impacted by a net addition of -€65 million in restructuring costs in the fourth quarter of 2025. **Gross operating income** stood at €1,864 million, down -3.3%. The **cost of risk** rose by +3.2% to -€327 million compared with 2024, taking into account non-recurring items of -€30 million relating to the Banca Progetto provision. In all, net income Group share of International Retail Banking was €956 million, compared with €916 million in 2024, an increase of +4.4% year-on-year.

In 2025, International Retail Banking contributed 10% to the underlying net income Group share of the Crédit Agricole Group's business lines (excluding Corporate Centre) and 9% to their revenues excluding the Corporate Centre.

ITALY

CA Italia's activity was strong in 2025. Gross customer capture over the year thus reached 212,000 new customers. The equipment rate for automotive, home, health, legal, mobile phone and personal accident insurance was 20.3% at CA Italia, up +0.3 percentage points compared to the fourth quarter of 2024.

CA Italia's loan outstandings at the end of December 2025 stood at €62.8 billion, up 1.0% compared to the end of December 2024 (in a recovering Italian market), driven by the individual market, where loan outstandings increased by +2.3%, and stable in the corporate market (including SMEs). The loan stock rate was stable compared to the third quarter of 2025 (+1 bp Q4/Q3) and down 83 basis points compared to the fourth quarter of 2024 (less than the market).

Customer assets at end-December 2025 totalled €123.7 billion, up 3.1% compared with end-December 2024; on-balance sheet deposits

were up 0.7% compared with end-December 2024, particularly in the individual market (less expensive deposits). Lastly, off-balance sheet deposits increased by 6.0% over the same period and benefited from positive net inflows and positive market effects.

For 2025, revenues for Crédit Agricole Italia were stable at €3,054 million. Operating expenses amounted to -€1,675 million, up 0.9% on full-year 2024, benefiting from a lower DGS contribution in 2025 (-€5 million in 2025 compared to -€58 million in 2024) but penalised by non-recurring items (reversal of expenses of +€34 million in the third quarter compared with -€65 million net of restructuring expenses recognised in the fourth quarter of 2025). **Gross operating income** thus came to €1,379 million, down -1.2% compared with full-year 2024. **Cost of risk** stood at -€272 million, up 10.4% compared with full-year 2024. In all, net income Group share of CA Italia totalled €662 million, a decrease of 2.0% compared to 2024.

RESULTS FOR CRÉDIT AGRICOLE GROUP IN ITALY ⁽¹⁾

For full-year 2025, the underlying net income Group share of entities in Italy was €1,097 million. The breakdown by business line is as follows: Retail Banking 56%; Specialised Financial Services 11%; Asset Gathering and Insurance 21%; and Large Customers 12%.

INTERNATIONAL RETAIL BANKING – EXCLUDING ITALY

For International Retail Banking excluding Italy, loan outstandings stood at 7.8% billion, up 6.8% at current exchange rates at end-December 2025 compared with end-December 2024 (+7.6% at constant exchange rates). Customer assets rose by 5.0% to €12.7 billion over the same period at current exchange rates (7.4% at constant exchange rates).

In Poland in particular, loan outstandings increased by 3.7% compared to end-December 2024 (+2.2% at constant exchange rates) and on-balance sheet deposits by 5.4% (+3.9% at constant exchange rates). Loan production in Poland was up this quarter compared with the fourth quarter of 2024 (+8.1% at current exchange rates and +6.3% at constant exchange rates). In addition, gross new customer capture in Poland reached 58,000 this quarter.

(1) At 31 December 2025, this scope corresponds to the aggregation of all Group entities present in Italy: CA Italia, CACF (Agos, Leasys, CA Auto Bank), CAA (CA Vita, CACI, CA Assicurazioni), Amundi, Crédit Agricole CIB, CAIWM, CACEIS.

In Egypt, commercial activity was dynamic across all markets. Loan outstandings increased by +15.0% between end-December 2025 and end-December 2024 (+22.3% at constant exchange rates). Over the same period, on-balance sheet deposits were up by +8.4% (+15.4% at constant exchange rates).

In 2025, revenues for International Retail Banking excluding Italy totalled €1,067 million, down -2.7% compared to 2024. Operating expenses amounted to -€583 million, up +3.2% compared to 2024. The cost/income ratio stood at 54.6% at the end of December 2025, decreasing by 3.1 percentage points compared to 2024. Gross operating income came to €485 million, down -8.9%

compared to 2024. Cost of risk stood at -€55 million, down -21.8% compared with 2024. Corporate income tax amounted to -€96 million in 2025, compared to -€170 million in 2024, a decrease of -43.6%. This decrease is mainly due to a reduction in the corporate income tax rate in Ukraine (25% in 2025 compared to 50% in 2024) and accounts for approximately +€37 million in positive tax effects this year. In addition, the corporate income tax rate will be increased to 50% in Ukraine in 2026 and will rise from 19% to 30% in Poland in 2026.

All in all, International Retail Banking excluding Italy contributed €294 million to net income Group share.

ASSET GATHERING DIVISION

The Asset Gathering division encompasses Insurance (Crédit Agricole Assurances), Asset management (Amundi) and Wealth management (CA Indosuez Wealth Management).

COST/INCOME RATIO (%)	47.0%	44.1%	+3.0 pp

At the end of December 2025, the assets under management of the Asset Gathering division stood at €3,051 billion, up +€77 billion over the quarter (or +2.6%), mainly due to positive net inflows in asset management and insurance and a favourable market and foreign exchange impact over the period. Over the year, assets under management rose by +€184 billion, or +6.4%.

In 2025, the asset gathering division generated revenues of €7,968 million, up 4.4% compared to 2024. Expenses increased by +11.4% to €3,747 million. The cost/income ratio was 47.0%, up 2.5 percentage points compared to 2024. Gross operating income amounted to €4,220 million, down -1.1% compared to 2024. Equity-accounted entities contributed €201 million, up +63.2%, mainly due to the contribution of Victory Capital from the second quarter of

2025 in the asset management division; the stake in Victory Capital is now 26.7%. Net income from other assets was impacted by the recognition of a €448 million capital gain also related to the deconsolidation of Amundi US. Tax amounted to -€1,044 million, up +7.6%. Net income Group share of the Asset Gathering division includes the additional corporate income tax charge in France and amounted to €3,235 million, up 12.0% compared to 2024 (26.5% for asset management, 5.0% for insurance and 19.8% for wealth management).

At end-December 2025, the Asset Gathering, contributed 34% to the net income Group share of the Crédit Agricole Group's core businesses and 19% to revenues (excluding the Corporate Centre division).

INSURANCE (CA ASSURANCES)

The Insurance business line reflects the results of Crédit Agricole Assurances, a wholly owned subsidiary of Crédit Agricole S.A., which covers all insurance businesses: savings/retirement, property & casualty, death & disability, creditor and group insurance.

INSURANCE – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ 2025/2024
Revenues	2,960	2,838	+4.3%

The insurance business (Crédit Agricole Assurances) performed very well, with total revenues reaching a high level of €13.1 billion, up +20.4% compared with the fourth quarter of 2024. Annual revenues reached a record €52.4 billion.

In Savings/Retirement, in the fourth quarter of 2025, revenues reached €9.9 billion, up +19.5% compared to the fourth quarter of 2024, in a favourable market environment. The momentum in gross inflows was observed both in France (+20%) and internationally (+17%); and in both unit-linked products (+21%) and euro-denominated products (+19%), as well as in group pensions with a new major contract. The proportion of unit-linked products in gross inflows was 37.6%, up from the fourth quarter of 2024 (+0.2 points). Net inflows were strong, amounting to +€3.9 billion (+€1.4 billion compared to the fourth quarter of 2024), consisting of net inflows of €1.6 billion into euro-denominated funds and €2.3 billion into unit-linked funds.

Assets under management (savings, retirement and funeral insurance) continued to grow and came to €373.0 billion (up +€25.7 billion year-on-year, or +7.4%). Growth in assets under management was driven by record net inflows of €15.9 billion and positive market effects. Unit-linked contracts accounted for 31.1% of outstandings, up 1.2 percentage points compared to the end of December 2024.

In property and casualty insurance, premium income amounted to €1.5 billion in the fourth quarter of 2025, up +22.7% compared to the fourth quarter of 2024. The average premium benefited from a positive price effect resulting from rate increases driven by climate change and inflation in repair costs, as well as changes in the product mix and a volume effect, with a portfolio of 17.9 million policies at the end of December 2025 (up 7.3% year-on-year). Finally, the combined ratio at the end of December 2025 stood at 94.6%, up +0.2 percentage point year-on-year.

In death & disability/creditor insurance/group insurance, fourth-quarter 2025 premium income stood at €1.7 billion, up +24.0% compared with the fourth quarter of 2024. Individual death &

disability insurance grew by +17.3% due to an increase in the average amount of coverage. Creditor insurance remained stable over the period, with slight growth in mortgage lending partially offset by a decline in international consumer finance. Group insurance rose sharply (+27.6% compared to the fourth quarter of 2024), notably with the entry into force of the IEG contract on 1 July.

The CSM (Contractual Service Margin) stood at €27.5 billion at the end of December 2025, up +9.1% compared to the end of December 2024. It benefited from a new business contribution that exceeded the CSM allocation and a positive market effect. The allocation factor was 7.5% (down -0.2 point compared to 2024).

Revenues of the insurance business reached €2,960 million, up 4.3% compared to 2024, reflecting significant growth in outstanding amounts (record net inflows for the year and positive market effect), the change in the scope of consolidation at the end of 2025 with the addition of PiùVera Assicurazioni, PiùVera Protezione and Abanca SG for +€56 million, and a contained claims experience with no major climate impact in 2025. Revenues for the year include the impact of Tier 2 debt coupons replacing AT1 debt (the cost of which was recognised in non-controlling interests). Non-attributable expenses amounted to -€426 million, up +25.1%, also taking into account the change in the scope of consolidation. Gross operating income was €2,534 million (+1.4% compared to 2024). The cost/income ratio was 14.4% at the end of 2025. The tax charge was -€555 million, compared with -€571 million in 2024. Net income Group share reached €1,972 million, up +5.0% compared with 2024.

Insurance contributed 21% to the underlying net income Group share of Crédit Agricole Group's business lines (excluding the Corporate Centre division) at the end of December 2025 and 7% to their revenues.

Crédit Agricole Assurances also demonstrated its solidity and resilience with a Solvency 2 regulatory prudential ratio of 195% at 31 December 2025.

ASSET MANAGEMENT (AMUNDI)

The Asset Management business line reflects the results of Amundi, a subsidiary that is 69.0%-owned by Crédit Agricole Group, 67.6% of which is held by Crédit Agricole S.A.

Amundi's assets under management grew by 2.7% over the quarter and 6.2% over the year, reaching a new record of €2,380 billion at the end of December 2025. Assets under management benefited from high inflows and positive market effect and foreign exchange impact. Net inflows were driven by passive management and active management, led by bond and diversified strategies. Net inflows were positive for retail, institutional investors and JVs. In retail, net inflows benefited from continued strong momentum in third-party distribution, particularly thanks to digital platforms. In the Institutional segment, net inflows benefited from the acquisition of several significant mandates. The JV segment posted strong inflows in India. Cumulative net inflows for 2025 were very high, reaching €88 billion, up +58% compared with last year.

For 2025, revenues amounted to €3,337 million (-1.2%), impacted by the scope effect related to the deconsolidation of Amundi US. Operating expenses rose by 3.2% and were impacted by an -€88 million provision for restructuring. The cost/income ratio was

58%, up +2.4 points compared to 2024. Thus, gross operating income was down -6.6% compared to 2024. Income from equity-accounted entities increased by +63.2% (from €123 million in 2024 to €201 million in 2025), reflecting in particular the integration of Victory Capital's contribution since the second quarter of 2025. Income from Asian joint ventures increased by +10%. **Net income from other assets** was impacted by the recognition of a non-monetary gain of €449 million also related to the completion of the transaction with Victory Capital in the second quarter of 2025. In all, net income Group share for 2025, which includes the additional corporate income tax in France, amounted to €1,090 million, up 26.5%.

Asset Management contributed 11% to the net income Group share of the Crédit Agricole Group's business lines (excluding the Corporate Centre division) at the end of December 2025 and 8% of their underlying revenues.

WEALTH MANAGEMENT ⁽¹⁾ (CA INDOSUEZ WEALTH MANAGEMENT)

The assets under management mentioned in the business line's figures include those of CA Indosuez Wealth Management as well as the assets of LCL's Private Banking clients (also included in LCL's assets under management). The income statement items relate exclusively to CA Indosuez Wealth Management.

In Wealth Management, total assets under management (CA Indosuez Wealth Management and LCL Private Banking) stood at €298 billion at the end of December 2025, up +6.8% compared to December 2024 and +2.7% compared to September 2025.

In 2025, revenues from the wealth management business increased by +19.6% compared to 2024, benefiting in particular from the integration of Degroof Petercam in June 2024, and reached €1,671 million. Expenses increased by +22.2%, mainly due to the impact of the integration of Degroof Petercam in June 2024 and integration costs. The cost/income ratio, restated for Degroof Petercam integration costs, was 78.3%. Gross operating income thus increased by 8.4% to €286 million. The cost of credit risk amounted to -€30 million, compared with -€15 million in 2024. Net

income from other assets was close to zero in 2025, compared with -€23 million in 2024, corresponding to Degroof Petercam acquisition costs. Net income Group share amounted to €174 million for 2025, up 19.8% compared to 2024.

With regard to the integration of Degroof Petercam, the progress rate of synergies is approximately 30%. The estimated integration costs in 2026 are -€40 million to -€50 million. The target of additional net income Group share of €150 million to €200 million by 2028 is confirmed.

Wealth management contributed 2% to the underlying net income Group share of Crédit Agricole's business lines (excluding the Corporate Centre division) at the end of December 2025 and 4% of their revenues.

(1) Indosuez Wealth Management scope.

LARGE CUSTOMERS DIVISION

The Large Customers division includes the Capital Markets, Investment Banking, Structured Finance and Commercial Banking business lines housed within Crédit Agricole Corporate & Investment Bank (Crédit Agricole CIB), as well as Asset Servicing, housed within CACEIS.

Over 2025, revenues of the Large Customers division were a record high of €8,882 million, up 2.7% compared with 2024. Operating expenses rose by +2.6% compared to 2024, to €5,171 million, mainly due to employee expenses and IT investments. As a result, gross operating income for 2025 amounted to €3,711 million, up 2.7% compared to 2024. Cost of risk ended 2025 with a net addition of -€127 million, up +8.7% from 2024 (net addition of -€117 million). The business line's contribution to net income Group share was €2,785 million, up 5.5% compared to 2024.

The division contributed 29% to the net income Group share of the Crédit Agricole Group's business lines (excluding the Corporate Centre division) at the end of December 2025 and 21% to revenues excluding the Corporate Centre division.

CORPORATE AND INVESTMENT BANKING

In total, Corporate and Investment Banking's revenues rose to €6,782 million, a steep 3.3% compared to end-December 2024, which was driven by growth in its two business lines. Revenues from Financing activities were up 2.0% compared to the total for 2024, at €3,431 million. Capital Markets and Investment Banking also grew its revenues by 4.5% compared with the end of December 2024, to total €3,351 million.

Crédit Agricole CIB ranks #1 in Green, Social & Sustainable bonds in EUR and #4 in All bonds in EUR Worldwide, confirming its leading position in syndicated loans (#1 in France and #2 in EMEA). The average regulatory VaR stood at €9.7 million in the fourth quarter of 2025, down from €12.7 million in the third quarter of 2025, in line with the trend on financial markets and the positions. It remains at a level that reflects prudent risk management.

Over 2025, revenues rose by +3.3% compared to 2024 to €6,782 million, a record level for both capital markets and investment banking and financing activities, despite an unfavourable foreign exchange impact. Operating expenses increased by +4.9%, mainly due to business development and IT investments. As a result, gross operating income rose by +1.4% compared to 2024, to €3,082 million. The cost of risk recorded a net addition of -€97 million in 2025, compared with an addition of -€93 million in

2024. The tax charge amounted to -€677 million, down -9.5%. Finally, net income Group share for 2025 stood at €2,313 million, up 4.8% over the period.

In addition, synthetic securitisation programmes freed up an additional €4.6 billion in RWA in 2025.

ASSET SERVICING

For Asset Servicing, business growth was supported by customer capture and positive market effects during the quarter and the year.

Assets under custody thus recorded an increase of +11.4% compared to the end of December 2024, reaching €5,896 billion. Assets under administration were up +9.1% year-on-year to €3,705 billion at end December 2025. Settlement-delivery volumes increased sharply, by +27.4% compared to the fourth quarter of 2024, mainly driven by France and Germany.

In addition, the fourth quarter was marked by the completion of the integration of ISB following the full migration of customers and the decommissioning of the former RBC IT systems, and thus recorded the final integration costs related to this acquisition. For this transaction, the progress rate of synergies achieved in 2025 stands at 66% and the target of additional net income of more than €100 million expected in 2026 is confirmed.

Revenues for 2025 were up +0.8% compared to 2024, despite the planned exit of former RBC customers, with good commercial momentum, a favourable trend in the interest margin over the period and the positive scope effect linked to the takeover of Degroof Petercam's depositary banking activities in particular. Operating expenses were down by 2.6% and included -€33.8 million in integration costs related to the acquisition of the former RBC activities (compared with -€97 million in integration costs in 2024). Gross operating income was up +10.0% compared to 2024. The cost/income ratio stood at 70.1%, down -2.5 percentage points compared with 2024. In all, the business line's contribution to net income Group share for 2025 amounted to €474 million, a sharp increase of +59.9% compared to 2024, which included Santander's non-controlling interests.

SPECIALISED FINANCIAL SERVICES

Specialised Financial Services includes consumer finance (CA Consumer Finance – CACF) and leasing and factoring activities (CA Leasing & Factoring – CAL&F).

SPECIALISED FINANCIAL SERVICES (SFS) – CONTRIBUTION TO RESULTS

(in millions of euros)	2025	2024	Δ2025/2024
Revenues	3,540	3,520	+0.6%
Operating expenses	(1,830)	(1,780)	+2.8%
GROSS OPERATING INCOME	1,710	1,740	-1.7%

Net income on other assets	(3)	(12)	-75.8%
INCOME BEFORE TAX	547	895	-38.9%
Tax	(123)	(187)	-34.5%
NET INCOME	424	708	-40.0%
Non-controlling interests	(92)	(82)	+11.4%
NET INCOME GROUP SHARE	333	625	-46.8%
COST/INCOME RATIO (%)	51.7%	50.6%	+1.1 pp

In 2025, CAPFM's outstandings stood at €122.5 billion at the end of December 2025, up +2.6% compared to the end of December 2024, across all segments (Automotive +1.8%, LCL and Regional Banks +4.5%, Other entities +2.6%), benefiting from the expansion of the portfolio managed with the Regional Banks and the development of car rental with Leasys and Drivalia, as well as the inclusion of GAC Leasing in the scope. Lastly, consolidated outstandings totalled €67.6 billion at end-December 2025, down -2.1% from end-December 2024.

Leasing outstandings rose by +7.1% year-on-year, both in France (+4.2%) and internationally (+5.6%), and this quarter included Merca Leasing's outstandings, to total €21.7 billion at the end of December 2025 (including €16.6 billion in France, €4.6 billion internationally and €0.5 billion in outstandings contributed by Merca Leasing). Factoring outstandings at the end of December 2025 were up +5.5% compared to the end of December 2024, and factored revenues were up +4% compared to the same period in 2024.

For 2025, the Specialised Financial Services division's revenues amounted to €3,540 million, up slightly by 0.6% compared to 2024, driven on the one hand by positive price and volume effects in personal finance, which offset the decline in revenues from mobility and insurance activities, and by the strong performance of the leasing business at CAL&F, and on the other hand impacted by an unfavourable base effect of €30 million in the fourth quarter of 2025 at CAPFM and the integration of Merca Leasing at CAL&F. Operating expenses increased by +2.8% compared to 2024 to -€1,830 million, and were impacted by IT investments and the integration of Merca Leasing at CAL&F. Gross operating income thus stood at €1,710 million, a decrease of -1.7% compared to 2024. The cost/income ratio stood at 51.7%, up +1.1 percentage points compared to the same period in 2024. The cost of risk increased by +12.2% compared to 2024, to -€1,076 million, notably impacted by a total of +€61 million in legal provisions for UK auto loans (+€20 million in the third quarter of 2025 and +€41 million in the fourth quarter of 2025), compared to legal provisions of +€30 million in the fourth quarter of 2024, also including provisions for UK auto loans. The contribution of the equity-accounted entities dropped sharply from the same period in 2024, mainly

linked to the decline in remarketing revenues, the revision of remarketing values at Leasys, the deterioration of CAPFM's business in China, and a depreciation of goodwill for CAL&F (in the second quarter of 2025). Net income Group share for the division includes the additional corporate income tax charge in France and reached €333 million, down -46.8% compared to the same period in 2024.

The business line contributed 3% to the net income Group share of Crédit Agricole S.A.'s business lines (excluding the Corporate Centre division) at end-December 2025 and 8% to revenues excluding the Corporate Centre division.

PERSONAL FINANCE AND MOBILITY

In 2025, CAPFM's revenues reached €2,780 million, up +0.6% compared to 2024, up +1.7% excluding exceptional items of €30 million recorded in the fourth quarter of 2024, benefiting from positive volume and price effects, particularly in the personal finance business, offsetting the decline in revenues from the mobility business, which suffered from the unfavourable automotive market environment, and the decline in insurance revenues. Expenses stood at -€1,392 million, stable at +0.7% compared to 2024. Gross operating income thus amounted to €1,388 million, up +0.4% (2.7% excluding exceptional items of €30 million recorded in the fourth quarter of 2024). The cost/income ratio stood at 50.1%, up +0.1 percentage point compared to 2024. The cost of risk increased by +12.6% compared to 2024, to -€988 million, mainly due to a deterioration at international subsidiaries and impacted by a total of +€61 million in legal provisions for UK auto loans in 2025 (+€20 million in the third quarter of 2025 and +€41 million in the fourth quarter of 2025), compared with a +€30 million in legal provisions in the fourth quarter of 2024, including provisions for UK auto loans. The contribution from equity-accounted entities was down sharply, from a profit of €133 million in 2024 to a loss of -€64 million in 2025, due to lower remarketing revenues and the revision of remarketing values at Leasys, as well as the deterioration in business in China since the fourth quarter of 2024. Net income Group share, including the additional corporate income tax in France, amounted to €178 million, down -57.9% compared to 2024.

LEASING AND FACTORING

For 2025, revenues were up slightly (+0.6%) compared with 2024, at €760 million, benefiting from the integration of Merca Leasing. Excluding this scope effect, revenues fell by -2.3% over the year, with the increase in revenues stemming from the momentum of the leasing activity over the year being offset by a decline in factoring revenues (notably due to the lower interest rates). Operating expenses rose by 9.9% to -€437 million, including the Merca Leasing scope effect and impacted over the year by IT investments and non-recurring items in the fourth quarter. Gross operating income was down -9.8% from 2024 to €323 million. The cost/income ratio stood at 57.5%, up +4.9 percentage points compared

to 2024. The cost of risk rose over the year (+7.9%), impacted by an increase in risk in the fourth quarter on a few factoring files in Spain and by the effect of the integration of Merca Leasing, partly offset by a reversal of provisions on performing loans of +€20 million in the second quarter of 2025. The contribution of the equity-accounted entities amounted to -€20 million in 2025, down sharply from 2024 at -€8 million due to a depreciation of goodwill in 2025. Finally, net income Group share included the additional corporate income tax charge in France, amounting to €155 million, down -23.8% compared to 2024.

CORPORATE CENTRE RESULTS

This division comprises three types of so-called structural activities:

- Crédit Agricole S.A.'s Corporate Centre function, asset and liability management and management of debt connected with acquisitions of subsidiaries or equity investments and the net impact of tax consolidation for Crédit Agricole S.A.;
- the results of the private equity business and results of various other Crédit Agricole S.A. companies (notably CA Immobilier, Uni-médias, Foncaris, BforBank, etc.); this division includes the new Crédit Agricole Transitions & Énergies (Transitions & Energies) business line, which will be 50% equity-accounted at the end of 2025;
- the results of resource companies carrying out dedicated activities on behalf of Crédit Agricole Group and its subsidiaries: IT production (CAGIP), payment activities (CAPS) and real estate operations (SCI).

This segment also includes other non-structural items, such as the volatile technical impacts of intra-group transactions.

MAIN CHANGES IN THE CONSOLIDATED BALANCE SHEET

At 31 December 2025, the consolidated balance sheet of the Crédit Agricole Group amounted to €2,681.9 billion, up €80.2 billion, i.e. +3.1% compared to 31 December 2024.

This increase mainly stemmed from:

- the €46.8 billion increase in financial assets at fair value through profit or loss;
- the €32.9 billion increase in financial assets at amortised cost.

ANALYSIS OF THE MAIN ITEMS

Loans and receivables due from customers and credit institutions totalled €1,363.3 billion at end-December 2025, an increase of 2.2% compared to 2024, i.e. +€29 billion.

Loans and receivables due from customers totalled €1,209.7 billion at 31 December 2025, compared with €1,188.8 billion a year earlier, i.e. an increase of 1.8%. This increase is mainly due to a €10 billion rise in customer loans at the Regional Banks and a rise in customer outstandings, primarily at Crédit Agricole CIB (+€5 billion) and LCL (+€3 billion).

Loans and receivables due from credit institutions were up to €153.6 billion (5.6%) at 31 December 2025 compared with €145.5 billion at end-2024. The increase is mainly due to a rise in outstandings at Crédit Agricole CIB.

Amounts due to credit institutions and customers totalled €1,297.5 billion at end-2025, up 3.6% compared to end-2024, or +€44.8 billion.

This increase was mainly driven by amounts due to customers, which rose €34.9 billion (3.0%) to €1,199.4 billion. This increase is mainly due to the rise in customer deposits at the Regional Banks and Crédit Agricole CIB.

Amounts due to credit institutions rose by +€9.9 billion to €98.0 billion (11.2%), mainly due to the increase in customer deposits at Crédit Agricole CIB.

Financial assets at fair value through profit or loss amounted to €654.4 billion at 31 December 2025, up 7.7% year-on-year, i.e.

+€46.8 billion. This increase is mainly attributable, at Crédit Agricole CIB, to growth in debt and equity portfolios and in repo activity, and, at Crédit Agricole Assurances, to growth in unit-linked contracts and debt portfolios.

Financial liabilities at fair value through profit or loss amounted to €419.8 billion at 31 December 2025, up +€12.0 billion year-on-year (2.9%). At Crédit Agricole CIB, this increase was mainly due to a rise in repo outstandings, partially offset by a decrease in the MtM of derivatives.

Financial assets at fair value through other comprehensive income amounted to €245.1 billion at end-December 2025, up +€10.7 billion (4.6% year-on-year).

The amount of **investments in equity-accounted entities** amounted to €6.5 billion at the end of 2025, up +€4.0 billion, mainly attributable to the consolidation of Banco BPM S.p.A. for €3.0 billion.

Central bank deposits increased by +€2.6 billion, i.e. +1.5% to stand at €168.3 billion at the end of December 2025. This increase is mainly due to an increase in deposits made by the various Group entities.

Hedging derivatives in assets and liabilities decreased by -9.3% and -17.2% respectively over the year, mainly due to changes in the rate curves.

Accruals, prepayments and sundry assets amounted to €45.2 billion at 31 December 2025, down -€8.8 billion compared to 2024. This decrease was mainly due to a decline in deposits and margin calls on derivatives and repos.

Insurance contracts issued that are liabilities were up 7.0% in 2025 from 2024, reaching €392.1 billion. This €25.7 billion rise is due in particular to the insurance liability increases (mainly under the VFA model) associated with greater assets.

The **debt securities** item stood at €293.8 billion at the end of 2025, up +0.9% compared with the end of 2024.

Equity amounted to €154.6 billion at 31 December 2025, a year-on-year increase of 3.9%. Equity Group share increased 4.4% over the year to reach €148.1 billion at the end of 2025.

2026 OUTLOOK

RELYING ON FISCAL POLICY SUPPORT TO COUNTERACT ADVERSITY

Against a backdrop of persistent geopolitical uncertainty, but with better visibility as regards US trade policy, growth rates are expected to remain steady or even pick up in 2026. Fiscal measures will contribute to this resilience, notably through tax cuts in the United States and, in the eurozone, spending linked to the NGEU plan on the one hand and German recovery measures on the other.

In the United States, growth slowed in 2025 but held up well despite the uncertainty. Our scenario envisions a slight acceleration to 2.1% in 2026, due to more favourable political and economic decisions. These refer to the second set of measures implemented by the Trump administration and the fiscal stimulus measures they should introduce. In 2026, fiscal policy should begin to take effect and uncertainty, particularly on the trade front, should subside. On the other hand, economic strategy, and tariffs in particular, will continue to fuel inflationary pressures. Overall inflation is expected to reach 2.7% and core inflation nearly 2.8% by the end of 2026.

In China, 2026 will be marked by the publication of the fifteenth five-year plan, which will set China's sector-specific objectives and priorities for the next five years. Unsurprisingly, innovation and industrial development in new technologies are likely to remain at the heart of the Chinese model, despite growing imbalances between investment and consumption. The authorities could choose to maintain a growth target of around 5% in 2026; our scenario anticipates a slight deceleration in growth to 4.7%, in line with recent trends. The Chinese economic environment remains marked by deflation, fuelled by a lack of consumer confidence, weak private consumption and the ongoing property crisis, with the latter showing no real sign of improvement. Although the authorities have asserted the need to rebalance growth in favour of domestic demand, exports will remain essential.

In the eurozone, the resilience of domestic demand is helping it navigate an adverse environment. In 2026, the good health of private agents, still favourable financial terms and a slightly expansionary fiscal policy are expected to absorb the confidence shock associated with the trade war and geopolitical uncertainty. Our scenario therefore remains broadly unchanged: growth in line with its potential rate, supported by accelerated investment, particularly public investment, with a significant contribution coming from the German spending plan. Growth could thus be around 1.2% in 2026, but this resilience faces a number of risks. These include increased competition from Asian products on global and domestic markets which undermine the competitiveness of European companies and could hinder sector-specific developments. Slowdowns in certain sectors may spread sequentially and without immediately causing a widespread "depression", they may, over time, trigger a widespread economic slowdown. Finally, headline and core inflation rates (around 1.8% at end-2026) are expected to remain below the 2% target.

In France, activity is expected to pick up in 2026. Supporting factors (increased defence spending in the European Union, Germany's fiscal "bazooka" and a revival in domestic investment) are expected to offset the headwinds (the higher US tariffs in particular). Political instability would no longer weigh particularly heavily on growth; fiscal consolidation would be limited, with the

public deficit reduced to below 3% of GDP and the stabilisation of the GDP-to-debt ratio effectively delayed.

In Italy, growth would remain limited to 0.5% in 2026, the same level as in 2025. Households are maintaining high levels of savings, while businesses are experiencing reduced margins and price competitiveness only partially restored. The economy remains vulnerable to US tariff shocks. While disinflation and improved financial conditions are stabilising activity, they are not triggering any genuine catch-up momentum. Household consumption and productive investment should cushion the slowdown thanks to a number of support measures planned for 2026, although fiscal room for manoeuvre remains limited.

In terms of monetary policy, in the United States, stubborn inflation and a further slowdown in the labour market justify the Fed's continued preference for a "hard-line" approach. The Fed is expected to implement a pause until early 2027, keeping the upper limit of the Fed funds rate at 3.75%, before initiating cuts. This outlook remains more cautious than that of the market, which, continuing its trend of excessive optimism, forecasts a rate slightly above 3% towards the end of 2026. The risks surrounding our scenario are rather bearish, particularly with the imminent arrival of a new Fed chair. In the eurozone, inflation at target and anticipated resilience in growth are unlikely to prompt the ECB to further ease monetary policy in 2026. The ECB is also expected to maintain its central bank policy rates at 2026 levels until spring 2027, before likely raising them in response to robust growth.

Interest rates in both the United States and the eurozone are expected to be subject to moderate upward pressure in 2026, justified by decent growth rates and fiscal stimuli. However, the divergent monetary policy trajectories anticipated for 2027 (slight easing for the Fed, tightening for the ECB) justify different distortions in the yield curves: steepening in the United States and flattening in the eurozone.

While the market is pricing in Fed funds rate cuts of nearly 50 basis points in 2026 in the United States, the pause in monetary easing assumed in our scenario for 2026 points to a slight rise in the two-year interest rate. The recent decline of the latter reflects the market's rather over-optimistic expectations of monetary easing. Our scenario anticipates a two-year rate of around 3.70% at the end of 2026. Driven by slightly stronger growth in 2026 and a persistently high public financing requirement, our scenario forecasts a ten-year rate of 4.50% at the end of 2026.

In the eurozone, the prospect of monetary tightening in 2027 should lead to a rise in interest rates. Compared to December 2025, our scenario assumes a 20 basis points increase in the two-year rate in 2026. The increase in the German debt supply will lead to a very slight uptick in the ten-year yield. The tightening of financial conditions would be less favourable for riskier issuers (peripheral issuers including France and Italy).

Finally, in 2026, the dollar should benefit from yield spreads, while it is unlikely that the euro will be able to take advantage of speculation around the US currency's status as a reserve currency.

2028 MEDIUM-TERM PLAN

On 18 November 2025, Crédit Agricole S.A. presented its new Medium-Term Plan, **ACT 2028**.

This plan was presented against a backdrop of major challenges, illustrated by issues such as Europe's competitiveness and strategic autonomy, increased competition in the banking sector due to digital technology and, more recently, artificial intelligence (AI), as well as accelerating societal and environmental transitions.

With this new roadmap, Crédit Agricole is laying the foundations for its ambitions for the future: to be the leader in Europe, the leader in new technologies and the leader in transitions. It is building on its strengths and its long-standing model to accelerate its development and amplify its transformation, supported by the cohesion of all its teams.

Acceleration, Transformation and Cohesion are the three strategic pillars of this ACT 2028 Medium-Term Plan: a growth and expansion plan driven by ambitious objectives to further strengthen the solidity and resilience of Crédit Agricole S.A. Three strategic targets have therefore been defined for 2028:

- a target of 60 million customers;
- a share of revenues generated outside France increased to nearly 60%;
- a cost/income ratio below 55%.

In financial terms, Crédit Agricole S.A. is targeting:

- net income Group share of more than €8.5 billion in 2028;
- a return on tangible equity (ROTE) of more than 14%.

ACCELERATION: ACCELERATING FASTER TO EXPAND OUR PLAYING FIELD

The 2028 strategic plan places acceleration at the heart of the roadmap. Crédit Agricole S.A. wants to expand its playing field, consolidate its positions in France and develop new growth drivers in Europe and Asia. The target is to reach 60 million customers for the Group, approximately €3.5 trillion in savings and more than €30 billion in revenues by 2028, with nearly 60% from international operations. Five levers will drive this acceleration.

1. CONSOLIDATING OUR LEADERSHIP IN RETAIL BANKING IN FRANCE

In a highly competitive environment marked by changing habits, Crédit Agricole plans to accelerate its growth in the French market, drawing on its three brands, its broad customer base and its digital tools.

Crédit Agricole relies on three complementary retail banking networks in France: the Regional Banks, LCL and BforBank. This organisation enables it to meet all customer needs with a more differentiated approach.

- The Regional Banks, universal banks serving all customer segments, offer a comprehensive range of solutions, combining digital technology and human excellence, and contribute to the economic vitality of their regions.
- LCL is firmly positioned as the bank for entrepreneurs, with a premium, multi-channel offering providing expertise in wealth and professional management, and a 100% digital access banking offering for independent customers.
- BforBank aims to offer the best in digital savings accessible to all, with an online investment platform, guided and fun solutions, and access to alternative investments. AI will help to halve the cost-to-serve and achieve profitability by 2028.

Together, these banks aim to capture more than 8 million new customers by 2028.

The Crédit Agricole Group aims to regain leadership among strategic customer segments through innovative solutions:

Young people will benefit from the launch of mobile solutions, with voice interactions and community-based approaches.

- The goal is to become the leading bank for young people in France.

Wealth management customers will benefit from the comprehensive coordination of expertise and exclusive investment offerings, including 100% digitalised advisory services.

- The target is to acquire more than one million additional high net worth customers between 2024 and 2028.

For professionals, SMEs and farmers, the ambition is to serve the entire value chain, with sector-specific offerings, HR banking and long-term financing solutions to support the next generation.

- The target is to acquire more than one million new professional and SME customers by 2028.

For MSEs, the Group will offer a coordinated approach, leveraging its expertise in cash management and long-term financing (through the creation of Indosuez Corporate Advisory).

- The goal is for one in three MSEs to choose Crédit Agricole as their primary banker in France by 2028.

2. EXPANDING THE GROUP'S DEVELOPMENT MODEL IN EUROPE

Firstly, Crédit Agricole S.A. wants to accelerate the Group's momentum in Italy, its second-largest domestic market, with a target of 6.5 million customers and a 20% contribution to the Group's results in 2028. This will involve increasing cross-selling, diversifying distribution channels and offerings, strengthening the brand and developing a digital bank for professionals, while remaining alert to external growth opportunities in Italy.

Crédit Agricole S.A.'s medium-term plan also aims to accelerate the Group's development in Europe, where its business lines and retail banks already have a strong presence. The Group aims to roll out its universal model, particularly in Germany with the creation of Crédit Agricole Deutschland. The objective is to double the existing customer base in Germany, targeting 2 million customers by 2028, by expanding the offering to include the full range of savings products, everyday banking and insurance.

Crédit Agricole S.A. wants to launch a digital savings platform in Europe, targeting more than €40 billion in assets outside France by 2028, with a comprehensive range of investments and an enhanced customer experience through advice and automation.

Finally, Crédit Agricole S.A. wants to expand into the MSE segment, which represents a significant and rapidly evolving market, in order to contribute to building European sovereignty. The aim is to draw on solid expertise in the countries where the retail banks operate to work with a new generation of European MSEs, primarily in four sectors: technology, agri-food, defence and energy. Crédit Agricole S.A. aims to serve more than 200 new strategic European MSEs outside France by 2028, by exporting its expertise and developing its local presence and synergies among all of the Group's business lines.

3. STRENGTHENING OUR Foothold IN ASIA

Asia is a major growth area and a key development focus for the Group, which has a long history in the region and is currently present in nine countries. The Medium-Term Plan aims to support the region's growth and strengthen our position with major economic players. This involves meeting the region's project financing needs for infrastructure development and savings solutions. All entities will be mobilised to provide creative, high value-added solutions across all market segments and to expand their customer base.

- Asia, with its strong growth in savings, is a key territory for asset management. Amundi is targeting net inflows of €150 billion by 2028, thanks to new partnerships and the development of existing joint ventures.
- CA Indosuez is developing its investment solutions for high-net-worth individuals and investment professionals in this region, with a target of €20 billion in assets under management by 2028.
- Crédit Agricole CIB intends to accelerate its development in the Asia-Pacific region, drawing on its expertise in infrastructure and energy project financing supporting the energy transition, telecoms and transport, with an annual revenue growth target of 5.5%.
- CACEIS is expanding its offerings to new geographical areas, supporting its European client base and developing its Asian client base, notably through the opening of a branch in Singapore.

4. SEIZING OPPORTUNITIES IN PRIVATE MARKETS AND ACCELERATING PAYMENT, COLLECTION AND CASH FLOW MANAGEMENT OFFERINGS

The private asset market is growing rapidly, driven by demand from customers seeking diversification and long-term savings solutions for retirement. Crédit Agricole S.A. wants to seize opportunities in these markets by boosting investments in private assets at Crédit Agricole Assurances, particularly in debt, for the benefit of its policyholders. Amundi and CA Indosuez are positioning themselves as key players in the democratisation of private assets, and Amundi has announced a strategic partnership with ICG on private assets. Amundi is also seeking to develop investment solutions for institutional investors. Crédit Agricole CIB supports debt funds in their financing needs, thereby amplifying the Group's distribution capacity.

The Group is also ramping up the development of its payment, collection and cash flow management offerings by integrating technological innovations, particularly in mobile payments, and by offering all-in-one solutions for businesses, including non-financial services such as electronic invoicing. The move upmarket in cash management offerings and the development of innovative partnerships are strengthening the Group's competitiveness in these fast-growing markets.

5. ASSERTING OURSELVES AS A DRIVING FORCE BEHIND TRANSITIONS

Crédit Agricole S.A. is accelerating in transitions, with the ambition of becoming the leader in the environmental transition economy. The Group has reiterated its Net Zero targets, reinforced its climate strategy and offers the widest range of responsible investments on the market. It is positioning itself as a key player in climate change adaptation, developing dedicated banking services, launching a new Prevention business line and promoting the circular economy. Finally, it is innovating and mobilising resources in favour of nature. The ambition for 2028 is also to amplify the Group's impact on regional vitality and a just transition by facilitating access to sustainable housing and essential services (health, mobility, renewable energy) and by supporting agricultural and agri-food transitions.

Specific commitments include:

- a 90/10 ratio of green/brown outstanding loans;
- €240 billion in transition financing;
- €1 billion in sustainable finance revenues in corporate and investment banking;
- 600,000 housing units supported in energy renovations.

Furthermore, faced with the challenge of the demographic transition, the Group has the widest range of offerings on the market and aims to become the trusted partner for large-scale intergenerational transmission, developing innovative offerings for wealth transfer, retirement planning and support for seniors and caregivers. The aim is to support customers in all their wealth management needs, to be the leader in collective and individual pension assets in France by 2028, to accelerate savings/retirement in Europe with net inflows of more than €75 billion for Amundi by 2028, and to offer solutions for adapting to ageing through the Crédit Agricole Santé & Territoires (Health and Territories) business line.

TRANSFORMATION: SPEED UP OUR TRANSFORMATION AND GAIN EFFICIENCY

To achieve its ambitions for acceleration and maintain high operational efficiency with a cost/income ratio of less than 55% by 2028, transformation is at the heart of Crédit Agricole S.A.'s strategic plan. This transformation is based on four major areas.

1. ACCELERATING TIME-TO-MARKET AND LEVERAGING AI AND DATA TO DRIVE GROWTH AND EFFICIENCY

The Group will invest in shared technological and industrial resources, with the creation of a data marketplace to leverage internal data and facilitate access to market data. Artificial intelligence solutions are shared within the Group and a centre of expertise will be created to support all business lines. All employees will be trained in the use of AI.

Crédit Agricole is using these systems to build shared industrial platforms, starting with Group KYC, with an efficiency gain of around 50% for compliance operations.

The launch of the Digital Trust business line aims to become a benchmark player in various solutions concerning: guaranteeing the reliability of stakeholders and their supporting documents, offering secure digital identity solutions, and finally, the secure digitalisation of business processes.

To increase agility and speed, the Group is continuing to simplify its organisation by strengthening the value-based management of its IT projects, streamlining IT infrastructures and automating processes using AI. A simplification programme has been launched in each entity, including a review of the main functional areas, the creation of shared service centres and the automation of tasks.

These measures will reduce the time spent on administrative tasks by 20% and double the speed at which offers are brought to market.

2. PREPARING FOR THE FUTURE AND STEPPING UP INNOVATION

Crédit Agricole is developing a multi-business approach to tokenised finance, with CACEIS's MiCA licence, to give institutional clients access to secure execution and custody services for their crypto-assets. The target is to quadruple the volume of digital assets under management within three years.

The Group is continuing to invest in innovation and R&D, drawing on its start-up studio La Fabrique by CA, with the development, for example, of a comprehensive administrative and financial management platform for SMEs and solutions dedicated to associations and family caregivers. Research into quantum technology and its applications is continuing.

3. MAINTAINING HIGH STANDARDS IN RISK MANAGEMENT

The plan aims to rethink risk processes to increase their effectiveness and meet regulatory requirements, leveraging new technologies to automate and optimise processes and industrialise key processes, particularly on the Group's KYC platform.

The Group also wishes to strengthen its resilience in order to respond to new opportunities, threats and requirements by adapting its means of monitoring and responding to new cyber threats and by adapting its sourcing strategy and its supplier selection and monitoring processes.

The Group also wants to guarantee its strategic autonomy by strengthening its private cloud and supporting the European technology ecosystem to promote the emergence of sovereign solutions.

4. ENGAGING THROUGH TRUST, THE FOUNDATION FOR PERFORMANCE AND CROSS-FUNCTIONAL COLLABORATION

The Group is implementing measures to strengthen trust and team engagement: empowering employees, promoting simplification initiatives, developing employability and target skills, preparing the next generation of executives through strategic talent pools (diversity, international, expert profiles), and promoting an international culture. The Group has created a "Trust Index" to measure the strength of the collective.

By 2028, its ambitions are:

- 100% of target skills mapped;
- 50% women and 30% international employees in strategic talent pools;
- 100% of executives having completed a Group-wide development programme.

COHESION: COMBINING THE STRENGTHS OF ALL OUR BUSINESS LINES TO SERVE OUR CUSTOMERS

The Group's cohesion, based on a decentralised model and business lines united around common values and a shared Raison d'Être, is a major asset in achieving the targets of the Medium-Term Plan.

Synergies will be amplified by mobilising the business lines as "Business Partners" of the Group's retail banks and by developing consistency and coordination between the business lines (e.g. Savings Alliance, HR Bank).

Among the levers identified to develop cohesion, the business lines are particularly committed to supporting the customer capture efforts of the retail banks and to developing innovative solutions for bank customers (e.g. private assets by Amundi, the "GF Select" offering by Indosuez for high-net-worth customers).

ACT 2028: FINANCIAL TRAJECTORY

In an uncertain environment, Crédit Agricole S.A.'s Medium-Term Plan is geared towards sustainable growth, underpinned by the financial strength of the Crédit Agricole Group, whose controlled and prudent management framework is reflected in the following targets:

- a CET1 ratio greater than or equal to 17% throughout the trajectory, enabling optimised management of Crédit Agricole S.A.'s CET1 ratio at around 11%;
- a TLAC ratio of around 27% of risk weighted assets excluding eligible senior preferred debt;
- LCR managed between 110% and 130% and NSFR between 110% and 120%.

By business line, the main growth drivers for the coming years are as follows:

- **Asset management:** acceleration in ETFs, Asia (direct presence and JVs), retirement products and third-party distributors; strategic partnership between Amundi and ICG in private assets; growth of Victory Capital and benefits from synergies; continued development of Amundi Technology; investments financed by a cost optimisation programme.
- **Insurance:** multi-product offerings for individuals and acceleration in remote monitoring services; acceleration in high-net-worth customers in France (CGP partnerships in life insurance) and growth in savings and retirement assets; ramp-up of international development in property and personal protection, through the strengthening of existing European partnerships (Banco BPM, Mobility, etc.) and the development of new ones.
- **Wealth management:** full effect of Degroof Petercam synergies; acceleration in Northern Europe, Asia and the Middle East; development of client bases (UHNWI, family offices) and offerings (private equity, real estate, fund solutions and corporate advisory combined with wealth management advice for corporate executive customers).
- **Corporate and investment banking:** intensification of relationships with existing clients, strengthening of presence in Europe (Germany, Poland) and acceleration in the US and Asia; leader in sustainable finance, real asset and project financing (energy transition, sovereignty); continued roll-out of cash management solutions and equity derivatives; productivity gains linked to the acceleration of AI, the rationalisation of the information system and the optimisation of the organisation; optimised management of RWAs (SRT, debt assignments, currency and credit risk hedging).
- **Asset servicing:** full benefit of the ISB integration; acceleration in ETFs, real assets, pension funds in Europe and digital assets, development in Asia; operational efficiency gains thanks to the differentiated follow-the-sun model and increased use of data and AI.
- **Personal finance and mobility:** personal finance: continued improvement in margins and development of differentiated offerings (home renovation, health, services); mobility: market rebound, continued development of CA Auto Bank and diversification of partnerships, development of services and insurance, acceleration of Leasys and ramp-up of leasing in China; optimised RWA management (SRT, portfolio disposals, internal models).
- **Leasing and factoring:** continued development of renewable energy in France and leasing thanks to new specialised sectors; acceleration of factoring in Europe through the expansion of offerings (e-factoring); optimised management of RWA; expansion of the circular economy offering.
- **LCL:** adaptation of the relationship model by customer segment and implementation of a transformation plan; intensification of relationships, move upmarket (off-balance sheet savings and insurance) and acquisition of new customers; improvement in net interest margin and growth in fee and commission income driven by capture in high-value segments; optimisation of cost-to-serve and operational efficiency (front-to-back automation, AI).
- **CA Italia:** customer capture based on strengthening the sales network, evolving the service model and accelerating digital capture; transformation programme (digitalisation, data, organisational change); acceleration in high value-added segments (private banking and corporate banking) and specialised businesses (SMEs, wealth management, payments and property and casualty insurance) to promote growth in fee and commission income; stabilisation of net interest margin.

These levers enable Crédit Agricole S.A. to build an ambitious financial trajectory, which translates into the following targets:

- net income Group share exceeding €8.5 billion in 2028;
- average revenue growth exceeding 3.5% per year between 2024 and 2028;
- cost/income ratio below 55% in 2028;
- Return on Tangible Equity (RoTE) above 14% in 2028.

Revenue growth is expected to come from all business lines, in line with the Group's development model based on a balanced and diversified business mix. Crédit Agricole S.A.'s European footprint remains solid and is expected to strengthen further outside France, while the customer mix remains diversified and stable.

The decentralised management of operational efficiency within Crédit Agricole S.A. is reflected in specific cost/income ratio targets for each business line by 2028 and the prospect of a positive jaws effect across all business lines. Savings of around €0.75 billion, or 5% of Crédit Agricole S.A.'s starting cost base, are expected to be generated, notably through synergies from ongoing integrations (Degroof Petercam and ISB), business transformation plans (IT rationalisation, productivity gains, etc.) and joint initiatives (KYC platforms, simplification, etc.). These should free up approximately €1.8 billion in additional investment capacity by 2028, which will be used to accelerate and transform the business, develop business lines and support innovation.

The earnings trajectory is based on an assumed cost of risk/outstandings of 40 basis points for Crédit Agricole S.A.

Finally, the earnings trajectory also assumes that the contribution of equity-accounted entities will increase by a factor of 1.56.

Capital allocation will support both the organic development of the business lines and opportunities for value-creating partnerships or external growth. Between now and 2028, the marginal distribution of risk weighted assets (RWA) by business line should remain

balanced, supporting the development of the business lines. It is combined with ambitious profitability targets (RoNE) by business line, reinforced by optimised RWA management. External growth will continue to be based on demanding M&A criteria: ROI of more than 10% within three years, ROTE accretion, proven integration capacity, clear cost and revenue synergies, and strict alignment with strategy, risk level and compliance requirements.

Crédit Agricole S.A.'s distribution policy will be based on the following principles as part of the 2028 Medium-Term Plan:

- 50% distribution in cash;
- payment of an interim dividend from 2026 onwards. This policy strikes the right balance between attractive compensation and financing Crédit Agricole S.A.'s growth.

FINANCIAL TRAJECTORY: 2026 OUTLOOK

The 2026 outlook for Crédit Agricole S.A. is based on a set of favourable factors: the continuation and acceleration of the commercial momentum, amplified by the roll-out of new strategic initiatives; the gradual integration of recent acquisitions – ISB, Degroof Petercam, Thaler, Victory Capital, the BNPP Monaco portfolio, Alpha Associates and Merca Leasing – which are set to generate synergies and strengthen the Group's positioning in its key markets. The Retail Banking and Personal Finance business lines in France are expected to continue to benefit from the upturn in margins, while mobility activities are set to see a recovery in the profitability of Leasys, a return to growth in China and growth in insurance and related services. Corporate and Investment Banking should confirm an improvement in its positioning serving its customers. In addition, Banco BPM will now make a recurring and high contribution to profit, of around €100 million per quarter. This solid momentum could nevertheless be mitigated by an environment marked by macroeconomic uncertainties in France, a higher tax impact and the capping of the interest margin in several entities (CA Italia, CACEIS, Indosuez Wealth Management).

INFORMATION ON CRÉDIT AGRICOLE S.A.'S FINANCIAL STATEMENTS (PARENT COMPANY)

ANALYSIS OF CRÉDIT AGRICOLE S.A.'S RESULTS (PARENT COMPANY)

At 31 December 2025, Crédit Agricole S.A.'s revenues stood at €5,205 million, up by €1,531 million compared to financial year 2024.

This change was attributable to:

- the interest margin rose by €618 million, mainly driven by the inclusion of fee and commission income paid to Regional Banks through special savings accounts, which added €987 million. This increase was partially offset by -€130 million in termination payments for derivatives hedging the investment portfolio, -€63 million in interest expenses on early repayments of loans and borrowings with Group entities, and a -€21 million provision for home savings;
- a €1,280 million increase in revenues from variable-income securities (mainly dividends from subsidiaries and equity investments), due to higher dividends received from Crédit Agricole CIB, CA Leasing and Factoring and CA Italia, respectively amounting to €1,908 million, €57 million and €55 million, offset by lower dividends received from CA-CF and CA Assurances for €544 million and €177 million;
- a -€584 million decrease in fee and commission income, mainly attributable to the transfer of fee and commission income to the Regional Banks as part of the mechanism for transferring special savings product resources in the interest margin;
- an improvement in trading book income of €22 million, mainly related to net reversals of provisions on derivatives hedging the investment securities portfolio for €282 million, offset by a change in foreign exchange income of -€258 million generated in particular by the acquisition of foreign currencies to hedge Additional Tier 1 issues and by foreign exchange forwards used to immunise the Group's CET1;
- a change in investment portfolios and similar assets of €183 million, linked in particular to the change in securities impairment losses of €97 million and capital gains and losses on disposals between the two financial years of €86 million;
- an improvement in other operating revenues of €12 million.

At 31 December 2025, Crédit Agricole S.A. recognised -€970 million in operating expenses, up €110 million compared to 2024 (-€860 million).

As a result of these changes, gross operating income recorded a gain of €4,235 million at 31 December 2025, up €1,421 million compared to financial year 2024.

The cost of risk stood at €39 million for 2025, an improvement of €48 million compared to financial year 2024. This favourable change is mainly due to the reversal of €59 million in credit risk provisions set aside on deposits with Caisse des Dépôts et Consignations (CDC). This reversal follows a downward revision of the probability of default parameter applied to these exposures.

"Net gains (losses) on fixed assets" amounted to €1,625 million in 2025, up €1,143 million year-on-year, following impairment losses on equity investments, mainly related to:

- a positive effect of €750 million on LCL securities due to a reversal of impairment in 2025 following an improvement in the entity's value in use;
- a positive effect of €223 million on CA Egypt securities (provision of €67 million in 2024 compared to a reversal of €156 million in 2025);
- a positive effect of €86 million on CA Italia securities (reversal of €500 million in 2024 vs. a reversal of €586 million in 2025);
- a positive effect of €52 million on EFL securities due to a reversal of impairment in 2025 following an improvement in the entity's value in use;
- a positive effect of €45 million on CA Polska securities due to a reversal of impairment in 2025 following an improvement in the entity's value in use.

Income tax saw an income of €392 million, up €104 million from 2024. The change can be mainly explained, for €114 million, by the tax consolidation mechanism in France, for which Crédit Agricole S.A. is the head of the Group.

Overall, the net income of Crédit Agricole S.A. amounted to €6,207 million at 31 December 2025.

FIVE-YEAR FINANCIAL SUMMARY

	2021	2022	2023	2024	2025

1. CRÉDIT AGRICOLE S.A. AND CRÉDIT AGRICOLE GROUP RISK FACTORS

This section sets out the main risks to which Crédit Agricole S.A. and the Crédit Agricole Group are exposed, as well as the main risks related to holding Crédit Agricole S.A. shares and other securities, given the Crédit Agricole Group's structure. The next part of this document ("Risk management") discusses the Crédit Agricole S.A. and Crédit Agricole Group's risk appetite and the systems employed to manage these risks.

The term "Crédit Agricole S.A." used in this section refers to Crédit Agricole S.A. Parent Company (i.e. parent company and listed company of the Crédit Agricole Group) together with all its direct and indirect consolidated subsidiaries within the meaning of Article L. 233-3 of the French Commercial Code (*Code de commerce*) (hereafter individually a "subsidiary" or collectively the "subsidiaries").

The term "Crédit Agricole Group" used in this part is defined as being the body made up of Crédit Agricole S.A. Parent Company, its direct and indirect consolidated subsidiaries within the meaning of Article L. 233-3. of the French Commercial Code (*Code de commerce*), the Crédit Agricole Mutuel Regional Banks ("Regional Banks"), the Local Banks and their respective direct and indirect subsidiaries.

RISK FACTORS RELATED TO THE CRÉDIT AGRICOLE GROUP AND ITS ACTIVITY

Risks specific to the Crédit Agricole Group's business are presented in this part under the following six categories: (1.1) credit risks and counterparty risks; (1.2) financial risks; (1.3) operational risks and associated risks; (1.4) risks related to the environment in which the Crédit Agricole Group operates; (1.5) risks related to the strategy and transactions of the Crédit Agricole Group and (1.6) risks related to the structure of the Crédit Agricole Group.

Within each of the six categories, the risks that the Crédit Agricole Group currently considers to be most significant, based on an assessment of likelihood of occurrence and potential impact, are presented first. However, even a risk that is currently considered to be less important could have a significant impact on the Crédit Agricole Group if it were to materialise in the future. These risk factors are described below.

1.1 CREDIT AND COUNTERPARTY RISK

a) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO THE CREDIT RISK OF ITS COUNTERPARTIES

The risk of insolvency of its customers and counterparties is one of the main risks to which the Crédit Agricole Group is exposed. Credit risk impacts the Crédit Agricole Group's consolidated financial statements when counterparties are unable to honour their obligations and when the carrying amount of these obligations in the bank's records is positive. Counterparties may be banks, financial institutions, industrial or commercial companies, governments and their various entities, investment funds, or individuals. The level of counterparty defaults may increase further against a backdrop of economic uncertainty, particularly in Europe, and the Crédit Agricole Group may be required to record significant charges and provisions for possible bad and doubtful loans, affecting its profitability.

While the Crédit Agricole Group seeks to reduce its exposure to credit risk by using risk mitigation techniques such as collateralisation, obtaining guarantees, entering into credit derivatives and entering

into netting contracts, it cannot be certain that these techniques will be effective to offset losses resulting from counterparty defaults that are covered by these techniques. Moreover, the Crédit Agricole Group is exposed to the risk of default by any party providing the credit risk hedge (such as a counterparty in derivatives) or to the risk of loss of value of the collateral. In addition, only a portion of the Crédit Agricole Group's overall credit risk is hedged by these techniques. Accordingly, the Crédit Agricole Group has significant exposure to the risk of counterparty default.

At 31 December 2025, the exposure of **Crédit Agricole S.A.** to credit and counterparty risk (including dilution risk and settlement delivery risk) was €1,919 billion before taking into account risk mitigation methods. This is distributed as follows: 15% retail customers, 31% corporates, 21% governments and 27% credit institutions and investment firms. Moreover, the amounts of risk-weighted assets (RWAs) relating to credit risk and counterparty risk and the credit valuation adjustment (CVA) to which Crédit Agricole S.A. is exposed were €316.1 billion and €25.3 billion, respectively, at 31 December 2025. At that period-end, the gross amount of loans and receivables in default was €14.5 billion.

At 31 December 2025, the exposure of the **Crédit Agricole Group** to credit and counterparty risk (including dilution risk and settlement delivery risk) was €2,302 billion before taking into account risk mitigation methods. This is distributed as follows: 35% retail customers, 34% corporates, 19% governments and 6% credit institutions and investment firms. Moreover, the amounts of risk-weighted assets (RWAs) relating to credit risk and counterparty risk and the credit valuation adjustment (CVA) to which the Crédit Agricole Group is exposed were €530.7 billion and €25.9 billion, respectively, at 31 December 2025. At that period-end, the gross amount of loans and receivables in default was €28.1 billion.

b) ANY SIGNIFICANT INCREASE IN PROVISIONS FOR LOAN LOSSES OR CHANGES IN THE CRÉDIT AGRICOLE GROUP'S ESTIMATE OF THE RISK OF LOSS IN ITS LOAN AND RECEIVABLES BOOK COULD ADVERSELY AFFECT ITS RESULTS AND FINANCIAL POSITION

In connection with its lending activities, the Crédit Agricole Group periodically recognises doubtful loan expenses, whenever necessary, to reflect actual or potential losses in respect of its loan and receivables book, which are recognised in profit or loss account under "cost of risk". The Crédit Agricole Group's overall level of such asset impairment provisions is based upon its assessment of prior loss experience, the volume and type of lending being conducted, industry standards, economic conditions and other factors related to the recoverability of various loans, or scenario-based statistical methods applicable collectively to all relevant assets. Although the Crédit Agricole Group seeks to establish an appropriate level of provisions, its lending businesses may cause it to have to increase its provisions for doubtful loans in the future as a result of increases in non-performing assets or for other reasons (such as macroeconomic or sectoral changes), such as deteriorating market conditions or factors affecting particular countries or industry sectors notably in the current environment of macroeconomic and geopolitical uncertainty. Furthermore, although tensions observed over the last years on prices and the availability of energy and commodities are now less intense, the price levels reached could still affect the solvency of certain customer segments (SMEs, professionals) or financed business sectors that are particularly sensitive to the price of these resources or their volatility (French agricultural sector, agri-food industries, production and trading of commodities, energy-intensive industries, automotive) by reducing their profitability and their cash flow. Finally, the sharp slowdown in construction activities in France, particularly residential construction, and the prolonged maintenance of activity at a relatively low level could adversely affect the profitability and cash flow of customers operating in the building and public works sector. Any significant increase in provisions for doubtful loans or a significant change in the Crédit Agricole Group's estimate of the risk of loss inherent in its non-impaired loan book, as well as the occurrence of loan losses in excess of the charges recorded with respect thereto, could have an adverse effect on the Crédit Agricole Group's results of operations and financial position.

At 31 December 2025, the gross outstanding loans, receivables and debt securities of **Crédit Agricole S.A.** were €1,249 billion. With regard to credit risk, the amounts of reserves, accumulated impairments and related adjustments amounted to €10.3 billion. The cost of risk/outstandings of Crédit Agricole S.A. for the year 2025 ⁽¹⁾ was 35 basis points.

At 31 December 2025, the gross outstanding loans, receivables and debt securities of the Crédit Agricole Group were **€1,553** billion. With regard to credit risk, the amounts of reserves, accumulated impairments and related adjustments amounted to €22.9 billion. The cost of risk/outstandings of the Crédit Agricole Group for the year 2025 was 28 basis points.

c) A DETERIORATION IN THE QUALITY OF INDUSTRIAL AND COMMERCIAL CORPORATE DEBT OBLIGATIONS COULD ADVERSELY IMPACT THE CRÉDIT AGRICOLE GROUP'S RESULTS

The credit quality of corporate borrowers could deteriorate significantly, primarily from increased economic uncertainty and, in certain sectors, the risks associated with trade policies of major economic powers. If a trend towards deterioration in credit quality were to appear, the Crédit Agricole Group may be required to record asset impairment charges or to write off the value of its corporate debt portfolio, which would in turn significantly impact the Crédit Agricole Group's profitability and financial position.

At 31 December 2025, **Crédit Agricole S.A.**'s gross exposure to industrial and commercial corporates, i.e. sectors other than financial and insurance activities; public administration and defence, compulsory social security; and administrative and support service activities amounted to €267.5 billion (of which €7.8 billion in default) and were subject to accumulated impairments of €5.7 billion.

At 31 December 2025, the **Crédit Agricole Group's** gross exposure to industrial and commercial corporates, i.e. sectors other than financial and insurance activities; public administration and defence, compulsory social security; and administrative and support service activities amounted to €438.2 billion (of which €14.9 billion in default) and were subject to accumulated impairments of €13.2 billion.

d) THE CRÉDIT AGRICOLE GROUP MAY BE ADVERSELY AFFECTED BY EVENTS IMPACTING SECTORS TO WHICH IT HAS SIGNIFICANT EXPOSURE

The Crédit Agricole Group's credit exposures are very diversified due to its comprehensive universal customer-focused banking model activities. The Crédit Agricole Group is mainly exposed to retail banking with the Regional Bank, LCL and Crédit Agricole Italia networks. The Crédit Agricole Group is also subject to the risk that certain events may have a disproportionately large impact on a particular sector to which it is significantly exposed. Thus, retail customer borrowers, including households borrowing for home loans or personal finance, could be weakened by a lasting rise in unemployment. Public sector borrowers can be affected by national and local budgetary policies and spending priorities. If these sectors were to experience adverse conditions, the Crédit Agricole Group's profitability and financial position could be adversely affected.

At 31 December 2025, the share of retail customers in **Crédit Agricole S.A.**'s total portfolio of commercial lending was 25%, or €302.4 billion. 25% of Crédit Agricole S.A.'s commercial lending involved borrowers in the public sector (including local authorities), representing an amount of approximately €295.3 billion.

At 31 December 2025, the share of retail customers in the **Crédit Agricole Group's** total portfolio of commercial lending was 45%, or €857.1 billion. 17% of the Crédit Agricole Group's commercial lending involved borrowers in the public sector (including local authorities), representing an amount of approximately €321.3 billion.

⁽¹⁾ The cost of risk/outstandings is calculated by dividing the cost of risk recorded over the last four quarters on a rolling basis by the average outstandings at the beginning of the last four quarters.

e) THE SOUNDNESS AND CONDUCT OF OTHER FINANCIAL INSTITUTIONS AND MARKET PARTICIPANTS COULD ADVERSELY AFFECT THE CRÉDIT AGRICOLE GROUP

The Crédit Agricole Group's ability to engage in financing, investment and derivative activities could be adversely affected by a deterioration of the soundness of other financial institutions or market participants. Financial services institutions are interrelated as a result of trading, clearing, counterparty, funding or other relationships. As a result, defaults by, or even rumours or questions about, one or more financial services institutions, or the loss of confidence in the financial services industry generally, may lead to market-wide liquidity contractions and could lead to further losses or defaults. The Crédit Agricole Group has financial exposure to many counterparties in the financial industry, including brokers and dealers, commercial banks, investment banks, mutual and hedge funds, and other institutional customers with which it regularly executes transactions. Many of these transactions expose the Crédit Agricole Group to credit risk in the event of default or financial distress. In addition, the Crédit Agricole Group's credit risk may be exacerbated if the collateral it holds cannot be disposed of or is liquidated at prices below the full amount of the loan or derivative exposure due.

At 31 December 2025, the total amount of **Crédit Agricole S.A.'s** gross exposure to counterparties that are credit institutions and related entities was €511.7 billion (mainly linked to the Regional Banks within the framework of internal Crédit Agricole Group operations), of which €482.7 billion was using the internal ratings-based method.

At 31 December 2025, the total amount of the **Crédit Agricole Group's** gross exposure to counterparties that are credit institutions and related entities was €132.3 billion of which €103.5 billion was using the internal ratings-based method.

f) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO COUNTRY RISK AND COUNTERPARTY RISK CONCENTRATED IN THE COUNTRIES WHERE IT OPERATES

The Crédit Agricole Group is subject to country risk, meaning the risk that economic, financial, political or social conditions in a given country in which it operates will affect its financial interests. The Crédit Agricole Group monitors country risk and takes it into account in the fair value adjustments and cost of risk recorded in its financial statements. However, a significant change in political or macroeconomic environments may require it to record additional charges or losses beyond the amounts previously written down in its financial statements. The Crédit Agricole Group is especially exposed in absolute value to the country risk for France and Italy. Worsening economic or political conditions in these countries, or a breakdown in their relations with major trading partners, would impact the Crédit Agricole Group. Moreover, the Crédit Agricole Group has significant exposures in countries outside the OECD, which are subject to risks that include armed conflict, political instability, unpredictable regulation and taxation, expropriation and other risks that are less present in more developed economies.

At 31 December 2025, **Crédit Agricole S.A.'s** commercial lending amounted to €566.9 billion in France and €176.3 billion in Italy, representing 47% and 15%, respectively, of Crédit Agricole S.A.'s total exposure at that date.

At 31 December 2025, the **Crédit Agricole Group's** commercial lending amounted to €1,278.8 billion in France and €175 billion in Italy, representing 67% and 9%, respectively, of the Crédit Agricole Group's total exposure at that date.

At end-2025, for both **Crédit Agricole S.A.** and the **Crédit Agricole Group**, commercial lending net of protections received (i.e. export credit insurance, cash deposits, securities pledged etc.) to customers (including bank counterparties) in countries with ratings below B according to the Group's internal ratings, excluding countries in Western Europe (Italy, Spain, Portugal, Greece, Cyprus, Iceland and Andorra) totalled €80.4 billion.

In addition, the Crédit Agricole Group could suffer losses as a result of its direct and indirect exposure:

- In the Middle East, cumulative commercial lending net of protections received (i.e. export credit insurance, cash deposits, securities pledged etc.) amounted to €19.4 billion at 31 December 2025. Saudi Arabia, the United Arab Emirates and Qatar accounted for 92% of this lending in the zone at 31 December 2025.
- In Ukraine, at 31 December 2025, Crédit Agricole Ukraine's commercial lending amounted to €852 million, of which €763 million on-balance sheet, financed locally. Commercial activity continues its recovery that began in 2024 (€728 million in total commercial lending at the end of 2023, then €790 million at the end of 2024). The risks on these exposures were provisioned to the tune of €71 million at 31 December 2025.
- In Russia, since the start of the Russian-Ukrainian conflict, Crédit Agricole CIB has ceased all financing to Russian companies and all commercial activity in the country. In 2025, in a context where the conflict is ongoing, the subsidiary continued to suspend its activities, allowing it to comply with its local regulatory and legal obligations as well as international sanctions, while pursuing the disengagement plan (commercial activities, employees, exposures at risk). At 31 December 2025, exposures recognised at the Crédit Agricole CIB Group level were less than €1 billion (€0.6 billion in the Crédit Agricole CIB AO subsidiary, including €0.5 billion offshore and the equivalent of €0.1 billion in Indosuez Wealth Management).

g) THE CRÉDIT AGRICOLE GROUP IS SUBJECT TO COUNTERPARTY RISK IN THE CONDUCT OF ITS MARKET ACTIVITIES

The Crédit Agricole Group could suffer losses in the event of a counterparty defaulting on its securities, currency, commodities and other market activities. When the Crédit Agricole Group holds portfolios of debt securities, including in the context of its market making activities, it is subject to the risk of deterioration in the credit quality of issuers or default. As part of its trading activities, the Crédit Agricole Group is exposed to the risk of a counterparty defaulting in the execution of its transaction settlement obligations. The Crédit Agricole Group's derivatives activities are also subject to the risk of a counterparty default, as well as to significant uncertainty regarding the amounts due in the event of such a default. Although the Crédit Agricole Group often obtains collateral or makes use of compensation rights to deal with these risks, these techniques may not be sufficient to ensure complete protection, and the Crédit Agricole Group may incur significant losses due to the failure of one or several major counterparties.

For both **Crédit Agricole S.A.** and the **Crédit Agricole Group**, risk-weighted assets (RWAs) corresponding to the counterparty risk on derivatives and deferred settlement transactions and indicated in Pillar 3 were €7.5 billion at 31 December 2025.

1.2 FINANCIAL RISKS

a) RISKS RELATED TO LACK OF VISIBILITY, PRESSURE ON SHORT-TERM INTEREST RATES, A RISE IN LONG-TERM INTEREST RATES COULD IMPACT THE PROFITABILITY AND FINANCIAL POSITION OF THE CRÉDIT AGRICOLE GROUP

Thanks to disinflation, while continuing to reduce its balance sheet, the ECB began its monetary easing in June 2024 and lowered its refinancing rate (to 2.15% in June 2025) and deposit rate (to 2%) by 235 basis points (bp) and 200 bp, respectively, over one year. Against a backdrop of inflation at the 2% target and resilient growth in the Eurozone (estimated at 1.5% in 2025 and forecast at 1.2% in 2026) thanks to stronger domestic demand, particularly investment – driven by European funds, defence spending and the German recovery plan – the ECB appears to have reached the end of its easing cycle. Our scenario predicts stable central bank policy rates throughout 2026 (refinancing and deposit rates at 2.15% and 2% respectively). However, in addition to the risk of shocks on prices further down the line, this status quo could be thwarted by the influence of monetary policy and interest rates in the United States, where the risk of inflation remains high while growth remains resilient.

Indeed, in the United States, due in particular to the inflationary impact of tariffs, inflation (annual average of 2.8% in 2025 and 2.9% forecast for 2026) is expected to remain above 2%. Although the Fed began modest monetary easing in September 2024, it then opted for nine months of status quo before proceeding with further cuts in the Fed funds rate (25 basis points each in September, October and December) while announcing the end of quantitative tightening in December. Given that inflation remains high while the labour market is slowing without causing a significant rise in the unemployment rate, our scenario assumes that the Fed funds rate will remain stable (upper bound of 3.75%) throughout 2026.

Still in the United States, persistent inflationary risks, a budgetary trajectory deemed to have deteriorated, and successive changes in economic decisions are increasing investor concerns and exerting downward pressure on the dollar but upward pressure on sovereign interest rates. Similarly, in the Eurozone, resilient growth, inflation on target and monetary easing that is assumed to be complete argue in favour of a slight rise in interest rates. The German 10-year rate (*Bund*, 2.85% at the end of 2025) could thus reach 3% at the end of 2026. The rise in risk-free rates could be detrimental to riskier sovereign issuers and lead to a widening of their spreads, whether they are long-standing issuers from the periphery (Italy, Spain) or have recently joined it (France).

Furthermore, numerous factors are likely to lead to a rise in inflation and/or interest rates. Although the trade agreement signed at the end of July between the United States and the European Union provides greater clarity, the risks of a US reversal and European retaliatory measures remain, which could prove inflationary. More generally, the international environment is particularly uncertain and the risk of disruptive events (blockade of the Strait of Hormuz, incidents involving infrastructure in the Gulf,

incidents in the China Sea etc.) cannot be completely ruled out. Such events could lead to supply pressure, temporary supply difficulties and/or shocks to commodity prices. External factors (an even more uncertain environment, risks of disruptive events etc.) and internal factors (the trajectory of public debt and, in particular, the deterioration of France's budgetary situation) could also lead to a widening of sovereign spreads.

Finally, a change in the term structure of interest rates could lead households to change their investment allocation. A rise in short-term rates, possibly combined with higher inflation, would make regulated savings accounts more attractive, particularly the Livret A and the *Livret de développement durable et solidaire* (LDDS), with 60% of outstandings being centralised with the CDC. The attractiveness of regulated savings would result in a withdrawal of sight deposits. Outflows to money market funds, the performance of which depends on short-term interest rates, could exacerbate tensions on bank liquidity.

A rise in long-term sovereign rates could, on the one hand, slow the recovery in home loan production and, on the other, increase households' preference for off-balance-sheet investments such as life insurance. Increased volatility on the financial markets could also boost the appeal of structured products and lead to ever-stronger inflows into unit-linked products.

In this context, the Crédit Agricole Group could see its results significantly altered by the rising cost of its resources; its expenses and revenues would be subject to significant uncertainties.

b) ANY UNFAVOURABLE CHANGE IN THE YIELD CURVE AFFECTS OR COULD AFFECT THE CRÉDIT AGRICOLE GROUP'S CONSOLIDATED REVENUES OR PROFITABILITY

The net interest margin earned by the Crédit Agricole Group during any given period significantly affects its overall consolidated revenues and profitability for that period. Interest rates are highly sensitive to many factors beyond the Crédit Agricole Group's control. Changes in market interest rates could affect the interest rates charged on interest-earning assets differently than the interest paid on its liabilities. Any adverse change in the yield curve could cause a decline in both the Crédit Agricole Group's net interest margin from its lending activities and its economic value.

ECONOMIC VALUE ANALYSIS OF EQUITY

At 31 December 2025, if interest rates in the main areas in which **Crédit Agricole S.A.** is exposed ⁽¹⁾ were to fall by 200 basis points, this would have a positive impact of +€1.2 billion on the economic value ⁽²⁾ of Crédit Agricole S.A.; conversely, a 200 bp increase in interest rates in the main areas in which Crédit Agricole S.A. is exposed would have a negative impact of -€3.6 billion.

At 31 December 2025, if interest rates in the main areas in which the **Crédit Agricole Group** is exposed were to fall by 200 bp, this would have a positive impact of +€4.7 billion on the economic value of the Crédit Agricole Group; conversely, a 200 bp increase in interest rates in the main areas in which the Crédit Agricole Group is exposed would have a negative impact of -€14.1 billion.

(1) The interest rate shocks used correspond for the economic value analysis to the regulatory scenarios, namely +/-200 bps in the Eurozone and in the United States and +/-100 bps in Switzerland, and for the net interest margin analysis at a uniform shock of +/-50 bp.

(2) Net present value of the current balance sheet from which the value of equity and fixed assets is excluded.

These impacts are calculated based on a balance sheet phased out over the next 30 years, meaning they do not take into account future production and do not include any dynamic impact from a change of positions on the balance sheet. The average maturity of deposits without contractual maturity (demand deposits and savings books) outside financial institutions is limited to five years; the balance sheet being used excludes equity and shareholdings in compliance with regulations governing interest rate risk (Supervisory Outlier Test – SOT methodology, as defined by the European Banking Authority).

NET INTEREST MARGIN ANALYSIS

The calculations presented correspond to the sensitivity of the net interest margin to shocks of +/-0.5%. The assumptions regarding changes in outstanding loans and customer interest rates for Retail Banking in France are based on models developed by the Crédit Agricole Group. The use of these models significantly reduces sensitivities compared with calculations based on SOT assumptions. For example, the decline in rates, which leads to a decrease in the replacement rates of non-interest-bearing demand deposits, is offset by an increase in their volume.

At 31 December 2025, in the event of a -50 bp drop in interest rates in the main areas where **Crédit Agricole S.A.** is exposed, Crédit Agricole S.A.'s net interest margin would fall by -€0.3 billion in year one, -€0.1 billion in year two and -€0.2 billion in year three; conversely, in the event of an increase in interest rates of +50 basis points in the main areas where Crédit Agricole S.A. is exposed, Crédit Agricole S.A.'s net interest margin would increase by +€0.3 billion in year one, +€0.2 billion in year two and +€0.3 billion in year three.

At 31 December 2025, in the event of a -50 bp drop in interest rates in the main areas where the **Crédit Agricole Group** is exposed, the Crédit Agricole Group's net interest margin would fall by -€0.4 billion in year one and would remain virtually stable in years two and three; conversely, in the event of an increase in interest rates of +50 basis points in the main areas where the Crédit Agricole Group is exposed, the Crédit Agricole Group's net interest margin would increase by +€0.4 billion in year one, remain virtually stable in year two and +€0.2 billion in year three.

Between the two approaches, sensitivities are reversed: the economic value of the Crédit Agricole S.A. and the Crédit Agricole Group falls if interest rates rise, while the net interest margin increases.

The fall in economic value in the event of a rate hike is due to a generally higher volume of fixed-rate assets than fixed-rate liabilities on future maturities.

Therefore, in the event of an increase in rates, the negative sensitivity of fixed-rate assets is not fully offset by the positive sensitivity of fixed-rate liabilities.

Conversely, the net interest margin increases if interest rates rise, as the sensitivity of renewed assets to rate changes is higher than that of renewed liabilities, due to the fact that liabilities include equity and retail customer resources (demand deposits and regulated savings), which are not very or not at all sensitive to interest rate increases. For asset/liability sensitivities, the renewals taken into account in the net interest margin simulations overcompensate the stock.

Crédit Agricole S.A. and the Crédit Agricole Group's results could also be affected by a change in rates, both upwards and downwards, if hedges prove ineffective from an accounting perspective.

In addition, political uncertainties in France could affect the net interest margin due to an increase in the cost of medium- to long-term market resources.

C) THE CRÉDIT AGRICOLE GROUP MAY GENERATE LOWER REVENUES FROM ITS INSURANCE, ASSET MANAGEMENT, ASSET SERVICING, BROKERAGE AND OTHER BUSINESSES DURING MARKET DOWNTURNS

The market environment in 2025 has been marked by client risk aversion in the context of uncertain markets. Despite this environment, thanks to the diversity of activities and the ability to support clients with solutions adapted to market conditions, revenues from the Crédit Agricole Group's asset and wealth management, insurance and asset servicing activities increased in 2025. At the end of December 2025, the revenues ⁽¹⁾ generated by these three activities represented 18%, 10% and 7% of **Crédit Agricole S.A.**'s revenues and 12%, 7% and 5% of the **Crédit Agricole Group**'s revenues, respectively. Crédit Agricole Group is the leading insurer in France through Crédit Agricole Assurances ⁽²⁾. Amundi's assets under management stood at €2,380 billion at 31 December 2025, and Crédit Agricole Assurances' assets under management stood at €373 billion at 31 December 2025.

However, in a context of declining financial markets, revenues from asset and wealth management, insurance and asset servicing activities may be negatively impacted. For asset and wealth management activities, part of revenues is directly linked to management fees based on the assets under management and on fee and commission income related to these transactions. When markets are down, the total value of assets under management falls, leading to a potential drop in revenues from management fees. For insurance companies, a slump in markets could lead to a fall in the value of investments in financial instruments such as shares and bonds, potentially affecting returns for the insurer. Lastly, revenues from financial services activities could also be adversely impacted due to the reduced value of the customer portfolios of asset managers.

Moreover, financial and economic conditions affect the number and size of transactions for which the Crédit Agricole Group provides securities underwriting, financial advisory and other corporate and investment banking services. Therefore, the Crédit Agricole Group's revenues, which include fee and commission income from these services, are directly related to the number and size of the transactions in which the Crédit Agricole Group is involved, and can be significantly impacted by the decline of the market activity.

Furthermore, even in the absence of a market downturn, any below-market performance by the Crédit Agricole Group's undertaking for collective investment and life insurance products may result in increased withdrawals and reduced inflows, which would reduce the Crédit Agricole Group's revenues from its asset management and insurance businesses.

(1) Excluding Corporate Centre division.

(2) Source: *L'Argus de l'assurance*, 12 December 2025 (data at end-2024).

d) ADJUSTMENTS TO THE CARRYING AMOUNT OF THE CRÉDIT AGRICOLE GROUP'S SECURITIES AND DERIVATIVES PORTFOLIOS AND THE CRÉDIT AGRICOLE GROUP'S OWN DEBT COULD HAVE AN IMPACT ON ITS NET INCOME AND SHAREHOLDERS' EQUITY

The carrying amount of the Crédit Agricole Group's securities, derivatives and certain other assets, as well as its own debt in the balance sheet, are adjusted at each financial statements' production date. The carrying amount adjustments reflect, among other things, the credit risk inherent in the Crédit Agricole Group's own debt and variations in value in the fixed income and equity markets. Most of the adjustments are made on the basis of changes in fair value of the assets or liabilities of the Crédit Agricole Group during an accounting period, with the changes recorded either in the income statement or directly in shareholders' equity. Changes that are recognised in the income statement, to the extent not offset by opposite changes in the fair value of other assets, affect the consolidated net income of the Crédit Agricole Group. All fair value adjustments affect shareholders' equity and, as a result, the capital adequacy ratios of the Crédit Agricole Group. The fact that fair value adjustments are recognised in one accounting period does not mean that further adjustments will not be necessary in subsequent periods.

At 31 December 2025, the gross outstanding debt securities held by **Crédit Agricole S.A.** were €127.7 billion. Accumulated impairments, reserves and negative fair value adjustments due to credit risk were €175 million.

At 31 December 2025, the gross outstanding debt securities held by the **Crédit Agricole Group** were €182.1 billion. Accumulated impairments, reserves and negative fair value adjustments due to credit risk were €219 million.

In addition, Crédit Agricole Assurances holds a bond portfolio corresponding to its liability commitments and in particular guarantees granted to policyholders (mainly euro-denominated contracts and personal risk insurance – see Section 2.7 “Insurance sector risks” in the “Risk management” section) which also generates carrying amount adjustments recorded in the income statement or directly in shareholders' equity.

e) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO RISKS ASSOCIATED WITH CHANGES IN MARKET PRICES AND VOLATILITY WITH RESPECT TO A WIDE NUMBER OF MARKET PARAMETERS

The Crédit Agricole Group's businesses are materially affected by conditions in the financial markets, which in turn are impacted by current and anticipated future economic conditions in France, Europe and in the other regions around the world where the Crédit Agricole Group operates. Adverse changes in market, economic or geopolitical conditions could create a challenging operating environment for financial institutions. The Crédit Agricole Group is therefore highly exposed to the following risks: fluctuations in interest rates, share prices, foreign exchange rates, the premium applicable to bond issues (including those of the Crédit Agricole Group) and the price of oil.

To measure the potential losses associated with these risks, the Crédit Agricole Group uses a Value at Risk (VaR) model detailed in Section 2.5 “Market risk” of the “Risk management” part of this chapter.

At 31 December 2025, VaR stood at €9 million for both **Crédit Agricole S.A.** and the **Crédit Agricole Group**.

The Crédit Agricole Group also carries out stress tests in order to quantify its potential exposure in extreme scenarios, as described and quantified in paragraphs 2.5.III “Methodology for measuring and managing market risks” and 2.5.IV “Exposures” in the “Market risks” section of the “Risk management” part. These techniques are based on hypothetical or historical approaches from which future market conditions may differ significantly. Accordingly, the Crédit Agricole Group's exposure to market risk in extreme scenarios could be greater than the exposures predicted by its quantification techniques.

The amount of risk-weighted assets (RWAs) relating to the market risk to which **Crédit Agricole S.A.** is exposed was €12.1 billion at 31 December 2025.

The amount of risk-weighted assets (RWAs) relating to the market risk to which the **Crédit Agricole Group** is exposed was €12.5 billion at 31 December 2025.

Furthermore, the Crédit Agricole Group is sensitive to the potential market volatility that would be generated by concerted action by investors via a social networking platform to inflate the share price of certain issuers or certain commodities. These activities, whether or not the Crédit Agricole S.A. share is the target, can create uncertainty regarding valuations and lead to unpredictable market conditions, and could have an adverse impact on the Crédit Agricole Group and its counterparties.

f) THE CRÉDIT AGRICOLE GROUP MAY SUFFER LOSSES IN CONNECTION WITH ITS HOLDINGS OF EQUITY SECURITIES

The Crédit Agricole Group bears the risk of a decline in value of equity securities it holds in connection with its market-making and trading activities, mainly with respect to listed securities, and its private equity activities, and in connection with transactions in which it acquires strategic equity investments in a company with a view to exercising control and influencing the strategy. In the case of strategic equity investments, the Crédit Agricole Group's degree of control may be limited, and any disagreement with other shareholders or with management of the entity concerned may adversely impact the ability of the Crédit Agricole Group to influence the policies of this entity. If the Crédit Agricole Group's equity securities decline in value significantly, the Crédit Agricole Group may be required to record fair value adjustments or recognise asset impairment charges in its consolidated financial statements, which could negatively impact its results of operations and financial position.

At 31 December 2025, **Crédit Agricole S.A.** held €85.8 billion in equity instruments, of which €38.5 billion were recorded at fair value through profit or loss; €41.3 billion were held for trading purposes and €6 billion were recognised at fair value through equity.

At 31 December 2025, the **Crédit Agricole Group** held €90.3 billion in equity instruments, of which €40.6 billion were recorded at fair value through profit or loss; €41.3 billion were held for trading purposes and €8.3 billion were recognised at fair value through equity.

g) THE CRÉDIT AGRICOLE GROUP MUST ENSURE ADEQUATE ASSET AND LIABILITY MANAGEMENT IN ORDER TO CONTROL THE RISK OF LOSS RELATED TO CHANGES IN INTEREST AND FOREIGN EXCHANGE RATES, AS WELL AS TO THE RISK OF A DECREASE IN LIQUIDITY RESOURCES IN THE EVENT OF A PROLONGED DOWNTURN IN REFINANCING MARKETS

The Crédit Agricole Group is exposed to the risk that the maturity, interest rate or currencies of its assets might not match those of its liabilities. The timing of payments or flows of a number of the Crédit Agricole Group's assets and liabilities may fluctuate and be uncertain. The Crédit Agricole Group has implemented processes for monitoring, modelling and hedging the risks of its assets and liabilities and imposes strict limits on the gaps between its assets and liabilities as part of its procedures for managing liquidity, interest rate and foreign exchange risks. However, there can be no guarantee that these measures will be fully effective in eliminating any potential loss that would result from the mismatch between these assets and liabilities.

Liquidity risk is also subject to tighter supervision and diversified resource management. However, in the event that the refinancing markets close, the Crédit Agricole Group can rely on significant excess liquidity reserves and regulatory liquidity ratios, enabling the Crédit Agricole Group to be able to cope with any type of liquidity crisis situation over extended periods of time.

At 31 December 2025, the **Crédit Agricole Group** had:

- very large overall liquidity reserves of €485 billion, including €158 billion in very high-quality securities that can be immediately contributed to the Central Bank or used in repurchase agreements with the Central Bank, without the need to sell its assets.
- an LCR (Liquidity Coverage Ratio – the regulatory prudential ratio to ensure the short-term resilience of the liquidity risk profile) of 136% ⁽¹⁾ higher than the regulatory minimum of 100% and the 2028 Medium-Term Plan target of 110% to 130%;
- an NSFR (Net Stable Funding Ratio – a regulatory prudential ratio intended to ensure the long-term solidity of the liquidity risk profile) of 119.1%, exceeding the regulatory minimum of 100% and in line with the 2028 Medium-Term Plan target of 110% to 120%.

At 31 December 2025, **Crédit Agricole S.A.** posted:

- an LCR of 141%, higher than the regulatory minimum of 100%;
- an NSFR of 113.9%, higher than the regulatory minimum of 100%.

As the Crédit Agricole Group's overall liquidity reserves are pooled, Crédit Agricole S.A.'s needs are covered by the reserves of €485 billion at 31 December 2025 mentioned above.

h) THE CRÉDIT AGRICOLE GROUP'S HEDGING STRATEGIES MAY NOT ELIMINATE ALL RISK OF LOSSES

If an instrument or strategy that the Crédit Agricole Group uses to hedge its exposure to various types of risk in its businesses is not effective, the Crédit Agricole Group may incur losses. Many of these strategies are based on historical trading patterns and correlations. For example, if the Crédit Agricole Group holds a long position in an asset, it may hedge that position by taking a short position in an asset where the short position has historically moved in a direction that would offset a change in the value of the long position. The Crédit Agricole Group may only be partially hedged, however, or these strategies may not be fully effective in mitigating its risk

exposure in all market environments or against all types of risk in the future. Any unexpected market development, such as, for example, a sudden change in volatility or its structure, could also reduce the effectiveness of the Crédit Agricole Group's hedging strategies. Moreover, the way in which gains and losses resulting from ineffective hedges are recognised may increase the volatility of the results published by the Crédit Agricole Group.

At 31 December 2025, for both **Crédit Agricole S.A.** and the **Crédit Agricole Group**, the notional amount of protection bought in the form of credit derivatives was €1.6 billion (€2.3 billion at 31 December 2024), and the notional amount of short positions was zero (idem at 31 December 2024).

1.3 OPERATIONAL RISKS AND ASSOCIATED RISKS

The **operational risk** and associated risks of the Crédit Agricole Group include non-compliance risk, legal risk and the risks generated by outsourced services.

Over the period from 2023 to 2025, operational risk incidents for **Crédit Agricole S.A.** were divided as follows: the "Implementation, delivery and process management" category represents 38% of the operational loss, the "Customers, products and business practices" category represents 30% of the operational loss, and the "External fraud" category represents 23% of the operational loss. Other operational risk incidents can be broken down into employment and safety practice (3%), internal fraud (3%), business disruptions and system failures (1%) and damage to physical assets (1%).

In addition, the amount of risk-weighted assets (RWAs) relating to operational risk to which **Crédit Agricole S.A.** is exposed was €55 billion at 31 December 2025.

Over the period from 2023 to 2025, operational risk incidents for the **Crédit Agricole Group** were divided as follows: the "Implementation, delivery and process management" category represents 37% of the operational loss, the "Customers, products and business practices" category represents 26% of the operational loss, and the "External fraud" category represents 27% of the operational loss. Other operational risk incidents can be broken down into employment and safety practice (4%), internal fraud (3%), business disruptions and system failures (1%) and damage to physical assets (1%).

In addition, the amount of risk-weighted assets (RWAs) relating to operational risk to which the **Crédit Agricole Group** is exposed was €82.8 billion at 31 December 2025.

a) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO FRAUD RISKS

Fraud is an offence and an intentional act aimed at obtaining a tangible or intangible benefit, to the detriment of a person or an organisation, committed in particular by contravening laws, regulations or internal rules.

Fraud represents a loss and has a significant cost for the Crédit Agricole Group. Other than the consequences in terms of operational losses and damage to reputation, fraud can today be part of money laundering and/or terrorist financing schemes. Certain acts of fraud can be subject to a suspicious transaction report to Tracfin, the French intelligence service responsible for combating money laundering, illegal financing and fraud. In view of this, it is vital to strengthen governance, prevention, detection and processing.

(1) Average LCR at end-December 2025.

At 31 December 2025, the cost of fraud for **Crédit Agricole S.A.**, at the date of detection, averaged €113 million over the last three years.

The cost of fraud is mainly concentrated (approximately 90%) in the consumer finance and retail banking segments and takes the form of identity and document fraud (approximately 40% of fraud risks) and payment instrument fraud (approximately 20%).

At 31 December 2025, the cost of fraud for the **Crédit Agricole Group**, at the date of detection, averaged €178 million over the last three years.

The cost of fraud is mainly concentrated (approximately 80%) in the consumer finance and retail banking segments and takes the form of identity and document fraud as well as payment instrument fraud (approximately 40% of fraud risks for each category).

b) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO RISKS RELATED TO THE SECURITY AND RELIABILITY OF ITS INFORMATION SYSTEMS AND THOSE OF THIRD PARTIES

Technology is at the heart of the banking activity in France, and the Crédit Agricole Group continues to roll out its multichannel model as part of a lasting relationship with its customers. In this context, the Crédit Agricole Group is subject to cyber risk, which is the risk caused by a malicious and/or fraudulent act, perpetrated digitally in an effort to manipulate data (personal, banking/insurance, technical or strategic data), processes and users, with the aim of causing material losses to companies, their employees, partners and customers. Cyber risk has become a top priority in the field of operational risks. A company's data assets are exposed to new, complex and evolving threats which could have material financial and reputational impacts on all companies, and specifically on banking institutions. Given the increasing sophistication of criminal enterprises behind cyber-attacks, regulatory and supervisory authorities have begun highlighting the importance of risk management in this area.

As with most other banks, the Crédit Agricole Group relies heavily on communications and information systems throughout the Group to conduct its business. Any failure or interruption or breach in security of these systems could result in failures or interruptions in its customer relationship management, general ledger, deposit, servicing and/or loan organisation systems. If, for example, the Crédit Agricole Group's information systems failed, even for a short period of time, it would be unable to meet certain customers' needs in a timely manner and could thus lose business opportunities. Likewise, a temporary shutdown of the information systems of the Crédit Agricole Group, even though it has back-up recovery systems and contingency plans, could result in considerable costs required for information retrieval and verification. The Crédit Agricole Group cannot provide assurances that such failures or interruptions will not occur or, if they do occur, that they will be adequately addressed. The occurrence of any failures or interruptions could have an adverse effect on its financial position and results of operations.

The Crédit Agricole Group is also exposed to the risk of an operational failure or interruption of one of its clearing agents, foreign exchange markets, clearing houses, custodians or other financial intermediaries or external service providers that it uses to execute or facilitate its securities transactions. It is also at risk in the

event of a failure of an external information technology service provider, such as a cloud data storage company. As its interconnectivity with its customers grows, the Crédit Agricole Group may also become increasingly exposed to the risk of operational failure of its customers' information systems. The Crédit Agricole Group's communications and information systems, and those of its customers, service providers and counterparties, may also be subject to failures or interruptions resulting from cyber-crime or cyber-terrorism. The Crédit Agricole Group cannot guarantee that failures or interruptions in its systems or in those of other parties will not occur or, if they did occur, that they would be adequately resolved.

Over the period from 2023 to 2025, operational losses due to business and systems failure risk accounted for 1.5% of **Crédit Agricole S.A.**'s total operational losses. Over the same period for the **Crédit Agricole Group**, operational losses due to business and systems failure risk represented 1.2% of total operational losses.

c) THE CRÉDIT AGRICOLE GROUP'S RISK MANAGEMENT POLICIES, PROCEDURES AND METHODS MAY PROVE TO BE INEFFECTIVE AND INSUFFICIENT TO GUARANTEE AN ACTUAL REDUCTION OF ITS EXPOSURE TO UNIDENTIFIED OR UNANTICIPATED RISKS, WHICH COULD LEAD TO MATERIAL LOSSES

The Crédit Agricole Group's risk management policies, procedures, techniques and strategies may not guarantee an effective reduction of its risk exposure in all likely economic environments and market configurations. These procedures and methods may not be effective against certain risks, particularly those that the Crédit Agricole Group has not previously identified or anticipated. Some of the qualitative tools and metrics used by the Crédit Agricole Group for managing risk are based on its use of observed historical behaviour of the market and of players or on economic variables. The Crédit Agricole Group applies statistical and other tools to these observations to assess its risk exposures. The tools and metrics may fail to predict future risk exposures of the Crédit Agricole Group. These risk exposures could, for example, arise from factors it did not anticipate or correctly evaluate in its statistical models or from unprecedented market movements. This would limit its ability to manage its risks and affect its results. The Crédit Agricole Group losses could therefore be significantly greater than those anticipated based on historical measures.

In addition, certain processes that the Crédit Agricole Group uses to estimate risk, including expected credit losses under the IFRS standards in force, are based on both complex analysis and factors that could lead to uncertain assumptions. Both qualitative and quantitative models used by the Crédit Agricole Group may not be comprehensive and could lead the Crédit Agricole Group to significant or unexpected losses. While no material issue has been identified to date, risk management systems are also subject to the risk of operational failure, including fraud.

At 31 December 2025, the prudential capital requirement in order to cover the operational risk of **Crédit Agricole S.A.** and the **Crédit Agricole Group** amounted to €4.4 billion and €6.6 billion, respectively. This exposure has been assessed in full using the Standardised Measurement Approach (SMA) since 1 January 2025, in accordance with the CRR3 requirements.

d) ANY DAMAGE TO THE CRÉDIT AGRICOLE GROUP'S REPUTATION COULD HAVE A NEGATIVE IMPACT ON ITS BUSINESS.

The Crédit Agricole Group's business depends broadly on the maintenance of a strong reputation in compliance and ethics. Any legal proceedings or adverse publicity against the Crédit Agricole Group for non-compliance or for any other similar or related issue could damage its reputation and, as a result, have a negative impact on its business. These matters include, but are not limited to, possible inappropriate dealings with potential conflicts of interest, potentially incorrect monitoring of legal and regulatory requirements, competition issues, ethics issues, social and environmental responsibility, money laundering, information security policies and sales and trading practices.

The Crédit Agricole Group may be dependent on data produced or transmitted by third parties, particularly in terms of social and environmental responsibility, and could be exposed to specific risks in this area in a context where guarantees of the reliability of this third-party data are still being developed. The Crédit Agricole Group's reputation could also be damaged by an employee's misconduct, fraud or embezzlement by financial intermediaries or any other act or misconduct or negligence by its third-party providers, external agents and sub-contractors. Any damage to the Crédit Agricole Group's reputation might lead to a loss of business that could impact its earnings and financial position. Failure to address these issues adequately could also give rise to additional legal risk, which might increase the number of litigation claims and disputes and expose the Crédit Agricole Group to fines or regulatory sanctions.

Reputational risk is a key element for the Crédit Agricole Group. It is managed by the Crédit Agricole Group Compliance department and the Compliance departments of relevant entities within the Crédit Agricole Group, which notably ensure, without limitation, the prevention and control of the risks of non-compliance with, in this context, the prevention of money laundering, the fight against the financing of terrorism, the prevention of fraud and corruption, compliance with embargoes and asset freezing obligations, and the protection of customer data.

e) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO THE RISK OF PAYING HIGHER COMPENSATION FOR DAMAGES OR FINES AS A RESULT OF LEGAL, ARBITRATION OR REGULATORY PROCEEDINGS

The Crédit Agricole Group has in the past been, and may in the future be, subject to significant legal proceedings (including class actions), arbitrations and regulatory proceedings. When determined adversely to the Crédit Agricole Group, these proceedings can result in awards of high damages, fines and penalties. Legal and regulatory proceedings to which the Crédit Agricole Group has been subject involve issues such as collusion with respect to the manipulation of market benchmarks, violation of international sanctions, inadequate controls and other matters. While the Crédit Agricole Group in many cases has substantial defences, even where the outcome of a legal or regulatory proceeding is ultimately favourable, it may incur substantial costs and have to devote significant resources to defending its interests. For further information on changes in risks resulting from legal, arbitration or administrative proceedings under way within Crédit Agricole S.A., please refer to the section "Changes in Crédit Agricole S.A.'s legal risks" under "Risk management" of this document.

Organised as a business line, the Legal Affairs department has two main targets: to control legal risk, which can give rise to disputes and liabilities, whether civil, disciplinary or criminal, and to provide the legal support needed by entities to enable them to carry out their activities.

At 31 December 2025, the provisions for legal risk totalled €151 million for **Crédit Agricole S.A.** and €321 million for the **Crédit Agricole Group**, compared to €334 million and €483 million, respectively, at 31 December 2024.

f) THE INTERNATIONAL SCOPE OF THE CRÉDIT AGRICOLE GROUP'S OPERATIONS EXPOSES IT TO LEGAL AND COMPLIANCE RISKS

Due to its international scope, the Crédit Agricole Group's operations are exposed to risks inherent to foreign operations, including the need to comply with multiple and often complex laws and regulations applicable to activities in each of the countries where the Crédit Agricole Group is active, such as local banking laws and regulations, internal control and disclosure requirements, data privacy restrictions, European, U.S. and local anti-money laundering and anti-corruption laws and regulations, international sanctions and other rules and requirements. Violations of these laws and regulations could harm the reputation of the Crédit Agricole Group, result in litigation, civil or criminal penalties, or otherwise have a material adverse effect on its business.

To illustrate, in October 2015, Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate and Investment Bank reached agreements with the US federal and New York State authorities that had been conducting investigations regarding US dollar transactions with countries subject to US economic sanctions. The events covered by this agreement took place between 2003 and 2008. Crédit Agricole Corporate and Investment Bank and Crédit Agricole S.A., which cooperated with the US and New York State authorities in connection with their investigations, have agreed to pay a total penalty amount of US\$787.3 million (equivalent to €692.7 million).

Despite the implementation and constant improvement of procedures designed to ensure compliance with these laws and regulations, there can be no assurance that all employees, service providers or contractors of the Crédit Agricole Group will follow its policies or that such programmes will be adequate to prevent all violations. It cannot be excluded that transactions in violation of the Crédit Agricole Group's policies may be identified, potentially resulting in penalties. Furthermore, the Crédit Agricole Group does not always have direct or indirect control in certain entities with international operations in which it only holds a stake, and in those cases its ability to enforce compliance with its internal policies and procedures may be even more limited.

At 31 December 2025, the Crédit Agricole Group had operations in 46 countries. This scope includes Crédit Agricole S.A. as the parent company, as well as the subsidiaries and branches of the Crédit Agricole Group. However, it does not include held-for-sale and discontinued operations, nor any equity-accounted entities. Note that in 2025, 67% of the revenues (excluding intercompany disposals) of **Crédit Agricole S.A.** and 76% of the revenues (excluding intercompany disposals) of the **Crédit Agricole Group** came from their two main locations (namely France and Italy).

1.4 RISKS RELATING TO THE ENVIRONMENT IN WHICH THE CRÉDIT AGRICOLE GROUP OPERATES

a) HIGHER AND/OR VERY VOLATILE INTEREST RATES AND A SHARP ECONOMIC SLOWDOWN COULD NEGATIVELY AFFECT THE CRÉDIT AGRICOLE GROUP'S BUSINESS ACTIVITIES, OPERATIONS AND FINANCIAL PERFORMANCE

The uncertain and conflictual global economic environment, as well as regional and national developments, is rife with risks that could result in upward pressure on inflation and interest rates and downward pressure on growth.

- The COVID crisis and then the regional armed conflicts clearly brought to light national security concerns, the issues of sovereignty, preserving strategic sectors and protecting key supplies, in order to not be dependent on a hostile power or a single supplier. Combined with the accelerating challenges of climate transition, developments in national industrial strategies, the rise of protectionism and the imposition of tariffs are leading to an economic reconfiguration of global value chains. These movements are structural and likely to create additional price tensions and destabilise the economic sectors and players concerned.
- Climate events (such as droughts, fires, floods or even harsh winters) can also cause supply difficulties, disrupt global trade and lead to significant price tensions.
- In the United States, Donald Trump's economic plan suggests slightly stronger growth (tax cuts, deregulation) but also higher inflation (tariffs, anti-immigration laws, budget deficit). This scenario carries risks: lower central bank policy rate cuts in the United States, which could constrain monetary policy in the rest of the world; protectionism heavily impacting global growth; and lack of visibility which could lead, on the one hand, to financial volatility and, on the other hand, to a wait-and-see attitude to savings, which would be detrimental to consumption, investment and growth.
- More generally, geopolitical developments and conflicts (such as the war in Ukraine and conflicts in the Middle East, or tensions between China and the United States or between other nations with significant weight in the global economy) pose risks to the global economy, particularly to trade and supply chains, and therefore to prices (particularly for commodities and key components) and even to the quantities actually available.
- In the Eurozone, the reference scenario assumes growth at its potential level, inflation close to the ECB's target, coupled with moderately upward pressure on interest rates. However, the eurozone remains exposed to the risk of imported inflationary pressures in the event, for example, of supply difficulties (as during the Covid crisis) or energy price shocks (as when the war in Ukraine broke out). Furthermore, the eurozone is exposed to the risk of a weaker growth scenario materialising. The risks associated with the baseline scenario are indeed bearish. A scenario of stagnation could materialise in a number of ways: a hardening of the trade dispute with the United States, a contraction in export markets, increased competitive pressure, a redirection of Chinese exports towards the European Union (EU), a deterioration in private sector confidence and, finally, a more gradual implementation of Germany's fiscal stimulus package.

- Finally, in France more specifically, against a backdrop of weak growth and deteriorating public finances, any political, economic and social developments could lead to higher and more volatile French sovereign interest rates (*Obligation Assimilable du Trésor*, OAT) as well as private interest rates. Uncertainty may also contribute to economic players adopting a wait-and-see approach, which would be detrimental to activity.

Thus, higher inflation risks (particularly upstream) could, among other things, thwart the ECB's status quo scenario, promote higher interest rates, reduce household purchasing power, and worsen the situation for businesses. This could lead to an increase in the number of corporate defaults, causing unemployment to rise. The real estate sector in particular is very sensitive to interest rates and a halt to the decline or an increase in interest rates on real estate loans would be damaging to the sector. Higher interest rates (particularly in view of weak growth) and a decline in the confidence of economic agents could lead to a deeper crisis and impact the economy more broadly. These various factors not only increase the risk of default by the Crédit Agricole Group's customers, but also the risk of financial instability and a downturn in the financial markets, which have an impact on the Crédit Agricole Group's business activities and cost of risk.

More generally, weak growth, the rapid rise in interest rates or high interest rate levels could cause difficulties for some major economic players, particularly those with the most debt. Difficulties in repaying their debts and defaults on their part could cause a significant shock to the markets and have systemic impacts. In a more-difficult-to-read context weakened by major shocks, events such as those linked to the difficulties of significant players are potentially damaging to the financial health of the Crédit Agricole Group, depending on its exposure and the systemic repercussions of the shock.

b) ADVERSE ECONOMIC AND FINANCIAL TERMS HAVE IN THE PAST HAD AND MAY IN THE FUTURE HAVE AN IMPACT ON THE CRÉDIT AGRICOLE GROUP AND THE MARKETS IN WHICH IT OPERATES

A deterioration in economic conditions in the markets where the Crédit Agricole Group operates could have one or several of the following impacts:

- More-adverse economic conditions would affect the business and operations of customers of the Crédit Agricole Group, which could decrease revenues and increase the rate of default on loans and other receivables.
- Macroeconomic policies adopted in response to actual or anticipated economic conditions could have unintended effects. They are likely to impact market parameters such as interest rates and foreign exchange rates, which in turn could affect the businesses of the Crédit Agricole Group that are most exposed to market risk.
- The underestimation of risks (particularly political and geopolitical risks) by financial markets, an overly favourable perception of economic conditions generally or in specific business sectors, and the indiscriminate quest for profitability could result in asset price bubbles and could, in turn, exacerbate the impact of corrections if conditions become less favourable and/or risk aversion becomes apparent.
- A widespread economic disruption (such as the global financial crisis of 2008, the European sovereign debt crisis of 2011, the COVID crisis of 2020 or the war in Ukraine and the energy crisis it caused in 2022) could have a severe impact on all of the activities of the Crédit Agricole Group, particularly if the disruption is characterised by an absence of market liquidity that makes it difficult to dispose of certain categories of assets at their estimated market value or at all.

- More generally, international economic or geopolitical risks can materialise suddenly and have significant macroeconomic impacts on countries, sectors, value chains, corporates and, ultimately, the bank's activities, in the short- or long-term. For example, uncertainties surrounding the outcome of the war in Ukraine, developments in the Middle East conflict, and intensifying tensions between the United States and China or between other nations with significant weight in the global economy (desire for economic decoupling, especially in the technology sectors) could give rise to multiple scenarios and trigger a number of risks, including trade wars and sanctions, military tensions around Taiwan and in the South China Sea, and even nuclear risk.
- A decline in the prices of bonds, equities and commodities could impact a significant portion of the business of the Crédit Agricole Group, including in particular trading, investment banking and asset management revenues.
- More generally, greater uncertainties and significant market disruptions may increase volatility. That could have a significant adverse impact on the Crédit Agricole Group's trading and investment activities in the bond, foreign exchange, commodities and equity markets, as well as on its positions in other investments. In recent years, the financial markets have experienced significant disruption and volatility, which could reoccur, exposing the Crédit Agricole Group to significant losses. Such losses could extend to many trading and hedging instruments used by the Crédit Agricole Group, including swaps, forwards, futures, options and structured products. In addition, financial market volatility makes it difficult to anticipate trends and implement effective trading strategies.

While uncertainties remain strong, an additional deterioration in economic conditions would increase the difficulties and failures of corporates and the unemployment rate could start rising again, increasing the probability of customer default. The heightened economic, geopolitical and climatic uncertainty could have a strong negative impact on the valuation of risky assets, on the currencies of countries in difficulty, and on the price of commodities. As such:

- The succession of unprecedented exogenous shocks and difficulties in assessing the economic situation may lead central banks to pursue inappropriate monetary policies: late or prudent monetary easing or, on the contrary, early tightening, could thus lead to an overly restrictive policy that could promote a pronounced recession in activity.
- The political and geopolitical context – more conflictual and tense – induces greater uncertainty and increases the overall level of risk. In the event of rising tensions or the materialisation of latent risks, this could lead to major market movements and have a negative impact on economies.
- In France, there could also be a significant drop in confidence in the event of a more marked deterioration of the political, economic or social context which could lead, on the one hand, households to consume less and save more as a precaution, and corporates to delay investments on the other. This would be detrimental to growth and the quality of private debt, which has grown more than in the rest of Europe.

- In France, political and economic uncertainty coupled with possible social tensions, against the backdrop of weak growth and high public debt, would have a negative impact on confidence and investors, and could cause an additional rise in interest rates and in the cost of refinancing for the government, corporates and the banks. It could also lead to losses on the sovereign portfolios of banks and insurers. For example, **Crédit Agricole S.A.'s** exposure to French sovereign risk was €58.1 billion at 31 December 2025, which represents 3% of Crédit Agricole S.A.'s exposures to credit and counterparty risk. The **Crédit Agricole Group's** exposure to French sovereign risk was €68 billion at 31 December 2025, which represents 3% of the Crédit Agricole Group's exposures to credit and counterparty risk.

The current economic and financial balances are fragile and uncertainties remain strong. It is therefore difficult to predict economic or financial developments and to determine which markets would be most significantly impacted in the event of a significant deterioration. If economic or market conditions (whether French, European or global) were to deteriorate or become significantly more volatile, the Crédit Agricole Group's operations could be disrupted, and its business, results and financial position could, as a result, experience a material adverse effect.

c) THE CRÉDIT AGRICOLE GROUP OPERATES IN A HIGHLY REGULATED ENVIRONMENT, AND ITS PROFITABILITY AND FINANCIAL POSITION COULD BE SIGNIFICANTLY IMPACTED BY ONGOING LEGAL AND REGULATORY CHANGES

The Crédit Agricole Group is subject to significant regulation and numerous supervisory regimes in the jurisdictions in which it operates.

To illustrate, such regulations pertain to, in particular:

- the regulatory and prudential requirements applicable to credit institutions, including prudential rules on capital adequacy and minimum capital and liquidity, diversification and risk weighting requirements, governance, restrictions on shareholdings and compensation, as defined in particular, but not limited to, by:
 - (i) Regulation (EU) 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms (as amended or supplemented at any time);
 - (ii) Directive 2013/36/EU of the European Parliament and of the Council of 26 June 2013 on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms (as amended or supplemented at any time) as transposed into French law.

Under these regulations, credit institutions, such as Crédit Agricole S.A., and banking groups such as the Crédit Agricole Group, must comply with requirements in terms of minimum capital ratios, risk diversification and weighting and liquidity, monetary policy, reporting, rules for the use of internal models and restrictions on equity investments. At 31 December 2025, **Crédit Agricole S.A.'s** phased-in Common Equity Tier 1 (CET1) ratio was 11.8% and Crédit Agricole S.A.'s total phased-in ratio was 17.2%. At the same date, the **Crédit Agricole Group's** phased-in Common Equity Tier 1 (CET1) ratio was 17.3% and the Crédit Agricole Group's total phased-in ratio was 20.9%;

- the rules applicable to bank recovery and resolution as defined, without limitation, by:
 - (ii) Directive 2014/59/EU of the European Parliament and of the Council of 15 May 2014 establishing a framework for the recovery and resolution of credit institutions and investment firms (as amended or supplemented at any time) as transposed into French law;
 - (ii) Regulation No. (EU) 806/2014 of the European Parliament and of the Council of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund (as amended or supplemented at any time); accordingly, the Crédit Agricole Group is placed under the supervision of the ECB to which a Crédit Agricole Group recovery plan is submitted each year in accordance with the applicable regulations (for more information, see the “Risk management” section of the 2025 Universal Registration Document).
- the regulations applicable to financial instruments (including shares and other securities issued by Crédit Agricole S.A.), as well as the rules relating to financial reporting, information disclosure and market abuse (Regulation (EU) No. 596/2014 of the European Parliament and of the Council of 16 April 2014 on market abuse, as modified or supplemented at any time), which in particular increases the obligations of the Crédit Agricole Group in terms of transparency and reporting;
- the monetary, liquidity, interest rate and other policies of Central Banks and regulatory authorities;
- the regulations governing certain types of transactions and investments, such as derivatives and securities financing activities and money market funds (Regulation (EU) No. 648/2012 of the European Parliament and of the Council of 4 July 2012 on OTC derivatives, central counterparties and trade repositories, as modified or supplemented at any time);
- regulations of market infrastructures, such as trading platforms, central counterparties, central securities depositories and securities settlement systems;
- applicable regulations on corporate social responsibility (CSR), which reinforce requirements regarding the disclosure of information:
 - (i) with regard to sustainability, making it possible to understand the impact of the activity of the institution concerned on CSR issues and how these issues affect the results and financial position of that institution, in particular, without limitation, to Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013 on the annual financial statements, consolidated financial statements and related reports of certain types of undertakings, (as amended or supplemented at any time, including, in particular, by Directive 2014/95/EU of the European Parliament and of the Council of 22 October 2014 on the publication of non-financial and diversity information by certain large undertakings and groups and, more recently, by

Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 (the “CSRD”) as regards corporate sustainability reporting);

- (ii) with regard to how and to what extent banking groups finance or develop economic activities that can be considered environmentally sustainable in accordance with Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to promote sustainable investments, known as the Taxonomy Regulation (as amended or supplemented at any time, including, in particular, by Commission Delegated Regulation (EU) 2021/2178 of 6 July 2021 specifying the content and presentation of information to be disclosed by undertakings subject to Articles 19a or 29a of Directive 2013/34/EU concerning environmentally sustainable economic activities, and specifying the methodology to comply with that disclosure obligation);
- (iii) with regard to sustainability in the financial services sector, and in particular the integration of sustainability risks and the consideration of adverse sustainability impacts in their processes as well as the disclosure of sustainability-related information across different financial products in accordance with Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019, as amended or supplemented at any time (the “SFDR”);

it being specified that these CSR regulations are regularly subject to changes that may impact the Crédit Agricole Group, particularly in the context of the adoption of an “Omnibus package” comprising several legislative and regulatory proposals, some of which have already been adopted and are now applicable;

- tax and accounting legislation in the jurisdictions where the Crédit Agricole Group operates;
- the rules and procedures relating to internal control, anti-money laundering and combating terrorist financing, risk management and compliance.

As a result of some of these measures, the Crédit Agricole Group was notably forced to reduce the size of some of its activities in order to comply with the new requirements created by them. These measures have also increased compliance costs and it is likely that they will continue to do so. In addition, some of these measures may also significantly increase the Crédit Agricole Group’s funding costs, particularly by requiring the Crédit Agricole Group to increase the portion of its funding consisting of capital and subordinated debt, which carry higher costs than senior debt instruments.

Failure to comply with these regulations could have major consequences for the Crédit Agricole Group: significant intervention by regulatory authorities and fines, international sanctions, public reprimand, reputational damage, enforced suspension of operations or, in extreme cases, withdrawal of authorisation to operate. Moreover, regulatory constraints could significantly limit the ability of the Crédit Agricole Group to expand its business or to pursue certain existing activities.

In addition, legislative and regulatory measures have come into force in recent years or may be adopted or modified to introduce or strengthen a number of changes, some of which are permanent, in the overall financial environment. While the aim of these measures is to avoid a recurrence of the global financial crisis, the new measures have changed substantially, and may continue to change, the environment in which the Crédit Agricole Group and other financial institutions operate. As such, the measures that have been or may be adopted include more stringent capital and liquidity requirements (particularly for large global institutions and groups such as Crédit Agricole Group), tax on financial transactions, caps or tax on employee compensation over specified levels, limits on the types of activities that commercial banks can undertake (prohibition or limitation of proprietary trading and investment, investments and holdings in private equity funds and hedge funds), ring-fencing requirements relating to certain activities, restrictions on the types of entities permitted to conduct swaps, restrictions on certain types of activities or financial products such as derivatives, mandatory write-downs or conversions into equity of certain debt instruments in the event of a resolution procedure and, more generally, enhanced recovery and resolution regimes, new risk-weighting methodologies (particularly with respect to insurance businesses), and new rules on the use of internal models, periodic stress testing, strengthening of the powers of supervisory authorities, new rules for managing environmental, social and governance (ESG) risks, and new rules for disclosing information, particularly in relation to sustainability requirements.

The measures relating to the banking and financial sector in which the Crédit Agricole Group operates could be amended again, expanded or strengthened, and new measures could be introduced, further affecting the predictability of the regulatory regimes to which the Crédit Agricole Group is subject and requiring rapid implementation likely to mobilise significant resources within the Crédit Agricole Group. In addition, the adoption of these new measures could increase the constraints on the Crédit Agricole Group and require a strengthening of the actions carried out by the Crédit Agricole Group presented above in response to the existing regulatory context.

In addition, the general political environment has evolved unfavourably for banks and the financial industry, resulting in additional pressure on legislative and regulatory bodies to adopt more stringent regulatory measures, despite the fact that these measures can have adverse consequences on lending and other financial activities, and on the economy.

Given the continuing uncertainty linked to new legislative and regulatory measures, the scale and scope of which are largely unpredictable, it is impossible to predict their real impact on the Crédit Agricole Group, but their impact could be very significant.

1.5 RISK RELATED TO THE STRATEGY AND TRANSACTIONS OF THE CRÉDIT AGRICOLE GROUP

a) CRÉDIT AGRICOLE S.A. MAY NOT ACHIEVE THE TARGETS SET OUT IN ITS 2028 MEDIUM-TERM PLAN

On 18 November 2025, Crédit Agricole S.A. announced its new Medium-Term Plan for 2028, “ACT 2028” (the “2028 Medium-Term Plan”), with the ambition to be a conquering bank, leader in Europe, leader in transitions and leader in new technologies. In a context of major challenges, Crédit Agricole S.A. is leveraging its strengths to accelerate its development and deepen its transformation, with these ambitions supported by the cohesion of all its teams.

The 2028 Medium-Term Plan places acceleration at the heart of the roadmap. Crédit Agricole S.A. wants to expand its playing field, consolidate its positions in France and develop new growth drivers in Europe and Asia. The target is to reach 60 million customers for the Group, approximately €3.5 trillion in savings and more than €30 billion in revenues by 2028, with nearly 60% of this coming from international operations. Five levers are driving this acceleration: consolidating our leadership in retail banking in France; expanding the Group’s development model in Europe; strengthening our foothold in Asia; seizing opportunities in private markets and accelerating our payment, collection and cash flow management offerings; and asserting ourselves as a driving force behind transitions.

To achieve its ambitions for acceleration and maintain high operational efficiency with a cost/income ratio of less than 55% by 2028, transformation is at the heart of Crédit Agricole S.A.’s strategic plan. This transformation is based on four major areas: accelerating time-to-market and leveraging artificial intelligence (AI) and data as drivers for customer capture and efficiency; preparing for the future and intensifying innovation; maintaining high standards of risk management; and fostering trust as the foundation for performance and cross-functional collaboration.

The Group’s cohesion, based on a decentralised model and business lines united around common values and a shared Raison d’Être, is a major asset in achieving the targets of the Medium-Term Plan. Synergies will be amplified by mobilising the business lines as “Business Partners” of the Group’s relationship banks and by developing consistency and coordination between the business lines. Among the levers identified to develop cohesion, the business lines are particularly committed to supporting the customer acquisition efforts of the retail banks and to developing innovative solutions for bank customers.

The 2028 Medium-Term Plan includes a number of financial targets relating to the cost/income ratio, net income, return on equity, level of equity, and payout ratio. These financial targets were established primarily for purposes of internal planning and allocation of resources, and are based on a number of assumptions with regard to the economic climate and the activity of the business lines of Crédit Agricole S.A. The financial targets do not constitute projections or forecasts of anticipated results. The actual results of Crédit Agricole S.A. are likely to vary from these targets for a number of reasons, including if one or more of the risk factors described elsewhere in this section materialise. For example, Crédit Agricole S.A. is pursuing the following targets, as set out in its 2028 Medium-Term Plan: net income Group share of more than €8.5 billion in 2028; revenue growth of more than 3.5% per year on average between 2024 (pro forma) and 2028; a cost/income ratio below 55% in 2028; return on tangible equity (ROTE) above 14% in 2028; optimised management of the CET1 ratio at around 11% in relation to the CET1 ratio target for the Crédit Agricole Group of 17% or more throughout the pathway. The 2028 Medium-Term Plan also provides for a dividend distribution policy for Crédit Agricole S.A. of 50% in cash, with an interim dividend to be paid from 2026 onwards.

More generally, the success of the 2028 Medium-Term Plan is based on a large number of initiatives of varying scope, to be rolled out within the various Crédit Agricole Group entities. Although many of the targets set out in the 2028 Medium-Term Plan are expected to be achievable, it is not possible to predict which ones will be achieved and which ones will not. The 2028 Medium-Term Plan also provides for important investments, but their return could be lower than expected if the targets pursued under the 2028 Medium-Term Plan were not ultimately achieved. Thus, if Crédit Agricole S.A. was unable to achieve the targets set out in the 2028 Medium-Term Plan (in whole or in part), there could be a material adverse impact on its financial position and results.

Furthermore, as a responsible and committed player, the Crédit Agricole Group is accelerating in transitions, with the ambition of becoming the leader in the environmental transition economy. The Group is reaffirming its Net Zero pathways, strengthening its climate strategy and offering the widest range of responsible investments on the market. It is positioning itself as a key player in climate change adaptation, developing dedicated banking services, launching a new Prevention business line and promoting the circular economy. Finally, it is innovating and mobilising resources in favour of nature.

The ambition for 2028 is to amplify the Group's impact on regional vitality and a just transition by facilitating access to sustainable housing and essential services (health, mobility, renewable energy) and by supporting agricultural and agri-food transitions. Concrete commitments include a 90/10 ratio of green/brown outstanding loans, €240 billion in transition financing, €1 billion in sustainable finance revenues from corporate and investment banking, and 600,000 homes supported in their energy renovation projects.

Finally, faced with the challenge of the demographic transition, the Group has the widest range of offerings on the market and aims to become the trusted partner for large-scale intergenerational transmission, developing innovative offerings for wealth transfer, retirement planning and support for seniors and caregivers. The aim is to support customers in all their wealth management needs, to be the leader in group and individual pension assets in France by 2028, to accelerate the inflow of retirement savings in Europe with net inflows of more than €75 billion, and to offer solutions for adapting to ageing through the "Crédit Agricole Santé & Territoires" business line.

Failure to comply with these ESG commitments could damage the reputation of the Crédit Agricole Group and therefore Crédit Agricole S.A., which could have a negative impact on its business. In addition, the new nature of certain ESG data requiring additional reliability work could lead to the recalculation of trajectories to achieve the targets set, and thus shift them over time.

b) INSURANCE ACTIVITIES COULD BE ADVERSELY AFFECTED IN THE EVENT OF A DECORRELATION BETWEEN CLAIMS AND THE ASSUMPTIONS USED IN SETTING THE PRICES FOR INSURANCE PRODUCTS AND IN ESTABLISHING RESERVES, AND IN THE EVENT OF A SHARP INCREASE IN RATES AND TAXATION.

At 31 December 2025, Crédit Agricole Assurances accounted for 25% of Crédit Agricole S.A.'s results and 21% of the Crédit Agricole Group's results ⁽¹⁾.

Crédit Agricole Assurances continues to adapt its strategy in a context characterised by monetary policy easing and heightened geopolitical risks, increased climate risks, with natural events becoming both more intense and more frequent, and growing risks related to AI and cybercrime. Its risk profile is dominated by market and insurance risks.

In its savings/retirement insurance business, Crédit Agricole Assurances offered preferential policyholder deferred profit sharing on euro payments in both France and internationally. In France, Crédit Agricole Assurances is optimising changes in its profit-sharing reserves (*provision pour participation aux bénéfices* – PPAB). The PPAB therefore reached €6.3 billion at 31 December 2025 (versus €7.5 billion at 31 December 2024), making it possible to boost the rates paid to policyholders over several years. Moreover, the unit-linked portion whose risk is borne by the policyholders represented 31.1% of Crédit Agricole Assurances' assets under management at 31 December 2025, up 1.2 points year-on-year. Finally, Crédit Agricole Assurances' annualised surrender rate ⁽²⁾ stood at 4.1% at 31 December 2025.

In property and casualty insurance as well as personal protection (death and disability/creditor/group insurance) activities, insurance revenues from Crédit Agricole Group entities largely depend on whether the assumptions used to set the prices of products and establish the provisions are in line with the losses incurred. For example, these assumptions concern changes in mortality or morbidity, the behaviour of policyholders and the frequency and cost of claims. Crédit Agricole Assurances and CAMCA rely on their experience and on professional data to provide actuarial estimates for claims and the future profitability generated by its products. However, the losses incurred could prove to be greater than the assumptions applied for setting prices and determining provisions. For Crédit Agricole Assurances, this risk mainly concerns death and disability/creditor/group/property and casualty insurance activities. If the benefits paid by Crédit Agricole Assurances to policyholders exceed the assumptions on which pricing and provisions were set, Crédit Agricole Assurances' operating income and financial position may be affected.

With regard to property and casualty insurance business specifically, Crédit Agricole Assurances publishes a combined ratio ⁽³⁾ which reflects the profitability of this activity, a level greater than 100% indicating a non-profitable technical activity. At 31 December 2025, the combined ratio for property and casualty insurance activities in France stood at 96.7%. If Crédit Agricole Assurances needed to increase its provisions, for example due to inflation, or if Crédit Agricole Assurances suffered a higher loss ratio than expected, its ratio would increase and its operating profit would decrease temporarily, the insurance policies being reviewable annually.

c) ADVERSE EVENTS MAY AFFECT SEVERAL OF THE CRÉDIT AGRICOLE GROUP'S BUSINESSES SIMULTANEOUSLY

While each of the Crédit Agricole Group's principal activities are subject to risks specific to them and are subject to different market cycles, it is possible that adverse events could affect several of the Crédit Agricole Group's activities at the same time. For instance, a decrease in interest rates could simultaneously impact the interest margin on loans, the yield and therefore the fee and commission income earned on asset management products, and the returns on investments of the insurance subsidiaries. A general and prolonged decline in financial markets and/or adverse macroeconomic conditions could impact the Crédit Agricole Group in multiple ways, by increasing default risk in its lending activities, causing a decline in the value of its securities portfolios and reducing revenues in its fee and commission income-generating activities. In addition, a deterioration in the regulatory and tax environment in the main markets in which the Crédit Agricole Group operates could affect the Crédit Agricole Group's business or result in its profit being over-taxed. In such an event, the Crédit Agricole Group might not realise the benefits that it otherwise would hope to achieve through the diversification of its activities. Where an event adversely affects multiple activities, the impact on the result and financial position of the Crédit Agricole Group is all the more important.

d) THE CRÉDIT AGRICOLE GROUP IS EXPOSED TO ENVIRONMENTAL, SOCIAL AND GOVERNANCE RISKS

Environmental, societal and governance (ESG) risk factors can affect the Crédit Agricole Group in two ways, according to the principle of double materiality. Firstly, social and environmental materiality, which reflects the impact, positive or negative, of the Crédit Agricole Group's activities on its ecosystem. Secondly, financial materiality reflects the impact of the ecosystem on the Crédit Agricole Group's business lines.

(1) Net income Group share excluding Corporate Centre division.

(2) Annualised amount of redemptions since 1 January compared with the corresponding provisions at the start of the financial year.

(3) Combined property & casualty ratio in France (Pacifica) excluding discounting, net of reinsurance: (claims experience + overheads + fee and commission income)/gross earned premiums.

In the first area, the Crédit Agricole Group could be exposed to reputational risk related to its compliance with public commitments, particularly those related to ESG. The Crédit Agricole Group may thus face controversy by being challenged by third parties if they believe that these commitments are not being met. Furthermore, Crédit Agricole S.A. may not fully achieve the targets of its Strategic Plan (see Net Zero Commitments presented in Chapter 2.1 of the 2025 Universal Registration Document). This could result in a failure to achieve the quality of the working conditions and framework it has set out and thus damage the Crédit Agricole Group's reputation, which could have a negative impact on its business. In terms of social risk, the Crédit Agricole Group could fail to achieve the targets of its Societal Project. This one strives to economically and socially strengthen all territories and all customers, in particular by promoting the inclusion of young people, access to care, and ageing well – everywhere and for all. Finally, physical risks may impact operating tools, but their consequences should remain marginal at the Crédit Agricole Group level.

Depending on the financial materiality, the ESG risk hazards may affect the counterparties of Crédit Agricole Group member entities, and therefore indirectly, the Crédit Agricole Group. ESG risks are thus considered to be risk factors that influence the other main categories of existing risks, notably credit, but also market, liquidity and operational risks.

However, these risks could mainly materialise through credit risk: for instance, when an entity within the Crédit Agricole Group lends to businesses that conduct activities that emit greenhouse gases, it is subject to the risk that more stringent regulations or limitations will be imposed on its borrower, which could have an adverse impact on the latter's credit quality and the value of the assets financed (e.g. sudden drop in revenues). Such consequences may also arise as a result of technological changes accelerating the transition to a more low-carbon economy, or changes in the behaviour of end consumers (increase in leverage ratios to finance the transition). Similarly, these adverse impacts may be associated with physical risk events – such as natural disasters, but also long-term changes in climate models (increasing frequency and the impacts of events such as droughts, flooding, rising sea levels etc.) – having a negative impact on the counterparties of entities within the Crédit Agricole Group in the performance of their activities. The Crédit Agricole Group could thus face reputational risk if one of its member entities' counterparties were to be the subject of a controversy related to environmental factors (e.g. non-compliance with regulations on greenhouse gas emissions, damage to biodiversity in the event of an industrial accident leading to the pollution of ecosystems etc.), but also to social and governance factors. With the acceleration of transitional restrictions to address climate change, the increasing intensity of acute weather phenomena and concern surrounding the preservation of resources, the Crédit Agricole Group will indeed have to adapt its activities and its counterparty selection appropriately in order to achieve its strategic targets, avoid suffering losses and limit its reputational risk.

e) THE CRÉDIT AGRICOLE GROUP, ALONG WITH ITS CORPORATE AND INVESTMENT BANKING SUBSIDIARY, MUST MAINTAIN HIGH CREDIT RATINGS, OR THEIR BUSINESS AND PROFITABILITY COULD BE ADVERSELY AFFECTED

Credit ratings have an important impact on the liquidity of the Crédit Agricole Group and the liquidity of each of its member entities individually that are active in financial markets (principally its corporate and investment banking subsidiary, Crédit Agricole Corporate and Investment Bank). A significant downgrade in their credit ratings could have a material adverse effect on the liquidity and competitive position of the Crédit Agricole Group or Crédit Agricole Corporate and Investment Bank, increase borrowing costs, limit access to the capital markets, trigger obligations in the Crédit Agricole Group's covered bond programme or under certain bilateral provisions in some trading, derivative and collateralised financing contracts, or adversely affect the market value of the bonds.

The Crédit Agricole Group's cost of long-term unsecured funding from market investors, and that of Crédit Agricole Corporate and Investment Bank, is directly related to their credit spreads (the amount in excess of the interest rate of government securities of the same maturity that is paid to debt investors), which in turn depend to a certain extent on their credit ratings. Increases in credit spreads can significantly increase the Crédit Agricole Group's or Crédit Agricole Corporate and Investment Bank's cost of funding. Changes in credit spreads are continuous, market-driven, and subject at times to unpredictable and highly volatile movements. Credit spreads are also influenced by market perceptions of the issuer's solvency. In addition, credit spreads may be influenced by movements in the acquisition cost of credit default swaps indexed to the Crédit Agricole Group's or Crédit Agricole Corporate and Investment Bank's debt securities, which are influenced both by the credit quality of those securities, and by a number of market factors that are beyond the control of the Crédit Agricole Group and Crédit Agricole Corporate and Investment Bank.

Of the three rating agencies solicited, Moody's, S&P Global Ratings and Fitch Ratings long term issuer ratings for Crédit Agricole S.A. are A1 stable outlook, A+ stable outlook and A+ stable outlook respectively.

Non-financial ratings may have an impact on Crédit Agricole's image with its stakeholders, particularly investors, who use these ratings to build their portfolios. A significant downgrade of its rating could have an adverse effect on investor interest in securities issued by Crédit Agricole S.A.

At 31 December 2025, Crédit Agricole S.A.'s non-financial rating was maintained or even improved by MSCI (AA), Sustainalytics (17.7), ISS ESG (C+) and CDP (A).

f) THE CRÉDIT AGRICOLE GROUP FACES INTENSE COMPETITION

The Crédit Agricole Group faces intense competition in all financial services markets and for its products and services, including Retail Banking services. For illustrative purposes, concerning this activity, Regional Banks in France have a market share greater than 25% ⁽¹⁾.

(1) 25.2% of the household credit market.

The European financial services markets are mature, and the demand for financial services products is, to some extent, related to overall economic development. Competition in this environment is based on many factors, including the products and services offered, pricing, distribution systems, customer service, brand recognition, perceived financial strength and the willingness to use capital to serve customer needs. Consolidation has created a number of firms that, like the Crédit Agricole Group, have the ability to offer a wide range of products, from insurance, loans and deposit taking to brokerage, investment banking and asset management services.

In addition, new competitors (including those using innovative technology solutions), which may be subject to separate or more flexible regulation, or other requirements relating to regulatory prudential ratios, are also emerging in the market. Technological advances and the growth of e-commerce have made it possible for non-bank institutions to offer products and services that traditionally were banking products, and for financial institutions and other companies to provide electronic and Internet-based financial solutions, including electronic securities trading. These new players exert downward price pressure on the Crédit Agricole Group's products and services and can succeed in winning market share in areas that have been historically stable and dominated by traditional financial institutions. In addition, new applications, particularly in payments and everyday banking, and new technologies facilitating transaction processing, such as blockchain, have been gradually transforming the financial sector and the ways in which customers consume banking services. It is difficult to predict the effects of the emergence of such new technologies, for which the regulatory framework is still being defined, but their increased use may transform the competitive landscape of the banking and financial industry. The Crédit Agricole Group must therefore strive to maintain its competitiveness in France and in the other major markets in which it operates by adapting its systems and strengthening its technological footprint to maintain its current market share and level of results.

1.6 RISKS RELATED TO THE STRUCTURE OF CRÉDIT AGRICOLE GROUP

a) IF ANY MEMBER OF THE CRÉDIT AGRICOLE NETWORK ENCOUNTERS FUTURE FINANCIAL DIFFICULTIES, CRÉDIT AGRICOLE S.A. WOULD BE REQUIRED TO MOBILISE THE RESOURCES OF THE CRÉDIT AGRICOLE NETWORK (INCLUDING ITS OWN RESOURCES) TO SUPPORT SUCH MEMBER

Crédit Agricole S.A. (parent company) is the corporate centre of the Crédit Agricole Network, which includes Crédit Agricole S.A. (parent company), the Regional Banks and the Local Banks, pursuant to Article R. 512-18 of the French Monetary and Financial Code, as well as Crédit Agricole Corporate and Investment Bank and BforBank as its affiliated members (the "Network").

Under the statutory financial support mechanism provided for in Article L. 511-31 of the French Monetary and Financial Code, Crédit Agricole S.A., as the corporate centre of the Network, must take all necessary measures to guarantee the liquidity and solvency of each member of the Network, as well as the Network as a whole. As a result, each member of the Network benefits from the statutory financial support mechanism and contributes thereto. The general provisions of the French Monetary and Financial Code are transposed into internal provisions setting out the operational measures required for this legal mechanism for internal financial solidarity. Specifically, they have established a Fund for bank

liquidity and solvency risks (*fonds pour risques bancaires de liquidité et de solvabilité* – FRBLS) designed to enable Crédit Agricole S.A. (parent company) to fulfil its role as corporate centre by providing assistance to any member of the Network that may be experiencing difficulties.

Although Crédit Agricole S.A. is not currently aware of circumstances likely to require recourse to the FRBLS to support a member of the Network, there can be no assurance that it will not be necessary to use the Fund in the future. In such a case, if the resources of the FRBLS were to be insufficient, Crédit Agricole S.A. (parent company), under its duties as corporate centre, will be required to make up the shortfall by mobilising its own resources and, where appropriate, those of the other members of the Network.

As a result of this obligation, if a member of the Network were to face major financial difficulties, the event underlying these financial difficulties could impact the financial position of Crédit Agricole S.A. (parent company) and that of the other members of the Network that are relied upon for support under the financial support mechanism.

The European banking crisis management framework was adopted in 2014 by EU Directive 2014/59 (known as the "Bank Recovery and Resolution Directive – BRRD"), transposed into French law by the French Decree-Law no. 2015-1024 of 20 August 2015 (Ordonnance no. 2015-1024 portant diverses dispositions d'adaptation de la législation au droit de l'Union européenne en matière financière), which also adapted French law to take into account the provisions of European Regulation 806/2014 of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund. The Directive (EU) 2019/879 of 20 May 2019, known as "BRRD2", amended the BRRD and was transposed into French law by the French Decree-Law No. 2020-1636 of 21 December 2020.

This framework, which includes measures to prevent and to resolve banking crises, is intended to preserve financial stability, to ensure the continuity of activities, services and operations of institutions whose failure could significantly impact the economy, to protect depositors, and to avoid or limit the use of public financial support as much as possible. In this context, the European Resolution Authorities, including the Single Resolution Board, have been granted extensive powers to take all necessary measures in connection with the resolution of all or part of a credit institution or the group to which it belongs.

For cooperative banking groups, the "extended single point of entry" ("extended SPE") resolution strategy is preferred by the resolution authorities, whereby resolution tools would be applied simultaneously at the level of Crédit Agricole S.A. (parent company) and its affiliated members. In this respect, and in the event of a resolution of the Crédit Agricole Group, the perimeter comprising Crédit Agricole S.A. (in its capacity as the corporate centre) and all its affiliated members would be considered, as a whole, as the extended single entry point. Given the foregoing and the financial support mechanism that exist within the Network, a member of the Network cannot be placed individually in resolution.

The resolution authorities may initiate resolution proceedings against a credit institution when they determine that: the institution has failed or is likely to fail, there is no reasonable prospect that another private measure will prevent the failure within a reasonable time, a resolution measure is required, and a liquidation procedure would fail, to achieve the targets of the resolution mentioned above.

The resolution authorities may use one or more resolution tools, as described below, with the aim of recapitalising or restoring the viability of the institution. The resolution tools should be implemented in such a way that shareholders (shares, mutual shares, CCIs, CCAs) bear losses first, then the other creditors bear losses, provided that they are not legally excluded from bail-in or excluded from bail-in by a decision of the resolution authorities. French law also provides for safeguard when certain resolution tools or decisions are implemented, including the principle according to which equity holders and creditors of an institution in resolution should not incur greater losses than they would have incurred had the institution been wound-up under a judicial liquidation proceeding under the French Commercial Code (*Code de Commerce*) ("no creditor worse off than under normal insolvency proceedings" principle referred to in Article L. 613-57-I of the French Monetary and Financial Code). Thus, investors are entitled to claim compensation if the treatment they receive in resolution is less favourable than the treatment they would have received if the institution had been subject to normal insolvency proceedings.

In the event that the resolution authorities decide to open a resolution proceeding against Crédit Agricole Group, they will first write down the par value of the CET1 instruments (shares, mutual shares, CCI and CCA), Additional Tier 1 instruments, and Tier 2 instruments, in order to absorb losses, and possibly convert the Additional Tier 1 instruments and Tier 2 ⁽¹⁾ instruments into equity. Then, if the resolution authorities decide to use the bail-in tool, such bail-in tool would be applied to other debt instruments ⁽²⁾, resulting in the partial or total write-down of these instruments or their conversion into equity in order to absorb losses.

The resolution authorities may decide to implement, on the corporate centre and its affiliated members in a coordinated manner, write-down or conversion measures and, where applicable, bail-ins. In such an event, write-down or conversion measures and, where applicable, bail-in measures would apply to all entities of the Network, irrespective of the concerned entity and of the root of the losses.

The creditor hierarchy in resolution is defined by the provisions of Article L. 613-55-5 of the French Monetary and Financial Code, applicable at the date of implementation of the resolution.

The holders of equity and any creditors of the same rank or with identical rights in liquidation will then be treated equally, irrespective of which entity of Crédit Agricole Group they are creditors.

The extent of this bail-in, which also aims to recapitalise the Crédit Agricole Group, is based on equity requirements at the consolidated level.

Therefore, investors must then be aware that there is a significant risk, for the holders of shares, mutual shares, CCI and CCA, and for the holders of debt instruments issued or implemented by any member of the Network to lose all or part of their investment if a resolution proceeding is implemented on the Crédit Agricole Group, irrespective of which entity they are a creditor.

The other banking resolution tools available to the resolution authorities are essentially the total or partial disposal of the activities of the institution to a third party or to a bridge institution, and the institution's assets separation tool.

This resolution framework does not affect the statutory financial support mechanism provided for in Article L. 511-31 of the French Monetary and Financial Code, which applies to the Network, as defined in Article R. 512-18 of the same Code. Crédit Agricole S.A. considers that, in practice, this mechanism should be implemented prior to any resolution measures.

The implementation of a resolution proceeding on the Crédit Agricole Group would thus imply that the statutory financial support mechanism had failed to remedy the failure of one or more members of the Network, and hence of the Network as a whole.

b) THE PRACTICAL ADVANTAGE OF THE 1988 GUARANTEE ISSUED BY THE REGIONAL BANKS MAY BE LIMITED BY THE IMPLEMENTATION OF THE RESOLUTION REGIME THAT WOULD APPLY PRIOR TO LIQUIDATION

The resolution regime provided for by the BRRD/BRRD2 could limit the practical effect of the Crédit Agricole S.A. bond guarantee granted by all Regional Banks jointly and severally among them up to the amount of their capital, reserves and retained earnings (the "1988 Guarantee").

This resolution regime does not affect the statutory financial support mechanism provided for under Article L. 511-31 of the French Monetary and Financial Code, which applies to the Network prior to the implementation of any resolution measures.

However, the application of resolution measures on the Crédit Agricole Group could limit the occurrence of the conditions for implementing the 1988 Guarantee, as the 1988 Guarantee can only be called if Crédit Agricole S.A.'s assets prove to be insufficient to cover its obligations at the end of its liquidation or dissolution. Due to this limitation, bondholders and creditors of Crédit Agricole S.A. may not be able to benefit from the protection that the 1988 Guarantee would offer.

⁽¹⁾ Articles L. 613-48 and L. 613-48-3 of the French Monetary and Financial Code.

⁽²⁾ Articles L. 613-55 and L. 613-55-1 of the French Monetary and Financial Code.

2. RISK MANAGEMENT

This section of the management report presents the risk appetite of Crédit Agricole S.A. and the Crédit Agricole Group, the nature of the main risks to which they are exposed, their magnitude and the measures implemented to manage them.

The information presented under IFRS 7 on financial instrument disclosures covers the following main types of risks:

- credit risks;
- market risks;
- structural balance sheet risks: global interest rate risk, foreign exchange risk and liquidity risk, including risks associated with the insurance sector.

This information forms an integral part of the notes to the consolidated financial statements ⁽¹⁾ of Crédit Agricole S.A. and the Crédit Agricole Group and is covered by the Statutory Auditors' opinion on the financial statements. The relevant passages are identified in the management report between the tags **[Audited]** and **[Audited End]** ▲.

In order to cover all risks inherent in the banking business, additional information is provided concerning:

- operational risks;
- non-compliance risks.

In accordance with legislation and best business practices, risk management within Crédit Agricole S.A. and Crédit Agricole Group is reflected by a form of governance in which the roles and responsibilities of each individual are clearly identified, as well as by effective and reliable risk management methodologies and procedures which make it possible to measure, monitor and manage all the risks to which the Group is exposed.

2.1. RISK APPETITE, GOVERNANCE AND ORGANISATION OF RISK MANAGEMENT

CONCISE STATEMENT ON RISKS

(Statement prepared in compliance with Article 435-(1)-(f) of Regulation (EU) No. 575/2013)

The Board of Directors of Crédit Agricole S.A. makes a formal statement every year regarding its risk appetite. The Group's Risk Appetite Statement is prepared in line with the risk identification process. The statement is an integral and strategic part of the governance framework which covers strategy, business targets, risk management and global financial management for the Group. The strategic orientations of the Medium-Term Plan (MTP) "ACT 2028", the Risk Appetite Statement, the budgetary process and the allocation of resources to the business lines are mutually coherent.

The risk appetite of the Crédit Agricole Group is the type and aggregate amount of risk that the Group is ready to take on, in the framework of its strategic targets.

The Group's risk appetite is determined by particular reference to the financial policy and the risk management policy, which are based on:

- a policy of selective and responsible financing that takes account of a prudent lending policy framed by the risk frameworks, the corporate social responsibility policy and the authorisation system, as well as a compensation policy that includes criteria for compliance with risk limits and compliance metrics;
- the target of maintaining limited exposure to market risk;
- control of ALM risks (Liquidity, Global Interest Rate Risk, and Foreign Exchange) as well as monitoring the growth of risk weighted assets and the size of the balance sheet;
- strict management of operational risk exposure (including Information and Communication Technology-related risks, outsourcing and legal risk) and a sound IT and cyber risk management framework;

- model risk management through proven model governance and Group-level monitoring;
- containment of non-compliance risk;
- containment of environmental risks.

The formal definition of risk appetite allows Executive Management and the Board of Directors to define the Group's development direction consistent with the Medium-Term Plan and translate it into operational strategies. This results in a consistent approach shared by the Strategy, Finance, Risk and Compliance departments.

The Risk Appetite Statement is coordinated with the Operational departments of the various entities and aims to:

- engage directors and senior management in reflection and dialogue on risk taking;
- formalise, standardise and make explicit the acceptable level of risk for a given strategy;
- fully integrate risk/return considerations into the strategic planning and decision-making processes;
- define advance indicators and alert thresholds to improve resilience by taking action as soon as alerts for risk appetite standards are triggered;
- improve external communications to third parties on financial strength and risk management.

The Group's risk appetite takes into account the main strategic indicators defined in the Medium-Term Plan and forms the risk management framework for the strategy. The MTP targets set by the Group are then reported annually in the budget. Risk appetite is therefore included every year in the risk statement and appetite matrix. These draw on a set of strategic indicators defined by appetite, tolerance and, for indicators with regulatory thresholds, capacity thresholds.

(1) In the remainder of this section on "Risk management", the term "consolidated financial statements" refers to both those of Crédit Agricole S.A. and those of the Crédit Agricole Group.

In addition to the annual statement, the Group also reports on its risk appetite throughout the year through risk frameworks approved by the Board of Directors, based on recommendations from the Board's Risk Committee. The Risk Committee bases its reviews on approvals by the Group Risk Committee chaired by the Chief Executive Officer of Crédit Agricole S.A.

In addition to the summary statement and matrix, the Group produces a dashboard of its risks and internal and regulatory limits, which is used to monitor more operational indicators that represent major risks and consists of a selection of limits or alert thresholds set in these risk frameworks. This dashboard is presented to the Board Risk Committee and Crédit Agricole S.A.'s Board of Directors on a quarterly basis.

The Group's risk appetite is defined through:

- **key indicators covering:**
 - **Crédit Agricole S.A.'s external rating**, which has a direct impact on refinancing terms and the Group's image in the market,
 - **solvency** which guarantees the Group's sustainability by ensuring that it has sufficient equity to back the risks it is taking on,
 - **liquidity**, which is managed with a view to financing the needs of each entity at all times and preventing the Group's sources of finances from drying up with the consequent threat of default on payments, or even resolution,
 - **business**, whose monitoring enables measurement of business risk and ensures achievement of the strategy laid down by the Group to guarantee its long-term sustainability,
 - **profit**, because it is a direct source of future solvency and shareholder dividends and therefore constitutes a key part of the Group's financial communications,
 - **credit risk**, which constitutes the Group's main risk due to its commercial positioning and its growth strategy. Particular diligence is paid to this risk due to rising geopolitical risk (conflicts in Ukraine and the Middle East, tensions between the United States and China) and rising credit risk in France,
 - and key risks such as interest rate risk and inflation risks, market risk (more specifically at Crédit Agricole CIB), operational risk including ICT and outsourcing risk, non-compliance risk, insurance risk and environmental risk;
- **limits and alert thresholds on risks defined in line with these indicators;**

- **qualitative priorities**, inherent to the Group's strategy and businesses. The qualitative criteria are largely based on the corporate social responsibility (CSR) policy of the Company, which embodies the Group's concern with supporting sustainable development and controlling all risks including non-financial risks.

The key indicators reflect three levels of risk:

- **appetite** is used for managing everyday risk and indicators which breach tolerance thresholds;
- **tolerance** corresponds to a closer level of steering. Exceeding tolerance thresholds on key indicators or limits triggers a notification within 72 hours at the appropriate level depending on the indicator level. Suitable corrective measures must then be presented;
- **capacity**, which is only defined for indicators for which there is a regulatory threshold, begins once this regulatory threshold is crossed. Entering the capacity zone triggers a notification to the Board of Directors for Level I and II indicators.

The Group's risk appetite system, which is based on the risk identification process that aims to accurately identify all major risks that are likely to impact the Group's balance sheet, income statement, regulatory prudential ratios, or the reputation of an entity or the Group and to apply a Group-wide, standard approach to placing them in categories and sub-categories.

OVERALL RISK PROFILE

The Group's business is built around the customer-focused universal banking model in Europe with a low level of defaults and prudent provisioning. The market risk profile has also considerably reduced, as a result of a change in the Group's strategy more than a decade ago.

The Group's risk profile is monitored and presented at least every quarter to the Group Risk Committee and to the Board of Directors. The Executive Directors and the supervisory body are thus kept regularly informed of how the risk profile corresponds to the risk appetite.

The main components of the Group's risk profile at 31 December 2025 are detailed in the Chapter "Risk factors and risk management" of this document:

- Credit risk: part 2.4 (Risk management);
- Market risk: part 2.5 (Risk management);
- Financial risks (interest rate, exchange rate, liquidity and financing): part 2.6 (Risk management);
- Operational risk: part 2.8 (Risk management);
- Environmental risks: section 1.5.d (Risk factors).

A selection of key indicators from the Risk Appetite Statement is presented in the table below:

Crédit Agricole S.A. and its subsidiaries		CET1 ratio (phased-in)		Cost of risk	Net income Group share
31 December 2025		11.8%		€1.97bn	€7.07bn
31 December 2024		11.7%		€1.8bn	€7.1bn

Crédit Agricole Group	CET ratio (phased-in)	LCR ratio (year-end level)	Cost of risk	Net income Group share	Impaired loan ratio on outstanding loans
31 December 2025	17.3%	141.4%	€3.45bn	€8.75bn	2.20%
31 December 2024	17.2%	127.4%	€3bn	€8.6bn	2.07%

At 31 December 2025, the risk appetite indicators of Crédit Agricole S.A. and the Crédit Agricole Group presented above were within the defined risk appetite levels. They have not reached the tolerance thresholds.

SUITABILITY OF THE INSTITUTION'S SYSTEMS FOR THE RISKS PURSUANT TO ARTICLE 435-1-(E) OF REGULATION (EU) NO. 575/2013

ORGANISATION OF RISK MANAGEMENT

Risk management, which is inherent in banking activities, lies at the heart of the Group's internal control system. All staff involved, from the initiation of transactions to final maturity, play a part in this system.

Measuring and monitoring risk is the responsibility of the dedicated Risk Management business line (headed by the Group Risk Management department [Direction des risques Groupe – DRG]), which is independent from Group functions and reports directly to the Deputy Chief Executive Officer.

Although risk management is primarily the responsibility of the business lines which oversee their own business development (first line of defence), DRG's task is to ensure that the risks to which the Group is exposed are consistent with the risk frameworks defined by the business lines (in terms of global and individual limits and selection criteria) and compatible with the Group's growth and profitability targets.

The Group Risk Management department (DRG) performs consolidated Group-wide monitoring of risks using a network of Risk Managers who report hierarchically to the Group Chief Risk Officer and functionally to the executive body of their entity or business line.

To ensure a consistent view of risks within the Group, the DRG has the following duties:

- it coordinates the risk identification process and the implementation of the Group's risk appetite framework in cooperation with the Finance, Strategy and Compliance functions and the business lines;
- it defines and/or validates methods and procedures for analysing, measuring and monitoring all of the Group's risks that are considered to be major, as defined in the annual risk identification process;
- it takes part in the critical analysis of the business lines' commercial development strategies, focusing on the risk impact of these strategies;
- it provides independent opinions to Executive Management on risk exposure arising from business lines' positions (credit transactions, setting of market risk limits) or anticipated by their risk framework;
- it lists and analyses Group entities' risks, on which data is collected in risk information systems.

The Financial Steering unit of the Group Finance department (Direction des finances Groupe – FIG) is responsible for the management of structural asset/liability risk (interest rate, exchange rate and liquidity) as well as for the refinancing policy and for the management of capital requirements. Supervision of these risks by Executive Management is carried out through Liquidity and ALM (Asset and Liability Management) Committee Meetings, in which the DRG takes part.

The DRG keeps the Executive Directors and the supervisory body informed of the degree of risk control in the Crédit Agricole Group, presents various risk frameworks of the major business lines of the Group for validation, and warns them of any risk of deviation from risk policies approved by executive bodies. It informs them of the outcomes and performance of prevention measures, whose organisational principles are approved by them. It makes suggestions for any improvement of such measures that may be required as a result of changes to business lines and their environment.

At consolidated level, this action falls within the remit of governance bodies, in particular:

- **the Risk Committee** (a Board of Directors sub-committee, nine meetings per year): it analyses key factors in the Group's risk appetite statement defined by Executive Management, regularly examines the Group's risk management and internal control issues, reviews the half-yearly information and annual report on internal control and risk measurement and monitoring;

- **the Group Risk Committee** (Comité des risques Groupe – CRG, 12 meetings per year and when necessary) chaired by the Chief Executive Officer of Crédit Agricole S.A.: defines Group policy in terms of risks, sets the Group's overall limits, approves the risk frameworks of the entities and business lines, monitors the Group's major risks in a cross-divisional manner;
- **the Group Individual Risk Committee** (Comité des risques Individuels de niveau Groupe – CRIG, one meeting per week on average) chaired by the Chief Executive Officer of Crédit Agricole S.A., decides on all individual cases requiring approval from Executive Management excluding exceptions, examines all cases at the request of Executive Management, presents at the request of the Group Chief Risk Officer any sensitive cases relating to an entity or any cases covered by the procedure;
- **the ESG Strategy Committee** (ESG StratCo), chaired by the Chief Executive Officer of Crédit Agricole S.A., meets every two months. It advises on the Group's ESG strategy and its sector-specific policies that will then be presented to the Crédit Agricole S.A. Societal Commitment Committee and subsequently approved by the Crédit Agricole S.A. Board of Directors. This body is also tasked with monitoring the fulfilment of the Group's commitments and is kept informed of ESG ratings and the implementation of improvement plans;
- **the Group Internal Control Committee** (Comité de contrôle interne Groupe – CCIIG, chaired by the Deputy Chief Executive Officer, minimum of four meetings per year) which coordinates the three control functions: examines internal control issues common across the Group (including regulatory developments), promotes cross-functional actions within the Group, validates Crédit Agricole S.A. Parent Company's Consolidated Supervision Scope, approves the Annual Report and half-yearly information on internal control prior to their presentation to the supervisory body;
- **the Asset-Liability Management Committee** (ALM Committee, chaired by the Chief Executive Officer of Crédit Agricole S.A., six meetings per year): analyses the financial risks facing the Crédit Agricole Group, including Crédit Agricole S.A. (interest rate, exchange rate and liquidity risks) and validates the guidelines for their management; validates certain methodologies specific to interest rate risk, decisions relating to the management of solvency and resolution ratios, and various other financial elements including notably the dividend policy of subsidiaries and the guidelines for the management of liquidity portfolios in terms of limits validated by the Group Risk Committee;
- **the Group Compliance Management Committee** (Comité de management de la conformité Groupe – CCMG, chaired by the Deputy Chief Executive Officer, 12 meetings per year): defines and validates the Group's Compliance policy, examines all draft compliance-related standards and procedures, prior to their implementation, examines all significant irregularities and approves corrective measures, makes all decisions related to remedial action for deficiencies, takes note of the main compliance-related conclusions of audits conducted, conducts arbitrations within its remit, is informed of any new businesses and partnerships developed by Group entities that have received a favourable opinion from the New Business and New Product Committee (NAP Committee), approves the annual compliance report;
- **the Group Security Committee** (Comité sécurité Groupe – CSG, four meetings per year) chaired by the Deputy General Manager in charge of the Transformation, HR and Transitions division, is a decision-making committee that defines the Crédit Agricole Group's security strategy in terms of information systems security, physical safety and security, data protection, business continuity and insurable corporate risk management, determines the Group's security projects, supervises the execution of the strategy and assesses the Group's level of control in the following four areas: security of people and property, security of Information Systems, business continuity plans, data protection.

In addition, each Group operating entity defines its own risk appetite framework and sets up a Risk Management and Permanent Controls function. Accordingly, within each business line and legal entity:

- a Risk Manager (responsable de la fonction Gestion des risques – RFGR) is appointed with a high hierarchical position (member of the highest Executive Committee of the entity – Executive Committee or Management Committee depending on the name used by the entity);
- the Risk Manager supervises all the last-line control units within their areas of responsibility, covering oversight and permanent control of risks falling within the remit of the relevant business line;
- has access to appropriate human, technical and financial resources. They must be provided with the information required by their role and have systematic and permanent access to any information, document, body (committees etc.), tools or even IT systems across their entire area of responsibility. They are associated with entity projects far enough in advance to be able to play their role effectively.

This principle of decentralising the Risk management function to operating entities aims to ensure that the business lines' risk management and permanent controls systems operate efficiently.

Group risk management is also reliant on a certain number of tools which enable the DRG and the Group's executive bodies to fully comprehend the risks that present themselves:

- a robust IT and global risk consolidation system, within the trajectory defined by the Basel Committee on Banking Supervision for global systemically important banks (BCBS 239);
- generalised use of stress testing methodologies in Group credit, financial or operational risk procedures;
- formalised and up-to-date control standards and procedures, which define lending systems, based on an analysis of profitability and risks, individual and sectoral geographical anti-trust, as well as limits on interest rate, foreign exchange and liquidity risks;
- a Group recovery plan updated on an annual basis, in accordance with, firstly, the provisions of Directive 2014/59/EU of 15 May 2014, as amended, which establishes a framework for the recovery and resolution of credit institutions, and, secondly, Delegated Regulation (EU) 2016/1075 of 23 March 2016.

RISK CULTURE

The risk culture is disseminated across the Group via diverse and effective channels:

- Career and Talent Committees within the Risk Management business line, which plan the succession to key posts, facilitate the mobility of both men and women with the relevant expertise and thus enhance their future career paths by diversifying their skill sets;
- highly valued careers and experience sought after by other business sectors as a result of time spent within the Risk Management business line;
- a range of training on risk comprising modules tailored to the needs of employees, both within and outside the Risk Management business line. This system includes awareness training for all Group employees, including e-learning modules and content dedicated to various risk themes (operational risk, financial risk, internal control, climate and environmental risk, Basel 4 etc.). These training courses aim to provide a better understanding of the risks inherent in the banking business lines;

- Communication and training initiatives aimed at reinforcing the spread of risk culture among all Group employees. The aim of these actions is to develop the knowledge and involvement of all employees, in order to make risk a subject involving all the Group's lines of defence.

CONSOLIDATED RISK MONITORING

Each quarter, the Board of Directors' Risk Committee and the Group Risk Committee examine the main changes in the risk position, table of internal and regulatory limits produced by the Group Risk department. The dashboard provides a detailed review of the Group's risk position across all business lines and on a consolidated basis.

The Group's consolidated alert procedures are coordinated by the Alert Monitoring Committee (Comité de suivi des alertes – CSA, chaired by the Chief Risk Officer, eight meetings per year or more if necessary) by reviewing all the risk alerts centralised by the Group Risk Management department.

2.2. STRESS TESTING

Stress tests, crisis simulations and resistance tests form an integral part of the Crédit Agricole Group's risk management system. Stress tests play a role in proactive risk management, the assessment of capital adequacy under an adverse scenario and meeting regulatory requirements. In this regard, by measuring the economic, accounting or regulatory impact of severe but plausible economic scenarios, stress testing provides a measure of the resilience of a portfolio, business, entity or of the Group used as inputs for the ICAAP (Internal Capital Adequacy Assessment Process) and the risk appetite. Stress testing covers credit, market, operational and climate risks as well as liquidity risk and risks related to interest rates and exchange rates. Stress testing used to manage the Crédit Agricole Group risks involves a range of different exercises.

DIFFERENT TYPES OF STRESS TESTS

- **Using stress testing for proactive risk management:** specific exercises that are recurring or carried out upon request are performed centrally and with the contribution of Group entities to supplement and enhance the various analyses performed to properly monitor risks. This work is presented to Executive Management at Group Risk Committee Meetings. In this respect, stress testing focused on market risk or liquidity risk is periodically undertaken.

In the case of credit risk, stress tests are performed to measure the risk stemming from economic trends in major Group risks. The exercises underpin the decisions taken by the Group Risk Committee on aggregate exposure limits.

- **Budget stress tests or ICAAP (Internal Capital Adequacy and Assessment Process) stress testing:** the Crédit Agricole Group undertakes an annual exercise as part of the budgetary process, with the results of this stress testing being used in the ICAAP. It plays a part in capital requirements planning and makes it possible to estimate the Group's profitability over a three-year period, under various economic scenarios. The goal of this stress testing in the budgetary process and the ICAAP is to measure the effects of the economic scenarios (baseline, moderate adverse and adverse) on the businesses, entities and the Group as a whole and the sensitivity of their results. It is necessarily based on an

economic scenario (change in a series of economic variables) from which the impact on the various risks and geographic regions are determined. This scenario is supplemented to reflect operational risks and the risk of improper conduct.

The aim of this exercise is to estimate a solvency ratio by measuring the impact on the income statement (cost of risk, interest margin, fee and commission income etc.), risk-weighted assets and equity and to compare these indices to the Group's tolerance thresholds.

- **Reverse stress tests:** as part of the recovery plan, the Risk and Finance teams annually simulate extreme scenarios at a consolidated level in order to identify the conditions that could lead the Group to a situation close to "near default" or, at the very least, to a situation requiring recovery actions.
- **Regulatory stress testing:** this stress testing encompasses all requests from the ECB, the European Banking Authority (EBA) or other supervisor. In 2025, the Group successfully completed the comprehensive stress test organised by the EBA. In this context, the Crédit Agricole Group ranked among the top European systemic banks in terms of CET1 solvency ratio in the worst-case scenario.

GOVERNANCE

In line with the guidelines of the EBA, the stress test programme for the Group and major entities clearly details the governance and responsibilities of each party involved in the stress testing encompassing credit, market, operational, climate and liquidity risks and structural risks related to interest rates and exchange rates. The stress test programme is approved annually by the Board of Directors.

The scenarios used in the ICAAP processes, Risk Appetite or for regulatory purposes are prepared by the Economic department (ECO) and are presented to the Board of Directors. These economic scenarios show central and stressed fluctuations in macroeconomic and financial variables (GDP, unemployment, inflation, interest rates and exchange rates etc.) for all countries to which the Group is exposed.

2.3. INTERNAL CONTROL AND RISK MANAGEMENT PROCEDURES

The Crédit Agricole Group's internal control organisation reflects an architecture in line with legal and regulatory requirements, as well as the recommendations of the Basel Committee.

The internal control system and procedures are defined within the Crédit Agricole Group as all systems designed to control activities and risks of all kinds and to ensure regularity (in the sense of compliance with laws, regulations and internal standards), safety and efficiency of operations, in accordance with the references presented in point I below.

The internal control system and procedures are characterised by the objectives assigned to them:

- application of Executive Management instructions and guidelines;
- financial performance, through the efficient and appropriate use of the Group's assets and resources, as well as protection against the risk of loss;
- comprehensive, accurate and regular knowledge of the data needed for decision making and risk management;
- compliance with legal and regulatory requirements and internal standards;
- prevention and detection of fraud and errors;
- accuracy, completeness of accounting records and the timely preparation of reliable accounting and financial information.

These procedures have, nonetheless, the inherent limitations of any internal control system, due in particular to technical or human failures.

In accordance with the principles in force within the Group, the internal control system applies over a broad scope aimed at supervising and controlling activities, as well as measuring and monitoring risks on a consolidated basis. This principle, applied by Crédit Agricole S.A. and each entity of Crédit Agricole Group, as well as by each subsidiary or entity to its own subsidiaries, makes it possible to apply the internal control system according to a pyramidal logic and to all entities. Each of these entities reports to a supervision unit and is subject to an appropriate escalation process. The system implemented by Crédit Agricole S.A., which is in line with the standards and principles set out below, is thus deployed in a manner adapted to the different business lines and risks at each of the Crédit Agricole Group's levels in order to best meet the regulatory obligations specific to banking activities.

The resources, tools and reports implemented in this normative environment provide regular information, in particular to the Board of Directors, the Risk Committee, to Executive Management and to management, on the functioning of internal control systems and their adequacy (permanent and periodic control system, reports on risk measurement and monitoring, corrective action plans etc.).

I. REFERENCES IN TERMS OF INTERNAL CONTROL

References to internal control are based, in particular at European level, on the provisions of the Directive on capital requirements for credit institutions and investment firms (CDR), supplemented by varied guidelines, in particular those of the European Banking Authority (EBA) on corporate governance and internal control. In France, the applicable framework is mainly based on the provisions of the French Monetary and Financial Code ⁽¹⁾ and the amended Decree of 3 November 2014 on the internal control of corporates in the banking, payment services and investment services sector subject to the supervision of the French Regulatory and Resolution Supervisory Authority (ACPR), as well as, when applicable, the General Regulation of the French Financial Market Authority (AMF).

(1) Article L. 511-41.

These national and international standards are supplemented by Crédit Agricole Group's own internal standards:

- a corpus of communications of a permanent, regulatory nature (external regulations and internal Group rules) and of mandatory application, relating in particular to accounting (Crédit Agricole's accounting plan), financial management, risk management and permanent controls, and internal control organisation, applicable to the entire Crédit Agricole Group;
- Code of Conduct of the Crédit Agricole Group;
- body of "procedural notes" applicable to Crédit Agricole S.A. and its subsidiaries, as well as to the Regional Banks (in the form of a "yellow letter" in the latter case) concerning organisation, operations or risks. In this context, Crédit Agricole S.A. adopted a set of procedural notes in 2004 to monitor compliance with laws and regulations. This procedural system has since been adapted to regulatory changes and deployed in the Group's entities, particularly in the areas of financial security (prevention of money laundering, fight against terrorist financing, freezing of assets, compliance with embargoes etc.) or detection of malfunctions in the application of laws, regulations, professional standards and standards of conduct, for example. The procedural notes are updated regularly, as necessary, in particular in light of the regulatory changes and in the scope of supervision on a consolidated basis.

II. PRINCIPLES FOR THE ORGANISATION OF THE INTERNAL CONTROL SYSTEM

In order to ensure that internal control systems are effective and consistent between the Group's various organisational levels, Crédit Agricole Group has adopted a set of common rules, including a procedural note on the internal control organisation within the Group, and recommendations based on the implementation of and compliance with fundamental principles.

Thus, each entity of the Crédit Agricole Group (Regional Banks, Crédit Agricole S.A., subsidiaries of credit institutions or investment firms, insurance companies, other etc.) must apply these principles at its own level.

FUNDAMENTAL PRINCIPLES

The organisational principles and components of the internal control systems of Crédit Agricole S.A., which are common to all Crédit Agricole Group entities, include obligations in terms of:

- informing the supervisory body (risk frameworks, limits set on risk taking, internal control activity and results, significant incidents);
- direct involvement of the management body in the organisation and operation of the internal control system;
- exhaustive coverage of activities and risks, liability of all actors;
- a clear definition of tasks, effective separation of engagement and control functions, formalised and up-to-date delegations;
- formalised and updated standards and procedures.

These principles are complemented by:

- risk measurement, monitoring and control systems: credit, market, liquidity, financial, climate and environmental, operational (operational processing, quality of financial and accounting information, IT processes), non-compliance and legal risks;
- a control system, as part of a dynamic and corrective process, including permanent controls carried out by the operational units or by dedicated employees, and periodic controls (carried out by the units of the Group Control and Audit department or by the Audit units);

- the adoption of the Group's remuneration policies (following the deliberations of the Board of Directors of 9 December 2009 and 23 February 2011) and internal control procedures – in accordance with applicable national, European or international regulations, in particular those relating to the Capital Requirements Directive (CRD 5), the AIFMD, UCITS V Directive and Solvency 2, the provisions relating to the Volcker Rule, the French banking separation act (*loi de séparation bancaire*) and the MiFID, as well as the professional banking recommendations relating to, on the one hand, the adequacy between the compensation policy and the risk management targets, and on the other hand the compensation of the members of the executive bodies and that of the risk takers (see Chapter III of the Universal Registration Document).

SYSTEM MONITORING

In application of the decree of 3 November 2014, amended in 2021, an obligation has been imposed on each entity or business line manager, each manager, each employee and each Group body to be able to report and justify, at any time, the proper control of its activities and the risks involved, in accordance with the standards for the exercise of banking and financial professions, in order to ensure the long-term security of each activity and each development project and to adapt the control measures to be implemented to the intensity of the risks incurred.

This requirement is based on organisational principles and an architecture of responsibilities, operating and decision-making procedures, controls and reporting to be implemented in a formal and effective manner at each level of the Group: central functions, business lines, subsidiaries, operational units and support functions.

GROUP INTERNAL CONTROL COMMITTEE

The Internal Control Committee of the Group and of Crédit Agricole S.A., the umbrella body for steering the systems, met regularly under the chairmanship of the Deputy Chief Executive Officer of Crédit Agricole S.A.

The purpose of this committee is to examine internal control issues common to the entire Group (Crédit Agricole S.A., subsidiaries of Crédit Agricole S.A., Regional Banks, common resource structures) and to ensure the consistency and effectiveness of internal control on a consolidated basis. The Group's Internal Control Committee, a decision-making body with binding decisions, is composed of Crédit Agricole S.A. employee executives. As such, it is distinguished from the Risk Committee, which is a division of the Board of Directors, and is responsible for coordinating the three control functions: Internal audit, Risk management, Compliance monitoring.

THREE BUSINESS LINES OPERATING THROUGHOUT THE GROUP

The Head of the Group Risk department, the Head of the Group Control and Audit department and the Group Head of Compliance report directly to an executive director of Crédit Agricole S.A. and have access to the Risk Committee and the Board of Directors of Crédit Agricole S.A.

In addition, under the decree of 3 November 2014, as amended, on the internal control of companies in the banking, payment services and investment services sector that are subject to the supervision of the French Regulatory and Resolution Supervisory Authority, the Group Chief Risk Officer has been designated as the person in charge of risk management for Crédit Agricole S.A. as well as for the Crédit Agricole Group.

The audit functions are responsible for supporting the business lines and operational units to ensure the regularity, safety and efficiency of operations. In this capacity they carry out:

- the management and control of credit, market, liquidity, financial and operational, and climate and environmental risks by the Group Risk Management department, which is also

responsible for the ultimate control of accounting and financial information and for monitoring deployment by the Group IT Security Officer of information systems security and business continuity plans;

- the prevention and control of non-compliance risks by the Group Compliance department, which ensures in particular the prevention of money laundering, the fight against terrorist financing, the prevention of fraud, compliance with embargoes and asset freezing obligations;
- independent and periodic control of the proper functioning of all entities of the Crédit Agricole Group by the Group Control and Audit department.

In addition to the involvement of the various control functions, the other central functions of Crédit Agricole S.A. and its departments and business lines contribute to the implementation of internal control systems on a consolidated basis, whether within specialised committees or through actions to standardise procedures and centralise data.

Organised as a business line, the Legal Affairs department has two main targets: to control legal risk, which can give rise to disputes and liabilities, whether civil, disciplinary or criminal, and to provide the legal support needed by entities to enable them to carry out their activities, while controlling legal risks and minimising associated costs.

WITH REGARD TO CRÉDIT AGRICOLE S.A. AND ITS SUBSIDIARIES

The functions, departments and business lines are themselves supported by decentralised mechanisms within each of the legal entities, which are first-tier subsidiaries and are part of the consolidated supervisory scope of Crédit Agricole S.A., and include:

- quarterly Internal Control Committee Meetings, which are decision-making and binding in nature, consisting of an executive director of the entity and representatives of the control functions of the entity and of Crédit Agricole S.A., responsible in particular for steering the internal control system implemented in the entity, examining the main risks to which the entity is exposed, critically evaluating the internal control systems and the audit action, monitoring missions and taking any necessary corrective measures, and monitoring the standards and their implementation;
- specialised committees that are specific to each entity;
- a network of correspondents and authorities dedicated to each business line.

WITH REGARD TO THE CRÉDIT AGRICOLE REGIONAL BANKS

For the Regional Banks, the application of all the Group's rules is made possible by the dissemination of national recommendations on internal control by the plenary Internal Control Committee (Comité plénier de contrôle interne – CPCI) of the Regional Banks and by the activity of the central control functions of Crédit Agricole S.A. The Plenary Committee is responsible for strengthening the management of the Regional Banks' internal control systems and is composed of Chief Executive Officers, senior managers and heads of the Regional Banks' Audit functions, as well as representatives of Crédit Agricole S.A.'s control functions. Its activities are extended through regular regional meetings and working and information meetings between the heads of the Audit functions of Crédit Agricole S.A. and their counterparts in the Regional Banks.

The role of Crédit Agricole S.A. as a corporate centre requires it to be very active and vigilant in terms of internal control. In particular, specific monitoring of the risks and controls of the Regional Banks is carried out at Crédit Agricole S.A. by dedicated units of the Group Risk Management department, by the Group Compliance department and through the periodic missions of the Group Control and Audit department.

ROLE OF THE BOARD OF DIRECTORS

The Board of Directors of Crédit Agricole S.A. is aware of the Company's general organisation. It approves the general organisation of Crédit Agricole S.A. and its internal control system, and defines the Group's risk appetite in an annual statement. It is informed of the organisation, activity and results of internal controls. Other than the information it regularly receives, it has access to the Annual Report and the half-yearly presentation on internal controls, such in accordance with banking regulations and standards defined by Crédit Agricole S.A. The Chairman of the Board of Directors of Crédit Agricole S.A. receives detailed summary notes presenting the conclusions of the Group Control and Audit department's missions.

The Board is informed, through the Risk Committee, of the main risks incurred by the Company and the significant incidents revealed by the internal control and risk management systems.

The Chairman of the Risk Committee of Crédit Agricole S.A. reports to the Board on the work of the committee, and in particular on the annual report on internal controls and on risk measurement and monitoring. By the date of the General Meeting, the Annual Report will have been presented to the Risk Committee, forwarded in due course to the French Regulatory and Resolution Supervisory Authority (Autorité de contrôle prudentiel et de résolution – ACPR), and to the Statutory Auditors. It will also have been presented to the Board of Directors.

ROLE OF THE CHIEF EXECUTIVE OFFICER IN INTERNAL CONTROL

The Chief Executive Officer (CEO) defines the general organisation of the Company and ensures its efficient implementation by qualified and competent persons. He is directly and personally involved in the organisation and operation of the internal control system, ensuring its effectiveness and overall consistency. In particular, the CEO sets out the roles and responsibilities for internal control and allocates appropriate resources to it.

The CEO ensures that the risk frameworks and limits are compatible with the financial position (equity levels, results) and the frameworks adopted by the Board of Directors, as part of the Group's Risk Appetite Statement.

The CEO ensures that risk identification and measurement systems, adapted to the Company's activities and organisation, are adopted. The CEO also ensures that the main information from these systems is regularly reported to him.

The CEO personally assures that the internal control system is constantly monitored to ensure its adequacy and effectiveness. The CEO is informed of any malfunctions that the internal control system would identify and of the corrective measures proposed. In this respect, the executive director receives detailed summary notes presenting the conclusions of the Group Control and Audit department's missions.

III. SPECIFIC INTERNAL CONTROL SYSTEMS AND RISK CONTROL AND MONITORING SYSTEMS OF CRÉDIT AGRICOLE S.A.

Crédit Agricole S.A. implements processes and mechanisms for measuring, monitoring and controlling its risks (counterparty, market, operational, financial and other risks) adapted to its activities and organisation, which are an integral part of the internal control system and are periodically reported to the management body, the supervisory body and the Risk Committee, in particular via reports on internal control and risk measurement and monitoring.

Detailed information on risk management is presented in the chapter "Risk factors and risk management" and in the note to the consolidated financial statements dedicated to these (Note 3).

RISK MANAGEMENT AND PERMANENT CONTROLS FUNCTION

The Risk Management business line was created in 2006 pursuant to amendments to Regulation 97-02 (repealed and replaced by the decree of 3 November 2014, as amended, on the internal control of corporates in the banking, payment services and investment services sector subject to the supervision of the French Regulatory and Resolution Supervisory Authority).

The Risk Management business line is responsible for both the overall management and the permanent control of the Group's risks: credit, financial, climate, environmental and operational risks, in particular those related to the quality of financial and accounting information, physical and information system security, business continuity and the supervision of outsourced services.

Risk management is based on a Group system whereby the strategies of the business lines, including in the event of the launch of new activities or new products, are the subject of a risk notice, and risk limits are formalised in the risk frameworks for each sensitive entity and activity. These limits are reviewed at least once a year or in the event of a change in an activity or risks and are validated by the Group Risk Committee. They are accompanied by cross-Group limits, particularly on major counterparties. The mapping of potential risks, the measurement and monitoring of proven risks are regularly adjusted with regard to the activity.

Audit plans are adapted to changes in the activity and the risks, to which they are proportionate.

The business line is placed under the responsibility of Crédit Agricole S.A.'s Group Chief Risk Officer, who is independent of any operational function and reports to the Crédit Agricole S.A. Executive Director. It consists of the cross functions of Crédit Agricole S.A. (Group Risk Management department) and the decentralised Risk Management and Permanent Controls functions, working closely with the business lines at the level of each Group entity in France and around the world. The Risk Management business line employed 3,819 people at end-2025 (in full-time equivalent) within the scope of the Crédit Agricole Group.

CENTRAL RISK MANAGEMENT AND PERMANENT CONTROLS FUNCTIONS OF CRÉDIT AGRICOLE S.A.

Within Crédit Agricole S.A., the Group Risk Management department is responsible for the steering and overall management of the Group's risks and permanent control systems.

GLOBAL GROUP RISK MANAGEMENT

The consolidated measurement and management of all Group risks is carried out centrally by the Group Risk Management department, with units specialised by risk type that define and implement consolidation and risk management measures (standards, methodologies, information systems).

The Group Risk Management department also has a "business line risk management" function in charge of the global and individualised relationship with each of the subsidiaries of Crédit Agricole S.A. and the Regional Banks.

Group risks are monitored by the business line risk management units, in particular through the Group Risk Committee and the Regional Banks' Risk Monitoring Committee.

It is also carried out through an alert procedure applied to all entities and which allows the most significant risks to be presented to a specific committee on a bi-monthly basis (Alert Monitoring Committee).

Crédit Agricole S.A. measures its risks in an exhaustive and precise manner, namely by integrating all categories of commitments (on- and off-balance sheet) and positions, consolidating commitments on companies belonging to the same group, aggregating all portfolios and distinguishing risk levels.

This is supplemented by ad hoc measurements of risk profile distortion under stress scenarios and a regular assessment based on various scenario types.

In addition to regulatory exercises, from an internal management viewpoint, stress tests are carried out at least once a year by all entities. This work is performed in particular as part of the annual budgetary process to strengthen the practice of measuring the sensitivity of the Group's risks and income statement and its various components to a significant downturn in the economy. This global stress testing is supplemented by sensitivity tests on the main portfolios.

Risk monitoring by Crédit Agricole S.A., its subsidiaries and the Regional Banks on an individual or collective basis requires a system to monitor the overruns and their regularisation, the operation of accounts, the correct classification of receivables in accordance with current regulations (in particular impaired loans), the adequacy of the level of provisioning for risks under the supervision of the Risk Committees, and the periodic review of the main risks and portfolios, in particular for sensitive business.

In a context of contrasting and uncertain risk, Crédit Agricole S.A. pursues a policy of actively reviewing the risk policies and frameworks applied by its subsidiaries. Moreover, the Group's main cross-functional portfolios (housing, energy, professionals and farmers, consumer finance, private equity etc.) have been analysed by the Group Risk Committee (CRG). The scope of risks covered in the risk frameworks reviewed by the CRG also includes model risks, operational risks and conglomerate risks and environmental risk.

Alert and escalation procedures are in place in the event of a prolonged anomaly, depending on its materiality.

PERMANENT CONTROL OF OPERATIONAL RISKS

The Group Risk Department coordinates the Permanent Control system. It defines key control indicators by risk type, collects control results, and organises consolidated reporting for risk experts. The analysis of results and the monitoring of the escalation process for failed controls are presented to the Group Internal Control Committee and the Group Risk Department's Permanent Control Umbrella Committee.

DECENTRALISED RISK MANAGEMENT AND PERMANENT CONTROLS FUNCTIONS, AT THE LEVEL OF EACH OF THE GROUP'S BUSINESS LINES

WITHIN CRÉDIT AGRICOLE S.A.

The business line function operates under a hierarchical organisation, with a Risk Manager (responsable de la fonction Gestion des risques – RFGR) appointed at each subsidiary or business line. The business line Risk Manager (RFGR) reports hierarchically to the Group Chief Risk Officer and functionally to the Executive Management of the subsidiary (CEO or Deputy CEO). This positioning ensures the independence of the local Risk Management and Permanent Controls departments.

Each subsidiary or business line, under the responsibility of its RFGR, obtains the necessary resources to ensure the management of its risks and the compliance of its permanent control system, in order to implement a full-fledged function (exhaustive and consolidated vision of risks, likely to guarantee the sustainability of the entity over its entire scope of supervision on a consolidated basis).

The relationship between each subsidiary or business line and Group Risk Management department is organised around the following main elements:

- implementation by each subsidiary or business line of the Group's cross-functional standards and procedures, developed by the Group Risk Management department;

- determination for each subsidiary or business line of a risk framework, validated by the Group Risk Committee on the advice of the Group Risk Management department, specifying in particular the entity's overall commitment limits;
- principle of delegation of powers from the Group RFGR to the business line RFGRs that report to the former in the performance of their duties, subject to the latter's transparency and alerting the Group Risk Management department.

Furthermore, as the corporate centre, Crédit Agricole S.A., through its Group Risk department, oversees, steers, coordinates and supports the Group's business lines (monitoring the correct application of requirements relating to permanent control, operational risk management and operational risk mapping etc.).

WITHIN THE SCOPE OF THE REGIONAL BANKS

Banking regulations relating to risks apply to each of the Regional Banks individually. Each is responsible for its own risk management and permanent control system and has a Risk Manager (RFGR) in charge of risk management and permanent controls, who reports to the Executive Management of the Regional Bank (CEO, Deputy CEO or Deputy General Manager) and has a functional link to the Group Risk department as the corporate centre of Crédit Agricole S.A. The RCPR may also be responsible for the duties of the Compliance Officer. If this is not the case, the Compliance Officer reports directly to an executive director.

Moreover, as the corporate centre, Crédit Agricole S.A., via the Group Risk Management department, consolidates the risks carried by the Regional Banks and has the role of standardising, monitoring, coordinating and managing the Risk Management business line in the Regional Banks, including by disseminating the necessary standards to them, in particular for the implementation of a permanent control system at Group level.

In addition, the significant credit risks taken by the Regional Banks are presented for partial guarantee to Foncaris, a credit institution and wholly owned subsidiary of Crédit Agricole S.A. The obligation imposed on the Regional Banks to request a counter-guarantee from Foncaris on their main operations (above a threshold defined between the Regional Banks and Foncaris) thus provides the corporate centre with an effective tool enabling it to assess the associated risk before accepting it.

INTERNAL CONTROL SYSTEM FOR DIGITAL OPERATIONAL RESILIENCE

The internal control system that has been put in place ensures that the Group's security governance bodies receive regular reports on the situation of the main entities in terms of monitoring risks related to digital operational resilience.

BUSINESS CONTINUITY PLANS

With regard to IT backup plans, the IT productions of most of the subsidiaries of Crédit Agricole S.A. and of the 39 Regional Banks hosted on the Greenfield secure bi-site structurally benefit from backup solutions from one site to another.

Business continuity plans are regularly tested and updated, covering all identified crisis scenarios.

The subsidiaries of Crédit Agricole S.A. for which IT is not managed by Greenfield have IT backup solutions that are regularly tested with reasonable assurance of restart in the event of failure.

With regard to user backup plans, the Group maintains a large-scale teleworking system, coupled, for certain activities (trading room), with a physical backup site and the crossover use of the premises of the Group's entities.

In addition, and in accordance with Group policy, most entities are able to cope with a massive viral attack on workstations through the use of adapted solutions (physical back-up site, workstation matrixing bench and crisis PCs in stock).

INFORMATION SYSTEMS SECURITY

The Crédit Agricole Group continued to strengthen its resilience in the face of the scale of risks associated with information and communication technologies (ICT), particularly cyber threats.

Group security governance has been implemented with a Group Security Committee (CSG) which is the decision-making and executive body that defines the Group's security strategy by domain, integrating the orientations of Group security policies into it, determines Group security projects, supervises the execution of the strategy on the basis of indicators for managing Group projects and applying policies, and finally assesses the Group's level of control in the four areas falling within its competence: business continuity plan, data protection, personal and property security and information system security.

The Information Systems Risk Manager (*Manager des risques systèmes d'information* – MRSI) and Chief Information Security Officer (CISO) functions are now deployed in most of the Group's entities: the MRSI, who reports to the RFGR, consolidates the information to act as a second set of eyes.

In 2025, compliance with the European Digital Operational Resilience Act (DORA) further strengthened the Group's digital operational resilience and made it a real strategic differentiator in an increasingly digitalised environment.

SPECIFIC INTERNAL CONTROL SYSTEMS AND RISK CONTROL AND MONITORING SYSTEMS OF CRÉDIT AGRICOLE S.A.

INTERNAL CONTROL SYSTEM FOR ACCOUNTING AND FINANCIAL INFORMATION

In keeping with the applicable rules within the Group, the organisational principles and responsibilities of the Group Finance department functions are set out in an operational note.

The Finance function is organised as a business line within Crédit Agricole S.A. The Crédit Agricole S.A. Finance function defines the financial strategy, in conjunction with other departments within Crédit Agricole S.A. where necessary, and determines the standards and methods applicable in the Group in terms of accounting and regulatory information, taxation, solvency and the management of liquidity, interest rate and foreign exchange risks. It also ensures that these standards and methods are disseminated to and implemented by all Group entities.

Within the subsidiaries, the Chief Financial Officers report hierarchically to the head of the business line or subsidiary and functionally to the Director of the Group Finance department. The Finance department of each subsidiary is responsible for applying the Group's standards and principles in these areas in line with each business line's specific attributes. In some cases, it also constitutes an intermediate level for consolidation of the business line's accounting and business management data.

Each Risk Management and Permanent Controls department in a Crédit Agricole S.A. subsidiary is responsible for producing the risk data used to prepare financial information and for implementing controls to ensure that this information is accurately reconciled to accounting data.

Each entity is equipped with the means to ensure the quality of the accounting, management and risk data transmitted to the Group in line with consolidation requirements, in particular with regard to the following aspects: compliance with the standards applicable to the Group, consistency with the parent company financial statements approved by its supervisory body, reconciliation of accounting and management data.

ORGANISATION OF GROUP FINANCE

Within Finance, the Accounting and Regulatory Information and Financial Communication departments and the Management Control department mainly contribute to the preparation of published accounting and financial information.

Accounting and Regulatory Information

The main purpose of the Accounting and Regulatory Information department is to produce the Group's parent company and consolidated financial statements and regulatory reporting, including segment information for Crédit Agricole S.A. based on the definition of the business lines for financial reporting purposes and in compliance with IFRS 8.

To fulfil this purpose, the department, in accordance with applicable regulations, defines and circulates the accounting standards and principles that apply to the Group. It oversees the accounting framework, lays down the rules governing the architecture of the accounting information and regulatory reporting system, and manages the accounting processes for consolidation of the financial statements and regulatory reporting.

Management Control

The Group Management Control function, within the Financial Steering department, defines the rules for allocating economic equity (definition, allocation policy), consolidates, prepares and quantifies the budget and the Medium-Term Plan for Crédit Agricole S.A., and monitors the budget. To meet this objective, Group Management Control defines the management control procedures and methods and the structure and management regulations for the Group management control system.

Financial Communication

Crédit Agricole S.A.'s Financial Communication department ensures message consistency across all investor categories. It is responsible for information published in press releases and presentations to shareholders, financial analysts, institutional investors and rating agencies, as well as information contained in documents subject to approval by the French Financial Market Authority (AMF). In this respect, working under the responsibility of the Deputy General Manager in charge of the Finance and Steering division, the Financial Communication department provides the materials used as the basis for presentations of Crédit Agricole S.A.'s and the Crédit Agricole Group's results, financial structure and changes in business lines, as needed to enable third parties to formulate an opinion, particularly on the Group's financial strength, profitability and outlook.

PROCEDURES FOR THE PREPARATION AND PROCESSING OF ACCOUNTING AND FINANCIAL INFORMATION

Each Group entity has responsibility, vis-à-vis the Group and the regulatory authorities to which it reports, for its parent company financial statements, which are approved by its supervisory body. Depending on the entity's size, these financial statements are subject to prior review by the entity's Audit Committee, if it has one.

For the Crédit Agricole Regional Banks, once their financial statements are drawn up, they are approved by the Accounting and Regulatory Information department of Crédit Agricole S.A.; this is one of its responsibilities as corporate centre.

Crédit Agricole S.A.'s consolidated financial statements are submitted to the Audit Committee and approved by the Board of Directors of Crédit Agricole S.A.

Most published financial information is based on accounting data and on management and risk data.

Accounting data

Figures for each individual entity are drawn up in accordance with the accounting standards applicable in the country in which the entity operates. For the purposes of preparing the Group's consolidated financial statements, local financial statements are restated to comply with IFRS policies and principles, as adopted by Crédit Agricole S.A.

Management and risk data

Management and/or risk data is produced by the Group Finance department or the Group Risk Management department. The data are reported with the final accounting data, in accordance with the same definition and granularity standards and are used as inputs to the Group's internal management reporting. Management data or risk data, reconciled with accounting data, can be used as inputs for certain Group regulatory consolidated reporting.

Furthermore, external sources of information (such as the European Central Bank and Banque de France) may be used for management data, particularly for calculating market shares.

In accordance with the AMF and ESMA (European Securities and Markets Authority) recommendations, the use of management data for preparing published financial information must comply with the following guidelines:

- classification of the types of financial information published: historical information, pro forma data, projections or trends;
- a clear description of the sources from which the financial information was drawn. When published data are not extracted directly from accounting information, the sources and definition of calculation methods are mentioned;
- comparability of figures and indicators over time, which implies ongoing use of the same sources, calculation methods and methodologies.

DESCRIPTION OF THE CONTROL SYSTEM

The purpose of the control system is to ensure that coverage of risks likely to affect the quality of accounting information and regulatory reporting is satisfactory and effective.

This function is carried out in two departments in a complementary manner: the Accounting and Regulatory Information department within the Group Finance department (Level 2.1 controllers) and the Group Financial Risk department within the Group Risk Management department (Level 2.2 controllers).

The Guide to Accounting Control and Regulatory Reporting is the Registration Document for all of Crédit Agricole Group's Level 2.1 and 2.2 controllers.

System within the Accounting and Regulatory Information department

With no hierarchical link to Management's production departments, the 2.1 controllers exercise control over the operational activities carried out on Crédit Agricole S.A.'s corporate data and Crédit Agricole Group's consolidated data, as well as over the production of regulatory reports. They participate in the definition of methodologies relating to the first-level controls applicable within the Group in terms of accounting and regulatory information and offer support to the Level 2.1 controllers of the Regional Banks and subsidiaries.

System within the Group Risk Management department

Reporting hierarchically to the Group Financial Risk department, within the Group Risk Management department, the permanent control services ensure:

- the Permanent Control of the Operational departments of the Finance department, excluding the Financial Steering department of the Crédit Agricole S.A. Parent Company;
- the permanent control of the Financial Communication department;
- the oversight of the Financial Steering department (Direction du pilotage financier - DPF) of the Crédit Agricole S.A. Parent Company, including Management Control;
- the governance coordination of Permanent Control for the Crédit Agricole S.A. departments under its responsibility;

- the management, oversight and supervision of the Permanent Control systems related to the accounting and regulatory reporting of all Crédit Agricole Group entities, in close collaboration with the network of Level 2.2 controllers of the Regional Banks and subsidiaries;
- the issuing of opinions on accounting risk in connection with the risk frameworks presented by the entities, based on in-depth analyses of the permanent control systems monitored;
- the definition of the accounting and financial information control methodologies, within the Crédit Agricole Group.

RELATIONS WITH THE STATUTORY AUDITORS

The Universal Registration Document, its updates, the securities notes and the prospectuses prepared for new debt or share issues, which contain comprehensive financial information, are subject to approval by or registration with the AMF.

In accordance with applicable professional standards, the Statutory Auditors perform those procedures they deem appropriate on published accounting and financial information:

- audit of the parent company and consolidated financial statements;
- review of interim consolidated financial statements;
- reading of all quarterly financial information.

As part of the duties assigned to them by law, the Statutory Auditors submit to Crédit Agricole S.A.'s Audit Committee their overall work programme, the various spot checks they have carried out, the conclusions of their work on the accounting and financial information they have reviewed in carrying out their assignment, as well as any significant weaknesses of the internal controls, with regards to the procedures used for the preparation and processing of accounting and financial information.

NON-COMPLIANCE RISK PREVENTION AND CONTROL

See part 2.9 "Non-compliance risks" below.

PERIODIC CONTROL

The Group Control and Audit department, which reports directly to Crédit Agricole S.A.'s Executive Management in order to guarantee its independence, is the highest level of control within the Crédit Agricole Group. Its sole responsibility is to ensure the Crédit Agricole Group's periodic control through the missions it carries out, the management of the Crédit Agricole S.A. Audit-Control business line, which reports to it hierarchically (or functionally, in exceptional cases, when local regulations require a local hierarchical reporting line) and the supervision and coordination of the internal audit units of the Regional Banks.

It carries out its work in accordance with the texts governing the system:

- Article 12 of the Order of 3 November 2014, as amended by the Order of 25 February 2021, on the internal control of corporates in the banking, payment services and investment services sector subject to the supervision of the French Regulatory and Resolution Supervisory Authority (hereinafter "the order of 3 November 2014");
- Article 13 of the Order of 6 January 2021, as amended by the Order of 25 February 2021, on the fight against money laundering, terrorist financing and the freezing of assets (hereinafter the "Order of 6 January 2021");
- Internal Audit Standards, defined in the International Professional Practices Framework (IPPF) by the Institute of Internal Audit (IIA), represented in France by the French Institute of Audit and Internal Control (Institut français de l'audit et du contrôle interne - IFACI).

Based on an updated risk mapping approach resulting in an audit cycle of between one and five years maximum, it conducts on-site and documentary audits in the Regional Banks and their subsidiaries, units of Crédit Agricole S.A. and its subsidiaries, including when they have their own internal audit and control units, as part of a coordinated approach to audit plans.

The assignments carried out by the Group Control and Audit department are assurance assignments as defined by professional standards. Their purpose is to assess:

- the adequacy and effectiveness of the control systems referred to in Article 11 of the Order of 3 November 2014 and Article 13 of the Order of 6 January 2021, as well as those that ensure the reliability and accuracy of the financial, management and operating information of the audited areas;
- the control and actual level of risks assumed directly by the Crédit Agricole Group or through outsourced activities (identification, recording, management, hedging) mentioned in the above-mentioned orders, in particular credit risk (including concentration, dilution and residual value risk), market risk, liquidity risk, global interest rate risk, intermediation risk, settlement risk, anti-money laundering and terrorism financing risk and the various components of operational risk, including internal and external fraud risk, IT risk, business interruption risk, legal risk, non-compliance risk, basis risk, securitisation risk, systemic risk, model risk, excessive leverage risk and environmental risk;
- the compliance of operations with applicable laws and regulations, as well as with internal rules and procedures;
- the compliance of procedures with the risk appetite framework, the Group strategy and the decisions of Executive Management;
- the adequacy, quality and effectiveness of the controls performed and reported by the first and second lines of defence;
- the implementation, within a reasonable timeframe, of the recommendations made by the various internal or external audit bodies in the course of their assignments,
- and to ensure the quality and efficiency of the overall functioning of the organisation.

The Group Control and Audit department's assignments provide the Chief Executive Officer, Deputy Chief Executive Officers, Chief Risk Officer and Head of Compliance of Crédit Agricole S.A., the Board of Directors of Crédit Agricole S.A. and its sub-committees, as well as the executives and supervisory bodies of the departments or entities audited, with a professional and independent opinion on the operation and internal control of the entities making up the Crédit Agricole Group.

The Group Control and Audit department may also carry out investigations when significant internal or external fraud is suspected or proven, or special assignments related to issues that do not fall within the classification of the audit plan mapping, or provide operational support. The Group Control and Audit department may, from time to time, carry out consulting assignments on its own proposal or at the request of Executive Management or governance bodies. The purpose of these consulting assignments is to propose improvements to the Group's governance, risk management and control processes.

The Group Control and Audit department also provides centralised monitoring of the Audit-Control business line for all subsidiaries and supervises and coordinates the periodic control of the Regional Banks, thereby enhancing the effectiveness of controls by harmonising audit practices at their best level, to ensure the security and regularity of operations in the various Group entities and to develop common areas of expertise.

Joint audit engagements of the Group Control and Audit department and the audit departments of subsidiaries are regularly carried out, which contributes to exchanges on best audit practices. Particular importance is given to thematic and transversal investigations.

In addition, the Group Control and Audit department ensures, within the framework of the Internal Control Committees of the relevant Group subsidiaries – in which the Executive Management, the Head of Internal Audit, the Head of the Risk Management function and the Compliance Officer of each entity participate – that audit plans are properly carried out, that risks are properly controlled and, more generally, that each entity's internal control systems are adequate.

The assignments carried out by the Control and Audit department of Crédit Agricole S.A., the audit-control units or any external audit (regulatory authorities, external firms where applicable) are subject to a formal monitoring system. For each of the recommendations made at the end of these assignments, the system makes it possible to ensure the progress of the planned corrective actions, their implementation according to a precise timetable, in line with their priority level, and for the Head of the Group Control and Audit department to exercise, if necessary, their duty to alert the supervisory body and the Risk Committee pursuant to Article 26 b) of the decree of 3 November 2014, as amended, on the internal control of corporates in the banking, payment services and investment services sector subject to the supervision of the French Regulatory and Resolution Supervisory Authority. The Group Head of Control and Audit reports to the Audit Committee of Crédit Agricole S.A. and may issue alerts to the Audit Committee and the Risk Committee of the Board of Directors of Crédit Agricole S.A.

In accordance with Article 23 of the order of 3 November 2014, as amended, on internal control, the Head of the Group Control and Audit department reports to the Board of Directors of Crédit Agricole S.A. regarding the performance of the assignments.

The Audit-Control business line consisted of 1,417 full-time equivalent employees at end-2025:

- 939 within Crédit Agricole S.A.;
- 478 within the scope of the Regional Banks.

2.4. CREDIT RISK

[Audited] A credit risk is realised when a counterparty is unable to honour its obligations and when the carrying amount of these obligations in the bank's books is positive. The counterparty may be a bank, an industrial or commercial enterprise, a government and its various controlled entities, an investment fund, or an individual person.

DEFINITION OF DEFAULT

The definition of default used in management is the same as the one used for regulatory calculations in the Group entities.

A debtor is, therefore, considered to be in default when at least one of the following two conditions has been met: (i) payment arrears of more than 90 days past due and above the regulatory materiality thresholds, unless specific circumstances demonstrate that the delay is due to reasons independent of the debtor's financial situation; (ii) the entity believes that the debtor is unlikely to settle its credit obligations unless it avails itself of certain measures such as enforcement of collateral security right.

Thus, the Crédit Agricole Group has defined signs of unlikelihood to pay in accordance with Article 178(3) of Regulation (EU) No 575/2013 and with the EBA/GL/2016/07 Guidelines. They may consist namely in: (i) significant financial difficulties of the issuer or borrower, (ii) the granting, by the lender(s) to the borrower, for economic or contractual reasons related to financial difficulties of the borrower, of one or more favours that the lender(s) would not have considered under other circumstances, (iii) the increasing probability of bankruptcy or financial restructuring of the borrower, (iv) the purchase or creation of a financial asset with a significant discount, which reflects the credit losses suffered.

RESTRUCTURED LOANS

Restructuring as defined by the EBA (forbearance) consists of all changes made to one or more credit agreements, as well as to refinancings, agreed to by virtue of a customer's financial difficulties.

Once the restructuring as defined by the EBA has been carried out, the exposure continues to be classified as "restructured" for at least two years, if the exposure was performing when restructured, and three years if the exposure was in default when restructured. These periods are extended when certain events covered by the Group standards occur (further incidents for example).

In this respect, Group entities have put in place solutions to identify and manage these exposures, tailored to their specificities and to their business lines, depending on the circumstances: based on expert judgement, algorithmic solutions or a combination of these two approaches. These mechanisms also make it possible to satisfy the requirement to produce quarterly regulatory statements on this matter.

The volume of loans in forbearance under the ITS 2013-03 definition are given in Note 3.1 to the Group's consolidated financial statements. The accounting policies and principles applicable to receivables are specified in Note 1.2 to the Group's consolidated financial statements.

I. OBJECTIVES AND POLICY

Credit risk-taking by the Crédit Agricole Group is subject to the risk appetite of the Group and entities and risk frameworks confirmed by the Board of Directors and approved by the Group Risk Committee, a sub-committee of Crédit Agricole S.A. Executive Committee chaired by the Chief Executive Officer. The risk frameworks are adjusted to each business line and its development plan. They set out applicable overall limits, intervention criteria (types of eligible counterparties, nature and maturity of eligible products, collateral required) and arrangements for delegating decision-making authority. These risk frameworks are adjusted as

required for each business line, entity, business sector or country. Business lines are responsible for complying with these risk frameworks, and compliance is controlled by the Risk Managers.

Crédit Agricole Corporate and Investment Bank also carries out active portfolio management, in order to reduce the main concentration risks borne by the Crédit Agricole Group. The Group uses market instruments, such as credit derivatives or securitisation mechanisms, to reduce and diversify counterparty risk and enable it to optimise its use of equity. Similarly, potential risk concentration is mitigated by syndication of loans with external banks and use of risk hedging instruments (credit insurance, derivatives).

Crédit Agricole S.A., its subsidiaries and the Regional Banks seek to diversify their risks in order to limit their exposure to credit and counterparty risks, particularly in the event of a crisis affecting a particular industry or country. To this end, Crédit Agricole Group entities regularly monitor their total exposures by counterparty, by trading portfolio, by business sector and by country, using different internal calculation methods depending on the type of exposure (see in particular paragraph II.2.2 "Credit risk measurement").

To reduce the risk associated with the deterioration of the quality of its exposure to credit and counterparty risks, the Group may apply a hedging strategy consisting notably of the purchase of credit derivatives (see Credit risks under Section II.4.3 "Use of credit derivatives").

When the risk is proven, an individual or portfolio-based impairment policy is implemented.

In particular, with respect to counterparty risk on market transactions, the policy on credit reserves constitution on this type of risk is similar to credit risk, with a credit valuation adjustment (CVA) for "performing" customers that is economically comparable to a collective provision, and for defaulted counterparties, an individual provision sized in accordance with the derivative instrument position, taking into account the CVA amount already provisioned prior to the default.

In case of default, the impairment is assessed in accordance with the same principles as those governing the credit risk provisioning policy: expected loss amount depending on the derivative instrument rank in the "waterfall". But it takes into account the CVA process, with two possible outcomes: either derivatives are left in place (CVA or individual impairment), or they are unwound (individual impairment).

II. CREDIT RISK MANAGEMENT

1. GENERAL PRINCIPLES OF RISK-TAKING

All credit transactions require in-depth analysis of the customer's ability to repay the debt and the most efficient way of structuring the transaction, particularly in terms of security and maturity. This analysis must comply with the risk framework of the business line or entity concerned and with all limits in force, both individual and aggregate. The final commitment decision is based on an internal rating of the counterparty and is taken by the commitment units or by the Credit Committees, on the basis of an independent opinion given by a representative of the Risk Management and Permanent Controls business line concerned, as part of the authorisation system in place. The Group Risk Committee and its Chairman constitute the Group's ultimate decision-making authority. Each lending decision requires a risk-return analysis. For the corporate and investment banking, this means an ex ante calculation of the profitability of the transaction. In addition, the principle of an individual risk limit applies to all types of counterparty, whether corporates, banks, financial institutions, public sector or semi-public sector entities.

2. RISK MEASUREMENT METHODS AND SYSTEMS

2.1 INTERNAL RATING SYSTEMS AND CREDIT RISK CONSOLIDATION SYSTEMS

The internal rating systems cover all of the methods, procedures and controls used for assessment of credit risk, rating of borrowers and estimation of losses given default by the borrower. Governance of the internal rating system relies on the Standards and Models Committee (Comité des normes et modèles – CNM) chaired by the Group Chief Risk Officer, who is responsible for the validation and circulation of risk measurement and control standards and methodologies within the Crédit Agricole Group. In particular, the CNM reviews:

- the rules for identifying and measuring risks, in particular, counterparty rating methods, credit scoring and Basel risk parameter estimates (probability of default, credit conversion factor, loss given default) and related organisational procedures;
- the segmentation between retail customers and Large customers, with related procedures such as risk consolidation information system data entry;
- the performance of rating and risk assessment methods by reviewing back-testing results at least once a year;
- the use of ratings (validation of common syntaxes, glossaries and benchmarks).

For retail customers, including loans to individuals (in particular, home loans and consumer finance) and small businesses, each entity is responsible for defining, implementing and substantiating its rating system, in accordance with the Group standards established by Crédit Agricole S.A.

LCL, CA Italia and the consumer finance subsidiaries (Crédit Agricole Personal Finance & Mobility) have their own rating systems. The Crédit Agricole Regional Banks use common risk assessment models developed and monitored by Crédit Agricole S.A. Procedures for back-testing the parameters used in calculating the regulatory capital requirements have been defined and are

operational in all entities. The internal models used by the Crédit Agricole Group are based on statistical models established on explanatory behavioural variables (e.g. average current account balance) and identifying variables (e.g. business sector). The approach taken can be either customer-centred (Individual Customers, Farmers, Small Businesses and VSBs), or product-centred. The estimated one-year probability of default, to which the rating relates, is updated on a yearly basis.

In the Large customers scope, the Crédit Agricole Group has adopted a single rating scale. This scale is composed of 13 “performing” ratings (A+, A, B+, B, C+, C, C-, D+, D, D-, E+, E and E-) and two “default” ratings (F and Z). Each “performing” rating in the single rating scale is defined by (i) a Probability of Default (PD) range across the accessible cycle, such that (ii) the ranges of two consecutive ratings are non-overlapping and (iii) the median probability of two consecutive ratings shows an exponential increase.

Such a scale ensures the following three principles:

1. **principle of comparability**, allowing the credit risk level of any counterparty to be assessed, regardless of the rating scope or the Crédit Agricole Group entity, whether it is a counterparty, a group, its subsidiaries or a guarantor;
2. **principle of homogeneity within a rating**, ensuring that two counterparties assigned the same rating have the same level of default risk;
3. **principle of heterogeneity among ratings**, ensuring that two counterparties assigned different ratings have significantly different levels of default risk.

The single scale makes it possible to define a common, shared reference for risk levels, encouraging the establishment of a common language and practices, and the development of cross-functional uses across all entities and business lines within the Crédit Agricole Group as a whole.

COMPARISON BETWEEN THE GROUP RATINGS AND THE RATING AGENCIES

Crédit Agricole S.A./
Crédit
Agricole Group

	A+	A	B+	B	C+	C	C-	D+	D	D-	E+	E	E-
S&P/Fitch	AAA	AA+	AA/AA-	A+/A/A-	BBB+	BBB	BBB-	BB+/BB	BB-	B+/B	B-	CCC+/CCC-	CC/C

Benchmark PD	(0% – 0.01%)	(0.01% – 0.02%)	(0.02% – 0.04%)	(0.04% – 0.10%)	(0.10% – 0.20%)	(0.20% – 0.30%)	(0.30% – 0.60%)	(0.60% – 1.00%)	(1.00% – 1.90%)	(1.90% – 4.90%)	(4.90% – 11.80%)	(11.80% – 19.80%)	(19.80% – 100%)

Within Crédit Agricole Group, the Large customers category comprises primarily Sovereign States and Central Banks, corporates, local authorities, specialised financings as well as banks, insurance companies, asset management companies and other financial companies. An internal rating method tailored to each specific risk profile, based on financial and qualitative criteria, is applied to each type of Large customer. For Large customers, Crédit Agricole Group entities have common internal rating methodologies. Counterparties are rated, at the latest, when they apply for support and the rating is updated with each renewal or upon any event that could affect risk quality. The rating assigned must be approved by a unit independent of the Front Office. The rating is reviewed at least annually. To ensure that each counterparty has a unique Crédit Agricole Group rating, a single

Group entity is responsible for rating said counterparty on behalf of all the entities providing it with support.

Whether relating to Large Customers or retail customers, the rating oversight system implemented by Crédit Agricole S.A., its subsidiaries and Regional Banks across the entire rating process concerns:

- the rules for identifying and measuring risks, in particular, the methods used;
- the uniformity in the handling of default events on a consolidated basis;
- the proper utilisation of the internal rating methodologies;
- the reliability of data substantiating the internal rating.

The CNM ensures that these principles are respected, in particular, when rating methodologies are approved and during annual back-testing.

Furthermore, Crédit Agricole S.A. and its subsidiaries continue to focus on improving the risk-tracking system for:

- the risk management of third parties and groups which is designed to ensure accurate identification of third parties and groups presenting a risk within the entities and to improve cross-functional risk information management on third parties and groups, which is crucial to ensuring rating uniqueness and consistent allocation of exposures to Basel portfolios;
- the closing process, which aims to guarantee the quality of the process of production of the solvency ratio.

The French Regulatory and Resolution Supervisory Authority (ACPR) has authorised the Crédit Agricole Group to use internal rating systems to calculate regulatory capital requirements for credit risk of its retail and Large customers portfolios on the greater part of its scope.

Having internal rating systems deployed throughout the Crédit Agricole Group enables it to implement counterparty risk management based on risk indicators compliant with current regulatory regulations. For Large customers, the single rating system (identical tools and methods, shared data) which has been implemented for several years now, has helped to improve counterparty monitoring, in particular, for counterparties common to several Crédit Agricole Group entities. The system has also made it possible to have a common reference framework on which to base standards and procedures, monitoring tools, alert procedures and risk provisioning policies.

Finally, in the corporate and investment banking business lines, expected loss, economic capital and risk-adjusted return measurements are used in the processes for making loan approval decisions, defining frameworks for risks and limits.

2.2 CREDIT RISK MEASUREMENT

The measurement of credit risk exposures includes both drawn facilities and confirmed unutilised facilities.

To measure counterparty risk on market transactions, Crédit Agricole CIB and its subsidiaries use an internal approach to estimate the current and potential risk of derivative instruments (such as swaps and structured products).

Counterparty risk on market transactions is assessed for potential risk related to changes in the market value of derivative instruments over their remaining life. It is determined according to the type and residual maturity of the contract, based on a statistical observation of trends in the underlying assets. Where permitted by netting and collateralisation agreements established with the counterparty, counterparty risk is assessed using a net portfolio and eligible collateral approach. This method is used for internal counterparty risk management purposes.

To reduce its exposure to counterparty risk, Crédit Agricole CIB establishes netting and collateralisation agreements with its counterparties (see II.4 “Credit risk mitigation mechanism” in this section on credit risk management).

The positive gross fair value of the contracts, as well as the gains from the offsetting and the guarantees held, and the net exposure on derivative instruments after the impact of offsetting and guarantees are discussed in Note 6.8 on Offsetting – Financial Assets of the consolidated financial statements.

At other Group entities, the base for counterparty risk on market transactions is either calculated by the Crédit Agricole CIB tool under an internal provision of services agreement or based on the regulatory approach.

3. SUPERVISION SYSTEM OF COMMITMENTS

Rules for dividing and limiting risk exposures, along with specific processes relating to commitments and grant criteria, are used to prevent any excessive concentration of the portfolio and to limit the impact of any underperformance.

3.1 PROCESS FOR MONITORING CONCENTRATIONS BY COUNTERPARTY OR GROUP OF RELATED COUNTERPARTIES

The consolidated commitments of all Crédit Agricole Group entities are monitored by counterparty and by group of related counterparties. A group of counterparties is a group of French or international legal entities that are connected, regardless of their status and economic activity, enabling the total exposure to the risk of default of this group to be measured on the basis of the exposure of one or more of these entities. Commitments to a counterparty or group of related counterparties include all loans granted by the Group as well as corporate finance transactions, bond portfolios, financing commitments and counterparty risks relating to capital market transactions. Exposure limits for counterparties and groups of related counterparties are recorded in the internal information systems of each entity or business line. When several subsidiaries have a counterparty in common, a Group-level aggregate limit is set on the basis of commitment authorisation limits that depend on the internal rating.

Each operating entity reports the amount of its commitments by risk category on a monthly or quarterly basis to the Group Risk Management department. Exposures to major non-bank counterparties, i.e. those on which the aggregate commitments of Crédit Agricole Group exceed a threshold determined from €500 million of exposure and modulated according to the rating, are reported separately to the Group Risk Committee.

At end-2025, the commercial lending commitments of **Crédit Agricole S.A.** to its ten largest non-sovereign, non-bank customers amounted to 5.28% of the total non-bank commercial lending portfolio (compared with 6.57% at 31 December 2024).

At end-2025, the commercial lending commitments of the **Crédit Agricole Group** to its ten largest non-sovereign, non-bank customers amounted to 4.34% of the total non-bank commercial lending portfolio (compared with 5.31% at 31 December 2024).

The diversification of the portfolio on an individual basis is satisfactory.

3.2 PORTFOLIO REVIEW AND SECTOR MONITORING PROCESS

Periodic portfolio reviews conducted by entity or business line strengthen the monitoring process, thus serving to identify counterparties that are underperforming, update counterparty ratings, monitor risk frameworks and check on changes in concentration ratios, for instance, by business sector.

Moreover, the Corporate and Investment Bank has a portfolio modelling tool that it uses to test how well portfolios hold up under stress scenarios.

The Regional Banks organise their own portfolio review and sector monitoring processes tailored to their risk profiles.

3.3 PROCESS FOR MONITORING COUNTERPARTIES IN DEFAULT AND ON CREDIT WATCH

Counterparties in default and on credit watch are monitored closely by the business lines, in collaboration with the Risk Managers. They are also the object of formal monitoring by the entities' sensitive exposure committees and of quarterly monitoring by the Group Risk Committee and the Risk Committee on a consolidated basis.

3.4 CONSOLIDATED CREDIT RISK MONITORING PROCESS

The Group's credit risk profile is monitored and presented at least every quarter at the Group Risk Committee and the Board of Directors' Meetings using the main changes in the risk position, its supplement and the Group risk appetite dashboard.

In addition, detailed periodic reviews of banking risks, country risks and the main non-banking risks are conducted during Group Risk Committee Meetings.

3.5 COUNTRY RISK MONITORING AND MANAGEMENT SYSTEM

Country risk is the risk that economic, financial, political, judicial or social conditions in a country will affect the Bank's financial interests. This risk does not differ in nature from "elementary" risk (credit, market and operational risks), but is an aggregate of risks resulting from vulnerability to a specific political, social, macroeconomic and financial environment. Country risk covers the assessment of the overall risk environment in a country as opposed to sovereign risk, which refers to a government's counterparty risk.

The system for assessing and monitoring country risk within the Crédit Agricole Group is based on its own rating methodology. Internal country ratings are based on criteria relating to the financial strength of the government, the banking system and the economy, criteria relating to ability and willingness to pay, governance and political stability.

Annually reviewed limits and risk frameworks are applied to each country whose business volume justifies it, with some exceptions.

This approach is supplemented by scenario analyses aimed at testing the impact of adverse macroeconomic and financial assumptions. These tests provide the Group with an integrated view of the risks to which it may be exposed in situations of extreme tension.

The Group manages and controls its country risks according to the following principles:

- acceptable country risk exposure limits are determined through reviews of country strategies, depending on the assessment of the portfolio's vulnerability to country risk. The degree of vulnerability is determined by the type and structure of transactions, the quality of counterparties and the term of commitments. The exposure limits may be reviewed more frequently if developments in a particular country make it necessary. These strategies and limits are validated according to the issues in terms of risks by Crédit Agricole CIB's Strategy and Portfolio Committees (CSP) and Crédit Agricole S.A.'s Group Risk Committee (CRG);
- corporate and investment banking maintains a system for regular assessment of country risk and for updating the country risk rating quarterly for each country in which the Group operates. This rating is produced using an internal country rating model based on various criteria (structural solidity, governance, political stability, ability and willingness to pay). Specific events may cause ratings to be adjusted before the next quarterly review;
- Crédit Agricole CIB's Country and Portfolio Risk department validates transactions whose size, maturity and degree of country risk could affect the quality of the portfolio.

Country risk exposure is monitored and controlled in both quantitative (amount and term of exposure) and qualitative (portfolio vulnerability) terms through regular specific reporting on all exposures to countries.

Western European countries with an internal rating (below B) qualifying them for close country risk monitoring undergo a separate ad hoc monitoring procedure.

Segment information by geographic area is provided in Note 5.2 of the consolidated financial statements.

Moreover, exposures to other countries rated below B are detailed below in Section III of paragraph 2.4 "Exposure to country risk". ▲

3.6 CREDIT RISK STRESS TESTING

Credit risk stress testing is primarily based on satellite models that link changes in credit risk parameters (PD and Loss Given Default – LGD) to macroeconomic and financial variables. These models are independently reviewed and approved by the Standards and Models Committee in the same way as the regulatory or origination models. These satellite models are used for the regulatory stress testing (2025 stress tests done by the EBA, for example) for budgetary stress (or ICAAP stress) and for certain specific portfolio stresses. Moreover, these models also contribute to the calculation of ECLs – Expected Credit Losses – according to IFRS 9 (see part IV.1 below).

In line with EBA methodology, the credit risk stress tests employ Basel parameters (PD, LGD, Exposure At Default – EAD) conditioned on economic scenarios to estimate the cost of risk including provisions for assets not in default and on Basel parameters to estimate the impact in terms of risk weighted assets.

The Group Risk department conducts recurring or ad-hoc stress exercises in collaboration with the businesses and entities concerned. They play a key role in risk analysis and are used as a basis for the sizing of the proposed risk envelopes and limits. These studies are carried out mainly in the context of the risk frameworks of the Group's main activities and are presented to the Executive Management as part of the Group Risk Committee.

A global credit risk stress test is carried out at least once a year as part of the budgetary process. The works, coordinated by the Group Risk Management department, involve all Crédit Agricole Group entities and all portfolios, whether they are treated for regulatory purposes using the Internal Rating Based (IRB) or standard method. The analysis horizon is set at three years. Reverse stress tests are also implemented to study scenarios that could lead the Group to cross predefined thresholds (e.g. CET1 tolerance level), as well as climate stresses on credit and market risk. The stress process is part of the Group's governance and aims to improve dialogue between the Risk and Finance functions in order to measure the sensitivity of the cost of risk and capital requirements in the event of a downturn in the economic climate. In addition to being used for budgetary purposes and to manage capital requirements, the results of the global credit risk stress tests are a key component of the ICAAP. They are reviewed by the Executive Committee and are also reported to Crédit Agricole S.A. Board of Directors.

4. CREDIT RISK MITIGATION MECHANISMS

4.1 COLLATERAL AND GUARANTEES RECEIVED

[Audited] Guarantees or collateral are intended to provide partial or full protection against credit risk.

The principles governing the eligibility, utilisation and management of collateral and guarantees received as security are defined by Crédit Agricole Group's Standards and Methodology Committee (Comité des normes et méthodologies – CNM), (in accordance with the CRR 2/CRD 5 system for the calculation of the solvency ratio).

This common framework, defined in Group standards, ensures a consistent approach across the various Group entities. It notably documents the conditions for prudential recognition, and the valuation and revaluation methods of all the credit risk mitigation techniques that are used: collateral (notably for the financing of assets: property, aircraft, ships etc.), personal guarantees, public export credit insurers, private credit insurance policies, financial guarantee insurance, credit derivatives, and cash collateral.

The entities are in charge of implementing this framework at the operational level (management, monitoring of valuations, implementation).

Details of collateral commitments received are provided in Note 3.1 and Note 9 to the consolidated financial statements.

Regarding financial assets obtained by enforcement of guarantees or credit enhancement measures, the Group's policy is to sell them as soon as possible.

4.2 USE OF NETTING AGREEMENTS

If a "master" agreement has been signed with a counterparty and said counterparty defaults or enters bankruptcy proceedings, Crédit Agricole S.A., its subsidiaries and the Regional Banks apply close out netting, enabling them to terminate current contracts early and to calculate a net balance on the debts and debt obligations in respect of this counterparty. They also use collateralisation techniques to enable securities or cash to be transferred in the form of collateral or transfer of full ownership during the lifetime of the hedged transactions, which can be offset, in the event of default by one of the parties, in order to calculate the net balance of reciprocal debt and debt obligations resulting from the master agreement signed with the counterparty.

4.3 USE OF CREDIT DERIVATIVES

In managing its corporate financing portfolio Crédit Agricole CIB uses credit derivatives together with a range of risk-transfer instruments, including, in particular, securitisation.

At 31 December 2025, the notional amount of protection bought in the form of credit derivatives was €1.6 billion (€2.3 billion at 31 December 2024), the notional amount of short positions was zero (the same at 31 December 2024).

Crédit Agricole CIB processes its derivatives through around 10 leading, competent and regulated bank counterparties, all investment grade. Furthermore, 100% of these derivatives are processed through clearing houses (the same at 31 December 2024), acting as guarantors of these credit risk hedging transactions. When the credit derivative cannot be cleared, the transaction can be processed bilaterally, registered through competent and regulated bank counterparties, all investment grade, based in France, Germany, the United Kingdom or the United States and acting as guarantors of these credit risk hedging transactions. The bank monitors any concentration of protection on these hedging providers outside the clearing house, applying notional limits per banking counterparty, set and reviewed annually by the Crédit Agricole CIB Risk department.

These credit derivative transactions carried out as part of credit risk mitigation transactions are subject to adjustment calculation under Prudent Valuation, to cover market risk concentrations.

The outstanding amounts of credit derivatives are shown in the accompanying consolidated Note 3.3 to the consolidated financial statements, in the "Derivative instruments: amount of commitments" section.

III. EXPOSURES

1. MAXIMUM EXPOSURE

The maximum exposure of Crédit Agricole S.A., its subsidiaries and Regional Banks to credit risk corresponds to the net carrying amount of loans and receivables, debt instruments and derivative instruments before the effect of non-recognised netting contracts and collateral. It is shown in Note 3.1 to the consolidated financial statements.

At 31 December 2025, **Crédit Agricole S.A.'s** maximum exposure to credit and counterparty risk amounted to €1,932 billion (€1,866 billion at 31 December 2024), an increase of 3.5% compared to 2024.

At 31 December 2025, the **Crédit Agricole Group's** maximum exposure to credit and counterparty risk amounted to €2,688 billion (€2,606 billion at 31 December 2024), an increase of 3.1% compared to 2024.

2. CONCENTRATION

An analysis of credit risk on commercial lending excluding Crédit Agricole Group internal transactions and collateral given by the Group as part of repurchase agreements (loans and receivables from credit institutions, loans and receivables from customers, financing commitments and guarantee commitments given), i.e. €1,204 billion for **Crédit Agricole S.A.** and €1,922 billion for the **Crédit Agricole Group** is presented below by geographic area and by business sector.

This scope excludes, in particular, derivative instruments, which are mainly monitored in VaR (see 2.5 "Market risks") and bond assets held by the Crédit Agricole Assurances Group (€208 billion in market value excluding unit-linked policies and UCITS).

2.1 PORTFOLIO DIVERSIFICATION BY GEOGRAPHIC AREA

The commercial lending portfolio (including bank counterparties) is broken down here under by geographic area. The breakdown reflects the country in which the commercial lending risk is recognised.

BREAKDOWN BY GEOGRAPHIC AREA OF CRÉDIT AGRICOLE S.A.'S COMMERCIAL LENDING

Geographic area of exposure	2025	2024
Africa and Middle East	3%	3%
Central and South America	2%	2%
North America	8%	8%
Asia and Oceania excluding Japan	5%	5%
Eastern Europe	2%	2%
Western Europe excluding Italy	14%	14%
France (Retail Banking)	15%	15%
France (excluding Retail Banking)	32%	33%
Italy	15%	14%
Japan	6%	5%
TOTAL	100%	100%

BREAKDOWN BY GEOGRAPHIC AREA OF THE CRÉDIT AGRICOLE GROUP'S COMMERCIAL LENDING

Geographic area of exposure	2025	2024
Africa and Middle East	2%	2%
Central and South America	1%	1%
North America	5%	5%
Asia and Oceania excluding Japan	3%	3%
Eastern Europe	1%	1%
Western Europe excluding Italy	9%	9%
France (Retail Banking)	38%	38%
France (excluding Retail Banking)	29%	29%
Italy	9%	9%
Japan	4%	3%
TOTAL	100%	100%

The distribution of commercial lending by geographical area is broadly stable for both **Crédit Agricole S.A.** and the **Crédit Agricole Group**.

Note 3.1 to the financial statements presents the breakdown of loans and receivables and commitments given to customers and credit institutions and by geographic area on the basis of accounting data.

2.2 PORTFOLIO DIVERSIFICATION BY BUSINESS SECTOR

The commercial lending portfolio (including bank counterparties outside the Group) is broken down here under by business sector. This breakdown reflects the business sector in which the commercial lending risk is recognised.

BREAKDOWN BY BUSINESS SECTOR OF CRÉDIT AGRICOLE S.A.'S COMMERCIAL LENDING

Business sector	2025	2024
Air/Space	1.8%	1.8%
Agriculture and food processing	2.5%	2.5%
Insurance	1.5%	1.5%
Automotive	3.4%	3.4%
Other non-banking financial activities	5.2%	6.3%
Other industries	2.0%	2.2%
Other transport	1.7%	1.7%
Banking Institutions	1.8%	1.5%
Wood/Paper/Packaging	0.4%	0.4%
Building and public works	1.9%	1.8%
Retail/Consumer goods industries	2.2%	2.2%
Other	3.6%	3.6%
Energy	8.0%	8.1%
<i>o/w Oil and Gas</i>	3.1%	3.6%
<i>o/w Electricity</i>	4.9%	4.5%
Real estate	3.2%	3.0%
Heavy industry	2.7%	2.8%
IT/Technology	1.9%	1.7%
Shipping	1.7%	1.7%
Media/Publishing	0.3%	0.3%
Healthcare/Pharmaceuticals	1.0%	1.1%
Non-trading services/Public sector/Local authorities	24.5%	24.2%
Telecom	2.3%	2.1%
Tourism/Hotels/Restaurants	0.8%	0.7%
Utilities	0.4%	0.3%
Retail Banking customers	25.1%	25.2%
TOTAL	100%	100%

Crédit Agricole S.A.'s commercial lending portfolio by business sector is well diversified and remained stable overall in 2025. Only two sectors accounted for more than 10% of business and make up nearly half of its lending commitments: the “Non-trading services/Public sector/local authorities” sector, and the “Retail Banking customers” sector, representing 24.5% and 25.1% of commitments at 31 December 2025, respectively.

The following details should be noted:

- Securitisation exposures, which mainly correspond to liquidity facilities granted to securitisation programmes financed via Crédit Agricole CIB channels, are attached to the different sectors according to the activity of the seller.
- The “Aviation” sector financing involves either financing of very high-quality assets, or financing of some of the world’s leading aircraft or equipment manufacturers.
- The “Automotive” is still deliberately focusing on the major car manufacturers, with limited development in terms of the main equipment manufacturers. Close monitoring of the sector has recently been put in place given the geopolitical context and uncertainties surrounding the impact of the US tariff policy.
- The “Other” sector contains the commitments relating to customers whose activities are highly diversified (notably asset/financial holding companies).
- The segment “Oil and Gas” includes a wide variety of underlyings, players and types of financing. Most of the exposure in the oil sector relates to players that are structurally less sensitive to the drop in oil prices (public sector companies, large international companies, transportation/storage/refinery companies). Conversely, customers focused on exploration/production and those dependent on industry investment levels (oil services) are the most sensitive to market conditions. Already under scrutiny for several years, the “Oil and Gas” sector continues to be more closely monitored and is subject to a very selective approach to projects, with any significant new transactions giving rise to an in-depth analysis of credit and Corporate Social Responsibility (CSR) risk.
- The expansion of the “Electricity” sector reflects the Group’s desire to support its customers and society in the energy transition. Half of the portfolio is made up of loans to large integrated or diversified groups and one third is in direct asset financing. The latter are mainly projects that enable the production of green energy such as wind or solar power.
- The “Real Estate” portfolio consists mainly of specialised financing of quality assets to real estate investment professionals; other corporate financing is mainly granted to large real estate companies and is often accompanied by interest rate hedges. The balance of the lending relates to guarantees issued to major French developers and interest rate hedges for (mainly public) social housing organisations in France. The uncertain macro-economic environment and higher interest rates compared to the past decade have led to a repricing of assets and a relative weakness in the sector. The Group’s high-quality portfolio is proving its resilience while remaining closely monitored.
- The “Heavy Industry” sector mainly comprises large global steel, metal and chemical groups. Within the sector, commitments in the coal segment have continued along a reduction trajectory, in line with the Group’s CSR policy.

- The current position of the “Shipping” sector is the result of the expertise and background of Crédit Agricole CIB in mortgage financing for ships, which it provides to its international ship-owning customers. After 10 difficult years, shipping has showed signs of recovery since 2018, strengthened by order books and a more moderate supply of ships/tonnage. Nevertheless, the sector is still subject to some volatility in a context of supply chain disruptions and the conflicts in Russia/Ukraine and the Middle East, which are affecting global growth and international maritime trade. However, this portfolio remains relatively protected by its diversification (financing of oil and gas tankers, offshore vessels, bulk carriers, container ships, cruise ships etc.), as well as by the quality of ship financing structures, secured by mortgages and coverage from credit insurers.
- Exposure to the telecoms sector continues to grow, focusing on jumbo deals and infrastructure financing (fibre and data centres). The sector involves lending to operators and equipment manufacturers. It consists primarily of corporate financing.

BREAKDOWN BY BUSINESS SECTOR OF THE CRÉDIT AGRICOLE GROUP'S COMMERCIAL LENDING

Business sector	2025	2024
Air/Space	1.1%	1.1%
Agriculture and food processing	2.7%	2.6%
Insurance	0.9%	0.9%
Automotive	2.3%	2.3%
Other non-banking financial activities	3.4%	4.0%
Other industries	1.3%	1.5%
Other transport	1.2%	1.2%
Banking Institutions	1.0%	0.8%
Wood/Paper/Packaging	0.3%	0.3%
Building and public works	1.4%	1.4%
Retail/Consumer goods industries	2.0%	2.0%
Other	2.9%	3.0%
Energy	5.3%	5.5%
<i>o/w Oil and Gas</i>	2.0%	2.4%
<i>o/w Electricity and Utilities</i>	3.3%	3.1%
Real estate	4.4%	4.4%
Heavy industry	1.9%	1.9%
IT/Technology	1.2%	1.1%
Shipping	1.1%	1.1%
Media/Publishing	0.2%	0.2%
Healthcare/Pharmaceuticals	1.1%	1.1%
Non-trading services/Public sector/Local authorities	16.7%	16.6%
Telecom	1.5%	1.3%
Tourism/Hotels/Restaurants	0.8%	0.8%
Utilities	0.4%	0.4%
Retail Banking customers	44.6%	44.6%
TOTAL	100%	100%

The **Crédit Agricole Group's** commercial lending portfolio by business sector is well diversified and remained stable overall in 2025. Only two sectors account for more than 10% of activity and together represent the majority of lending commitments, as in 2024: the “Retail banking customers” segment, which remains dominant at 44.6% of the total, and the “Non-trading services/public sector/local authorities” segment, which remains in second place with 16.7% of total commercial lending.

With regard to the Crédit Agricole Group, in addition to the above sector-specific information on Crédit Agricole S.A.'s exposures, it should be noted that the “Retail Banking” segment includes exposures relating to the Regional Banks' customers, including home loans, which explains its predominance within the Crédit Agricole Group.

2.3 BREAKDOWN OF LOANS AND RECEIVABLES OUTSTANDING BY CUSTOMER TYPE

Concentration by customer type of loans and receivables for credit institutions and customers are presented in Note 3.1.4 to the consolidated financial statements.

For **Crédit Agricole S.A.**, the gross amount of loans and receivables excluding debt securities (€727 billion at 31 December 2025, including accrued interests, compared with €707.7 billion at 31 December 2024) was up 2.7% from 2024. It is split mainly between corporates and retail customers (respectively, 44.0% and 32.4%).

For the **Crédit Agricole Group**, gross outstanding loans and receivables excluding debt securities (€1,385.9 billion at 31 December 2025, including accrued interests, compared with €1,356.1 billion at 31 December 2024) was up 2.2% in 2025. It is split mainly between corporates and retail customers (respectively, 33.2% and 52.7%).

2.4 EXPOSURE TO COUNTRY RISK

At 31 December 2025, commercial lending from which are deducted the protections received (export credit insurance, cash deposits, securities pledged etc.), including to bank counterparties, to **Crédit Agricole Group** customers in countries with ratings below “B” according to the Group's internal rating scale, excluding Western European countries (Italy, Spain, Portugal, Greece, Cyprus, Iceland and Andorra), amounted to €80.4 billion compared with €78.3 billion at 31 December 2024 and were increased to more than 99.99% at the **Crédit Agricole S.A.** level. Most of this lending comes from Crédit Agricole CIB, UBAF (47%-owned by Crédit Agricole CIB) and International Retail Banking.

The concentration of total exposures in these countries was generally stable: the top 20 countries accounted for 94% of the lending portfolio at end-2025, like at end-2024.

Two geographic areas are predominant: Asia (34%) and Middle East/North Africa (30%).

CHANGES IN COMMERCIAL LENDING (NET OF PROTECTIONS RECEIVED) FOR COUNTRIES WITH A CREDIT RATING LOWER THAN "B" (IN MILLIONS OF EUROS) - CRÉDIT AGRICOLE S.A.

Date	North Africa/Middle East	Sub-Saharan Africa	Latin America	Asia	Central and Eastern Europe	Total
2025	23,824	1,678	10,810	27,654	16,398	80,364
2024	21,204	2,006	9,201	30,474	15,381	78,266

THE MIDDLE EAST AND NORTH AFRICA

Cumulative lending in Middle Eastern and North African countries amounted to €23.8 billion at 31 December 2025, up 12.4% compared to the end of 2024, mainly due to the growth in commercial lending in Saudi Arabia (+€1.6 billion or 27%) and in the United Arab Emirates (+€1 billion or +21%). Saudi Arabia, the United Arab Emirates, Qatar and Egypt accounted for 89% of this lending in the Middle East and North Africa at 31 December 2025 (compared to 87% at 31 December 2024).

In addition, this cumulative lending for Middle East countries alone amounted to €19.4 billion at December 31, 2025, 92% of which concentrated in Saudi Arabia, the United Arab Emirates and Qatar.

CENTRAL AND EASTERN EUROPE

After several years of decline, this cumulative lending to Central and Eastern European countries were up 7% this year compared with last year (i.e. +€1 billion), concentrated in Poland (+€1.3 billion, or +10%), while exposure to Russia continues to decline (-€0.3 billion, or -31%). At 31 December 2025, this Group's lending portfolio remained concentrated in two countries: Poland and Ukraine, 92% of the total for this region (compared to 90% at 31 December 2024).

ASIA

The decrease in this lending to Asian countries with ratings below B (-9%, or -€2.8 billion compared to 31 December 2024) mainly corresponds to the 15% decrease in this lending to China (-€3.2 billion, including Hong Kong), which nevertheless remains the largest regional exposure (€18.7 billion), ahead of India (€6.8 billion).

LATIN AMERICA

At end-December 2025, exposures to this region represented 13.4% of all these exposures to countries rated lower than "B", compared to 11.8% at end-December 2024. This lending in Brazil (up +€1.3 billion, or +23%) and Mexico accounted for 91% of the total for Latin America like at the end of December 2024.

SUB-SAHARAN AFRICA

These Group's lending in Sub-Saharan Africa totalled €1.7 billion at 31 December 2025, i.e. 2% of the total for countries with a rating below B, compared to 2.6% at end-2024. This lending in South Africa accounted for 29% of this lending in this region at 31 December 2024 (compared to 34% at 31 December 2024, i.e. 27%), with no other country accounting for more than 10% of the total for this geographic area.

3. CREDIT QUALITY

3.1 ANALYSIS OF LOANS AND RECEIVABLES BY CATEGORY

The breakdown of loans and receivables from credit institutions and customers is as follows for **Crédit Agricole S.A.**:

Loans and receivables (in millions of euros)	31/12/2025	31/12/2024
Neither past due nor impaired	697,861	681,201
Past due but not impaired	15,339	13,052
Impaired	13,842	13,403
TOTAL	727,042	707,657

The loan and receivables book at 31 December 2025 was 96% made up of amounts that were neither past due nor impaired, compared to 96.3% at 31 December 2024.

The breakdown of loans and receivables from credit institutions and customers is presented as follows for the **Crédit Agricole Group**:

Loans and receivables (in millions of euros)	31/12/2025	31/12/2024
Neither past due nor impaired	1,338,030	1,311,745
Past due but not impaired	20,466	18,805
Impaired	27,445	25,526
TOTAL	1,385,942	1,356,075

The loan and receivables book at 31 December 2025 was 96.5% made up of amounts that were neither past due nor impaired, compared to 96.7% at the end of 2024.

According to IFRS 7, a financial asset is past due when a counterparty has not made a payment on its contractual due date. It is considered that there is no proven credit risk on past due amounts that are less than 90 days past due, representing 99.9% of past due receivables that are not impaired (same as at end-2024), both for **Crédit Agricole S.A.** and for the **Crédit Agricole Group**.

Details of financial assets that were past due or impaired are presented in Note 3.1 to the consolidated financial statements.

3.2 ANALYSIS OF OUTSTANDING AMOUNTS BY INTERNAL RATING

The internal rating policy used by the **Crédit Agricole Group** aims to cover the entire Group customer portfolio (retail customers, corporates, financial institutions, banks, administrations and public authorities).

For **Crédit Agricole S.A.**'s portfolio of performing commercial lending excluding retail customers, (€901.6 billion at 31 December 2025 compared with €846.6 billion at 31 December 2024), internally rated borrowers represented 88.9% of the portfolio, compared with 92.3% at end-2024 (i.e. €801.4 billion at 31 December 2025, compared with €781.6 billion at 31 December 2024). The breakdown of this portfolio is presented according to the Standard & Poor's equivalents of the Group's internal ratings:

CHANGE IN THE PERFORMING NON-RETAIL COMMERCIAL LENDING PORTFOLIO OF CRÉDIT AGRICOLE S.A. BY INDICATIVE S&P EQUIVALENT OF THE INTERNAL RATING

	31/12/2025	31/12/2024
AAA	36.8%	36.8%
AA	11.2%	11.7%
A	12.4%	13.6%
BBB	27.4%	26.1%
BB	10.2%	10.0%
B	0.7%	0.8%
On credit watch	1.3%	1.0%
TOTAL	100.0%	100.0%

This breakdown reflects a loan book that remains of good quality with, at 31 December 2025, 87.7% of lending to borrowers with investment grade ratings (ratings greater than or equal to BBB) compared to 88.2% at 31 December 2024, and a limited proportion on credit watch, up to 1.3% from 1.0% at 31 December 2024.

For the **Crédit Agricole Group's** performing commercial lending portfolio excluding retail customers (€1,064.7 billion at 31 December 2025, compared with €1,008.1 billion at 31 December 2024), internally rated borrowers accounted for 90.2% of the total, compared with 93.2% at end-2024 (€960.1 billion at 31 December 2025, compared with €939.3 billion at 31 December 2024). The breakdown of this portfolio is presented according to the Standard & Poor's equivalents of the Group's internal ratings:

CHANGE IN THE PERFORMING NON-RETAIL COMMERCIAL LENDING PORTFOLIO OF THE CRÉDIT AGRICOLE GROUP BY INDICATIVE S&P EQUIVALENT OF THE INTERNAL RATING

	31/12/2025	31/12/2024
AAA	31.0%	31.3%
AA	12.7%	13.0%
A	11.7%	12.5%
BBB	27.6%	26.8%
BB	14.5%	14.1%
B	1.1%	1.1%
On credit watch	1.4%	1.2%
TOTAL	100.0%	100.0%

This breakdown reflects a loan book that remains of good quality with, at 31 December 2025, 82.9% of lending to borrowers with investment grade ratings (ratings greater than or equal to BBB) compared to 83.6% at 31 December 2024, and a limited proportion on credit watch, up to 1.4% from 1.2% at 31 December 2024.

3.3 IMPAIRMENT AND RISK HEDGING

3.3.1 IMPAIRMENT AND RISK HEDGING POLICY

The policy for hedging loan loss risks is based on two kinds of value adjustments for credit losses:

- impairment allowances on an individual basis intended to hedge probable losses on impaired loans;
- impairment allowances for credit losses, pursuant to IFRS 9, following a significant decline in the loan quality for a transaction or loan book. These impairments are designed to cover the risk profile of commitments in certain countries, business sectors or counterparties, not because they are in default but because their ratings have been downgraded. Loan book-based impairments are also performed in Retail Banking. These impairments are for the most part calculated on a statistical basis, based on the expected loss amount up to the transaction's maturity, using Basel criteria to estimate the probability of default (PD) and the loss given default (LGD).

3.3.2 IMPAIRED LOANS AND RECEIVABLES

For **Crédit Agricole S.A.**, at 31 December 2025, total individually impaired commitments amounted to €13.8 billion, compared with €13.4 billion at 31 December 2024. These consist of commitments for which the Group sees potential non-recovery. Individually impaired outstandings represented 1.9% of the Group's gross book value at 31 December 2025, (same as at 31 December 2024).

Restructured loans ⁽¹⁾ totalled €7.4 billion at 31 December 2025, compared to €8.6 billion at 31 December 2024.

For the **Crédit Agricole Group**, at 31 December 2025, total individually impaired commitments amounted to €27.4 billion, compared with €25.5 billion at 31 December 2024. These consist of commitments for which the Group sees potential non-recovery. Individually impaired outstandings represented 2% of the Group's gross book value at 31 December 2025, compared to 1.9% at 31 December 2024.

Restructured loans totalled €14.9 billion at 31 December 2025, compared to €15.1 billion at 31 December 2024.

4. COST OF RISK

The main factors that had an impact on the level of impairment observed during the year are detailed below:

4.1 MAIN ECONOMIC AND INDUSTRY-SPECIFIC FACTORS OF 2025

A description of the overall environment and macroeconomic outlook is detailed in the "Economic and financial environment" section of Chapter 4 "Review of the 2025 financial position and performance", in the 2025 Universal Registration Document.

The year 2025 was marked by heightened geopolitical and trade tensions in France, economic activity slowed but nevertheless held up well in the face of a tense political and budgetary situation; inflation stabilised at a moderate level and unemployment rose slightly. The ECB continued to lower its central bank policy rates until June 2025, before stabilising them. However, 10-year rates rose over the year. Cash flow pressures on SMEs and corporates persisted, with an increase in credit risk (higher default and sensitivity rates), particularly visible for SME and VSB customers. At the same time, a deterioration in risks was observed for consumer finance. Conversely, in an environment where fixed rates predominate, individual customers remain relatively protected on home loans, and Large Corporates continue to demonstrate their resilience within the Group's portfolios.

The main areas of concern are concentrated in the real estate sector including developers, telecoms, agriculture (particularly the wine industry), wholesale trade, building and public works, traditional distribution facing competition from e-commerce, and, more recently, the automotive sector (equipment manufacturers, distributors and, to a lesser extent, manufacturers).

(1) The definition of restructured loans is detailed in Note 1.2 "Accounting policies and principles" to the consolidated financial statements.

4.2 FIGURES AND FACTS

In 2025, the net cost of **Crédit Agricole S.A.** stood at €1.97 billion (35.4 bp ⁽¹⁾) compared with €1.85 billion (34.6 basis points – bp) the previous year, a moderate increase of 6.6%. It is broken down as follows:

ASSESSMENT OF NET COST OF CRÉDIT AGRICOLE S.A. RISK (IN MILLIONS OF EUROS)

(1) As of December 31, 2024, the cost of risk related to the Private Banking business (€15 million), previously presented under the "Large Corporates" category, is now presented under the "Others" category.

The net cost on performing loans (Stage 1 and Stage 2) represented -1.9 bp, compared with 5.5 bp in 2024. The net cost on non-performing loans and similar loans (Stage 3) represented 37.3 bp in 2025, compared with 29.1 bp in 2024.

In 2025, the **Crédit Agricole Group's** net cost amounted to €3.45 billion (28.5 bp) compared with €3.19 billion (27.0 bp) the previous year, representing an increase of +8.5%. It is broken down as follows:

ASSESSMENT OF CRÉDIT AGRICOLE S.A. GROUP'S NET COST OF RISK (IN MILLIONS OF EUROS)

(1) As of December 31, 2024, the cost of risk related to the Private Banking business (€15 million), previously presented under the "Large Corporates" category, is now presented under the "Others" category.

The net cost on performing loans (Stage 1 and Stage 2) represent -0.6 bp, compared with 4.7 bp in 2024. The net cost on defaulting loans (Stage 3) represented -27.8 bp, compared with 22.2 bp.

Overall, the increase in the cost of risk observed in 2025 on portfolios in default can be explained by the rise in corporate defaults.

OVERVIEW BY BUSINESS LINE

Details of the movements that affected the cost of risk are presented in Note 4.9 to the consolidated financial statements. This

is broken down by business line in Note 5.1 to the consolidated financial statements.

5. COUNTERPARTY RISK ON DERIVATIVE INSTRUMENTS

The counterparty risk on derivative instruments is established according to market value and potential credit risk calculated and weighted in accordance with regulatory standards. The measure associated with this credit risk is detailed above in paragraph II.2.2 "Credit risk management – Credit risk measurement".

(1) Cost of risk for the last four quarters, to which the average outstanding amounts at the beginning of the period for the last four quarters are related.

IV. APPLICATION OF IFRS 9

1. CREDIT RISK RATING MEASUREMENT

In the face of economic and geopolitical uncertainties, the Group continues to regularly revise its forward-looking macroeconomic outlook to determine the credit risk estimate.

INFORMATION RELATING TO THE MACRO-ECONOMIC SCENARIOS APPLIED AT 31 DECEMBER 2025

The Group used four scenarios for calculating IFRS 9 provisioning parameters in production during December 2025, with projections up to 2028.

These scenarios, which were created in October 2025, are based on various assumptions about changes in the international environment. These include changes in inflation rates, prompting separate monetary policy responses from central banks, and contrasting impacts on economic growth projections.

Weightings are assigned to each of these scenarios. A weighting of more than 50% is assigned to the central scenario, reflecting its robustness, but continuing significant risks and uncertainties lead to a relatively high weighting being assigned to adverse scenarios.

The scenarios and weightings applied are identical for **Crédit Agricole S.A.** and the **Crédit Agricole Group**.

FIRST SCENARIO: "CENTRAL SCENARIO" (WEIGHTED AT 55%)

Resilience of growth

In an international environment that remains unstable, there are still many uncertainties. We can nevertheless assume that the uncertainties caused by US economic policy are waning, and that tariffs are at least stabilising.

For the United States, the general outline of the scenario was a slowdown in 2025, driven by rising tariffs, anti-immigration policies and persistent inflation. This was followed by a slight upturn thanks to the fiscal policy introduced by the *One Big Beautiful Bill Act* as well as to deregulation. The scenario thus anticipates average annual growth of 1.7% for 2025, down significantly from the 2.8% recorded in 2024, before accelerating again to around 2%. The current deceleration is accompanied by a weakening of the labour market, with a moderate increase in unemployment. Tariffs, at their point of maximum impact, would add nearly 0.8 point to the increase in prices year-on-year. This effect would be largely temporary, but would take inflation to around 3% at the end of 2025, before gradually falling in 2026 but remaining above the Fed's (Federal Reserve Bank) target.

In the Eurozone, despite sluggish consumption and a weaker external environment, the recovery continues. The impact of tariffs is less pronounced than anticipated at the moment, and the trade agreement between the EU and the US, concluded in July 2025, offers greater visibility. The growth achieved in early 2025 points to GDP growth of around 1.3% in both 2025 and 2026. The resilience of the economy is driven by domestic demand: this has weakened, but remains at a level slightly higher than its long-term trend, and investment in particular has withstood uncertainty. Our scenario is based, above all, on investment, driven by European funds, defence spending and the German recovery plan.

Monetary policies: a lengthy pause

In the United States, persistent inflation does not argue in favour of rapid and large-scale monetary easing: a final cut in 2025 would bring the upper limit of the federal funds rate to 4%, before a prolonged pause. In the Eurozone, inflation around target and a recovery – albeit modest – in the economy also suggest stable central bank policy rates, followed by a tightening, but not before 2027.

Long-term interest rates: upward pressure

Interest rates would experience moderate upward pressure. In the US, the potential resurgence of inflationary concerns, associated with less monetary easing than anticipated, could result in a slight rise in interest rates coupled with a flattening of the curve.

This movement would spread to the Eurozone, driven by European growth that is more resilient than expected, and then supported by fiscal expansion in Germany. The reorganisation of the hierarchy among Eurozone sovereign issuers is expected to continue.

SECOND SCENARIO: "MODERATE ADVERSE" SCENARIO (WEIGHTED AT 25%)

Sudden materialisation of several risks

This scenario involves a reassessment of risk in the United States, in the wake of what was already observed on Liberation Day, with a rise in 10-year Treasury rates and a widening of the swap spread, coupled with lower demand for the dollar. Moreover, the uncertain nature of the environment creates a crisis of confidence; the risk aversion especially affects the equity markets, but also the Eurozone's least robust sovereign rates, particularly French rates. International tensions and another increase in gas prices adversely affect the European Union. France is also experiencing political deadlock, which undermines its credibility in terms of its plans to reduce public finance imbalances.

The Eurozone experiences a resurgence of inflation, especially in countries that are highly exposed to gas (Italy and Germany). GDP declines in 2026 in the Eurozone as a whole, as well as in its major countries. In France, by comparison with the central scenario, inflation is 0.3 percentage point higher in 2026, while growth is 1.5 percentage points lower. There is some normalisation thereafter, thanks in particular to a significant drop in inflation, but growth remains lower in 2027 than expected in the central scenario.

Response from Central Banks and long-term rates

This scenario assumes that the central banks do not react. They do not ease monetary policy in response to the wave of risk aversion in 2026 due to concerns about inflation, and central bank policy rates therefore remain stable throughout the period. In the interbank market, indiscriminate mistrust creates tensions over rates (rise in Euribor).

With regard to long risk-free rates (Eurozone swap rates), this scenario assumes that markets anticipate a rapid return to "normal", as the risk presented by the US economy dissipates and confidence returns, with a recovery in equity markets after the major shock of 2026. The markets tend to underestimate the magnitude and duration of the downward shock on growth and focus on the risk of inflation. Tensions are concentrated on the short end (two-year rates) in 2026. In contrast, rates on long-term maturities are lower than in the central scenario, with the curve inverted. In addition, spreads relative to the 10-year swap widen markedly in 2026.

**THIRD SCENARIO: “FAVOURABLE” SCENARIO
(WEIGHTED AT 5%)*****A boost in growth thanks to the German “bazooka”***

This scenario assumes that the German investment plan will be implemented more quickly and efficiently. The Bundestag very quickly approves the recovery plan and the KfW (German public investment bank) is actively mobilised. The plan provides for €500 billion of investment over 12 years, or 1% of GDP per year, dedicated to energy, transport, education and digital infrastructure. The debt brake is relaxed, excluding spending related to Ukraine and defence. German regions can borrow up to 0.35% of their GDP to invest in infrastructure renovation and security.

The fiscal stimulus provided by the German plan and these fiscal easements boost many industrial sectors in Germany but also in Europe; the knock-on effect on European Union members is significant.

With the proliferation of investment projects, particularly in Germany, Italy and France, European industry experiences a significant turnaround. Investment is dynamic and the business climate and consumer confidence strengthen; the growth outlook is clearly improving. The growth surplus for the Eurozone as a whole is 0.4 percentage points per year on average in the period 2025-2028.

The public deficits in Germany, Italy and France increase but there is no large-scale deterioration in public debt-to-GDP ratios.

Slight monetary tightening and a narrowing of spreads

As growth is driven more by investment spending than by consumption, the rise in inflation is marginal (+0.1 point on average per year). As a result, the ECB raises its interest rates a little more than in the central scenario, leading to higher long-term rates. In the meantime, French and Italian spreads tighten.

**FOURTH SCENARIO: “SEVERE ADVERSE” SCENARIO
(WEIGHTED AT 15%)*****Worsening of trade and geopolitical tensions***

We assume new trade tariff hikes by the US government. Following a ruling of the US Court of International Trade, the US government

favours a significant increase in tariffs on key sectors, (including steel, aluminium, automobiles, pharmaceuticals, semiconductors and chips). It is also seeking congressional approval for a universal tariff (NB: it can resort to a piece of legislation that has never been used before: Section 122 of the Trade Act of 1974, which allows temporary tariffs of up to 15% to be imposed on all imports to make up for external deficits). The tariff applied is around 20%.

The main partners respond by controlling their exports (retention of strategic exports from China) or by imposing tariffs in turn (China and the EU). The EU refuses to commit to importing more liquefied natural gas (LNG) from the United States, a refusal to which the US government responds by imposing a limit on LNG export volumes.

Due to the higher volumes in play, the total blockade of US LNG exports would result in an increase in natural gas prices well above that of 2022. Here we assume a partial embargo that leads to a doubling of the gas price for half a year (H1 2026), the time needed to negotiate.

Trade tensions and geopolitical tensions lead to a partial blockage of some key shipping routes (Panama, Malacca Strait, Suez Canal), resulting in a lengthening of delivery times and occasional disruptions of supply chains.

The shocks, linked to trade tensions, the resurgence of inflation and rising financing costs, lead to a crisis of confidence, resulting in a rise in the savings rate and a decline in investment. Growth is seriously affected.

High inflation and monetary tightening.

Inflation rises rapidly. Fears of second-round effects are very present, due in particular to the relatively good performance of the labour markets when the shock occurs, despite the anticipated deceleration of growth.

In response to this inflation and these risks, the Fed and the ECB implement rapid and significant monetary tightening. Ten-year swap rates rise, as do sovereign rates, affected by fears over budgetary situations. However, the curve is inverted. The equity markets fall sharply.

FOCUS ON CHANGES TO THE MAIN MACRO-ECONOMIC VARIABLES UNDER EACH OF THE FOUR SCENARIOS

SENSITIVITY ANALYSIS OF MACRO-ECONOMIC SCENARIOS IN THE CALCULATION OF IFRS 9 PROVISIONS (ECL STAGES 1 AND 2) BASED ON CENTRAL PARAMETERS

CRÉDIT AGRICOLE S.A. SCOPE:

Change in ECL when applying 100% of the scenario (Crédit Agricole S.A. scope)

Central scenario	Moderate adverse	Favourable	Severe adverse
-11.8%	+6.0%	-15.1%	+39.5%

WITHIN THE SCOPE OF THE CRÉDIT AGRICOLE GROUP

Change in ECL when applying 100% of the scenario (Crédit Agricole Group scope)

Central scenario	Moderate adverse	Favourable	Severe adverse
-9.6%	+4.2%	-12.7%	+33.4%

This sensitivity on ECLs defined according to central parameters may be adjusted based on local economic assumptions (or local forward-looking assumptions) which, where applicable, could reduce or increase it.

In an effort to take specific local circumstances into account (related to geographical area and/or certain activities/business lines), sector supplements are established at the local level by some Group entities, which can round out the centrally defined macroeconomic scenarios.

BREAKDOWN OF STAGE 1/STAGE 2 AND STAGE 3

Crédit Agricole S.A. scope:

At the end of December 2025 and taking into account local economic assumptions, provisions for performing and impaired loans (Stage 1/ Stage 2) and provisions for default (Stage 3) represented **34% and 66% of provisions** respectively.

The cost of risk attributable to **Stage 1/Stage 2 exposures stood at -5% of the annual cost of risk (net reversal position) compared with 105% for the portion relating to default (Stage 3 and other provisions).**

Within the scope of the Crédit Agricole Group:

At the end of December 2025 and taking into account local economic assumptions, provisions for performing and impaired loans (Stage 1/ Stage 2) and provisions for default (Stage 3) represented **41% and 59% of provisions** respectively.

The cost of risk attributable to **Stage 1/Stage 2 exposures stood at 2% of the annual cost of risk compared with 98% for the portion relating to default (Stage 3 and other provisions).**

2. ECL TRENDS

Changes in the structure of outstanding amounts and ECL during the period are detailed in Section 3.1 of the consolidated financial statements.

The comments below pertain to the scope of financial assets at amortised cost (loans and receivables from customers), which represent approximately 90% of value adjustments for losses of Crédit Agricole S.A. and the Crédit Agricole Group.

LOAN STRUCTURE ON CUSTOMER BALANCE SHEET – CRÉDIT AGRICOLE S.A.

The credit trend has strengthened within Crédit Agricole S.A., with an increase in customer loans outstanding of €11.2 billion in 2025 (i.e. +2.0%). This growth was driven by Retail Banking, which grew by +€4 billion (+1.6%), followed by Large Customers, which grew by +€3.8 billion (+2.0%), Other activities, which grew by +€2.9 billion (+13.8%) and Specialised financial services (Personal Finance and Mobility), up +€0.5 billion (+0.4%).

During 2025, the structure of the portfolios shifted in favour of the best-rated portfolios (Stage 1), with outstanding customer loans increasing by +€17.4 billion, bringing their weight to 87.23% of the total customer portfolio (+137 bp vs. the end of 2024). The increase was particularly pronounced in Retail Banking (+€10.2 billion) and Specialised financial services (+€5.5 billion), while Large Customers saw more moderate decrease of -€1.1 billion (-0.7%) with a decline in relative weight (-231 bp).

Stage 2 loans decreased by -€6.7 billion (-10.2%), bringing their share of the total customer portfolio to 10.40% (-142 bp vs. end-2024). This decrease was concentrated in Retail Banking (-€6.7 billion) and Specialised financial services (-€5.1 billion), while Large Customers posted a significant increase (+€5.0 billion, or +24.9%) due to a deterioration in certain sectors.

Defaulting loans (Stage 3) have risen since the beginning of the year (+3.9%), now representing 2.36% of the total customer portfolio (+4 bp). This change was mainly due to a +€0.5 billion increase in retail banking (+8.4%), partially offset by a -€0.1 billion decrease in Large Customers (-4%).

LOAN STRUCTURE ON CUSTOMER BALANCE SHEET – CRÉDIT AGRICOLE GROUP

The credit trend has strengthened within the Crédit Agricole Group, with an increase in customer loans outstanding of €21.8 billion in 2025 (i.e. +1.8%). This growth was driven by Retail Banking, which grew by +€14.6 billion (+1.6%), followed by Large Customers, which grew by +€3.8 billion (+2.0%), Other Activities, which grew by +€3.0 billion (+13.9%), and Specialised financial services for +€0.5 billion (+0.5%).

During 2025, the structure of the portfolios remained stable overall for the best-rated portfolios (Stage 1), with outstanding customer loans increasing by +€18.4 billion, maintaining their weight at 86.85% of the total customer portfolio (-5 bp vs. the end of 2024). This trend varies depending on the business line, with a significant decline in the weight of Stage 1 in Large Customers (-231 bp), while Specialised financial services showed a sharp improvement (+478 bp).

Stage 2 loans rose by +€1.4 billion (+1.1%), with their weight slightly down to 10.95% of the total customer portfolio (-8 bp vs. end-2024). This change was marked by a sharp increase in Large Customers (+€5.0 billion, or +24.9%), bringing their weight to 13.01% (+239 bps), while the PSpecialised financial services business line posted a significant decline of -€5.1 billion (-27.9%), reducing its weight to 12.33% (-486 bp).

Defaulting loans (Stage 3) have risen slightly since the beginning of the year (+7.9%), now representing 2.20% of the total customer portfolio (+13 bp vs end-2024). This change was mainly due to an increase of +€1.9 billion (+11.0%) in Retail Banking, bringing the weight of non-performing loans to 2.16% (+18 bp), while Large Customers posted a slight decrease of -€0.1 billion (-4.0%), reducing their weight to 1.31% (-8 bp).

CHANGE IN ECL – CRÉDIT AGRICOLE S.A.

Impairment losses increased slightly by €25 million in 2025, across all stages, representing an increase of +0.3%. This change varied across business lines, with an increase of €173 million in Retail Banking (+4.2%), partially offset by a decrease of €129 million in Large Customers (-5.8%). Overall, the coverage ratio, including all stages (total ECLs divided by all outstandings), stood at 1.69%, down 3 bp compared to the beginning of the year.

Of the best-rated counterparties (Stage 1), ECLs remained virtually stable over the year (i.e. -€1 million, -0.1%), with a Stage 1 coverage ratio (total Stage 1 ECLs divided by Stage 1 outstandings) down slightly to 0.20% from 0.21% at the end of 2024. This stability masks contrasting trends, with an increase of €34 million (+11.0%) in Specialised financial services, offset by a decrease of €28 million (-5.5%) in Retail Banking.

The ECLs of the impaired portfolio (Stage 2) decreased by -€133 million, i.e. 5.5%. This decline is divided between Corporate and Investment Banking (-€62 million), Specialised financial services (-€50 million) and Retail Banking (-€18 million). However the Stage 2 coverage ratio increased to 3.87% at the end of 2024, up from 3.68% (+19 bp), due to a sharp decline in outstandings classified as Stage 2, which was especially marked in Retail Banking where the coverage ratio increased by +124 bp to 5.26%.

The coverage ratio for non-performing loans (Stage 3) decreased to 46.94% compared to 47.55% at the end of 2024 (-61 bp), despite an increase of €159 million in impairments (+2.6%), while the outstandings concerned increased by +3.9%. This increase in impairments was mainly driven by Retail Banking (+€219 million, +8.7%), while Large Customers posted a decrease of €58 million (-4.3%).

CHANGES IN ECL - CRÉDIT AGRICOLE GROUP

Impairment losses increased by €945 million in 2025, across all stages, representing an increase of +4.4%. This change was mainly driven by Retail Banking, with +€1,088 million in impairment (+6.9%), partially offset by a -€129 million (-5.8%) decrease in

Large Customers. Overall, the coverage ratio, including all stages, stood at 1.80%, up +4 bp compared to the beginning of the year.

For the best-rated counterparties (Stage 1), ECLs decreased by -10.7% over the year, a reduction of €303 million, with a decrease in the coverage ratio to 0.24% from 0.27% at the end of 2024 (-3 bp). This decrease was mainly due to Retail Banking with -€330 million (-14.3%), bringing its coverage ratio to 0.25% (-5 bp), while the Specialised financial services business posted an increase of +€34 million (+11.0%).

The ECLs of the impaired portfolio (Stage 2) increased by +€476 million, i.e. +7.7%. This increase was mainly driven by Retail Banking with +€589 million (+12.2%), partially offset by decreases in Large Customers (-€62 million, or -8.7%) and Specialised financial services (-€50 million, or -8.3%). The coverage ratio for Stage 2 increased significantly to 4.91% compared to 4.61% at the end of 2024 (+30 bp), with a sharp increase in Retail Banking to 26.55% (+875 bp), while Corporate and Investment Banking saw its coverage ratio fall to 2.59% (-96 bp).

The coverage ratio of non-performing loans (Stage 3) decreased to 48.38% compared to 49.14% at the end of 2024 (-76 bp), despite an increase of €773 million in impairments (+6.3%). This change was mainly driven by Retail Banking, with +€829 million (+9.6%) but with a slightly lower coverage ratio at 48.47% (-64 bp). In line with this trend, Specialised financial services and Corporate and Investment Banking saw their coverage ratios drop by -102 bp to 45.71% and -17 bp to 51.41%, respectively, while Other activities recorded the largest drop (-674 bp) to 54.60%. ▲

2.5. MARKET RISK

[Audited] Market risk represents the risk of financial instrument value loss resulting from variations in market parameters, the volatility of these parameters and the correlations between these parameters. The parameters concerned are in particular: exchange rates, interest rates, as well as the prices of securities (shares, bonds) and commodities, derivatives and all other assets, such as real estate assets.

I. OBJECTIVES AND POLICY

Crédit Agricole S.A. and its subsidiaries have a specific market risk management system with risk teams that are independent of the operational teams, validated risk identification and measurement methods, monitoring and consolidation procedures.

In an uncertain market environment marked by strong international tensions and increased volatility, the Crédit Agricole Group maintained a prudent market risk management policy in line with its risk appetite framework.

II. RISK MANAGEMENT

1. LOCAL AND CENTRAL ORGANISATION

Crédit Agricole S.A. and its subsidiaries have two distinct and complementary levels of market risk control:

- **at the central level**, the Group Risk Management department ensures coordination on all subjects related to the management and control of cross-functional market risks. It standardises data and data processing to ensure the consistency of consolidated risk measurement. It keeps the executive bodies (Executive Management of Crédit Agricole S.A.) and decision-making bodies (Board of Directors and the Board's Risk Committee) up-to-date on the Group's market risk exposure. Finally, it

analyses the market risk frameworks defined by the entities on an annual basis, for subsequent validation by Crédit Agricole S.A.'s Executive Management. It ensures regular and close monitoring of market activities as part of its steering role;

- **at the local level**, for the parent company Crédit Agricole S.A. and its subsidiaries, a Risk Management and Permanent Controls department steers the monitoring and control of the market risks of the entity. Within the Crédit Agricole Corporate and Investment Bank subsidiary, where the main capital market activities of the Crédit Agricole Group take place, the Risk Management and Permanent Controls department includes the Market and Counterparty Risks (MCR) department, which is responsible for identifying, measuring and monitoring market risks. This department also provides assistance in monitoring the market risks of international retail banks in addition to their risk teams, as well as for monitoring the trading books of the Financial Steering department of the Crédit Agricole S.A. Parent Company, whose transactions are managed in the IT system of Crédit Agricole Corporate and Investment Bank. The IT architecture put in place within Crédit Agricole Corporate and Investment Bank for market risk management is based on the use of shared platforms with the Front Office for performance and risk indicators. The independence of these processes is based on, firstly, an independent view of the inventories of transactions, supported by the back office teams, and, secondly, on the independent selection of market data by the Risk department and the independent validation of valuation models by this same department.

Group procedures define the level of information, the format and frequency of reporting that the entities must send to Crédit Agricole S.A. (Group Risk Management department).

2. DECISION-MAKING AND RISK-MONITORING COMMITTEES

Four governance bodies are involved in managing market risk at the level of Crédit Agricole S.A.:

- the Group Risk Committee, chaired by the Chief Executive Officer of Crédit Agricole S.A., approves the VaR and stress limits on each entity's market risks when it presents its risk framework and makes the main decisions in the matter of risk management. It reviews Crédit Agricole Corporate and Investment Bank's market and risk position on a half-yearly basis;
- the Executive Committee reviews any market risk alerts issued every two weeks by the Group Risk Management department;
- the Alert Monitoring Committee, chaired by the Chief Risk Officer, reviews all reported alerts on a monthly basis;
- the Methodology Committee of Crédit Agricole Corporate and Investment Bank is in charge of validating the internal regulatory standards and models implemented within the scope of the capital market activities of Crédit Agricole Corporate and Investment Bank, in accordance with current standards.

In addition, each entity has its own local Risk Committee. The most important of these is Crédit Agricole Corporate and Investment Bank's Market Risk Committee (MRC), which meets once a month and is chaired by the Management Committee member in charge of risk. This committee reviews Crédit Agricole Corporate and Investment Bank's positions and the profit and loss account of its capital market activities and verifies compliance with the limits assigned to each activity. It has the authority to make decisions on requests for increases in operational limits.

III. MARKET RISK MEASUREMENT AND SUPERVISION METHODOLOGY

The market risk measurement and supervision system is based on a combination of several indicators, most of which are subject to global or specific limits or alert thresholds. It relies principally on Value at Risk (VaR), stressed VaR, stress scenarios and complementary indicators (nominal positions, wrong way risk, sensitivities to risk factors etc.) and a process that values all positions in each entity giving rise to market risks.

1. VAR (VALUE AT RISK)

The central element of the market risk measurement system is the historical Value at Risk (VaR). VaR is defined as the maximum theoretical loss on a portfolio in the event of adverse movements in market parameters (interest rates, exchange rates, asset prices etc.) over a given time frame and for a given confidence interval. Crédit Agricole S.A. uses a confidence interval of 99% and a time frame of one day using one year of historical data. It serves as the basis for calculating capital requirements for activities recorded in regulated trading, subject to validation by the supervisory bodies. For other scopes covered by regulated trading, it serves as an internal risk indicator.

BACK-TESTING

A back-testing process is applied to check the relevance of the VaR model for each entity of Crédit Agricole S.A. and its subsidiaries with capital market activities. It retrospectively verifies whether the number of exceptions (days when actual losses exceeded VaR) was within the 99% confidence interval (a daily loss should statistically exceed the calculated VaR only two or three times a year). ▲

At 31 December 2025, the regulatory scope of Crédit Agricole Corporate and Investment Bank was subject to three VaR exceptions over a rolling 12-month period (see chart below).

BACK-TESTING OF THE REGULATORY VAR OF CRÉDIT AGRICOLE CORPORATE AND INVESTMENT BANK FOR 2025

2. STRESS SCENARIOS

[Audited] Stress scenarios complement the VaR measure, which does not capture the impact of extreme market conditions. Stress scenario calculations following Group principles are the result of different complementary approaches. These include:

- **historical scenarios** that replicate the effect of major past crises on the current portfolio;
- **hypothetical scenarios** that anticipate likely shocks, developed in collaboration with economists;
- **adverse stress tests** at the level of the entities, which evaluate the impact of major and unfavourable market movements on the different business lines;

- **extreme adverse stress tests** at the level of Crédit Agricole Corporate and Investment Bank and Crédit Agricole S.A. Parent Company, which measure the impact of even more severe market shocks.

The stress scenarios are calculated weekly and Crédit Agricole Corporate and Investment Bank completes these measures by a daily calculation of global stress based on a so-called “semi-adverse” approach, taking into account all significant risk factors of the different asset classes.

Historical scenarios:

- ▶ **1998 crisis: credit market crisis scenario, decline in equity markets, sharp rise in interest rates and decline in emerging currencies;**
- ▶ **2008 crisis: stress scenario measuring the impact of market movements following the bankruptcy of Lehman Brothers;**
- ▶ **European debt crisis: decline in equity markets and increased volatility, decline in commodity prices except for gold, sharp decrease in long-term rates and appreciation of the US dollar, increase in credit spreads;**
- ▶ **Chinese stock market crisis: turmoil linked to the bursting of the stock market bubble in June 2015;**
- ▶ **Covid-19 crisis: scenario reflecting market conditions in March 2020, including a decline in the equity markets and their dividends, a widening of credit spreads, and a sharp fall in US rates.**

Hypothetical scenarios:

- ▶ **Economic recovery: growth in the equity and commodities markets, sharp rise in short-term rates and depreciation of the US dollar, tightening of credit spreads;**
- ▶ **Liquidity crunch: sharp rise in short-term rates, widening of credit spreads, decline in equity markets;**
- ▶ **International tensions: scenario representing economic conditions in a context of international tensions between China and the United States with increased volatility and falling share prices, a growing commodities market, steepening yield curves, the US dollar declining against other currencies, and widening credit spreads.**

3. COMPLEMENTARY INDICATORS

Other complementary indicators (sensitivity to various risk factors, loss alerts, stop-loss indicators, outstandings, maturities, wrong way risk etc.) are also produced by the entities and can, as part of the risk management system, be subject to limits. These indicators provide fine-grained measurements of exposure to different market risk factors, serve to identify atypical transactions and fill out the summary picture of risks supplied by VaR and global stress scenarios.

4. INDICATORS RELATED TO THE CRD 4

STRESSED VAR

The so-called “stressed” VaR is intended to correct the pro-cyclical nature of historical VaR. It is calculated using a 99% confidence interval of one day and over a period of tension corresponding to the worst period observed for the most significant risk factors. The calibration period of the Stressed VaR is reassessed every six months.

At end-2025, for Crédit Agricole Corporate and Investment Bank it corresponds to the period 7 December 2007 to 8 December 2008. In addition to the VaR capital requirement, there is now a stressed VaR capital requirement. ▲

The table below shows the change in regulatory stressed VaR on the capital market activities of Crédit Agricole Corporate and Investment Bank, between 31 December 2024 and 31 December 2025:

(in millions of euros)	31/12/2025	Minimum	Maximum	Average	31/12/2024
IRC capital	252	237	330	266	174

INCREMENTAL RISK CHARGE

The IRC (Incremental Risk Charge) is an additional capital requirement related to the risk of default and migration on so-called linear credit positions (i.e. not including credit correlation positions), required by the CRD 4.

Its purpose is to quantify any unexpected losses caused by credit events on the issuers, i.e. default and migration of rating (the case of either a fall or a rise in credit rating).

The IRC is calculated with a confidence interval of 99.9% over a risk period of one year, by Monte Carlo simulations of migration scenarios based on three sets of data:

1. a one-year transition matrix provided by S&P and adapted to the internal rating system of Crédit Agricole Corporate and Investment Bank. This matrix gives the transition probabilities for an issuer based on its initial credit rating to higher or lower credit ratings, as well as its probability of default;
2. the correlation of issuers with systemic factors;
3. average spread curves by rating from which the shocks resulting from migrations are deducted.

These simulated credit default and migration scenarios then make it possible to value positions using the Crédit Agricole Corporate and Investment Bank models.

CREDIT VALUE ADJUSTMENT (CVA)

CRD 4 introduced an additional capital requirement linked to the volatility of the Credit Value Adjustment (CVA). Since 1 January 2025, when the new provisions of the Capital Requirements Regulation (CRR 575/2013) came into effect, the Crédit Agricole Group has been applying the Basic Approach for CVA (BA-CVA) method consistently across all its entities. This approach replaces the previous system, which combined an advanced approach for Crédit Agricole Corporate and Investment Bank, which was authorised to use its internal model, and a standard method for the Group's other entities.

PRUDENT VALUATION (PVA)

In the context of CRD 4, the Basel 3 Committee requires the application of an additional prudential measure (Prudent Valuation) to the market carrying amount. It is applied to all trading and banking book positions recognised at fair market value with a confidence interval of 90%.

Prudent valuation is broken down into nine accounting adjustments: price uncertainty, liquidation costs, model risk, concentrated positions, prepaid credit spreads, borrowing cost, early termination, future administrative costs and operational risk. All the different categories are then aggregated and deducted from the Common Equity Tier 1.

The calculation of adjustments on the basis of regulatory requirements resulted in an equity impact at the end of December 2025 of €882 million for Crédit Agricole CIB, including €744 million for market risks.

IV. EXPOSURES

VAR

The VaR of Crédit Agricole S.A. is calculated by incorporating the impacts of diversification between the different Group entities.

The key VaR values on the capital markets activities of Crédit Agricole S.A. and its subsidiaries between 31 December 2024 and 31 December 2025, broken down by major risk factor, are shown in the table below:

BREAKDOWN OF VAR (99%, 1 DAY)

(in millions of euros)	31/12/2025	Minimum	Maximum	Average	31/12/2024
Rate	6	5	9	6	6
Credit	3	3	7	4	3
Foreign exchange	7	2	9	4	5
Equity securities	5	3	11	7	11
Commodities	0	0	0	0	0
Offsetting effect	(13)	-	-	(10)	(13)
VAR OF CRÉDIT AGRICOLE S.A.	9	6	16	11	13

The VaR has fluctuated between a minimum of €6 million and a maximum of €16 million. The annual average VaR stood at €11 million in 2025, stable compared with the average in 2024.

The following graph shows the change in VaR over the course of 2025:

VAR OF CRÉDIT AGRICOLE S.A. AND SUBSIDIARIES BETWEEN 31 DECEMBER 2024 AND 31 DECEMBER 2025

STRESSED VAR

The stressed VaR is calculated solely on the scope of Crédit Agricole Corporate and Investment Bank.

The table below shows the key values of regulatory stressed VaR on the capital market activities of Crédit Agricole Corporate and Investment Bank, between 31 December 2024 and 31 December 2025:

(in millions of euros)	31/12/2025	Minimum	Maximum	Average	31/12/2024
Crédit Agricole CIB stressed VaR	32	17	36	25	26

CHANGE IN STRESSED VAR (99%, 1 DAY)

The graph below shows the change in regulatory stressed VaR of Crédit Agricole Corporate and Investment Bank over the course of 2025.

At end-December 2025, stressed regulatory VaR of Crédit Agricole Corporate and Investment Bank was €32 million, up compared to end-2024. Averaged over the year, stressed VaR (€25 million) was down compared to 2024 (€27 million).

V. EQUITY RISK**1. TRADING PORTFOLIOS AND BANKING BOOK**

[Audited] The different types of business are exposed to equity risk. The equity risk incurred by the capital market activities of Crédit Agricole CIB is hedged by the overall management through VaR (see Section IV above). The other outstandings exposed to equity risk correspond to portfolios that are invested partly in equities and structured products whose market value depends on prices of underlying equities and equity indexes.

2. EQUITY RISK FROM OTHER ACTIVITIES

Crédit Agricole S.A. and Crédit Agricole Group entities hold portfolios that are invested partly in equities and structured products whose market value depends on prices of underlying equities and equity indexes.

Note 1.2 “Accounting policies and principles” to the consolidated financial statements presents the various valuation methods for equity instruments measured at fair value.

For **Crédit Agricole S.A.**, at 31 December 2025, outstanding amounts exposed to equity risk amounted to €44.5 billion, including portfolios of insurance companies for €37.4 billion.

For the **Crédit Agricole Group**, at 31 December 2025, outstanding amounts exposed to equity risk amounted to €48.9 billion, including portfolios of insurance companies for €37.4 billion.

Note 6.4 to the consolidated financial statements shows in particular the outstanding amounts and the unrealised gains and losses on shares recorded at fair value non-recyclable through equity. Furthermore, information relating to market risk (including equity risk) for portfolios held by insurance companies is presented in Note 5.3 “Special characteristics of insurance” to the consolidated financial statements.

3. TREASURY SHARES

In accordance with the provisions of Articles L. 225-209 et seq. of the French Commercial Code (*Code de commerce*) and European Commission Regulation 2273/2003 of 22 December 2003, the Combined General Meeting of Shareholders of the Group may grant authority to the Board of Directors of Crédit Agricole S.A. to trade in its own shares. Crédit Agricole S.A. uses such an authorisation mainly to cover its commitments to employees under stock options or to stimulate the market in a market-making agreement.

Details of 2025 transactions carried out under the share buyback programme are provided in Chapter 1 of the Universal Registration Document, in the section “Information on the share capital and shareholders”.

At 31 December 2025, shares outstanding in treasury amounted to 0.01% of the share capital compared to 0.53% at 31 December 2024 (see Note 6.17 of Crédit Agricole S.A.’s consolidated financial statements). ▲

2.6. ASSET AND LIABILITY MANAGEMENT

I. ASSET AND LIABILITY MANAGEMENT – STRUCTURAL FINANCIAL RISKS

[Audited] Crédit Agricole S.A.'s Financial Management department defines the principles of financial management and ensures their consistent application within Crédit Agricole S.A. The department is responsible for organising financial flows, defining and implementing refinancing rules, performing asset and liability management and managing regulatory prudential ratios.

Optimising financial flows within Crédit Agricole S.A. is an ongoing objective. Pooling of surplus resources and making it systematically possible to hedge the associated risks contribute to this objective.

Thus, the principles of the Crédit Agricole S.A. ALM approach ensure that any surpluses and shortfalls in terms of customer resources, in particular resources collected by the Regional Banks, are centralised in the books of Crédit Agricole S.A. This resource pooling helps in refinancing other Group entities as needed (including Crédit Agricole Leasing & Factoring and Crédit Agricole Personal Finance & Mobility).

The system for centralising the management of liquidity at Crédit Agricole S.A. serves to control and optimise cash management, especially since it is accompanied by partial interest rate matching.

Consequently, Crédit Agricole S.A. has a high level of financial cohesion, with limited spreading of financial risks, particularly liquidity risk. Nevertheless, the various Group entities are responsible for managing the risk that remains at their level, within the limits assigned to them.

The limits are determined by the Chief Executive Officer of Crédit Agricole S.A. within the Group Risk Committee, approved by Crédit Agricole S.A.'s Board of Directors and concern the Crédit Agricole S.A. scope:

- subsidiaries taking asset and liability risks must adhere to limits set by the Crédit Agricole S.A. Risk Committee;
- methods of measuring, analysing and managing the Group's assets and liabilities are defined by Crédit Agricole S.A. Regarding the Retail Banking balance sheets in particular, a consistent system of run-off conventions and models has been adopted for the Regional Banks, LCL and the international subsidiaries;
- Crédit Agricole S.A. consolidates the subsidiaries' measurements of their asset and liability risks. The results of these measures are monitored by the Crédit Agricole S.A. Liquidity and ALM (Asset and Liability Management) Committee;
- Crédit Agricole S.A.'s Financial Management department and Risk Management department take part in meetings of the Asset-Liability Management Committees of the main subsidiaries.

II. GLOBAL INTEREST RATE RISK

a) DEFINITION OF GLOBAL INTEREST RATE RISK

Banking portfolio interest rate risk refers to the actual or potential risk of a decline in the bank's equity or revenues resulting from adverse movements in interest rates that affect its banking portfolio positions.

Interest rate risk can be broken down into three sub-types of risk:

- **directional risk** or deadlock risk, which results from the maturity structure of the instruments in the banking portfolio and reflects the risk induced by the timing of rate changes in the instruments. The magnitude of the deadlock risk varies depending on whether changes in the term structure of rates move steadily along the yield curve (parallel risk) or differently by period (non-parallel risk);
- **basis risk**, which reflects the impact of relative changes in interest rates for financial instruments with similar maturities and valued with different interest rate indexes;

- **option risk**, which results from derivative or balance sheet positions that allow the bank or its customer to modify the level and timing of cash flows; option risk is split into two categories: automatic option risk and behavioural option risk.

It is managed through the use of hedges and other means and controlled through limits.

b) GLOBAL INTEREST RATE RISK MANAGEMENT AND MITIGATION STRATEGIES

TARGET

The objective of global interest rate risk management is to stabilise the future profits of the bank against the impact of any adverse interest rate movements.

Changes in interest rates impact the net interest margin by creating mismatches in timing or in the type of indexation between assets and sources of funds. Interest rate risk management uses balance sheet or off-balance sheet transactions to limit the resulting volatility in this income.

The scope for monitoring the global interest rate risk is made up of entities whose business generates an interest rate risk:

- Regional Banks (for the Crédit Agricole Group scope);
- LCL Group;
- Crédit Agricole S.A.;
- International retail banks, in particular the CA Italia Group;
- Crédit Agricole Corporate and Investment Bank;
- Crédit Agricole Consumer Finance Group;
- Crédit Agricole Leasing & Factoring Group;
- CACEIS;
- Amundi.

The interest rate risk borne by the Insurance business is monitored using indicators specific to this business line. An assessment of the impact of an instantaneous rate shock on the level of own funds under Solvency 2 is performed on the Crédit Agricole Assurances scope. This indicator is incorporated within an alert threshold.

LIMITATION SYSTEM AND HEDGING PRACTICES

The rules for setting limits are intended to protect the bank's net asset value in accordance with Pillar 2 of the Basel 3 regulations regarding global interest rate risk and to limit the volatility, over time, of net interest margins by avoiding sizeable concentrations of risk on certain maturities.

The limits set at entity and scope level put bounds on the extent of the maximum discounted loss over the whole of the next 30 years and the maximum annual loss over each of the next 10 or 15 years in the event of a rate shock.

Each entity (including Crédit Agricole S.A.) manages its own exposure and hedges the interest rate risks generated by this method of financial organisation using financial instruments (on- and off-balance sheet, futures or options) under the supervision of the Asset-Liability Management Committee, in compliance with its limits and Group standards.

The Group Financial Steering department and Risk department are represented on the main subsidiaries' ALM Committees. They ensure the harmonisation of methods and practices across the Group and monitor compliance with the limits assigned to each of the subsidiaries' entities.

In addition to validation by the Group Risk Committee, the limits of the subsidiaries, Crédit Agricole S.A. and the Crédit Agricole Group are approved by the governing body of each entity.

Limits that are reviewed annually and approved by Crédit Agricole S.A.'s Board of Directors govern the Group's exposure to global interest rate risk. These limits govern interest rate risk, inflation risk and basis risk.

The rules that apply in France to the setting of the Livret A index a portion of the interest to average inflation over a rolling six-month period. The interest on other passbooks is also correlated with the same half-yearly average inflation rate. As a result, the Group hedges the risk associated with these balance sheet items using instruments (carried on or off the balance sheet) for which the underlying is an inflation rate.

STRESS TESTING

A quarterly internal mechanism (ICAAP or internal capital adequacy assessment process) estimates the internal capital requirement for the interest rate risk that the Crédit Agricole Group could experience. This is measured in two ways: in economic value and in revenues.

The economic value impact is measured by taking into account:

- the directional interest rate risk (calculated based on gaps);
- the automatic option rate risk (mainly delta equivalent and gamma equivalent of caps and floors options);
- the behavioural risk (such as early fixed-rate loan repayments);
- potential consumption of interest rate risk exposure limits.

The impact on revenues is calculated using net interest margin simulations.

As one of the largest banking groups in Europe, Crédit Agricole Group is subject to regulatory stress tests conducted by the European Banking Authority. Interest rate risk is one of the risks subject to this type of periodic exercise.

ROLE OF INDEPENDENT AUDITS

A three-tiered, independent monitoring system has been established to maintain the robustness of the system:

- the global interest rate risk measurement system is subject to an ongoing control process;
- the Group Risk Management department issues an opinion on management processes and new products;
- the Internal Audit department carries out regular inspections in the various departments.

ROLE AND PRACTICES OF THE ASSET-LIABILITY MANAGEMENT COMMITTEE

The Crédit Agricole Group manages its exposure under the supervision of the Asset-Liability Management (ALM) Committee in accordance with its limits and internal standards.

The ALM Committee is chaired by the Chief Executive Officer of Crédit Agricole S.A. and includes several members of the Executive Committee of Crédit Agricole S.A. as well as representatives from the Risk Management department:

- it examines the individual positions of Crédit Agricole S.A. and its main subsidiaries, along with consolidated positions for each quarterly closing;
- it examines compliance with the applicable limits;
- it validates the guidelines for the global interest rate risk of Crédit Agricole S.A. proposed by the ALM department.

Each Regional Bank's situation as regards global interest rate risk is reviewed quarterly by the Regional Banks' Risk Committee.

BANK PRACTICES REGARDING APPROPRIATE MODEL VALIDATION

Consistency between the models used by the various Group entities is ensured through adherence to the modelling principles approved by the Standards and Methodology Committee. They are approved by the entity's ALM Committee and their relevance is monitored on an annual basis.

The asset and liability management models of the Regional Banks and LCL are developed at the national level by Crédit Agricole S.A. They follow the same validation circuit within Regional Banks and Crédit Agricole S.A. is informed if they are adapted locally.

The relevance of the models is reviewed annually, including a review of historical data or current market conditions. They are subject to an independent review (known as a "second set of eyes") by the Crédit Agricole S.A. risk function for national models and by the Regional Bank's risk function for local adaptations.

III. FOREIGN EXCHANGE RISK

Foreign exchange risk of the Banking Book is treated differently depending on whether it relates to structural foreign exchange positions (revalued through equity) or to operational foreign exchange positions (revalued through P&L).

1. STRUCTURAL FOREIGN EXCHANGE RISK

Crédit Agricole S.A.'s structural foreign exchange risk arises from long-term investments by the Group in assets denominated in foreign currencies (equity of the international operating entities, whether resulting from acquisitions, transfers of funds from the head office, or capitalisation of local earnings), with the Group's reference currency being the euro.

At 31 December 2025, the Group's main structural foreign exchange positions, on a gross basis before hedging, were in US dollars and currencies pegged to the dollar (in particular the Hong-Kong dollar), in Swiss francs, pounds sterling, Chinese yuan, Polish zloty, Japanese yen, Indian rupee and Egyptian pounds.

The main principles of the management of structural foreign exchange positions are:

- the prevention of potential losses from the revaluation of structural foreign exchange positions in foreign currencies which impact short/medium term results (disposal of securities, dividend payment);
- the optimised immunisation of the CET1 ratio on foreign currencies eligible for ECB exemption under Article 352(2) of the Capital Requirements Regulation (CRR);
- the hedging of residual open positions based on the management guidelines approved by the ALM Committee.

The Group's structural foreign exchange positions are presented four times a year at the ALM Committee meetings. General decisions on how to manage positions are taken during these meetings.

2. OPERATIONAL FOREIGN EXCHANGE RISK

Operational foreign exchange risk arises from income and expenses of all kinds that are denominated in currencies other than the reference currency (provisions, net income generated by international subsidiaries and branches, dividends in foreign currencies etc.), and from balance sheet imbalances. The Treasury departments of international subsidiaries manage their operational foreign exchange risk in their local currency.

The general rule is, from a cash flow point of view, to match assets and liabilities in the same currency in order not to be exposed to a foreign exchange risk on the nominal value (only on the interest margin). However, it is possible for this general rule not to apply to equity investments and net investment loans (assets side) or to AT1 issuances with temporary write-down features (liabilities side).

Income and expenses in currencies whose recognition causes a change in foreign exchange positions (accrued interest receivable, fee and commission income or expenses, invoices etc.) are hedged as and when required and at least once a month. Future interest margin is not hedged in advanced unless there is a strong probability that losses will materialise and the impairment risk is high.

IV. LIQUIDITY AND FINANCING RISK

Like all credit institutions, the Group is exposed to liquidity risk, i.e. the risk of not having sufficient funds to honour its commitments. This risk could materialise if, for instance, there were a general crisis of confidence among investors in the money and bond markets or massive withdrawals of customer deposits.

1. OBJECTIVES AND POLICY

The Group's primary objective in managing liquidity is to ensure that it has sufficient resources to meet its requirements in the event of any type of severe, prolonged liquidity crisis.

To manage this, the Group uses an internal liquidity risk management and control system whose targets are:

- to maintain liquidity reserves;
- to match these reserves with future liabilities coming due;
- to organise its refinancing (to achieve an appropriate short- and long-term refinancing time frame and diversify sources of refinancing);
- to ensure a balanced development between customer loans and deposits.

The system includes indicators, limits and alert thresholds. These are calculated and monitored for all Group entities and consolidated to allow monitoring of liquidity risk across the whole Crédit Agricole Group scope.

It also incorporates compliance with regulatory liquidity constraints. The Liquidity Coverage Ratio (LCR), the Net Stable Funding Ratio (NSFR), and the Additional Liquidity Monitoring Metrics (ALMM), calculated on a company or sub-consolidated basis for the Group entities in question and on a consolidated basis for the Group, are disclosed in monthly (LCR/ALMM) or quarterly (NSFR) reports to the ECB.

2. METHODOLOGY AND GOVERNANCE OF THE INTERNAL LIQUIDITY RISK MANAGEMENT AND CONTROL SYSTEM

Crédit Agricole Group's liquidity risk management and control system is built around indicators defined in a standard and divided into four separate groups:

- short-term indicators derived largely from simulations of crisis scenarios. The purpose of these is to schedule maturities and volumes of short-term refinancings as a function of liquidity reserves, cash flow from commercial activity and amortisation of long-term debt;
- long-term indicators used to assess and schedule long-term debt maturities: limits on maturity concentrations, allowing the Group to anticipate its refinancing needs and avoid any risk of difficulties with refinancing on the markets;
- diversification indicators, which allow the Group to monitor and manage concentrations of sources of market refinancing (by refinancing channel, type of debt, currency, geographic area, investor);
- cost indicators used to measure the short-term and long-term trends in the Group's issue spreads and their impact on the cost of liquidity.

4. QUANTITATIVE INFORMATION

Liquidity is measured at the Crédit Agricole Group level.

4.1 LIQUIDITY BALANCE SHEET AT 31 DECEMBER 2025

Standing at €1,732 billion at 31 December 2025, the Group's liquidity balance sheet shows a surplus of stable funding resources on stable assets of €194 billion, up €17 billion compared to end-December 2024.

The Standards and Methodology Committee is responsible for validating the definition of these indicators and any changes in them proposed by Crédit Agricole S.A.'s Group Finance department, on the advice of the Group Risk Management department.

The Crédit Agricole S.A. Board of Directors approves the general policy for Group liquidity risk management and sets limits for key indicators in light of the Group's liquidity risk appetite. The Group Risk Committee, which proposes these limits to the Board of Directors, determines how they are translated to each of the Group's constituent entities.

Accordingly, each subsidiary of Crédit Agricole S.A. and each Regional Bank is notified of the limits for the indicators controlled at Group level. In addition to this translation of the Group system, the ALM Committees (or their equivalent) of these entities define a specific set of limits for the risks relating to their own business. They are also free to decide locally to apply a stricter control than that required by the Group.

3. LIQUIDITY MANAGEMENT

Crédit Agricole S.A. controls the management of liquidity risk. The Finance department is responsible, in respect of short-term refinancing, for:

- setting spreads on short-term funds raised under the various programmes (mainly negotiable certificates of deposit – NCDs);
- centralising assets eligible for refinancing by the Central Banks of Group entities and specifying the terms and conditions of use in the framework of tenders;
- monitoring and forecasting cash positions.

And in respect of long-term refinancing, for:

- assessing needs for long-term funds;
- planning refinancing programmes to meet these needs;
- executing and monitoring these programmes over the course of the year;
- reallocating the funds raised to Group entities;
- setting prices for liquidity in intragroup flows.

Long-term refinancing programmes comprise various instruments (see below). The body in charge of these tasks at an operational level is the Group's Treasury and Liquidity Committee, which reviews all matters relating to liquidity issues ranging from intraday to medium/long-term. It proposes policy directions for the ALM Committee.

The ALM Committee, which is also informed of the Group's liquidity position, is responsible for all key decisions (management of the refinancing programme, launch of new programmes, validation of refinancing budgets, management of the balance between loans and deposits etc.).

If funding markets tighten, a Committee is set up by the Executive Management, the Group Risk Management department and the Group Finance department in order to keep a close watch on the Group's liquidity situation. ▲

LIQUIDITY BALANCE SHEET OF THE CRÉDIT AGRICOLE GROUP AT 31 DECEMBER 2025

(1) Including senior non-preferred bonds issued by the retail network.

(2) Including CDC centralisation and not including certain asset servicing deposits, in accordance with internal management.

Long-term debt amounted to €324 billion at 31 December 2025, up €19 billion compared with the end of December 2024.

This includes:

- collateralised senior debt of €97 billion;
- senior preferred debt of €167 billion;
- senior non-preferred debt of €39 billion;
- and Tier 2 securities amounting to €21 billion.

CHANGES IN LONG-TERM DEBT OF THE CRÉDIT AGRICOLE GROUP

(1) Notional amount Accounting value (excluding prudential solvency adjustments).

4.2 CHANGE IN CRÉDIT AGRICOLE GROUP'S LIQUIDITY RESERVES

The Group's liquidity reserves, at market value and after haircuts⁽¹⁾, amounted to €485 billion at 31 December 2025, up €12 billion compared to 31 December 2024.

They cover more than twice the short-term debt net of treasury assets.

This change in liquidity reserves is mainly due to:

- the increase in the securities portfolio (HQLA and non-HQLA) for €19 billion;

- the €3 billion increase in Central Bank deposits;
- the decrease in assets pledged to the Central Bank and unencumbered assets by €10 billion, linked to the decrease in self-securitisations by €5 billion and the decrease in eligible Central Bank receivables by €5 billion.

The Crédit Agricole Group also continued its efforts to maintain immediately available reserves (after recourse to the ECB financing). Non-HQLA assets eligible for Central Bank refinancing after haircuts totalled €129 billion.

(1) The securities making up the liquidity reserves are valued after discounting for idiosyncratic stress from December 2024 onwards (previously systemic stress) in order to best reflect the liquidation value of the securities in the event of liquidity stress.

LIQUIDITY RESERVES OF CRÉDIT AGRICOLE GROUP AT 31 DECEMBER 2025

- (1) Receivables eligible for central bank refinancing for potential coverage of the LCR.
 (2) Available securities, at market value after haircut.
 (3) Of which €1bn eligible at central bank.
 (4) Excluding cash (€4bn) & mandatory reserves (€11bn).

Available liquidity reserves at end-2025 comprised:

- €128 billion in assets eligible for Central Bank refinancing operations after the ECB haircut;
- €153 billion in Central Bank deposits (excluding cash and mandatory reserves);
- a securities portfolio amounting to €204 billion after haircut, consisting of HQLA marketable securities of €158 billion and other marketable securities of €46 billion after liquidity haircut (including €1 billion eligible for Central Bank refinancing).

Liquidity reserves in 2025 averaged €485 billion.

The allocation of limits arising from Crédit Agricole Group's liquidity risk management and control system to each Crédit Agricole S.A. subsidiary and Regional Bank ensures that local liquidity risks are matched by adequate coverage from reserves.

4.3 REGULATORY RATIOS

Since March 2014, Eurozone credit institutions have been obliged to report to their supervisory authorities their Liquidity Coverage Ratio (LCR), as defined by the EBA (European Banking Authority). The aim of the LCR is to boost the short-term resilience of banks' liquidity risk profile by ensuring that they have sufficient unencumbered High-Quality Liquid Assets (HQLA) that can be converted into cash easily and immediately, on private markets, assuming a liquidity crisis lasting 30 calendar days.

Credit institutions are subject to a threshold for this ratio, set at 100% since 1 January 2018.

Figures at 31/12/2025 (in billions of euros)	Crédit Agricole Group	Crédit Agricole S.A.
Liquidity buffer	318.3	280.6
Total net cash outflows	225.1	190.9
Liquidity Coverage Ratio (LCR)	141.4%	147%

The Crédit Agricole Group's average 12-month LCR stood at 135.8% at the end of December 2025. This exceeds the 2028 Medium-Term Plan target of 110% to 130%.

Crédit Agricole S.A.'s average 12-month LCR stood at 140.9% at the end of December 2025.

In addition, since 28 June 2021, Eurozone credit institutions have been obliged to report to their supervisory authorities their Net Stable Funding Ratio (NSFR), as defined by the EBA (European Banking Authority). The NSFR is intended to ensure that the institution has sufficient "stable" resources (i.e. with an initial maturity greater than one year) to finance its medium-to-long-term assets.

Credit institutions are subject to a threshold for this ratio, set at 100% since 28 June 2021.

Figures at 31/12/2025 (in billions of euros)	Crédit Agricole Group	Crédit Agricole S.A.
Stable financing requirement	1 119,5	943,4
Available stable financing	1,333.2	1,074.5
Net Stable Funding Ratio (NSFR)	119.1%	113.9%

5. REFINANCING STRATEGY AND CONDITIONS IN 2025

The year 2025 was characterised by a favourable refinancing environment for bond issuers, despite a macroeconomic context marked by increased political and geopolitical uncertainty.

Donald Trump's return to the White House in early 2025 and his tariff policy introduced a new source of volatility in the capital markets and created periods of instability that may have reduced issuance windows for issuers, particularly in April. However, these factors, along with ongoing geopolitical tensions, did not prevent credit investors from absorbing the primary supply in a relatively favourable monetary policy environment. Thus, after continuing to cut interest rates, the Fed and the ECB found themselves in a plateau phase at the end of 2025, with inflation appearing to be under control without affecting economic activity. Indeed, economic growth rates for 2025 are expected to exceed expectations in both the United States and Europe.

Various factors explain the dynamics of 2025 on the primary markets on both sides of the Atlantic. In Europe, the combination of significant financing needs and attractive spreads explains the volume of euro bond issues. In the United States, the bond market is also experiencing significant activity, accentuated by the R&D financing needs of companies in the artificial intelligence sector. These technology companies are now turning to the bond market on a massive scale to finance their investments, thereby creating a structurally larger supply. Interest rates, which are relatively high after many years of low rates, are enabling investors to crystallise historically attractive levels of return, despite a context of tightening credit spreads. This compression in spreads, which reflects the low risk premium demanded by investors, is evidence of sustained appetite for credit. This is all the more significant given that investors have seen massive inflows of capital being redeployed into the bond market. These large inflows are creating buying pressure that is supporting spreads and facilitating the absorption of the primary flow of new issues over the year.

In terms of volume, activity on the primary bond market in 2025 was relatively high. In the European financial institutions segment, all currencies combined, 2025 saw a bond issuance volume of around €540 billion. The breakdown by instrument confirms the predominance of senior unsecured securities, which account for 56% of the volume issued. Covered bonds are the second most active segment, accounting for nearly a quarter of the volume of issues, while subordinated notes account for a significant share in terms of format (20%). This dynamic is also reflected in investor demand: order books showed an average oversubscription rate of 3x compared to 2.5x in 2024, despite a sharp compression in credit spreads. Another illustration of strong investor appetite is the decline in average new issue premiums (NIPs) across the various formats to 3.1 basis points, compared with 4.6 basis points in 2024.

In conclusion, abundant liquidity helped to create sustained demand and tighter spreads, making 2025 a year of favourable refinancing conditions for issuers. Issuers were thus able to raise capital on favourable terms despite geopolitical uncertainty, benefiting from the alignment between financing needs, investor appetite and monetary stability.

V. HEDGING POLICY

[Audited] Within Crédit Agricole S.A., derivative instruments are used for three main purposes:

- to meet demand from Group customers;
- to manage the Group's financial risks;
- to take positions for the Group's own account (as part of specific trading activities).

Derivatives not held for hedging purposes (as defined by IAS 39 ⁽¹⁾) are classified as derivative instruments held for trading and are monitored for market risk as well as counterparty risk, where applicable. Certain derivative instruments may be held for the economic hedging of financial risks, without however meeting the IAS 39 criteria. They are also classified as derivative instruments held for trading.

In all cases, the intent of the hedge is documented at the outset and verified quarterly by appropriate tests (forward-looking and backward-looking).

Each Group entity manages its financial risks within limits set by the Group Risk Committee chaired by the Chief Executive Officer of Crédit Agricole S.A.

- The charts in Note 3.5 to the consolidated financial statements give the market values and notional amounts of hedging derivatives.

1. FAIR VALUE HEDGES AND CASH FLOW HEDGES

Global interest rate risk management aims to reconcile two approaches:

PROTECTION OF THE BANK'S NET ASSET VALUE

This first approach requires matching balance sheet and off-balance sheet items that are sensitive to interest rate changes on assets and liabilities (or, in simplified terms, fixed-rate items), so as to neutralise the variations in fair value that occur when interest rates change. If the matching is done by means of derivative instruments (mainly fixed-rate swaps, inflation swaps and, to a lesser extent, market options), the derivatives are classified as Fair Value Hedges if the instruments (micro FVH) or groups of instruments (macro FVH) identified as hedged items (fixed-rate assets and inflation: customer loans, fixed-rate liabilities and inflation: demand deposits and savings deposits) are eligible under IAS 39 (otherwise, as mentioned above, these derivatives are classified for accounting purposes as held for trading, even though they hedge risk).

To check macrohedging suitability, hedging instruments and hedged items are grouped by maturity using contract characteristics or, for certain balance sheet line items (particularly deposits), using assumptions based on the financial characteristics of the products and historical behaviour. The comparison between the two maturity schedules (hedges and hedged items) means that hedging can be documented in a forward-looking manner for each maturity and each generation.

For each macrohedging relationship, the prospective effectiveness of the hedge is measured at year-end, thereby ensuring that for each maturity group, the principal amount of the hedged items is greater than the notional amount of the financial hedging derivatives used. The retrospective effectiveness is therefore measured while ensuring that the change in the hedged outstanding amount at the beginning of the period does not indicate any a posteriori overhedging. Other factors of ineffectiveness are also measured: OIS/BOR difference, Credit Valuation Adjustment (CVA)/Debit Valuation Adjustment (DVA) and Funding Valuation Adjustment (FVA).

PROTECTION OF THE INTEREST MARGIN

This second approach requires neutralising variations in future cash flows of instruments or related balance sheet items that are affected by resets of their interest rates in the future, either because they are indexed to interest rate indexes that fluctuate or because they will be refinanced at market rates at some point in the future. If this neutralisation is done using derivative instruments (mainly interest rate swaps), the derivative instruments are classified as cash flow hedges (CFH). This neutralisation can also be carried out for balance sheet items or instruments that are identified individually (micro CFHs) or portfolios of line items or instruments (macro-CFHs). As is the case for fair value hedges, the documentation and effectiveness assessment of these hedging relationships are based on provisional maturities.

(1) Crédit Agricole S.A. chooses not to apply the IFRS 9 "hedge accounting" option, as allowed by the standard. All hedging relationships continue to be documented in accordance with the rules of IAS 39, until, at the latest, the date of application of the regulations on fair value macro hedges when adopted by the European Union. However, hedge accounting under IAS 39 uses the classification and measurement principles of IFRS 9 to decide which financial instruments qualify.

For each hedging relationship, the prospective effectiveness of the hedge is measured at year-end, thereby ensuring that for each maturity group, the principal amount of the hedged items is greater than the notional amount of the financial hedging derivatives used.

2. NET INVESTMENT HEDGES IN FOREIGN CURRENCIES

A third hedging category relates to the hedging of investments made in the entities (mostly international subsidiaries and branches) whose functional currency is different to that of the Group. The level of hedging is adjusted by currency with a view to protecting the financial position or immunising the CET1 ratio

against foreign exchange rate fluctuations. These hedging derivatives used for international investments (mainly currency bonds and exchange rate swaps) are subject to net investment hedge documentation. The changes in hedge value associated with the hedged risk (i.e. foreign exchange risk) are recorded, for the effective portion, through other equity that can be reclassified, where the amount of the hedged foreign currency asset is greater than or equal to the nominal (or notional) amount of the hedging instrument. Any ineffectiveness is recognised directly through profit or loss. ▲

2.7. INSURANCE SECTOR RISKS

[Audited] In view of the predominance of its savings and retirement activities, Crédit Agricole Assurances group, a subsidiary of Crédit Agricole S.A., is exposed to market risks (price risk and foreign exchange risk) and asset/liability risks (liquidity and interest rate risk). The Crédit Agricole Assurances Group also faces insurance risks. Lastly, it is exposed to operational risk linked to non-compliance risk and to legal risk particularly in process execution. The information given in this section is complementary to Note 5.3 "Specific characteristics of insurance" to the consolidated financial statements of Crédit Agricole S.A. and the Crédit Agricole Group.

I. GOVERNANCE AND ORGANISATION OF RISK MANAGEMENT IN THE CRÉDIT AGRICOLE ASSURANCES GROUP

The risk governance system of Crédit Agricole Assurances Group is based on the following principles:

- it is within the remit of the control function mechanism at Crédit Agricole S.A. level, which includes the Risk Management and Permanent Control business line, which is responsible for steering (supervision and prevention) and second-degree control, the Internal Audit business line, which is responsible for periodic control, and the Compliance business line. In addition to these functions is the Actuarial function at the Crédit Agricole Assurances level, as required by insurance company regulations;
- it is overseen by the Risk Management function of the Crédit Agricole Assurances Group, which heads the "Risk Management" business line, supervises the systems, and uses Group standards and principles to ensure that subsidiary risk management systems are compliant. It is supported by experts for each major risk category;
- it is based on the principle of subsidiarity. Each Crédit Agricole Assurances Group entity is responsible for defining and implementing its solo risk management policy, in accordance with Crédit Agricole S.A. principles and rules, the principles and rules for the management of Crédit Agricole Assurances Group, and local regulations for international subsidiaries.

Risk governance falls on:

- Executive Management (the Chief Executive Officer and second Executive Director as defined by Solvency 2) and the Board of Directors, ultimately responsible for the Crédit Agricole Assurances Group's compliance with all applicable regulations and legislation;
- the Crédit Agricole Assurances Executive Committee, the Group's decision-making body, which is supported by Group-level committees (including the Executive Risk and Internal Control Committee, the Finance Committee, the ALM and Investments Committee, the Reinsurance Committee and the Information Systems Investments Committee);
- the four key functions (Risks, Compliance, Actuarial function, Internal Audit), whose representatives have been appointed by the Chief Executive Officer. Their appointment is validated by the Board of Directors and notified to the competent national supervisory authority. The four key functions are coordinated by the Executive Risk and Internal Control Committee of the Crédit Agricole Assurances Group. The heads of the key functions have direct access to the Board of Directors, to whom they present the results of their work at least once a year;

- an internal control system, defined as the framework designed to manage and control all types of operations and risks and to ensure that all transactions are carried out in a manner that is proper (in compliance with regulations), secure and effective. Crédit Agricole Assurances asks its Board of Directors to validate its risk policies;
- the internal process for evaluating Crédit Agricole Assurances Group's risks and solvency (ORSA), synchronised with the other MTP/Budget strategic processes, capital planning and the updating of the risk framework and business line policies. Prospective assessments completed within this framework make it possible to analyse the consequences of adverse situations on the Group's management indicators and to take the necessary action, where appropriate.

1. ORGANISATION OF RISK MANAGEMENT

The risk management system of the Crédit Agricole Assurances Group is managed by the Head of the Risk Management function, who reports operationally to the Crédit Agricole Assurances Chief Executive Officer and hierarchically to the Group Chief Risk Officer of Crédit Agricole S.A. She is supported by the Risk Managers of the entities that report to her hierarchically, for French entities, and functionally, for international entities. The Insurance Risk Management business line operates like a matrix, combining entity-level organisations with Group approaches by type of risk.

The hierarchical reporting by business line guarantees independence, with a "second pair of eyes" role (to issue a recommendation) to back the operating functions, which manage risks day-to-day, make decisions and exercise first-level controls to ensure that their processes are performed properly.

2. RISK MANAGEMENT SYSTEM

AT CRÉDIT AGRICOLE ASSURANCES GROUP LEVEL

The Crédit Agricole Assurances Group has established a risk appetite framework that must be adhered to in order to achieve its strategic orientations by controlling and managing its risks appropriately. This consists of key indicators for each risk category that constitute the core of its risk framework.

The risk framework implemented by the Crédit Agricole Assurances Group is based on the overall risk management framework and the limits and alert thresholds for the range of different risks it is exposed to through the implementation of its strategy.

It is reviewed at least annually and validated, along with the risk appetite statement, by the Board of Directors of Crédit Agricole Assurances, after examination by the Crédit Agricole S.A. Risk Committee (a sub-committee of the Crédit Agricole S.A. Executive Committee, chaired by its Chief Executive Officer). Crédit Agricole Assurances' Executive Management and Board of Directors, or even the Risk Committee of Crédit Agricole S.A., are notified of any breaches of alert thresholds or limits and any resulting corrective measures.

The quarterly risk dashboard of Crédit Agricole Assurances Group, supplemented by a monthly report, is used to monitor the Group's risk profile and identify potential deviations.

The Board of Directors receives regular updates on compliance with the risk appetite framework.

Dedicated bodies have been established to manage risk consistently at Group level: the Risk Monitoring Committee, which meets monthly, and the Financial Risk Committee, which meets monthly; portfolios are reviewed by asset type and current risks are reported monthly to the Executive Committee.

Moreover, a Committee on Insurance Models at the level of the Crédit Agricole Assurances Group, steered by the Risk Management business line, approves the methodologies underpinning the models and indicators used to address major risks for Crédit Agricole Assurances Group or presenting cross-sector challenges for the Group.

AT ENTITY LEVEL

In accordance with the Group framework, companies define their own risk monitoring and control systems: process and risk mapping resulting in a risk framework that defines, according to their risk appetite, the Crédit Agricole Assurances Group's global limits, accompanied, if necessary, by limits to manage their specific risks.

The entities also draw up formal policies and procedures providing a framework for risk management (including the rules for accepting risk when insurance policies are taken out, provisioning and hedging of technical risks by reinsurance, claims management etc.).

Operational risk management is supervised in each entity by Committees that meet periodically (investment, ALM, technical, reinsurance and others) in order to monitor developments in the risk position, based on reporting by business lines, present analyses to support the risk management process, and, if necessary, draw up proposals for action. Significant incidents and limit breaches lead to alerts being triggered and notified either to Crédit Agricole S.A.'s Risk Management department (for certain Crédit Agricole Assurances Group-level limits or limits of the main entities), or to Crédit Agricole Assurances Executive Management or the entity's management. Corrective measures are implemented accordingly.

The risk management system is examined during meetings of the Risk and Internal Control Committees of each subsidiary, in light of the permanent control reports, the analysis of their Risk dashboard and the conclusions of periodic controls.

II. MARKET RISK

Market risk is the risk that changes in market prices (e.g. interest rates, exchange rates, equity prices) will affect the cash flows from insurance and reinsurance contracts and the fair value or future cash flows of financial instruments. It includes three types of risk: interest rate risk, foreign exchange risk and price risk.

Information relating to market risk is disclosed in Note 5.3 to the consolidated financial statements, "Special characteristics of insurance".

III. LIQUIDITY RISK

Liquidity risk is the risk that the Crédit Agricole Assurances group may have difficulty meeting its obligations under insurance contracts and financial liabilities that are to be settled by delivering cash or another financial asset.

Information relating to liquidity risk is disclosed in Note 5.3 to the Crédit Agricole S.A. consolidated financial statements, "Special characteristics of insurance".

IV. CREDIT RISK

Credit risk is the risk that one party to a financial instrument, an insurance contract issued and recognised as an asset, or a reinsurance contract held, will default on an obligation and cause the other party to incur a financial loss.

Information relating to credit risk disclosed in Note 5.3 to the Crédit Agricole S.A. consolidated financial statements, "Special characteristics of insurance".

V. UNDERWRITING RISK

Information on risk arising from contracts that fall within the scope of IFRS 17 is disclosed in Note 5.3 to the consolidated financial statements, "Special characteristics of insurance". ▲

VI. OPERATIONAL RISKS

Operational risk is the risk of loss resulting from shortcomings or failure in internal procedures, human error, internal systems or external events, including compliance risk and legal risk. Risks associated with ICT (information and communication technologies) and outsourcing are operational risks.

The Crédit Agricole Assurances entities apply Crédit Agricole S.A. directives on operational risk management.

The operational risk management system in each entity is thus comprised of the following components:

- a mapping of risk events, periodically updated to incorporate organisational changes, new activities and even changes in the cost of risk. It is based on a breakdown of activities into processes and the seven risk categories of the Basel 2 classification. The financial and non-financial (regulatory, image) impacts of these identified risk events, whether actual or potential, are assessed as well as their probability of occurrence, based on business expertise. Internal control is assessed on the basis of the results of controls at the different levels defined in the local control plans and standardised controls defined by Crédit Agricole S.A. Risk department and the findings of periodic controls to highlight the most critical net risks and prioritise actions plans to reduce them;
- a process of collecting data on risk-related incidents and operating losses, backed by an early warning system, is used to monitor identified risks and use them to introduce remedial measures and ensure consistency with mapping. The amount of collected losses is compared each quarter to an annually defined alert threshold.

Crédit Agricole Assurances and its subsidiaries have prepared a Business Continuity Plan (BCP) focusing on essential activities in order to cover a failure of information systems, operational sites and staff. It meets Crédit Agricole S.A.'s standards with an IT back-up plan based on Crédit Agricole S.A.'s shared IT operating and production environment. This plan is regularly tested. IT system security is an inherent component of the Group's security policies. A three-year programme of security projects (including in particular accreditation, intrusion tests, and IT system failure scenarios) is reviewed annually.

A Crédit Agricole Assurances Group-wide general subcontracting policy, describing amongst others the monitoring and control system associated with outsourcing, has been rolled out by Group entities. The system for managing outsourced services was implemented following the publication of the EBA guidelines on outsourced services, the French Order of 3 November 2014 as amended, and the publication of the EIOPA guidelines on the outsourcing of cloud-based services. Crédit Agricole Assurances also applies the European Digital Operational Resilience Act (DORA), which came into effect on 17 January 2025.

VII. NON-COMPLIANCE RISKS

Non-compliance risks refer to a potential lack of adherence to rules governing financial activities. These rules may be laws, regulations (Solvency 2 regulation, securities regulations, data protection, customer protection, anti-money laundering and anti-terrorism financing requirements, international sanctions, anti-corruption etc.), professional or ethics standards and usages, and instructions from the executive body. These risks are identified in the operational risk mapping of each Crédit Agricole Assurances Group entity.

In each entity, the Compliance Officer is responsible for implementing the Group procedures issued by the Compliance Department of Crédit Agricole S.A. (*FIDES Corpus*) and for developing procedures specific to the activities of their entity. The Compliance Officer is also responsible for training and for the

dedicated control system aimed at controlling these risks, with the ongoing goal of limiting the potential impacts (financial losses and legal, administrative or disciplinary sanctions), while protecting the reputation of the Crédit Agricole Assurances Group. In this respect, the launch of new business activities and the creation of new products, are subject to enhanced security by referral to the New Activities and New Products Committees, established in each entity to review in particular the contractual and marketing documents for products, as well as the training materials and sales aids intended for distributors.

The supervision of the compliance systems of the subsidiaries of Crédit Agricole Assurances is carried out by the Compliance Officer of the Crédit Agricole Assurances Group. Coordination for the Insurance business is carried out mainly through exchanges with the subsidiaries.

In all areas of compliance, from the prevention of money laundering and financing of terrorism to protecting customers, the Group has strengthened coordination with distributors (Regional Banks, LCL, other international networks) to ensure implementation of the controls to guarantee correct application of procedures by all parties.

VIII. LEGAL RISKS

Responsibility for legal management, regulatory monitoring and consulting with the various Business line departments lies with the Legal departments of the Crédit Agricole Assurances Group.

There are currently no governmental, legal or arbitration proceedings (or any proceedings known by the Company, whether suspended or threatened) that could have or have had, in the previous 12 months, any material effect on the financial position or profitability of the Company and/or the Crédit Agricole Assurances Group.

To Crédit Agricole Assurances' knowledge, there is no significant litigation to note.

2.8. OPERATIONAL RISKS

Operational risk ⁽¹⁾ is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, including, but not limited to, legal risk, model risk or information and communication technology (ICT) risk, but excluding strategic and reputational risk.

I. ORGANISATION AND SUPERVISION SYSTEM

The operational risk system, adjusted to each Group entity, comprises the following components common to the entire Group.

ORGANISATION AND GOVERNANCE OF THE OPERATIONAL RISK MANAGEMENT FUNCTION

- supervision of the system by Executive Management (via the Operational Risk Committee or the operational risk unit of the Group Risk Committee and the Internal Control Committee);
- standardised tasks for Crédit Agricole Group Risk Management Officers and Operational Risk Managers in the area of operational risk management;
- responsibility of the entities in managing their own risks;
- existence of a set of standards, associated control guidelines and obligation to implement them locally;
- application of the Crédit Agricole Group's risk appetite approach, incorporating operational risk in all its components.

IDENTIFICATION AND QUALITATIVE ASSESSMENT OF RISKS THROUGH RISK MAPPING

Operational risk mapping related to processes is done annually by the entities and is used by each entity with the results and associated action plans validated by the Operational Risk Committee (or operational risk unit of the Internal Control Committee) and a presentation to the Risk Committee of the Board of Directors.

This mapping is supplemented by the establishment of risk indicators to monitor the most sensitive processes:

- collection of operational loss data and an early warning system to report sensitive, significant incidents (including IT, climate and outsourcing incidents), which are consolidated in a database used to measure and monitor the cost of risk. The reliability and quality of the data collected are submitted to systematic audits both at the local and central levels (analysis of the entities' operational risk maps, analysis of the results of the audits, methodological support to local control units);
- calculation and regulatory reporting of capital requirements for operational risk at the consolidated level;

(1) EU Regulation 2024/1623.

- the quarterly production of an operational risk dashboard at entity level, accompanied by a Crédit Agricole Group summary, taking into account the main sources of risks affecting the business lines and associated action plans for major incidents.

TOOLS

The RCP (Risk Management and Permanent Controls) tool platform brings together the four fundamental components of the system (loss collection, operational risk mapping, permanent controls and action plans).

A Group tool for monitoring and processing sensitive and significant operational risk alerts (including IT) was rolled out in December 2024 as part of the ongoing strengthening of the operational risk alert system.

A tool for calculating regulatory capital related to operational risks (BOLERO) has been used to perform local and central calculations according to the standard formula (SMA) and in COREP regulatory statements relating to these requirements since the first quarter of 2025.

The risks associated with outsourced services are incorporated into each component of the Operational Risk system and are the subject of consolidated controls that are centrally communicated. The Crédit Agricole Group's system has been adapted in accordance with the EBA guidelines on outsourcing issued in February 2019, in particular to ensure compliance with the outsourcing stock and to record outsourcing in a dedicated register.

II. METHODOLOGY

In accordance with Regulation (EU) 2024/1623 of 31 May 2024 (known as "CRR3") amending Regulation (EU) 575/2013 (known as "CRR"), the operational risk framework changed on 1 January 2025 with the introduction of a new standardised method for calculating operational risk (Standardised Measurement Approach - SMA), which replaces the standard and advanced methods applied prior to that date. The calculation of capital requirements (CR) for operational risk uses the Business Indicator Component (BIC) based on the Business Indicator (BI) calculated over the last three financial years, incorporating data from entities acquired/disposed of during this three-year period. This method can be implemented using the accounting approach or the Prudential Approach. The Crédit Agricole Group has opted for the regulatory approach after notifying the ECB.

SMA REGULATORY CAPITAL REQUIREMENT CALCULATION

The SMA method uses financial data from three financial years to determine the "business indicator component" (BIC), which is equal to the capital requirements. It uses three components from financial data to calculate the BIC:

$$OR\ CR = BIC = BI * MC$$

BI: Business Indicator, MC: Multiplier Coefficient (12% for the BI tranche ≤ €1 billion, 15% for the BI tranche between €1 billion and €30 billion, 18% for the BI tranche > €30 billion)

$$BI = ILDC + SC + FC$$

ILDC: interest, lease contracts and dividends component; SC: services component; FC: financial component

The above components are determined using their average calculated from the last three financial years.

Starting with the first closing in 2025 (31 March 2025), the BOLERO Group tool was put into production, performing the SMA calculation for Crédit Agricole Group entities. The calculation steps and final results are sent to the ECB through the current COREP reporting statements.

III. EXPOSURE

BREAKDOWN OF OPERATIONAL LOSSES BY BASEL RISK CATEGORY (2023 TO 2025) - CRÉDIT AGRICOLE S.A.

BREAKDOWN OF OPERATIONAL LOSSES BY BASEL RISK CATEGORY (2023 TO 2025) - CRÉDIT AGRICOLE GROUP

Generally, the exposure profile in terms of operating risks detected in the last three years reflects the principal activities of the Crédit Agricole Group and Crédit Agricole S.A.:

- risks related to execution, delivery and process management linked to processing errors (failure to monitor management, failure to process or deliver, data entry errors, errors in accounting statements, non-compliance with regulatory deadlines, failure to monitor or manage guarantees etc.) became the primary source of risk in 2025, with increased exposure in the main areas of activity.
- significant exposure to the Customers, Product and Commercial Practices category, marked in particular by risks arising from several cases relating to customer protection regulations, misleading commercial practices or insufficient detection of market abuse/insider trading in the Specialised Financial Services division and Retail Banking;
- exposure to external fraud remains significant and stable, mainly related to cross-border operational credit risk (document fraud, document falsification, intentional disappearance of the debtor) and payment instrument fraud (electronic banking fraud).

Remedial and preventive action plans at the local or Group level were introduced to reduce the exposure of the Crédit Agricole Group and Crédit Agricole S.A. to operational risk.

RISK WEIGHTED ASSETS AND CAPITAL REQUIREMENTS FOR OPERATIONAL RISK

It should be noted that under CRR3/Basel 3 advanced (known as Basel 4), there is no longer any breakdown of risk weighted assets by Basel category.

Approach using the SMA method (in millions of euros)	31 December 2025	
	Capital requirement	Risk weighted assets (RWA)
Crédit Agricole S.A.	4,401	55,017
Crédit Agricole Group	6,626	82,826

IV. INSURANCE AND COVERAGE OF OPERATIONAL RISK

The Crédit Agricole Group and Crédit Agricole S.A. have obtained insurance coverage for their operational risks to protect their assets and profits. For high-intensity risks, Crédit Agricole S.A. has taken out insurance policies to cover itself and its subsidiaries with major insurance companies and with CAMCA for the Regional Banks. These policies harmonise the transfer of personal and property

risks and the setting up of specific professional liability and fraud insurance programmes for each business line. Lower intensity risks are managed directly by the relevant entities.

In France, third-party civil liability risks are covered by operating civil and professional liability insurance policies. It should be noted that property and casualty insurance for operating assets (property and IT equipment) also includes third-party liability coverage for all property exposed to this risk.

The MRB (Multirisques Bureaux – Comprehensive Office), PE (Pertes d'Exploitation – Business interruption), Cyber and RCJ (Responsabilité Civile Juristes – Lawyers' Liability) policies were renewed on 1 January 2026. The RCP (Responsabilité Civile Professionnelle – professional liability insurance) and GDB (Globale de Banque – Global Bank, i.e. all Securities Risks and Fraud) policies will expire on 1 May 2026 and will be renewed on that date.

High-frequency and low-intensity risks that cannot be insured on satisfactory financial terms are retained in the form of deductibles or pooled within the Crédit Agricole Group through internal reinsurance companies.

2.9. CHANGES IN CRÉDIT AGRICOLE S.A.'S LEGAL RISKS

In the normal course of business, Crédit Agricole S.A. is regularly subject to litigation proceedings, as well as requests for information, investigations, controls and other regulatory or judicial procedures from various institutions in France and abroad. The provisions recognised reflect the management's best judgement, considering the information in its possession at the closing date of the accounts.

With respect to the litigation and exceptional events reported in this document and updated in the third quarter of 2025 in document AO4, the only changes are as follows:

- in the last section of the "O'Sullivan and Tavera" paragraph;
- in the "Action by H2O fundholders" paragraph;
- in the third section of the "Crédit Agricole Auto Bank" paragraph.

LITIGATION AND EXCEPTIONAL EVENTS

OFFICE OF FOREIGN ASSETS CONTROL (OFAC)

In October 2015, Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate and Investment Bank (Crédit Agricole CIB) reached agreements with the US and New York authorities that had been conducting investigations regarding US dollar transactions with countries subject to US economic sanctions. The events covered by this agreement took place between 2003 and 2008.

Crédit Agricole CIB and Crédit Agricole S.A., which cooperated with the US and New York authorities in connection with their investigations, have agreed to pay a total penalty amount of US\$787.3 million (i.e. €692.7 million). The payment of this penalty has been allocated to the pre-existing reserve that had already been taken and, therefore, has not affected the accounts for the second half of 2015.

The agreements with the Board of Governors of the US Federal Reserve (Fed) and the New York State Department of Financial Services (NYDFS) are with Crédit Agricole S.A. and Crédit Agricole CIB. The agreement with the Office of Foreign Assets Control (OFAC) of the US Department of the Treasury is with Crédit Agricole CIB. Crédit Agricole CIB also entered into separate deferred prosecution agreements (DPAs) with the United States Attorney's Office for the District of Columbia (USAO) and the District Attorney of the County of New York (DANY), the terms of

which are three years. On 19 October 2018, the two deferred prosecution agreements with USAO and DANY ended at the end of the three-year period, Crédit Agricole CIB having complied with all its obligations under the DPAs.

Crédit Agricole continues to strengthen its internal procedures and its compliance programmes regarding laws on international sanctions and will continue to cooperate fully with the US and New York authorities, with its home regulators, the European Central Bank and the French Regulatory and Resolution Supervisory Authority (ACPR), and with the other regulators across its worldwide network.

In accordance with the agreements reached with the NYDFS and the US Federal Reserve, Crédit Agricole's compliance programme is regularly reviewed to assess its effectiveness. These reviews include a review by an independent consultant appointed by the NYDFS for a term of one year and annual reviews by an independent board approved by the US Federal Reserve.

EURIBOR/LIBOR AND OTHER INDEXES

Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB, in their capacity as contributors to a number of interbank rates, have received requests for information from a number of authorities as part of investigations into: (i) the calculation of the Libor (London Interbank Offered Rates) in a number of currencies, the Euribor (Euro Interbank Offered Rate) and certain other market indexes; and (ii) transactions connected with these rates and indexes. These demands covered several periods from 2005 to 2012.

As part of its cooperation with the authorities, Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB carried out investigations in order to gather the information requested by the various authorities and in particular the American authorities – the DOJ (Department of Justice) and CFTC (Commodity Future Trading Commission) – with which they were in discussions. Since then, these authorities have not contacted Crédit Agricole S.A. or Crédit Agricole CIB.

Furthermore, Crédit Agricole CIB is currently under investigation by the Attorney General of the State of Florida on both the Libor and the Euribor; the authority has not contacted Crédit Agricole CIB since.

Following its investigation and an unsuccessful settlement procedure, on 21 May 2014, the European Commission sent a statement of objection to Crédit Agricole S.A. and to Crédit Agricole CIB pertaining to agreements or concerted practices for the purpose and/or effect of preventing, restricting or distorting competition in derivatives related to the Euribor.

In a decision dated 7 December 2016, the European Commission jointly fined Crédit Agricole S.A. and Crédit Agricole CIB €114,654,000 for participating in a cartel in euro interest rate derivatives. Crédit Agricole S.A. and Crédit Agricole CIB are challenging the decision and have asked the European Court of Justice to overturn it. On 20 December 2023, the European Court of Justice handed down its decision, which reduced the fine imposed on Crédit Agricole S.A. and Crédit Agricole CIB to €110 million, exonerating them of certain alleged practices, but rejecting most of the grounds for overturning the decision that were put forwards. Crédit Agricole S.A. and Crédit Agricole CIB lodged an appeal against this decision with the Court of Justice of the European Union on 19 March 2024. The European Commission has also lodged an appeal seeking the overturning of the judgement of the European Court of Justice.

O'SULLIVAN AND TAVERA

On 9 November 2017, a group of individuals (or their families or estates), who claimed to have been injured or killed in attacks in Iraq, filed a complaint ("O'Sullivan I") against several banks, including Crédit Agricole S.A., and its subsidiary Crédit Agricole Corporate and Investment Bank (Crédit Agricole CIB), in US District Court for the District of New York.

On 29 December 2018, the same group of individuals, together with 57 new plaintiffs, filed a separate action ("O'Sullivan II") against the same defendants.

On 21 December 2018, a different group of individuals filed a complaint ("Tavera") against the same defendants.

All three complaints allege that Crédit Agricole S.A., Crédit Agricole CIB, and other defendants conspired with Iran and its agents to violate US sanctions and engage in transactions with Iranian entities in violation of the US Anti-Terrorism Act and the Justice against Sponsors of Terrorism Act and seek damages of an unspecified amount.

In O'Sullivan I, the court dismissed the complaint on 28 March 2019, denied the plaintiffs' motion to amend their complaint on 25 February 2020, and denied the plaintiffs motion for final judgement to allow the plaintiffs to appeal on 29 June 2021. On 9 November 2023, the Court stayed proceedings pending the resolution of certain motions in three US Anti-Terrorism Act cases to which Crédit Agricole S.A. and Crédit Agricole CIB are not parties: *Freeman v. HSBC Holdings, PLC*, No. 14-cv-6601 (E.D.N.Y.) ("Freeman I"), *Freeman c. HSBC Holdings plc*, no. 18-cv-7359 (E.D.N.Y.) ("Freeman II") and *Stephens c. HSBC Holdings plc*, no. 18-cv-7439 (E.D.N.Y.).

On 6 April 2020, the O'Sullivan II case was stayed pending the resolution of the O'Sullivan I case, and this stay was extended on 20 December 2023.

The Tavera case has also been stayed since 19 February 2019. On 8 November 2023, the stay was extended pending the resolution of certain motions in the Freeman I, Freeman II and Stephens cases. The stay was again extended on 21 October 2025.

CRÉDIT AGRICOLE CONSUMER FINANCE NEDERLAND B.V.

The conditions for the review of the interest rates of revolving loans marketed by Crédit Agricole Consumer Finance Nederland BV, a wholly owned subsidiary of Crédit Agricole Consumer Finance S.A., and its subsidiaries are the subject of borrowers' claims relating to the criteria for revising these rates and possible overpayments of interests.

On 21 January 2019, in two individual cases concerning subsidiaries of Crédit Agricole Consumer Finance Nederland B.V., the Appeals Committee of the KIFID (the Financial Services Complaints Authority) in the Netherlands decided that in case the consumers had no or insufficient information on the specific factors that determine the interest rate, the individual interest rate needed to follow the movement of market interest rates on consumer loans.

Crédit Agricole Consumer Finance Nederland BV implemented a compensation plan for the benefit of the borrowers in May 2020 which takes into account the aforementioned decisions of KIFID. Other institutions in the Netherlands implemented compensation plans. The Supervisory Board of Crédit Agricole Consumer Finance Nederland B.V. decided to close this compensation plan on 1 March 2021.

CACEIS GERMANY

On 30 April 2019, CACEIS Germany received from the Bavarian tax authorities a claim for the repayment of the dividend tax refunded to a number of its customers in 2010.

This claim amounted to €312 million. It was accompanied by a demand for the payment of €148 million of interest (calculated at the rate of 6% per annum).

CACEIS Germany (CACEIS Bank SA) strongly contests this claim, which it finds to be totally unfounded. CACEIS Germany has filed appeals with the tax authorities to contest the merits of the claim and to request a stay of execution of the payment pending the outcome of the proceedings on the merits. The stay of enforcement was granted for the payment of €148 million of interest and rejected for the repayment of the amount of €312 million. CACEIS Bank SA contested this rejection decision. As the rejection was enforceable, the sum of €312 million was paid by CACEIS Bank SA which, given the appeals lodged, recorded a receivable for an equivalent amount in its accounts. In a decision dated 25 November 2022, the Munich tax authorities rejected CACEIS Bank SA's appeal on the merits. On 21 December 2022, CACEIS Bank SA filed a case with the Munich Tax Court contesting the aforementioned decision of the Munich tax authorities and the aforementioned dividend tax repayment claim. Confident in its arguments, CACEIS Bank SA has not made any changes to its accounts.

CA BANK POLSKA

Between 2007 and 2008, CA Bank Polska, along with other Polish banks, granted mortgage loans denominated or indexed in Swiss francs (CHF) and repayable in PLN. The significant increase in the exchange rate of the CHF against Poland's national currency (PLN) led to a sharp rise in loan repayments for borrowers.

The courts deem the clauses in these loan contracts that allow banks to unilaterally set applicable exchange rates to be abusive and as a result, the number of disputes with banks is constantly rising.

In May 2022, CA Bank Polska introduced an out-of-court settlement programme for claims raised by borrowers.

ACTION BY H2O FUNDHOLDERS

On 20 and 26 December 2023, members of an association known as “Collectif Porteurs H2O” brought legal action against CACEIS Bank before the Paris Court of Economic Activities, along with Natixis Investment Managers and KPMG Audit, as part of a substantive lawsuit filed directly against H2O AM LLP, H2O AM Europe SAS and H2O AM Holding. BPCE, Natixis S.A., and KPMG S.A. were subsequently drawn into the proceedings.

The plaintiffs are holders of units in funds managed by companies in the H2O group, some of whose assets were hived off into “side pockets” in 2020, and holders of life insurance policies invested in unit-linked policies representing these funds.

Since the proceedings began, the number of plaintiffs, initially 6,077, has increased (voluntary interventions) and decreased (withdrawals), and is now in the order of 8,800.

The plaintiffs are seeking a judgement that will hold the H2O Group and all other defendants jointly and severally liable for damages in respect of the loss they believe they have incurred as a result of the hive-off of the funds in question.

The amount of claims has also changed during the proceedings, so far amounting to around €610 million.

In seeking to hold CACEIS Bank jointly and severally liable with the co-defendants, the plaintiffs allege that CACEIS Bank breached its duty of care as the funds’ custodian.

In a decision on 17 December 2025, the AMF Sanctions Committee imposed a financial penalty of €3.5 million on CACEIS Bank and issued it with a warning for failing to carry out certain controls in its capacity as custodian of seven funds managed by H2O. However, the Sanctions Committee states in its decision that “while these shortcomings did not allow for early detection of certain failures on the part of H2O to meet its obligations, the fact remains that it is the decisions made by the latter to invest in ineligible securities that are the cause of the harm that may have been suffered by the unitholders of the funds”.

This decision is not final and may be appealed within two months.

CUM-CUM – INVESTIGATION BY THE FRENCH NATIONAL FINANCIAL PROSECUTOR’S OFFICE (PNF)

Crédit Agricole CIB, like other banking institutions, was the subject of a preliminary investigation initiated in early 2023 by the Parquet National Financier (French National Financial Prosecutor’s Office – PNF) in the context of the “Cum-Cum” case.

Crédit Agricole CIB cooperated in this investigation, demonstrating that it had not introduced any system or policy to encourage its foreign customers to engage in securities lending or derivatives

transactions for the purpose of tax evasion, and that it had put in place internal rules in order to strictly regulate transactions around the detachment of the dividend as soon as the provisions of Article 119 bis of the French General Tax Code resulting from the 2019 Finance Act were introduced.

For the period from 2013 to 2023, the PNF considered that a number of securities lending and equity derivatives transactions concluded at market price levels constituted dividend arbitrage.

In this context, the PNF proposed a settlement of this case in the form of a judicial agreement in the public interest, under which Crédit Agricole CIB agreed to pay a public interest fine of €88.2 million.

This agreement, which does not constitute a criminal conviction and does not imply any admission of guilt on the part of Crédit Agricole CIB, was validated by the President of the Paris Court of Justice on 8 September 2025.

The payment of the public interest fine will not affect Crédit Agricole CIB’s financial statements for the 2025 financial year, taking into account the provisions made.

CRÉDIT AGRICOLE AUTO BANK

On 7 October 2025, the FCA (Financial Conduct Authority) in the United Kingdom published a draft compensation plan for borrowers who entered into a car finance agreement between 6 April 2007 and 1 November 2024. This includes contracts that, according to the FCA, would have resulted in an unfair relationship between the borrower and the borrower’s bank due to the terms of compensation of the credit intermediary car dealership.

This publication followed a ruling on 1 August 2025 issued by the Supreme Court in the United Kingdom concerning competing institutions challenged by their customers over the terms of their car financing contracts. In that ruling, the court questioned the compensation of credit intermediaries, finding that it created an imbalance between the parties.

The draft plan was put out for public consultation, with a deadline for stakeholder responses of 12 December 2025. The FCA plans to confirm the criteria for this plan by March 2026.

This draft plan is particularly relevant to CA Auto Finance UK, a wholly owned subsidiary of Crédit Agricole Auto Bank, which is itself wholly owned by CA Consumer Finance S.A., as well as Ferrari Financial Services UK, a company jointly owned by Crédit Agricole Auto Bank and car manufacturer Ferrari.

POSSIBLE DEPENDENCIES

Crédit Agricole S.A. does not depend on any industrial, commercial or financial patent, licence or contract.

2.10. NON-COMPLIANCE RISKS

The Compliance business line implements the regulations on an operational basis and promotes an ethical culture within the Group. It expresses and implements this commitment through three vectors of usefulness and six goals that are fully in line with Crédit Agricole Group's raison d'être and project.

Useful to society

- Preventing and combating financial crime is an essential investment in order to comply with international sanctions and to combat money laundering, terrorist financing, fraud and market abuses.
- Working towards sustainable finance that respects the Group's social commitments, by developing an ethical approach that complements adherence to regulations, with the aim of preventing and avoiding reputational risks.

Useful to customers

- Contributing to protecting our customers and differentiating ourselves by respecting their legitimate interests and personal data, through a transparent and fair relationship.
- Promoting the fluidity of our customer relationships by natively integrating regulations into the process through an innovative approach using the potential of new technologies.

Useful to teams

- Strengthening the commitment of the business lines through native implementation of the regulations, which encourages compliant development, optimisation of the necessary efforts, and distribution of useful skills in compliance and ethics.
- Empowering the Compliance business line teams through an operational approach to regulation, encouraging innovation, initiative, skills development and career development.

GOVERNANCE AND ORGANISATION

GOVERNANCE AND NON-COMPLIANCE RISK MANAGEMENT SYSTEM

The Crédit Agricole Group has defined and implemented a regularly updated, adequate and proportionate non-compliance risk-management system. It involves all Group stakeholders (employees, executives and Directors, and control functions including Compliance). This system is based in particular on an organisation, procedures, information systems and tools that are used to identify, assess, monitor and control non-compliance risks and, where relevant, to steer and follow up on the necessary corrective action plans.

The non-compliance risk management system is organised around a governance structure that is fully integrated into the Group's internal control framework. The Group Compliance Management Committee, chaired by Executive Management, holds a meeting every month. It makes the decisions required to prevent non-compliance risks and to implement and monitor corrective measures following the reporting of potential irregularities to the Committee. Risks of non-compliance and decisions taken to remedy them are regularly presented to the Executive Committee of Crédit Agricole S.A., the Risk Committee of the Board of Directors and the Board of Directors of Crédit Agricole S.A. In addition, the Group's risk appetite indicators relating to the main

Compliance issues (know your customers, conduct risk, fraud risk, screening of customer databases under international sanctions) are also regularly presented to these bodies.

The system is structured and deployed by the Crédit Agricole Group's Compliance business line. It is placed under the authority of the Group Head of compliance, who reports directly to the Deputy Chief Executive Officer of Crédit Agricole S.A., responsible for ensuring the coherence and effectiveness of the management and internal controls. To develop the integration of the business line and ensure the independence of its roles, the Compliance Officers of Crédit Agricole S.A.'s subsidiaries and Regional Banks report to the Group Head of Compliance.

The Group Compliance department supervises the entities using a consistent, structured and consolidated methodology. The methodology aims, via a risk-based approach, to prioritise supervision issues and ensure tighter management of the entities. This method relies on automated dashboards and optimised, streamlined performance and risk sensors.

The Group Compliance department establishes Group policies pertaining to compliance with regulations and legislation and ensures that these are properly disseminated and implemented throughout the Group entities. To this end, it has teams specialised in various areas of expertise, including the fight against money laundering and terrorist financing, fraud prevention, compliance with international sanctions and asset freezing, corruption prevention, financial market integrity and transparency, prevention and management of conflicts of interest, personal data protection, Know Your Customer (KYC) and customer protection, as well as ESG and prevention of the risk of misconduct. The management of changes to the set of compliance rules is overseen by a specific governance body, which ensures that the texts are updated regularly. The monitoring of the implementation of procedures in all entities is carried out using a dedicated tool. In the event that an entity is unable to implement the expected procedures, such as in the case of a conflict of laws, a documented justification and, where applicable, an associated action plan must be submitted to the Group.

The Group Compliance department has defined common basis of mandatory permanent controls that are included in the entities' control plans. These controls ensure that risks of non-compliance are controlled and that their impacts (financial losses, or legal, administrative or disciplinary sanctions) are managed with the ongoing target of protecting customers and the Group. This common set of permanent controls is regularly updated, in line with regulatory changes or developments in the system.

Finally, the Group Compliance department supervises and controls non-compliance risks at Group level, using activity and risk indicators centralised in a management tool that allows action plans and corrective measure follow-ups to be linked to them. These are supplemented by the findings of ad hoc compliance analyses carried out by the entities, the Group, audit missions or supervisory missions.

All these elements are the subject of regular reports for the attention of the management and governance bodies of the entities and the Group, as mentioned above.

COMBINED US OPERATIONS (CUSO)

A specific framework for the Crédit Agricole Group's activities in the United States has been in place and operational since 2024. In addition to the teams in charge of compliance for the activities of the entities located in the United States (in particular Crédit Agricole CIB, Amundi and CACEIS), this umbrella structure provides comprehensive and consolidated coverage of the risks of non-compliance in the Group's US activities. This structure reports directly to the Chief Executive Officer of US operations and to the Group Head of Compliance.

ORGANISATION OF COMPLIANCE RESOURCES

Compliance is an integral part of the work of all Group employees, whether in the first line of defence, such as KYC, detecting unusual transactions or combating fraud; the second line of defence, which entails monitoring operational risk; or the third line of defence, which involves performing audits to check that compliance rules are being properly applied.

The staff of the Compliance business line continued to increase in 2025 (+6% compared to 2024), reaching 2,457 full-time equivalent employees at the end of December 2025. This increase in workforce continues the trend of recent years.

The Compliance department coordinates human resources to facilitate career development and enhance the appeal of the Compliance business line within the Group. In keeping with the Human-centric project, the Compliance department establishes employee skills development as a priority. For example, internal mobility is now given priority over external recruitment. In addition, a framework for assessing Compliance skills has been formalised at the Group level. This covers both business line skills (e.g. understanding the regulatory environment, promoting a culture of compliance) and cross-functional skills (e.g. adaptability, ability to see the big picture). Finally, the Compliance department is vigilant about maintaining a good job coverage level across all business lines.

The Group continues to invest significantly in Compliance tools, developing and rolling out systems that incorporate new technologies such as artificial intelligence (AI). In particular, predictive AI allows for the continuous optimisation of the relevance of non-compliance detection, while generative AI facilitates the collection and pre-analysis of documents and information. At the same time, the Compliance department works closely with the sales teams to integrate compliance requirements natively into the front office tools. This native integration of compliance extends to projects, customer journeys, and throughout the design of products and services, in order to meet regulatory requirements while preserving the interests of customers and society.

In addition, a system is in place for reviewing and validating the compliance models used by certain tools, particularly those using artificial intelligence features.

Each year, the Compliance department presents to the Board of Directors the organisation of compliance resources and their suitability for carrying out compliance tasks.

FINANCIAL CRIME

The measures aimed at combating financial crime are the subject of ongoing action plans to take into account changes in risks, regulatory requirements and requirements of supervisory authorities.

KNOW YOUR CUSTOMER (KYC)

The Group is fully committed to the continuous improvement of the quality of the Know Your Customer (KYC) process. This commitment is reflected, on the one hand, in the gradual roll-out of native consistency checks in data entry tools and, on the other hand, by solutions involving customers in this process, called "Selfcare" solutions.

Indicators on the management of Know Your Customer (KYC) are rolled out across the whole Group. They concern in particular the customer onboarding process and the periodic review process. The periodic review is both quantitative (progress rate) and qualitative (consolidated results of level 2 controls, or "2.2.c"). This management was strengthened in 2024 in the Retail Banking division (France and international) and entities (specialised business lines), with close monitoring of Know Your Customer (KYC) indicators, which was automated in 2025.

The Group standard on obligations related to Know Your Customer (KYC) is regularly updated.

The body of controls, the steering indicators and the Group standard concern all customers. In addition, special monitoring is in place for customers presenting the highest risk of money laundering and terrorism financing.

ANTI-MONEY LAUNDERING AND COMBATING THE FINANCING OF TERRORISM

The Group's system is based on (i) classification of AML/CFT risks, (ii) KYC with assessment of the risk profile, (iii) detection of unusual transactions and, where applicable, reporting them to financial information units, and (iv) intragroup exchanges of AML/CFT information. The Crédit Agricole Group is particularly mindful of developing its system to continually adapt to new risks and the expectations of regulators.

The Compliance department is strengthening the tools for detecting unusual transactions with regard to the fight against money laundering and terrorist financing, notably by using artificial intelligence:

- In retail banking and certain specialised business lines, a new tool was rolled out in 2023, which allows (i) a greater agility and performance in creating or developing detection scenarios (simulation and short-cycle development capacities), (ii) better adaptation of the parameters to the risk of each customer, (iii) better detection of small-value transactions in a context of terrorist financing. This makes the alerts raised more relevant.
- Other tools complete the system. For example, Crédit Agricole CIB has a new detection tool specifically adapted to its activities, based on an innovative approach also using artificial intelligence.

INTERNATIONAL SANCTIONS

The Crédit Agricole Group's International Sanctions system is constantly adapting to a complex and ever-changing geopolitical context.

It ensures the proper application of regulatory obligations as soon as they are published, in particular:

- asset freezes imposed by France and the European Union;
- European sanctions against Russia, particularly with regard to innovative restrictions on luxury goods, the capping of deposits for Russian or Belarusian nationals, restrictions on securities or measures to cap the prices of oil products;
- any other applicable restrictive regulatory measure or international sanction (for example, issued by the OFAC);

Within the framework of an organisation specifically established to comply with regulations, the Crédit Agricole Group updates the lists published by the Authorities as soon as possible, ensuring the effectiveness of the system and compliance with the relevant obligations.

The Group carries out two types of checks:

- "screening" of customers and third parties in Crédit Agricole Group's databases in order to identify those subject to international sanctions;
- "filtering" of financial messages (mainly Swift and SEPA) to detect potentially prohibited transactions.

COMBATING FRAUD

To protect customers and preserve the Bank's interests, a structured system for combating fraud is implemented across all Crédit Agricole Group entities. Fraud prevention at Group level is under the Financial Security division of Crédit Agricole S.A.

The governance of the fraud prevention system is applied Group-wide and is set out in a procedural document and a dedicated committee structure. The Group Committee on Fraud Prevention and the Community Committee on Fraud Prevention meet on a quarterly basis with representatives from Regional Banks, subsidiaries of the Group and specialised functions participating.

This organisation and the cross-functional steering of fraud prevention is in keeping with the determination to improve the prevention and detection of complex fraud and facilitate coordination among staff responsible for investigations.

The Crédit Agricole Group documents its anti-fraud policy. This policy is reviewed annually to take into account organisational, legal and regulatory developments, as well as new trends and types of fraud (for example, to take into account technological developments in payments).

In addition, IT tools have been strengthened at the Group level: firstly, for better detection and secondly, for better cross-functionality and immunisation for the Group. In particular, given that the techniques used to commit fraud are becoming increasingly complex and modern, particularly due to organised gangs, the financial crime detection tool deployed to improve the fight against money laundering and terrorist financing also actively contributes to improving the detection of cases of fraud.

COMBATING CORRUPTION

In accordance with national and international anti-corruption directives, and in an extension of the measures taken by Crédit Agricole for many years, since 2018 (implementation of the Sapin II law) the Group has strengthened its anti-corruption system. This system is now deployed in all Group entities in France and abroad, regardless of the nature of their activities (retail banking, investment banking, consumer finance, insurance, real estate etc.).

Thus, the Group has procedures and operating methods based on committed governance, corruption risk mapping in all entities, a dedicated anti-corruption code, a whistleblowing system, accounting controls and training programmes for all employees. After the effective implementation of a supplier assessment system, work is currently being done to strengthen and optimise the assessment of customers and intermediaries with regard to corruption risks.

Crédit Agricole is thus the only French international banking group to have obtained ISO 37001 certification for its anti-corruption management system. This international certification was renewed in 2025 for three years, attesting to the strength of the system and the overall commitment of Crédit Agricole.

WHISTLEBLOWER RIGHTS

In 2019, the Crédit Agricole Group set up an internal whistleblowing tool, accessible on the Intranet and online, that allows any employee or any person from outside the company (service providers or suppliers, in particular) to securely report or disclose information on a crime, an offence, a threat or harm to general interest, a violation or an attempt to conceal a violation of an international agreement duly ratified or approved by France, of unilateral action of an international organisation taken on the basis of such an agreement, of the law of the European Union, of the law or of regulations, and on events which have occurred or are likely to occur, in particular: breach of the code of conduct or a situation contrary to the Group's anti-corruption code of conduct and any serious violation of human rights and fundamental freedoms, the health and safety of individuals or the environment, resulting from the Group's activities as well as the activities of subcontractors or suppliers. Whistleblowers who report or disclose the aforementioned information in good faith and without direct financial compensation are protected. For several years, the Compliance department has been regularly communicating with Group employees about the whistleblowing system and the tool, helping to increase their confidence in it and consequently the number of reports.

In addition, this whistleblower scheme incorporates the provisions of the Wasserman law of 21 March 2022, aimed at strengthening the protection of whistleblowers, and the implementing Decree of 3 October 2022.

Administered by qualified experts, the platform guarantees the strict confidentiality of the whistleblower, the facts reported, the persons involved and the exchanges between the whistleblower and the person in charge of processing the report. It also guarantees anonymity, if this option is chosen by the whistleblower.

The roll-out of this online platform was completed in 2020 across the entire Crédit Agricole Group, covering more than 450 entities and almost 150,000 people. Entities joining the Group following acquisitions are connected to the platform as and when they are acquired.

At 31 December 2025, 1,149 reports had been submitted and processed through this new system since its roll-out in 2019.

MARKET TRANSPARENCY

Market transparency relies on investors having equal access to the same information on listed companies. In this regard, Crédit Agricole Group has a global system for centralising all Group entity holdings that allows any threshold breach to be declared within the statutory time limits. In addition, a new tool was introduced in 2024 to optimise the processing of requests for opinions on investment and divestment transactions, with regard to the obligations applicable under regulations on threshold breaches and the US Bank Holding Company Act and Volcker regulations.

MARKET INTEGRITY

Through the system implemented, the Crédit Agricole Group contributes to the fairness, efficiency and integrity of the financial markets by combating abuses or attempted market abuses. These systems, made mandatory by the MAR and MIF regulations, are based on regularly updated policies, procedures, tools and training programmes.

During the past financial year, the detection tool used by retail banks in France was optimised as part of an ongoing effort to improve the detection quality of market abuse alerts.

TAX TRANSPARENCY

Tax transparency encompasses several regulations, including FATCA (Foreign Account Tax Compliance Act), EAI (Automatic Exchange of Information) and QI (Qualified Intermediary). The Crédit Agricole Group has set up procedures to implement these regulations and the resulting reporting obligations within its entities.

In 2025, at the level of Retail Banking entities, and in addition to regulatory requirements, ad hoc actions to collect tax information (self-certification of tax residence and/or tax identification numbers in the context of FATCA and AEOL) were carried out.

PROTECTING OUR CUSTOMERS AND THEIR DATA

Compliance helps to protect our customers, their legitimate interests and their personal data through a transparent and fair relationship and advice focused on customer needs and satisfaction.

Customer protection is an affirmed priority of Crédit Agricole Group. It is an integral part of the “Customer” and “Societal commitment” aspects of the Group Project. In 2025 the Crédit Agricole Group furthered its actions within a continuous improvement approach with regard to the transparency and loyalty of customer journeys.

Several measures have thus been strengthened in terms of the duty to advise, claims management and product governance.

In the context of continued strains on purchasing power, the prevention of financial vulnerability and support for customers in vulnerable financial situations remain a high priority.

TRANSPARENCY TOWARDS CUSTOMERS (INCLUDING ESG), BANKING INCLUSION

The Crédit Agricole Group natively integrates the collection of its customers' ESG preferences into its advisory processes. In this regard, the Group Compliance department participates in the project to update the rules on sustainable finance, particularly on the component relating to the publication of information on the integration of sustainability risks in investment and insurance advice.

The Group Compliance department is closely involved in the Group's work on banking inclusion in all its forms, particularly the capping and transparency of fees associated with these offers.

PRIORITY OF CUSTOMER INTERESTS THROUGH THE PREVENTION OF CONFLICTS OF INTEREST

The Crédit Agricole Group implements and regularly updates a system for the prevention and management of conflicts of interest, based on procedures and monitoring tools, and the regular training of employees. In 2025, the Group system was standardised in terms of conflicts of interest of a private nature (offices held outside the Group).

Respect for the primacy of customers' interests is a key aspect of the prevention of conflicts of interest. Through their honest, loyal and professional conduct, employees of Group entities serve and respect customers' interests in the best possible manner. In this regard, the prevention of conflicts of interest is an integral part of the ethical conduct promotion system. For example, during the past financial year, several awareness-raising campaigns on the declaration of gifts/invitations/benefits were conducted among all Crédit Agricole S.A. employees.

PROTECTION OF PRIVACY AND PERSONAL DATA

To ensure compliance with the European General Data Protection Regulation (GDPR), the Crédit Agricole Group has set up a system based on four pillars: Governance, Standards, Training and Control.

This system is overseen by the Data Protection Officers (DPO) appointed within each entity.

The Group Data Protection Officer, who reports to the Group Deputy Head of Compliance, is responsible for supporting, monitoring and managing the Group's DPO network. They are involved in strategic and operational data governance at the Group level, enabling them to apply a “privacy by design” approach to projects. The Group DPO is also fully involved in the product governance process, which validates Crédit Agricole S.A.'s offerings to customers of Crédit Agricole's Regional Banks.

The Group established an ethical framework in 2017 by adopting a Personal Data Charter. It is based on five key principles (data security, usefulness and fairness, ethics, transparency and education, control and monitoring by customers). The commitments made in this charter are consistent with the European General Data Protection Regulation (GDPR) which came into force in 2018. In accordance with the principle of transparency, Group entities make their Personal Data Protection Policy (*politique de protection des données personnelles* – PPD) available to their customers, their prospective customers and all their business relations on their website (in addition to the Charter). In these regularly updated policies, stakeholders can find detailed information on the purposes of the processing, the legal bases on which the processing is based, the retention periods and the recipients of personal data.

Particular attention is also paid to protecting the personal data of employees of Crédit Agricole Group entities. In particular, each entity informs its employees about the processing of their personal data using the Crédit Agricole Group Employee Personal Data Protection Charter.

CULTURE OF ETHICS

The system for controlling non-compliance risks is based on the dissemination of a solid culture of ethics and compliance among all Group employees, directors and executives.

The ethics and compliance culture is based on a reference framework consisting of:

- a Code of Ethics, updated in 2025, common to all Group entities, which promotes the values of proximity, responsibility and solidarity held by the Group;
- a Code of Conduct specific to each entity, which is the operational expression of the Code of Ethics and which aims to guide the daily actions, decisions and behaviour of employees. The Code of Conduct integrates behavioural rules in the face of ethical problems that each person may encounter in the course of their professional and non-professional missions. As part of the approach to controlling the risks of non-compliance, it also includes a specific anti-corruption component in application of the obligations arising from the Sapin II law relating to the prevention of corruption and influence peddling;
- the *FIDES Corpus*, which brings together all the procedures that reflect regulatory changes in the area of compliance;
- other texts, such as charters (Personal Data Protection Charter, Responsible Lobbying Charter, Responsible Purchasing Charter etc.) and sector policies (armaments policy etc.), also give substance to the Group's ethical commitments.

The commitment of Executive Management and Directors to the culture of ethics sets the right “tone from the top”. In addition to the training and dedicated awareness-raising activities detailed below, figures on the promotion of ethics (such as the rate of

completion of the “ethics quiz”, assessment of the risk of misconduct) are among the non-financial performance criteria used to determine the compensation of executive corporate officers. Furthermore, the risk of misconduct indicator is presented and approved annually by the Group Compliance Management Committee and incorporated into the risk appetite system.

The spreading of this culture of ethics also relies on awareness-raising, promotion and training activities with regard to the challenges and risks of non-compliance that strongly mobilise all Group stakeholders: employees, executives and directors:

- awareness-raising initiatives are structured around a community of Group ethics advisers and supported by numerous communications (newsletters, comic strips, hybrid courses including videos and podcasts, interviews with Crédit Agricole S.A. employees). The annual “Ethics and You” quiz also contributes to this awareness-raising effort, with its format and content reviewed on a regular basis. This quiz has been broadly rolled out within the Group since 2019. The participation rate in this quiz at the end of 2025 reached 93% (vs. 84% in 2024) for Crédit Agricole S.A. As regards the Group's executives and Directors, awareness is raised through dedicated training sessions and regular presentations on Compliance subjects at meetings of the Executive Committee, Risk Committee and the Board of Directors;
- the culture of ethics is also promoted through dedicated events such as the “Ethics days”, intended for all employees and other target groups. They include talks by expert speakers, as well as dedicated times for discussing and sharing ideas (workshops, “serious games” etc.);
- in addition, training modules and materials (general or intended for employees who are at a higher risk of exposure) cover all areas of day-to-day compliance, fraud, personal data protection, anti-money laundering and combating terrorist financing, as well as compliance with international sanctions. As regards the promotion of the culture of ethics specifically, 97.8% of Group employees had received training on the module “Professional standards and Standards of conduct” at 31 December 2025.

In addition to the preventive measures described above, a measurement and back-testing system for the risk of misconduct is in place:

- a process for the annual assessment of the risk of misconduct measures the degree of compliance with the culture of ethics across all entities. Based on the outcome of this assessment, action plans are put in place to reinforce the culture of ethics;
- the annual system for the identification of “risky conduct” for employees whose work has a significant impact on the Bank's risk profile, takes into account the risk of misconduct. This system is used, where necessary, when determining the compensation of the concerned employees. It also leads, where applicable, to the implementation of further actions to reinforce the culture of ethics.

TRAINING PLAN

To firmly establish a culture of compliance within the Group, the Group Compliance department has developed a comprehensive training programme. Certain modules, required by regulation, ensure that every employee has the knowledge and skills necessary to perform their job in accordance with applicable ethical and legal standards. Five mandatory courses (“Professional ethics and conduct”, “Anti-money laundering and combating the financing of terrorism (AML-CFT)”, “International sanctions”, “Combating fraud” and “Combating corruption”) make up the basic obligatory Compliance training that must be followed by all Group employees. At the end of each training, there is a quiz to test the proper understanding of the concerned issues by employees.

In addition to the five mandatory training courses mentioned above, a comprehensive set of Compliance training courses is available to all Group employees. Whether these courses are mandatory depends on the employee’s role and the entity they

work for. They are developed by IFCAM, the Crédit Agricole Group’s in-house training institute, and can therefore be tailored to meet the specific needs of the Group.

In addition, ad hoc and in-person training courses are provided by the Group or its entities. As such, the employees concerned receive training on AML/CFT, fraud prevention and market integrity. Additionally, the Fides Académie (a four-day in-person training course for employees joining the Compliance business line) provides a comprehensive view of Compliance issues and facilitating the sharing of experience.

Finally, and in accordance with the guidelines of the European Banking Authority and the provisions of the French Monetary and Financial Code, all members of the Board of Directors are regularly trained in regulatory issues and changes, with training materials tailored to whether the Directors are newly appointed or already sitting members of the Board.

GENERAL FRAMEWORK

LEGAL PRESENTATION OF THE ENTITY

Since the Extraordinary General Meeting of 29 November 2001, the Company's name has been: **Crédit Agricole S.A.**

Since 1 July 2012, the address of the Company's registered office has been: 12, place des États-Unis, 92127 Montrouge Cedex, France.

Registration number: 784 608 416 Nanterre Trade and Companies Register

NAF code: 6419Z.

Crédit Agricole S.A. is a French Public Limited Company (*Société Anonyme*) with a Board of Directors governed by ordinary company law and more specifically by Book II of the French Commercial Code (*Code de commerce*).

Crédit Agricole S.A. is also subject to the provisions of the French Monetary and Financial Code (CMF – *Code monétaire et financier*) and more specifically Articles L. 512-47 *et seq.* thereof.

Crédit Agricole S.A. was licensed as an authorised credit institution in the mutual and cooperative banks category on 17 November 1984. As such, it is subject to oversight by the banking regulatory authorities, and more particularly by the French Regulatory and Resolution Supervisory Authority (ACPR) and the European Central Bank.

Crédit Agricole S.A. shares are admitted for trading on Euronext Paris. Crédit Agricole S.A. is subject to the applicable stock market regulations particularly with respect to public disclosure obligations.

A BANK WITH MUTUAL ROOTS

SAS Rue La Boétie, which is wholly owned by the Regional Banks, holds the majority of Crédit Agricole S.A.'s share capital. Shares in SAS Rue La Boétie may not be transferred outside the Regional Banks' network. Furthermore, any trading in these shares between Regional Banks is governed by a liquidity agreement that in particular sets out the procedures for determining the transaction price. This encompasses both disposals of shares between the Regional Banks and capital increases at SAS Rue La Boétie.

Fédération Nationale du Crédit Agricole (FNCA) acts as a consultative and representative body, and as a communication forum for the Regional Banks.

As Crédit Agricole S.A. is the Central Body of the Crédit Agricole network (as it is so defined in Article R. 512-18 of the French Monetary and Financial Code), in accordance with the provisions of the French Monetary and Financial Code (Articles L. 511-31 and L. 511-32) Crédit Agricole S.A. is responsible for exercising administrative, technical and financial control over the credit institutions affiliated to it in order to maintain a cohesive network and to ensure their proper functioning and compliance with all regulations and legislation governing them. In that regard, Crédit Agricole S.A. may take all necessary measures, notably to ensure the liquidity and solvency of the network as a whole and of each of its affiliated institutions.

CRÉDIT AGRICOLE INTERNAL RELATIONS

INTERNAL FINANCING MECHANISMS

Crédit Agricole has instituted a number of internal financing mechanisms specific to the Group.

REGIONAL BANKS' CURRENT ACCOUNTS

Each Regional Bank holds a current account with Crédit Agricole CIB, which records the financial movements resulting from internal financial transactions within the Group. This account, which may be in credit or debit, is presented in the balance sheet under the line item "Loans and receivables due from credit institutions" or "Debt due to credit institutions".

SPECIAL SAVINGS ACCOUNTS

Funds held in special savings accounts (popular savings passbook accounts [*Livret d'épargne populaire*], sustainable and inclusive development passbook accounts [*Livret de développement durable et solidaire*], home purchase savings schemes and accounts, youth passbook accounts [*Livret Jeune*] and passbook savings accounts [*Livret A*]) are collected by the Regional Banks on behalf of Crédit Agricole S.A. and must be centralised at the latter. Crédit Agricole S.A. recognises them on its balance sheet as "Debt due to customers".

TERM DEPOSITS AND ADVANCES

The Regional Banks also collect non-government-regulated savings funds (passbook accounts, bonds, warrants, certain term accounts and similar accounts etc.) on behalf of Crédit Agricole S.A. These funds are transferred to Crédit Agricole S.A., and are recognised as such on its balance sheet.

Special savings accounts and time deposits and advances are used by Crédit Agricole S.A. to make "advances" (loans) to the Regional Banks, with a view to funding their medium and long term loans.

50% of savings funds collected by the Regional Banks are transferred back to them in the form of so-called "mirror advances" (with maturities and interest rates precisely matching those of the savings funds received), which they are free to use at their discretion.

Since April 2020, the Regional Banks have had to refinance themselves in the form of advances, called "global advances", from Crédit Agricole S.A. for the remaining 50% of the savings funds they have collected.

Furthermore, the Regional Banks may be refinanced in the form of unsecured loans negotiated at market price with Crédit Agricole S.A.

TRANSFER OF REGIONAL BANKS' LIQUIDITY SURPLUSES

The Regional Banks may use their "monetary" deposits (demand deposits, non-centralised time deposits and negotiable certificates of deposit) to finance lending to their customers. Surpluses must be transferred to Crédit Agricole S.A. where they are booked in current accounts, under "Loans and receivables due from credit institutions" or "Debt due to credit institutions" (depending on whether the current account open in the books of Crédit Agricole CIB is credit or debit – see above) or in term accounts, under "Crédit Agricole internal transactions".

FOREIGN CURRENCY TRANSACTIONS

The Regional Banks' foreign currency activities are refinanced through Crédit Agricole S.A.

MEDIUM AND LONG-TERM NOTES ISSUED BY CRÉDIT AGRICOLE S.A.

These are placed on the market or by the Regional Banks with their customers. They are booked on the balance sheet by Crédit Agricole S.A. under liabilities either as “Debt securities” or as “Subordinated debt”, depending on the type of security issued.

LIQUIDITY AND SOLVENCY RISKS HEDGING AND BANKING RESOLUTION

Under the legal internal financial strength mechanism enshrined in Article L. 511-31 of the French Monetary and Financial Code (CMF), Crédit Agricole S.A., as the Central Body of the Crédit Agricole network, must take all necessary measures to ensure the liquidity and solvency of each affiliated credit institution, as well as the network as a whole. As a result, each member of the network benefits from this internal financial strength.

The general provisions of the CMF (*Code monétaire et financier* – French Monetary and Financial Code) have been reflected in the internal provisions setting out the operational measures required for this legal solidarity mechanism.

In the initial public offering of Crédit Agricole S.A., CNCA (now Crédit Agricole S.A.) signed an agreement with the Regional Banks in 2001 aiming notably at governing internal relations within the Crédit Agricole network. In particular, the agreement provides for the creation of a Fund for Bank Liquidity and Solvency Risks (FRBLS) designed to enable Crédit Agricole S.A. to fulfil its role as Central Body by providing assistance to any affiliated members that may experience difficulties. The main provisions of this agreement are set out in Chapter III of the Registration Document filed by Crédit Agricole S.A. with France’s *Commission des opérations de Bourse* (now the French Financial Markets Authority – AMF) on 22 October under number R. 01-453.

The European banking crisis management framework was adopted in 2014 by EU Directive 2014/59 (known as the “Bank Recovery and Resolution Directive – BRRD”), incorporated into French law by Order 2015-1024 of 20 August 2015, which also adapted French law to the provisions of European Regulation 806/2014 of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund. Directive (EU) 2019/879 of 20 May 2019, known as “BRRD2”, amended the BRRD and was incorporated into French law by Order 2020-1636 of 21 December 2020.

This framework, which includes measures to prevent and to resolve banking crises, is intended to preserve financial stability, to ensure the continuity of activities, services and operations of institutions whose failure could significantly impact the economy, to protect depositors, and to avoid or limit the use of public financial support as much as possible. In this context, the European Resolution Authorities, including the Single Resolution Board, have been granted extensive powers to take all necessary measures in connection with the resolution of all or part of a credit institution or the group to which it belongs.

For cooperative banking groups, the “extended single point of entry” (“extended SPE”) resolution strategy is favoured by the resolution authorities, whereby resolution tools would be applied simultaneously at the level of Crédit Agricole S.A. and the affiliated entities. In this respect, and in the event of a resolution of the Crédit Agricole Group, the scope comprising Crédit Agricole S.A. (in its capacity as Central Body) and its affiliated entities would be considered as a whole as the expanded single entry point. Given the foregoing and the solidarity mechanisms that exist within the network, a member of the Crédit Agricole network cannot be put individually in resolution.

The resolution authorities may initiate resolution proceedings against a credit institution where they consider that: the institution has failed or is likely to fail, there is no reasonable prospect that another private measure will prevent the failure within a reasonable time, a resolution measure is necessary, and a liquidation procedure would be inadequate to achieve the resolution targets mentioned above.

The resolution authorities may use one or more resolution tools, as described below, with the aim of recapitalising or restoring the viability of the institution. The resolution tools should be implemented in such a way that equity holders (shares, mutual shares, CCLs, CCAs) bear losses first, with creditors following up immediately, provided that they are not excluded from bail-in legally speaking or by a decision of the resolution authorities. French law also provides for a protective measure when certain resolution tools or decisions are implemented, such as the principle that equity holders and creditors of an institution in resolution may not incur greater losses than those they would have incurred if the institution had been liquidated in the context of a judicial liquidation procedure under the French Commercial Code (*Code de commerce*) (NCWOL principle referred to in Article L. 613-57-I of the CMF). Thus, investors are entitled to claim compensation if the treatment they receive in a resolution is less favourable than the treatment they would have received if the institution had been subject to normal insolvency proceedings.

In the event that the resolution authorities decide to put the Crédit Agricole Group in resolution, they will first write down the par value of the CET1 instruments (shares, mutual shares, CCI and CCA), additional Tier 1 instruments, and Tier 2 instruments, in order to absorb losses, and then possibly convert the additional Tier 1 instruments and Tier 2 instruments ⁽¹⁾ into equity securities. Then, if the resolution authorities decide to use the bail-in tool, the latter would be applied to debt instruments ⁽²⁾, resulting in the partial or total write-down of these instruments or their conversion into equity in order to absorb losses.

With respect to the Central Body and all affiliated entities, the resolution authorities may decide to implement, in a coordinated manner, impairment or conversion measures and, where applicable, internal bailouts. In such an event, the impairment or conversion measures and, where applicable, internal bailout measures would apply to all entities within the Crédit Agricole network, regardless of the entity in question and regardless of the origin of the losses.

The creditor hierarchy in resolution is defined by the provisions of Article L. 613-55-5 of the CMF, effective as at the date of implementation of the resolution.

Equity holders and creditors of the same rank or with identical rights in liquidation will then be treated equally, regardless of the Group entity of which they are creditors.

The scope of this bail-in, which also aims to recapitalise the Crédit Agricole Group, is based on equity requirements at the consolidated level.

Investors must then be aware that there is a significant risk that holders of shares, mutual shares, CCLs and CCAs and holders of debt instruments of a member of the network will lose all or part of their investment if a resolution procedure is implemented on the Group, regardless of the entity of which they are a creditor.

(1) Articles L. 613-48 and L. 613-48-3 of the CMF.

(2) Articles L. 613-55 and L. 613-55-1 of the CMF.

The other resolution tools available to the resolution authorities are essentially the total or partial disposal of the activities of the institution to a third party or to a bridge institution and the separation of the assets of the institution.

This resolution framework does not affect the legal internal financial strength mechanism provided for in Article L. 511-31 of the French Monetary and Financial Code, which applies to the Crédit Agricole network, as defined in Article R. 512-18 of the same Code. Crédit Agricole S.A. considers that, in practice, this mechanism should be implemented prior to any resolution procedure.

The implementation of a resolution procedure to the Crédit Agricole Group would thus mean that the legal internal solidarity mechanism had failed to remedy the failure of one or more network entities, and hence of the network as a whole. It would also limit the likelihood that the conditions for triggering the guarantee covering the liabilities of Crédit Agricole S.A. (granted in 1988 to its third-party creditors by the Regional Banks on a joint and several basis, and up to the aggregate amount of their equity) are met. It should be recalled that this guarantee may be triggered in the event of an asset shortfall following Crédit Agricole S.A.'s bankruptcy or dissolution.

CAPITAL TIES BETWEEN CRÉDIT AGRICOLE S.A. AND THE REGIONAL BANKS

The capital ties between Crédit Agricole S.A. and the Regional Banks are governed by an agreement entered into by the parties prior to Crédit Agricole S.A.'s initial public offering.

Under the terms of this agreement, the Regional Banks exercise their control over Crédit Agricole S.A. through SAS Rue La Boétie, a holding company wholly owned by the Regional Banks. The purpose of SAS Rue La Boétie is to hold enough shares to ensure that it always owns at least 50% of the share capital and voting rights of Crédit Agricole S.A.

In addition, under the same agreement, Crédit Agricole S.A. directly owned approximately 25% of the share capital of each Regional Bank (except for *Caisse régionale de la Corse* owned at 99.9%). Following the transaction to simplify the Group's capital structure on 3 August 2016, the bulk of the cooperative investment certificates ("*certificats coopératifs d'investissement*" or CCIs) and the cooperative associate certificates ("*certificats coopératifs d'associés*" or CCAs) held by Crédit Agricole S.A. were transferred to a holding company ("*Sacem Mutualisation*") jointly owned by the Regional Banks.

INFORMATION PERTAINING TO THE RELATED PARTIES

The related parties of Crédit Agricole S.A. are the consolidated companies, including equity-accounted entities, the Group's Senior Executives and the Regional Banks, given the Group's legal structure and due to the fact that Crédit Agricole S.A. is the Central Body of the Crédit Agricole network.

In accordance with Crédit Agricole internal financial mechanisms, transactions between Crédit Agricole S.A. and the Regional Banks are presented on the balance sheet and income statement as Crédit Agricole internal transactions (Note 4.1 "Interest income and expenses", Note 4.2 "Net fees and commissions", Note 6.5 "Financial assets at amortised cost" and Note 6.7 "Financial liabilities at amortised cost").

OTHER SHAREHOLDERS' AGREEMENTS

Shareholder agreements signed during the financial year are detailed in Note 2 "Major structural transactions and material events during the period".

RELATIONS AMONG CONSOLIDATED COMPANIES AFFECTING THE CONSOLIDATED BALANCE SHEET

The list of Crédit Agricole S.A. companies is presented in Note 12 "Scope of consolidation at 31 December 2025". Since, at year-end, the existing transactions and outstandings between the Group's fully consolidated companies are eliminated on consolidation, only transactions with equity-accounted companies affect the Group's consolidated financial statements.

The main corresponding outstandings and commitments in the consolidated balance sheet at 31 December 2025 relate to transactions with the equity-accounted entities for the following amounts:

- loans and receivables due from credit institutions: €254 million (€263 million at 31 December 2024);
- loans and receivables due from customers: €1,643 million (€2,527 million at 31 December 2024);
- debt due to credit institutions: €2,070 million (€2,338 million at 31 December 2024);
- debt due to customers: €1,230 million (€1,472 million at 31 December 2024);
- commitments given on financial instruments: €1,966 million (€1,881 million at 31 December 2024);

- commitments received on financial instruments: €6,391 million (€5,554 million at 31 December 2024).

The transactions entered into with these entities did not have a material effect on the income statement for the period.

MANAGEMENT OF RETIREMENT, EARLY RETIREMENT AND END-OF-CAREER ALLOWANCES: INTERNAL HEDGING CONTRACTS WITHIN THE GROUP

As presented in Note 1.2 "Accounting policies and principles", employees are provided with various types of post-employment benefits. These are:

- end-of-career allowances;
- retirement plans, which may be either "defined-contribution" or "defined-benefit" plans.

The liability in this respect is partially funded by collective insurance contracts taken out with Predica, the Crédit Agricole Group's life insurance company.

These contracts govern:

- the setting up by the insurance company of mutual funds for investing contributions made by the employer to build up sufficient funds to cover end-of-career allowances or the various pension schemes;
- the management of the funds by the insurance company;
- the payment to the beneficiaries of the allowances and of the benefits due under the various plans.

Information on post-employment benefits is provided in Note 7 "Employee benefits and other compensation" in paragraphs 7.3 and 7.4.

RELATIONS WITH SENIOR MANAGEMENT

Detailed information on Senior Executives' compensation is provided in paragraph 7.7 of Note 7 "Employee benefits and other compensation", as well as in the "Remuneration policy" section, Chapter 3 "Corporate governance" of the Universal Registration Document.

There exist no material transactions between Crédit Agricole S.A. and its senior management, their families or the companies they control and which are not included in the Group's scope of consolidation.

CASH FLOW STATEMENT

The cash flow statement is presented using the indirect method.

Operating activities are representative of income-generating activities of Crédit Agricole S.A.

Tax inflows and outflows are included in full within operating activities.

Investment activities show the impact of cash inflows and outflows associated with purchases and disposal of investments in consolidated and non-consolidated corporates, property, plant & equipment and intangible assets. This section includes strategic equity investments classified as "Fair value through profit or loss" or "Fair value through other comprehensive income that will not be reclassified to profit or loss".

Financing activities show the impact of cash inflows and outflows associated with operations of financial structure concerning equity and long-term borrowing.

The **net cash flows** attributable to the operating, investment and financing activities of **discontinued operations** are presented on separate lines in the cash flow statement.

Net cash and cash equivalents include cash, debit and credit balances with central banks and debit and credit demand balances with credit institutions.

<i>(in millions of euros)</i>	31/12/2025	31/12/2024

NOTE 1

GROUP ACCOUNTING POLICIES AND PRINCIPLES,
ASSESSMENTS AND ESTIMATES APPLIED

1.1 APPLICABLE STANDARDS AND COMPARABILITY

Unless otherwise stated, all amounts in this financial report are expressed in euros and shown in millions, with no decimal places. Rounding amounts to the nearest million euros may occasionally result in negligible differences in the totals and subtotals shown in the tables.

Pursuant to EC Regulation No. 1606/2002, the consolidated financial statements have been prepared in accordance with IAS/IFRS standards and IFRIC interpretations applicable at 31 December 2025 and as adopted by the European Union (carve-out version), thus using certain exceptions in the application of IAS 39 on macro-hedge accounting.

These cover the following:

Standards, amendments or interpretations	Date of first-time application: financial years from	Potential material impact for the Group
Amendment to IAS 21/IFRS 1 Lack of Exchangeability	1 January 2025	No

ANC Regulation No. 2025-01 dated 7 February 2025, amending ANC Regulation No. 2016-09 and ANC Regulation No. 2020-01, dated 9 October 2020, should also be noted. This regulation covers the specific information to be provided by companies in the notes to their financial statements, from the 2025 financial year onwards, regarding certification fees for sustainability information.

Moreover, as long as the early application of standards and interpretations adopted by the European Union is optional for a period, this option is not selected by the Group, unless otherwise stated.

STANDARDS AND INTERPRETATIONS ADOPTED
BY THE EUROPEAN UNION AT 31 DECEMBER 2025
NOT YET APPLIED BY THE GROUP

IFRS 9/IFRS 7 – Classification and measurement
of financial instruments

The amendments to IFRS 9 and IFRS 7, adopted on 27 May 2025 and applicable to financial years beginning on or after 1 January 2026, clarify in particular the classification of financial assets with conditional characteristics, such as environmental, social and corporate governance (ESG) characteristics, through the SPPI test. Although this amendment is retroactive, the Group does not expect instruments with ESG clauses that existed before 1 January 2026 to fail the SPPI test.

These amendments will require additional information about financial instruments with contingent features as of the date of application.

These standards and interpretations are available on the European Commission website at: https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting/financial-reporting_en

DisclosureOfBasisOfPreparationOfFinancialStatementsExplanatory he standards and interpretations are the same as those applied and described in the Group’s financial statements for the financial year ended 31 December 2024.

They have been supplemented by the IFRS standards as adopted by the European Union at 31 December 2025 and for which application is mandatory for the first time during financial year 2025.

STANDARDS AND INTERPRETATIONS NOT YET ADOPTED
BY THE EUROPEAN UNION AS AT 31 DECEMBER 2025

The standards and interpretations published by the IASB at 31 December 2025 but not yet adopted by the European Union are not applied by the Group. They will become mandatory only as from the date planned by the European Union and have not been applied by the Group at 31 December 2025.

IFRS 18 – Presentation and disclosure
in financial statements

IFRS 18 “Presentation and Disclosure in Financial Statements” published in April 2024 will replace IAS 1 “Presentation of Financial Statements” and will apply to financial years beginning on or after 1 January 2027, subject to adoption by the European Union. The Group will not apply this new standard in advance.

IFRS 18 will introduce a new structure for the income statement and the mandatory subtotals with classification of income and expenses into three categories: “operating”, “investing” and “financing” in the income statement.

IFRS 18 will also require entities to provide a description in the notes to the financial statements of the performance measures defined by Management and used in public communications outside IFRS financial statements.

It also includes new requirements for how financial information is aggregated and disaggregated based on the identified roles of the primary financial statements and the notes.

Work is currently ongoing to analyse and prepare for its implementation within the Group.

IFRS IC DECISIONS, FINALISED AND APPROVED BY THE IASB, THAT MAY IMPACT THE GROUP

Standards, amendments or interpretations	Publication date	Potential material impact for the Group
IAS 7 Classification of the cash flows related to variation margin calls "Collateralised-to-Market" contracts	4 December 2024	No
IAS 38 Recognition of intangible assets resulting from climate-related commitments	20 March 2025	No

IFRS 15 Recognition of revenues from tuition fees	20 March 2025	No
IAS 29 Financial reporting in hyperinflationary economies	11 July 2025	No

1.2 ACCOUNTING POLICIES AND PRINCIPLES

USE OF ASSESSMENTS AND ESTIMATES TO PREPARE THE FINANCIAL STATEMENTS

Given their nature, estimates made to draw up the financial statements are based on certain assumptions and involve risks and uncertainties as to whether they will be achieved in the future.

Future results may be influenced by many factors, including:

- activity in domestic and international financial markets;
- fluctuations in interest and foreign exchange rates;
- the economic and political climate in certain business sectors or countries;
- changes in regulations or legislation;
- policyholder behaviour;
- demographic changes.

This list is not exhaustive.

Despite the unstable international environment, the global economy has resisted well. In the United States, the slowdown was less pronounced than anticipated. The inflationary impact of tariffs was more contained than expected, but inflation remained significantly above the Fed's target. The labour market has shown clear signs of a slowdown since the summer, which led the Fed, after nine months of status quo, to make three rate cuts at the end of the year.

In the eurozone, despite foreign trade being impacted by tariffs, the strength of the euro and Asian competition, the good health of private agents and the resilience of domestic demand caused accelerated growth. Inflation returned to its target level, leaving the ECB comfortably able to keep its rates unchanged from June 2025, after the decrease recorded in the first half of 2025.

The differences in the timing of the monetary policies of the Fed and the ECB, as well as slowing activity in the United States and something of an acceleration in the eurozone, caused a divergence in the evolution of interest rates on both sides of the Atlantic in 2025: overall, decreasing in the United States and rising in the eurozone. European sovereign spreads narrowed, particularly the Italian spread, which, adversely affected by the political and budgetary situation, fell slightly below the French spread. These various elements may have had an impact on the main accounting estimates at 31 December 2025.

Accounting estimates based on assumptions are principally used in the following assessments:

- financial instruments measured at fair value (including non-consolidated equity investments);
- insurance contract assets and liabilities;
- reinsurance contract assets and liabilities;
- liabilities under investment contracts without discretionary participation features;
- pension schemes and other post-employment benefits;
- stock option plans;
- impairment of debt instruments at amortised cost or at fair value through other comprehensive income that can be reclassified to profit or loss;
- provisions;
- impairment of goodwill;
- deferred tax assets;
- valuation of equity-accounted entities.

The procedures for the use of assessments or estimates are described in the relevant sections below.

In particular, the measurement of insurance contracts under IFRS 17 requires important judgements to be made. The main matters requiring judgement in the Group's application of IFRS 17 are as follows, and information about them is provided in the sections and notes referred to below:

- the estimation of future cash flows, in particular the projection of these cash flows and the determination of the contract boundary: in the sections "Measurement of insurance contracts/ Estimation of future cash flows" and "Measurement of insurance contracts/Contract boundary";
- the technique used to determine the adjustment for non-financial risk: in the section "Measurement of insurance contracts/Adjustment for non-financial risk";
- the approach used to determine discount rates: in the section entitled "Measurement of insurance contracts/Discount rates";
- the definition of hedging units and the determination of the amount of CSM allocated to profit or loss in each period to reflect the services provided under insurance contracts; in the section entitled "Recognition of the contractual service margin in profit or loss";
- the determination of transitional amounts relating to groups of contracts existing at the transition date: in Note 5.3 "Specific characteristics of insurance", section "Insurance contracts - Transitional amounts".

FINANCIAL INSTRUMENTS (IFRS 9, IFRS 13, IAS 32 AND IAS 39)**Definitions**

IAS 32 defines a financial instrument as any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity, meaning any contract representing contractual rights or obligations to receive or pay cash or other financial assets.

Financial assets and liabilities are treated in the financial statements in accordance with IFRS 9 as adopted by the European Union.

Derivative instruments are financial assets or liabilities whose value changes according to that of an underlying (provided, in the case of a non-financial variable, that the variable is not specific to a party to the contract), which require a small or no initial investment and for which settlement occurs at a future date.

IFRS 9 sets the principles governing the classification and measurement of financial instruments, impairment/provisioning of credit risk and hedge accounting, excluding macro-hedging transactions.

It should nevertheless be noted that Crédit Agricole S.A. has opted not to apply the IFRS 9 general hedging model. All hedging relationships consequently remain within the scope of IAS 39 pending future provisions relating to macro-hedging.

“Green” or “ESG” financial assets and “green bond” financial liabilities comprise a variety of instruments and mainly relate to loans and borrowings used to finance environmental projects and the environmental transition. It should be noted that not all financial instruments with these qualifications necessarily have a remuneration that varies depending on the achievement of ESG targets. This terminology is liable to change as a result of European regulations on sustainable finance. These instruments are recognised in accordance with IFRS 9 using the principles set out below. In particular, loans whose indexation of the ESG factor compensation does not introduce leverage or is considered immaterial in terms of variability of the cash flows of the instrument are not considered as failing the SPPI test (analysis of contractual clauses) on the basis of this single factor.

Conventions for valuing financial assets and liabilities**Initial measurement**

During their initial recognition, financial assets and liabilities are measured at fair value as defined by IFRS 13.

Fair value as defined by IFRS 13 corresponds to the price that would be received to sell an asset or paid to transfer a liability in an ordinary transaction between market participants, on the principal or the most advantageous market, at the valuation date.

Subsequent measurement

After initial recognition, financial assets and liabilities are measured according to their classification either at amortised cost using the effective interest rate method (EIR) for debt instruments or at fair value as defined by IFRS 13. Derivative instruments are always measured at fair value.

The effective interest rate (EIR) is the rate that discounts estimated future cash payments or receipts through the expected life of the financial instrument to obtain the net carrying amount of the financial asset or financial liability.

Amortised cost corresponds to the amount at which the financial asset or liability is measured during its initial recognition, including

transaction costs directly attributable to its acquisition or issue, reduced by repayments of principal, increased or reduced by the cumulative amortisation calculated by the effective interest rate method (EIR) on any difference (discount or premium) between the initial amount and the amount at maturity. In the case of a financial asset at amortised cost or at fair value through recyclable equity, the amount may be adjusted if necessary in order to correct for impairment (see the paragraph on “Provisions for credit risk”).

Financial assets**Classification and measurement of financial assets**

Non-derivative financial assets (debt or equity instruments) are classified on the balance sheet in accounting categories that determine their accounting treatment and their subsequent valuation mode.

The criteria for the classification and valuation of financial assets depends on the nature of the financial assets, according to whether they are qualified as:

- debt instruments (e.g. loans and fixed or determinable income securities); or
- equity instruments (e.g. shares).

These financial assets are classified in one of the following three categories:

- financial assets at fair value through profit or loss;
- financial assets at amortised cost (debt instruments only);
- financial assets at fair value through equity (recyclable for debt instruments; non-recyclable for equity instruments).

Debt instruments

The classification and valuation of a debt instrument depend on the combination of two criteria: the business model defined at portfolio level and the analysis of the contractual terms (SPPI test) determined by debt instrument, unless the fair value option is used.

The three business models

The business model represents the strategy followed by the management of Crédit Agricole S.A. for managing its financial assets in order to achieve its targets. The business model is specified for a portfolio of assets and does not constitute a case-by-case intention for an isolated financial asset.

We distinguish three business models:

- the Hold to Collect model where the aim is to collect contractual cash flows over the lifetime of the assets; this model does not always imply holding all of the assets until their contractual maturity; however, sales of assets are strictly governed;
- the Hold to Collect and Sell model where the aim is to collect the contractual cash flows over the lifetime of the assets and to sell the assets; under this model, both the sale of the financial assets and receipt of cash flows are essential; and
- the Other/Sell model, where the main aim is to sell the assets.

In particular, it concerns portfolios where the aim is to collect cash flows via disposals, portfolios whose performance is assessed based on fair value and portfolios of financial assets held for trading.

When the management strategy for managing financial assets does not correspond to either the collect model or the collect and sell model, these financial assets are classified in a portfolio whose management model is other/sell.

The contractual terms

("Solely Payments of Principal & Interest" or "SPPI" test)

"SPPI" testing combines a set of criteria, examined cumulatively, to establish whether contractual cash flows meet the characteristics of simple financing (principal repayments and interest payments on the remaining amount of principal due).

The test is satisfied when the financing gives entitlement only to the repayment of the principal and when the payment of interest received reflects the time value of money, the credit risk associated with the instrument, the other costs and risks of a conventional loan contract and a reasonable margin, whether the interest rate is fixed or variable.

In simple financing, interest represents the cost of the passage of time, the price of credit and liquidity risk over the period, and other components related to the cost of carrying the asset (e.g. administrative costs etc.).

In some cases, when qualitative analysis of this nature does not allow a conclusion to be made, quantitative analysis (or benchmark testing) is carried out. This additional analysis consists of comparing the contractual cash flows of the asset under review with the cash flows of a benchmark asset.

If the difference between the cash flows of the financial asset and the benchmark asset is considered immaterial, the asset is deemed to be simple financing.

Moreover, specific analysis is conducted when the financial asset is issued by special purpose entities establishing a differentiated order of payment among the holders of the financial assets by contractually linking multiple instruments and creating concentrations of credit risk ("tranches").

Each tranche is assigned a rank of subordination that specifies the order of distribution of cash flows generated by the structured entity.

In this case, the "SPPI" test requires an analysis of the characteristics of contractual cash flows of the asset concerned and underlying assets according to the "look-through" approach and the credit risk borne by the tranches subscribed compared to the credit risk of the underlying assets.

The mode of recognition of debt instruments resulting from qualification of the business model combined with the "SPPI" test may be presented in the following diagram:

Debt instruments		Business models		
		Hold to collect	Hold to collect and sell	Other/Sell
SPPI test	Satisfied	Amortised cost	Fair value through other comprehensive income that may be reclassified to profit or loss	Fair value through profit or loss (SPPI test N/A)
	Not satisfied	Fair value through profit or loss	Fair value through profit or loss	Fair value through profit or loss (SPPI test N/A)

Debt instruments at amortised cost

Initially measured at fair value, debt instruments are subsequently measured at amortised cost if they are eligible for the "Hold to collect" model and if they pass the "SPPI" test.

They are recorded at the settlement/delivery date and their initial valuation also includes accrued interest and transaction costs.

Amortisation of any premiums or discounts and loans and receivables transaction costs on fixed-income securities is recognised in the income statement using the effective interest rate method.

This category of financial instruments is impaired under the conditions described in the specific paragraph "Impairment/provisioning for credit risks".

Debt instruments at fair value through other comprehensive income that can be reclassified to profit or loss

Initially measured at fair value, debt instruments are subsequently measured at fair value through recyclable equity if they are eligible for the "Hold to collect and sell" model and if they pass the "SPPI" test.

They are recorded at the trade date and their initial valuation also includes accrued interest and transaction costs. Amortisation of any premiums or discounts and transaction costs on fixed-income securities is recognised in the income statement using the effective interest rate method.

These financial assets are subsequently measured at fair value, with changes in fair value recorded in other comprehensive income that can be reclassified to profit or loss and offset against the outstandings account (excluding accrued interest recognised in profit or loss according to the effective interest rate method).

In the case of disposal of the securities, these changes are transferred to the income statement.

This category of financial instruments is adjusted for expected credit losses (ECL) under the conditions described in the specific paragraph "Impairment/provisions for credit risks" (without this affecting the fair carrying amount).

Debt instruments at fair value through profit or loss

Debt instruments are measured at fair value through profit or loss in the following cases:

- the instruments are classified in portfolios composed of financial assets held for trading or for which the main aim is disposal. Financial assets held for trading are assets acquired or managed by the enterprise primarily with the aim of disposal in the short term or which are included in a portfolio of financial instruments managed as a unit and with the purpose of making a profit from short-term price fluctuations or an arbitrage margin. Although contractual cash flows are received during the period that Crédit Agricole S.A. holds the assets, receiving these contractual cash flows is not essential but ancillary;
- debt instruments that do not fulfil the criteria of the "SPPI" test. This is notably the case for UCIs (Undertakings for Collective Investment).
- financial instruments classified in portfolios which Crédit Agricole S.A. designates at fair value in order to reduce an accounting treatment difference on the income statement. In this case, the instrument is classified as designated at fair value through profit or loss.

Financial assets measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (directly recorded to profit or loss) and including accrued interest.

They are subsequently measured at fair value and changes in fair value are recognised in profit or loss, under “Revenues”, offset against the outstandings account. Interest on these instruments is

recorded under “Net gains (losses) on financial instruments at fair value through profit and loss”.

This category of financial assets is not impaired for credit risk.

Debt instruments measured by definition at fair value through profit or loss whose business model is “Other/Sell” are recorded at the settlement/delivery date.

Debt instruments designated at fair value through profit or loss are recorded on the trade date.

Debt instruments measured by definition at fair value through profit or loss, failing the SPPI test, are recorded at the settlement date.

Equity instruments

Equity instruments are by default recognised at fair value through profit or loss, except in the case of the irrevocable option for classification and measurement at fair value through other comprehensive income that cannot be reclassified to profit or loss, providing that these instruments are not held for trading purposes.

Equity instruments at fair value through profit or loss

Financial assets measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (directly recorded to profit or loss). Equity instruments held for trading purposes are recorded at the trade date. Equity instruments measured at fair value through profit or loss and not held for trading are recorded at the settlement date.

They are subsequently measured at fair value and changes in fair value are recognised in profit or loss, under “Revenues”, offset against the outstandings account.

This category of financial assets is not impaired.

Equity instruments at fair value through other comprehensive income that cannot be reclassified to profit or loss (irrevocable option)

The irrevocable option to recognise equity instruments at fair value through other comprehensive income that cannot be reclassified to profit or loss is adopted at the transactional level (line by line) and applies on the date of initial recognition. These securities are recorded at the trade date.

The initial fair value includes transaction costs.

During subsequent valuations, changes in fair value are recognised in other comprehensive income that cannot be reclassified to profit or loss. In case of disposal, these changes are not reclassified to profit or loss. The gain or loss on disposal is recognised in equity.

Only dividends are recognised in profit or loss, if:

- the right of the entity to receive payment is established;
- it is probable that the economic benefits associated with the dividends will flow to the entity;
- the amount of dividends can be reliably estimated.

This category of financial assets is not impaired.

Reclassification of financial assets

In the case of a significant change in the business model used for managing financial assets (new activity, acquisition of entities, disposal or discontinuation of a significant activity), a reclassification of these financial assets is necessary. The reclassification applies to all financial assets in the portfolio from the date of reclassification.

In other cases, the business model remains unchanged for existing financial assets. If a new business model is identified, it applies prospectively to new financial assets grouped in a new management portfolio.

Temporary investments in/Disposals of securities

Temporary disposals of securities (loans of securities, securities bought/sold under repurchase agreements) do not generally fulfil the conditions for derecognition.

Securities lent or sold under repurchase agreements remain on the balance sheet of the transferor. In the case of securities under repurchase agreements, the amounts received, representing the liability to the transferee, are recognised on the liabilities side of the balance sheet by the transferor.

Securities borrowed or received under repurchase agreements are not recognised on the balance sheet of the transferee.

In the case of securities under repurchase agreements, a debt to the transferor is recorded on the balance sheet of the transferee and offset against the amount paid. If the security is subsequently resold, the transferee records a liability equivalent to the fair value of fulfilling their obligation to return the security received under the agreement.

Income and expenses relating to such transactions are posted to profit and loss on a prorated basis, except in the case of classification of assets and liabilities at fair value through profit or loss.

Derecognition of financial assets

A financial asset (or group of financial assets) is fully or partially derecognised if:

- the contractual rights to the cash flows from the financial asset expire;
- or are transferred or are deemed to have expired or been transferred because they belong *de facto* to one or more beneficiaries; and substantially all the risks and rewards of the financial asset are transferred.

In this case, any rights or obligations created or retained at the time of transfer are recognised separately as assets and liabilities.

If the contractual rights to the cash flows are transferred but some of the risks and rewards of ownership as well as control are retained, Crédit Agricole S.A. continues to recognise the financial asset to the extent of the Group's continuing involvement in that asset. Continuing involvement pertains to the portion of the asset that remains exposed to changes in the value of the transferred asset.

Financial assets renegotiated for commercial reasons without financial difficulties of the counterpart with the aim of developing or keeping a commercial relation are derecognised at the date of the renegotiation. The new loans granted to customers are recorded at their fair value on the date of renegotiation. Subsequent recognition depends on the business model and the "SPPI" test.

Interest paid by the government (IAS 20)

Under French government measures to support the agricultural and rural sector and to help home buyers, certain Crédit Agricole S.A. entities grant subsidised loans at rates fixed by the government. Consequently, the government pays these entities the difference between the subsidised lending rate and a predetermined benchmark rate. Thus, the loans that benefit from these subsidies are granted at market rates.

The subsidy system is periodically reviewed by the government.

In accordance with IAS 20, subsidies received from the government are recorded in profit or loss under "Interest and similar income" and spread over the life of the corresponding loans.

Financial liabilities

Classification and measurement of financial liabilities

Financial liabilities are classified on the balance sheet in the following two accounting categories:

- financial liabilities at fair value through profit or loss, either due to their nature or optionally;
- financial liabilities at amortised cost.

Financial liabilities at fair value through profit or loss due to their nature

Financial instruments issued primarily to be bought back in the short term, instruments forming part of an identified portfolio of financial instruments which are managed together and which have indications of a recent profile of short-term profit-taking, and derivatives (with the exception of certain hedging derivatives) are measured at fair value due to their nature.

Changes in the fair value of this portfolio are recognised through profit or loss.

Financial liabilities designated at fair value through profit or loss

Financial liabilities fulfilling one of the three conditions defined by the standard below may be designated for measurement at fair value through profit or loss: for hybrid issues comprising one or more separable embedded derivatives, in order to reduce or eliminate the distortion of accounting treatment or groups of managed financial liabilities for which performance is measured at fair value.

This option is irrevocable and applies mandatorily from the date of initial recognition of the instrument.

During subsequent measurement, these financial liabilities are measured at fair value through profit or loss for changes in fair value not related to own credit risk and through other comprehensive income that cannot be reclassified to profit or loss for changes in value related to own credit risk, unless this aggravates an accounting mismatch (in which case any changes in value related to the Company's own credit risk are recorded in the income statement, as required by the standard).

Financial liabilities measured at amortised cost

All other liabilities fulfilling the definition of a financial liability (excluding derivatives) are measured at amortised cost.

These liabilities are initially measured at fair value (including transaction income and costs) and subsequently at amortised cost using the effective interest rate method.

Deposits and savings accounts

Deposits and savings accounts are recorded under the category "Financial liabilities at amortised cost – Debt due to customers" in spite of the characteristics of the collection system within the Crédit Agricole group, with deposits originating from the Regional Banks centralised at Crédit Agricole S.A. For the Group, the ultimate counterparty for these deposits is the end customer.

The deposits and savings are initially measured at fair value and subsequently at amortised cost.

Regulated savings products are by nature deemed to be at market rates.

Home purchase savings schemes and home purchase savings accounts (HPSPs) as set out in Note 6.15 "Provisions".

Reclassification of financial liabilities

The initial classification of financial liabilities is irrevocable. No subsequent reclassification is authorised.

Distinction between debt instruments and equity

Securities are classed as debt instruments or equity instruments based on the substance of the contractual terms.

A financial liability is a debt instrument if it includes a contractual obligation:

- to provide another entity with cash, another financial asset or a variable number of equity instruments; or
- to exchange financial assets and liabilities with another entity at potentially unfavourable conditions.

An equity instrument is a non-redeemable financial instrument which offers discretionary compensation representing a residual interest in a corporate after deduction of all its financial liabilities (net assets) and which is not qualified as a debt instrument.

Treasury share buyback

Treasury shares or equivalent derivative instruments such as options on treasury shares bought by Crédit Agricole S.A. with a fixed strike ratio, including shares held to cover stock option plans, do not meet the definition of a financial asset and are deducted from equity. They do not generate any impact on the income statement.

Derecognition and modification of financial liabilities

A financial liability is derecognised in full or in part:

- when it is extinguished; or
- when quantitative or qualitative analyses suggest it has undergone a substantial change following restructuring.

A substantial modification of an existing financial liability must be recorded as an extinction of an initial financial liability and the recognition of a new financial liability (novation). Any differential between the carrying amount of the extinct liability and the new liability will be recognised immediately in the income statement.

If the financial liability is not derecognised, the original effective interest rate is maintained. A discount/premium is recognised immediately in the income statement at the date of modification and is then spread, using the original effective interest rate, over the remaining life of the instrument.

Negative interest on financial assets and financial liabilities

In accordance with the IFRS IC decision of January 2015, negative interest income (expense) on financial assets that does not meet the definition of income under IFRS 15 is recognised as interest expense in the income statement and not as a reduction of interest income. The same applies to negative interest expense (income) on financial liabilities.

Impairment/Provisions for credit risks**Scope of application**

In accordance with IFRS 9, Crédit Agricole S.A. recognises a value adjustment for expected credit losses (ECL) on the following outstandings:

- financial assets of debt instruments at amortised cost or fair value through other comprehensive income that can be reclassified to profit or loss (loans and receivables, debt securities);
- financing commitments which are not measured at fair value through profit or loss;
- financial guarantee commitments coming under IFRS 9 and which are not measured at fair value through profit or loss;
- rental receivables coming under IFRS 16; and

- trade receivables generated by transactions under IFRS 15.

Equity instruments (at fair value through profit or loss or through other comprehensive income that cannot be reclassified to profit or loss) are not concerned by impairment provisions.

Derivative and other financial instruments measured at fair value through profit or loss are subject to the calculation of counterparty risk which is not covered by the ECL model. This calculation is described in Chapter 5 "Risks factors and risk management" of Universal Registration Document.

Credit risk and impairment/provisioning stages

Credit risk is defined as risk of loss related to default by a counterparty leading to its inability to meet its commitments to the Group.

The process of provisioning credit risk has three stages:

- **Stage 1:** upon initial recognition of the financial instrument (credit, debt security, guarantee etc.), Crédit Agricole S.A. recognises the 12-month expected credit losses;
- **Stage 2:** if the credit quality deteriorates significantly for a given transaction or portfolio, Crédit Agricole S.A. recognises the expected losses over its lifetime;
- **Stage 3:** when one or more default events have occurred on the transaction or on a counterparty with an adverse effect on the estimated future cash flows, Crédit Agricole S.A. recognises incurred losses over its lifetime. Subsequently, if the conditions for classifying financial instruments in Stage 3 are not met, the financial instruments are reclassified in Stage 2, then in Stage 1 according to the subsequent improvement in the quality of the credit risk.

Definition of default

The definition of default for the requirements of ECL provisioning is identical to that used in management and for the calculation of regulatory ratios. A debtor is, therefore, considered to be in default when at least one of the following two conditions has been met:

- a significant arrear in payment, generally more than ninety days past due, unless specific circumstances point to the fact that the delay is due to reasons independent of the debtor's financial situation;
- Crédit Agricole S.A. believes that the debtor is unlikely to settle its credit obligations unless it avails itself of certain measures such as enforcement of collateral security right.

A loan in default (Stage 3) is said to be impaired when one or more events occur which have a negative effect on the estimated future cash flows from this financial asset. Indications of impairment of a financial asset cover observable data on the following events:

- significant financial difficulties of the issuer or borrower;
- a breach of contract, such as default or overdue payment;
- the granting, by the lender(s) to the borrower, for economic or contractual reasons related to financial difficulties of the borrower, of one or more favours that the lender(s) would not have considered under other circumstances;
- the increasing probability of bankruptcy or financial restructuring of the borrower;
- the disappearance of an active market for the financial asset due to financial difficulties;
- the purchase or creation of a financial asset with a significant discount, which reflects the credit losses suffered.

It is not necessarily possible to isolate a particular event. The impairment of the financial asset could result from the combined effect of several events.

The defaulting counterparty returns to a healthy situation only after an observation period (90 days) that makes it possible that the debtor is no longer in default (assessment by the Risk Management Department).

Definition of expected credit loss (“ECL”)

ECL is defined as the weighted expected probable value of the discounted credit loss (principal and interest). It represents the present value of the difference between the contractual cash flows and the expected cash flows (including principal and interest).

The ECL approach is designed to anticipate as early as possible the recognition of expected credit losses.

ECL governance and measurement

The governance of the system for measuring IFRS 9 parameters is based on the structure implemented as part of the Basel framework. The Group Risk department is responsible for defining the methodological framework and supervising the loan loss provisioning system.

The Group primarily relies on the internal rating system and current Basel processes to define the scope of the IFRS 9 parameters required to calculate ECL. The assessment of the change in credit risk is based on an expected loss model and extrapolation based on reasonable scenarios. All information that is available, relevant, reasonable and justifiable, including of a forward-looking nature, must be retained.

The formula includes among others the probability of default, loss given default and exposure at default parameters.

These calculations are broadly based on the internal models used as part of the regulatory framework, but with specific characteristics to determine an economic ECL. IFRS 9 recommends a Point in Time analysis while having regard to historical loss data and forward-looking macroeconomic data, whereas the prudential regulation analyses the perspectives Through The Cycle for probability of default (PD) and in a Downturn for Loss Given Default.

The accounting approach also requires the recalculation of certain Basel parameters, in particular to eliminate internal recovery costs or floors that are imposed by the regulator in the regulatory calculation of Loss Given Default (“LGD”).

ECLs are calculated according to the type of product concerned: financial instruments or off-balance sheet instruments.

The expected credit losses for the coming 12 months (Stage 1) make up a percentage of the lifetime expected credit losses (Stages 2 and 3), and represent the lifetime cash flow shortfalls in the event of a default during the 12 months following the reporting period (or a shorter period if the expected lifetime of the financial instrument is less than 12 months), weighted by the probability of default within 12 months.

Expected credit losses are discounted at the effective interest rate or at the contractual rate (when the EIR is not available) used for the initial recognition of the financial instrument.

The terms of measurement of ECLs include collateral and other credit enhancements that are part of the contractual terms and which Crédit Agricole S.A. does not account for separately. The estimate of the expected cash flow shortfalls from a guaranteed financial instrument reflects the amount and timing of the recovery of the guarantees.

In accordance with IFRS 9, the inclusion of guarantees and sureties does not affect the assessment of the significant deterioration in credit risk: this is based on the evolution of the debtor's credit risk without taking into account guarantees.

The models and parameters used are backtested at least annually.

Forward-looking macroeconomic data are taken into account in accordance with a methodological framework applicable at two levels:

- at Group level for the determination of a shared framework for the consideration of forward-looking data in the estimation of PD and LGD parameters over the transaction amortisation period;
- at the level of each entity in respect of its own portfolios.

Significant deterioration of credit risk

All Group entities must assess, for each financial instrument, the deterioration of credit risk from origination to each reporting date. Based on this assessment of the change in credit risk, the entities must classify their exposure into different risk categories (Stages).

To assess significant deterioration, the Group uses a process based on two levels of analysis:

- the first level is based on absolute and relative quantitative criteria and rules as well as qualitative Group criteria that apply to all Group entities (central forward looking);
- the second level is linked to the expert assessment, based on local forward-looking information, of the risk held by each entity in its portfolios that may lead to an adjustment in the Group Stage 2 reclassification criteria (switching a portfolio, sub-portfolio or third party from 12-month ECL to lifetime ECL).

Each financial instrument is, without exception, assessed for significant deterioration. Contagion is not required for the downgrading of financial instruments of the same counterparty from Stage 1 to Stage 2. The significant deterioration assessment must consider the change in credit risk of the principal debtor without taking account of any guarantee, including for transactions with a shareholder guarantee.

Possible losses in respect of portfolios of small loans with similar characteristics may be estimated on a statistical basis rather than individually assessed.

The assessment of the significant increase in credit risk under the first level, defined above, for financial instruments with a rating model is based on the following two criteria:

1. Low credit risk exemption:

In accordance with current standards, the Group has opted to apply the “low credit risk” exemption to investment-grade debt securities (see IFRS 9.B5.5.23) and loan agreements with a probability of default below a given threshold (i.e. 0.30%).

2. Quantitative indicators:

The Crédit Agricole Group has selected several quantitative criteria to classify a Stage 2 deterioration. It should be noted that any of these criteria is sufficient for a Stage 2 deterioration. The types of criteria are as follows:

- A relative criterion that measures, at the contract level, the change in the associated risk since the initial recognition date. It measures the difference (as a ratio) between the default risk on the reporting date of a counterparty and the default risk assessed at the initial recognition date.
- Three absolute criteria. The Group has defined:
 - An absolute threshold criterion based on the Basel probabilities of default to capture an absolute deterioration not correlated with economic conditions. In practice, it captures the last two grades before the default regarded as risky, and therefore with a Stage 2 classification for the calculation of ECL.

- An absolute threshold criterion based on the probability of default at one year (forward looking) at the reporting date, capturing an absolute significant deterioration correlated with the economic situation.
- An absolute threshold criterion based on the number of days past due exceeding 30 days for a Stage 2 classification.

3. Qualitative indicators:

The Group uses a set of qualitative indicators allowing for a Stage 2 deterioration. These indicators may be at contract, counterparty or portfolio level and make it possible to identify exposures that have seen a significant deterioration in credit risk.

In the absence of an internal rating model, the Crédit Agricole Group uses the absolute threshold of payment 30 days past due as the maximum threshold for significant credit risk increase and classification in Stage 2.

If the credit risk increase since origination is no longer observed, impairment may be reduced to the 12-month expected credit losses (Stage 1).

To make up for the fact that certain significant deterioration factors or indicators may not be identifiable at instrument level, the standard allows for the assessment of significant deterioration at financial instrument portfolio level, or for groups of portfolios or parts of portfolios.

Portfolios can be created for the collective assessment of deterioration for instruments that share common characteristics, such as:

- instrument type;
- credit risk rating (including internal Basel 2 rating for entities with an internal ratings system);
- collateral type;
- date of initial recognition;
- remaining term until maturity;
- business sector;
- geographical location of the borrower;
- the value of collateral relative to the financial assets, if this has an impact on the probability of default (for example, in the case of loans secured only by collateral in certain countries or loan-to-value ratios);
- distribution channel, purpose of financing etc.

Differentiation of significant deterioration by market is therefore possible (home loans, consumer finance, loans to farmers or small corporates, corporate loans etc.).

The grouping of financial instruments for the purposes of credit risk assessment on a homogeneous portfolio basis may change over time, as new information becomes available.

For securities, Crédit Agricole S.A. uses an approach that consists of applying an absolute level of credit risk, in accordance with IFRS 9, below which exposures are classified in Stage 1 and provisions are made based on 12-month ECL.

As such, the following rules shall apply for monitoring the significant deterioration of securities:

- “Investment Grade” securities, at the reporting date, are classified in Stage 1 and provisions are made based on 12-month ECL;
- “Non-Investment Grade” securities (NIG), at the reporting date, must be subject to monitoring for significant deterioration since origination, and be classified in Stage 2 (lifetime ECL) in the event of significant deterioration in credit risk.

Relative deterioration must be assessed prior to the occurrence of a known default (Stage 3).

Restructuring due to financial difficulty

Debt instruments restructured due to financial difficulties are those for which Crédit Agricole S.A. has amended the original financial terms (interest rate, term etc.) for economic or legal reasons linked to the financial difficulties of the borrower, under conditions that would not have been considered under other circumstances. As such, these can be any debt instruments, regardless of the risk deterioration category of the debt instrument since the initial recognition.

In accordance with the EBA (European Banking Authority) definition as stated in the “Risk factors and risk management – Risk management” chapter, debt restructuring for financial difficulties of the debtor refers to any modification to one or more credit agreements for that same reason, as well as any refinancing granted due to financial difficulties experienced by the customer.

This definition of restructuring must be applied to each agreement and not at client level (no contagion).

The definition of loans restructured due to financial difficulty is therefore comprised of two cumulative criteria:

- contract modification or debt refinancing (concessions);
- a customer who is in a difficult financial position (a debtor facing, or about to face, difficulties in honouring financial commitments).

“Contract modification” refers to the following example situations:

- there is a difference between the modified contract and the former terms of the contract, to the benefit of the borrower;
- the contract modifications result in more favourable conditions for the borrower, from which other customers of the bank, with a similar risk profile and at the same time, do not benefit.

“Refinancing” refers to situations in which a new debt is granted to the client to enable it to repay in full or in part another debt for which it cannot meet the contractual terms and conditions due to its financial position.

The restructuring of a loan (whether performing or non-performing) infers the presumed existence of a proven risk of loss (Stage 3).

The need to recognise impairment on the restructured exposure must therefore be analysed accordingly (a restructuring does not automatically result in the recognition of impairment for proven losses or classification as default).

The “restructured loan” classification is temporary.

Once the restructuring as defined by the EBA has been carried out, the exposure continues to be classified as “restructured” for at least two years, if the exposure was performing when restructured, and three years if the exposure was in default when restructured. These periods are extended in the event of the occurrence of certain events (e.g. further incidents).

In the absence of derecognition for this type of event, the reduction of future cash flows granted to a counterparty, or the postponing of these flows as part of a restructuring, shall result in the recognition of a discount in the cost of risk.

It represents loss of future cash flow discounted at the original effective rate. It is equal to the difference between:

- the carrying amount of the loan;
- and the sum of theoretical future cash flows from the “restructured” loan, discounted at the original effective interest rate (defined at the date of the financing commitment).

In the event of a waiver of part of the share capital, this amount shall constitute a loss to be recorded immediately in cost of risk.

The discount recognised when a loan is restructured is accounted for under cost of risk.

Upon reversal of the discount, the portion associated with the passage of time is recorded in "Revenues".

Accounts uncollectible

When a loan is deemed uncollectible, i.e. when it cannot be recovered in full or in part, the amount deemed uncollectible must be derecognised from the balance sheet and written off.

The decision as to when to write off a loan is taken on the basis of an expert opinion. This must therefore be established by each entity, with its Risk Management Department, according to its own business knowledge. Before any write-offs, a Stage 3 impairment loss must be recognised (with the exception of assets at fair value through profit or loss).

For loans at amortised cost or fair value through other comprehensive income that can be reclassified to profit or loss, the amount written off is recorded under cost of risk (nominal amount) and "Revenues" (interests).

Derivative financial instruments

Classification and measurement

Derivative instruments are financial assets or liabilities classified by default as derivative instruments held-for-trading unless they can be considered to be hedging derivatives.

For their initial recognition, they are recorded on the balance sheet at their initial fair value on the trading date.

They are subsequently recognised at their fair value.

At the end of each reporting period, the counterparty of the change in fair value of derivatives on the balance sheet is recorded:

- through profit or loss if it concerns derivative instruments held-for-trading and for fair value hedges;
- through recyclable equity for cash flow hedging derivatives and net investments in foreign operations for the effective portion of the hedge.

Hedge accounting

General framework

In accordance with a decision made by the Group, Crédit Agricole S.A. chooses not to apply the "hedge accounting" component of IFRS 9, as permitted by the standard. All hedging relationships will continue to be documented in accordance with the rules of IAS 39 until, at the latest, the date on which the macro-hedging text is adopted by the European Union. However, hedge accounting under IAS 39 uses the classification and measurement principles of IFRS 9 to decide which financial instruments qualify.

Under IFRS 9, and taking account of the IAS 39 hedging principles, debt instruments at amortised cost and at fair value through recyclable equity qualify as fair value hedges and as cash flow hedges.

Documentation

Hedging relationships must comply with the following principles:

- fair value hedges are intended to provide protection from exposure to changes in the fair value of an asset or a liability that has been recognised, or of a firm commitment that has not been recognised, attributable to the risk(s) hedged and that may have an impact on net income (for instance, the hedging of all or some changes in fair value caused by the interest rate risk of a fixed-rate debt);

- cash flow hedges are intended to provide protection from exposure to changes in the future cash flow of an asset or liability that has been recognised, or of a transaction considered to be highly probable, attributable to the risk(s) hedged and that could (in the event of a planned transaction not carried out) have an impact on net income (for instance, the hedging of changes in all or some of the future interest payments on a floating-rate debt);
- net investment hedges in foreign operations are intended to provide protection against the risk of unfavourable changes in fair value associated with the foreign exchange risk of an investment carried out abroad in a currency other than the euro, Crédit Agricole S.A.'s presentation currency.

Hedges must also meet the following criteria in order to be eligible for hedge accounting:

- the hedging instrument and the hedged item must be eligible;
- there must be formal documentation from inception, primarily including the individual identification and characteristics of the hedged item, the hedging instrument, the nature of the hedging relationship and the nature of the hedged risk;
- the effectiveness of the hedge must be demonstrated, at inception and retrospectively, by testing at each reporting date.

For interest rate hedges for a portfolio of financial assets or financial liabilities, Crédit Agricole group documents the hedging relationship for fair value hedges in accordance with the carve-out version of IAS 39 as adopted by the European Union. In particular:

- the Group documents these hedging relationships based on its gross position in derivative instruments and hedged items;
- the effectiveness of the hedging relationships is measured by maturity schedules.

Measurement

The remeasurement of the derivative at fair value is recorded in the financial statements as follows:

- **fair value hedges:** the change in value of the derivative is recognised in the income statement symmetrically with the change in value of the hedged item in the amount of the hedged risk. Only the net amount of any ineffective portion of the hedge is recognised in the income statement;
- **cash flow hedges:** the change in value of the derivative, excluding accrued interest receivable, is recognised in the balance sheet through a specific account in other recyclable comprehensive income for the effective portion and any eventual ineffective portion of the hedge is recognised in the income statement. Profits or losses on the derivative accrued through equity are reclassified to profit or loss when the hedged cash flows occur;
- **hedges of net investment in a foreign operation:** the change in value of the derivative is recognised in the balance sheet in the translation adjustment account in recyclable equity and any ineffective portion of the hedge is recognised in the income statement.

Where the conditions for benefiting from hedge accounting are no longer met, the following accounting treatment must be applied prospectively, unless the hedged item disappears:

- **fair value hedges:** only the derivative instrument continues to be revalued through profit or loss. The hedged item is wholly accounted for according to its classification. For debt instruments at fair value through other comprehensive income that can be reclassified to profit or loss, changes in fair value subsequent to the ending of the hedging relationship are recorded in equity in their entirety. For hedged items valued at amortised cost, which were interest rate hedged, the revaluation adjustment is amortised over the remaining life of those hedged items;

- **cash flow hedges:** the hedging instrument is valued at fair value through profit or loss. The amounts accumulated in equity under the effective portion of the hedge remain in equity until the hedged flows of the hedged item affect profit or loss. For interest rate hedged items, income statement is impacted according to the payment of interest. In practice, the revaluation adjustment is amortised over the remaining life of those hedged items;
- **hedges of net investment in a foreign operation:** The amounts accumulated in equity under the effective portion of the hedge remain in equity as long as the net investment is held. The income is recorded once the net investment in a foreign operation exits the scope of consolidation.

Embedded derivatives

An embedded derivative is a component of a hybrid contract that meets the definition of a derivative product. This definition applies only to financial liabilities and non-financial contracts. Embedded derivatives must be accounted for separately from the host contract if the following three conditions are met:

- the hybrid contract is not measured at fair value through profit or loss;
- the embedded component taken separately from the host contract has the characteristics of a derivative;
- the characteristics of the derivative are not closely related to those of the host contract.

Determination of the fair value of financial instruments

When determining the fair value of financial instruments observable inputs must be prioritised. It is presented using the hierarchy defined in IFRS 13.

IFRS 13 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an ordinary transaction between market participants, on the principal or the most advantageous market, at the valuation date.

Fair value applies individually to each financial asset or financial liability. A portfolio exemption may be used where the management and risk monitoring strategy so allow and are appropriately documented. Thus, certain fair value parameters are calculated on a net basis when a group of financial assets and financial liabilities is managed on the basis of its net exposure to market or credit risks.

Crédit Agricole S.A. considers that the best evidence of fair value is reference to quoted prices published in an active market.

When such quoted prices are not available, fair value is determined using valuation techniques that maximise the use of relevant observable data and minimise the use of unobservable data.

When a debt is valued at fair value through profit or loss (by nature or designated), fair value takes account of the own credit risk of the issuer.

Fair value of structured issues

In accordance with IFRS 13, Crédit Agricole S.A. values its structured issues, recognised at fair value, by taking as a reference the issuer spread that specialist participants would agree to receive to acquire new Group issues.

Fair value hierarchy

The standard classifies fair value into three levels based on the observability of inputs used in valuation techniques:

Level 1: fair value corresponding to quoted prices (unadjusted) in active markets

Level 1 is composed of financial instruments that are directly quoted in active markets for identical assets and liabilities that Crédit Agricole S.A. can access at the valuation date. These are stocks and bonds quoted in active markets, fund securities quoted in an active market and derivatives traded on an organised market, in particular futures.

A market is regarded as being active if quoted prices are readily and regularly available from an exchange, broker, dealer, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

For financial assets and liabilities with offsetting market risks, Crédit Agricole S.A. uses mid-prices as a basis for determining fair values for the offsetting risk positions. The Group applies the current asking price to open short positions and the current bid price to open long positions.

Level 2: fair value measured using directly or indirectly observable inputs other than those in Level 1

The inputs used are observable either directly (i.e. prices) or indirectly (derived from prices) and generally consist of data from outside Crédit Agricole S.A., which are publicly available or accessible and based on a market consensus.

Level 2 consists of:

- stocks and bonds quoted in an inactive market or not quoted in an active market but for which the fair value is established using a valuation methodology usually used by market participants (such as discounted cash flow techniques or the Black & Scholes model) and based on observable market data;
- instruments that are traded over the counter, the fair value of which is measured with models using observable market data, i.e. that can be derived from various independently available external sources which can be obtained on a regular basis. For example, the fair value of interest rate swaps is generally derived from the yield curves of market interest rates as observed at the reporting date.

When Crédit Agricole S.A. uses the standard models and observable market data (such as interest rate yield curves or implied volatility surfaces), the day one gain or loss resulting from the initial fair value measurement of the related instruments is recognised in profit or loss at inception.

Level 3: fair value that is measured using significant unobservable inputs

For some complex instruments that are not traded in an active market, fair value measurement is based on valuation techniques using assumptions that cannot be observed on the market for an identical instrument. These instruments are disclosed within Level 3.

This mainly concerns complex interest rate instruments, equity derivatives, structured credit instruments for which fair value measurement includes, for instance, correlation or volatility inputs that are not directly benchmarkable with market data.

The transaction price is deemed to reflect the market value, any recognition of day one gain or loss is deferred.

The margin relating to these structured financial instruments is generally recognised through profit or loss over the period during which inputs are deemed unobservable. When market data become “observable”, the remaining margin to be deferred is immediately recognised in profit or loss.

Valuation methodologies and models used for financial instruments that are disclosed within Levels 2 and 3 incorporate all factors that market participants would consider in setting a price. They shall be beforehand validated by an independent control. Fair value measurement notably includes both liquidity risk and counterparty risk.

Offsetting of financial assets and financial liabilities

In accordance with IAS 32, Crédit Agricole S.A. nets a financial asset and a financial liability and reports the net amount when, and only when, it has a legally enforceable right to offset the amounts reported and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

The derivative instruments and the repurchase agreements handled with clearing houses that meet the two criteria required by IAS 32 have been offset on the balance sheet.

Net gains (losses) on financial instruments

Net gains (losses) on financial instruments at fair value through profit or loss

For financial instruments recognised at fair value through profit or loss, this item notably includes the following income statement elements:

- dividends and other revenues from equities and other variable income securities which are classified under financial assets at fair value through profit or loss;
- changes in fair value of financial assets or liabilities at fair value through profit or loss;
- gains and losses on disposals of financial assets at fair value through profit or loss;
- changes in fair value and gains and losses on disposal or termination of derivative instruments not included in a fair value hedge or cash flow hedge relationship.

This item also includes the ineffective portion of hedges.

Net gains (losses) on financial instruments at fair value through other comprehensive income

For financial assets recognised at fair value through equity, this item notably includes the following income statements elements:

- dividends from equity instruments classified as financial assets at fair value through non-recyclable equity;
- gains and losses on disposals and income associated with the termination of hedging relationships on debt instruments classified as financial assets at fair value through recyclable equity;
- net income on disposals or associated with the termination of fair value hedging instruments of financial assets at fair value through equity when the hedged item is disposed of.

Financing commitments and guarantees given

Financing commitments that are not designated as fair value through profit or loss or not treated as derivative instruments within the meaning of IFRS 9 are not recognised on the balance sheet. They are, however, covered by provisions for credit risk in accordance with the provisions of IFRS 9.

A financial guarantee contract is a contract under which the issuer must make specific payments to reimburse the holder for a loss incurred due to a specific debtor's failure to make a payment when due under the initial or amended terms of a debt instrument.

Financial guarantee contracts are recognised at fair value initially then subsequently at the higher of:

- the value adjustment amount for losses determined in accordance with the provisions of IFRS 9 in the “Impairment” section; or
- the amount originally recognised less, where applicable, the sum of income recognised in accordance with the principles of IFRS 15 “Revenue from Contracts with Customers”.

PROVISIONS (INCLUDING IAS 37)

Crédit Agricole S.A. has identified all obligations (legal or constructive) resulting from a past event for which it is probable that an outflow of resources will be required to settle the obligation, and for which the due date or amount of the settlement is uncertain but can be reliably estimated. These estimates are discounted where applicable whenever there is a material impact.

For obligations other than those related to credit risk, Crédit Agricole S.A. has set aside general provisions to cover:

- operational risks;
- employee benefits;
- financing commitment execution risks;
- claims and liability guarantees;
- tax risks (excluding income tax);
- risks related to home purchase savings schemes.

The latter provision is designed to cover the Group's obligations in the event of unfavourable moves impacting home purchase savings schemes. These obligations are: (i) to pay a fixed interest rate on the savings contract determined at inception for an undefined period of time; and (ii) to grant a loan to home purchase savings schemes and account savers at a rate fixed at inception of the contract. The provision is calculated for each generation of a home purchase savings scheme and for all home purchase savings accounts, with no netting of obligations between generations.

The amount of these obligations is calculated taking account notably of:

- subscriber behaviour models, based on assumptions regarding subscriber behaviour drawn from historical experience, which may not necessarily reflect actual trends in future behaviour;
- an estimate of the amount and term of the loans that will be granted in the future, based on historical experience over an extended period of time;
- the yield curve for market rates and reasonably foreseeable trends.

Certain estimates may be made to determine the amount of the following provisions:

- the provision for operational risks for which the identification of proven risks and an assessment by Management of incident frequency and the potential financial impact are taken into account;
- the provision for legal risks, which is based on Management's best estimate in light of the information in its possession at the end of the reporting period.

Detailed information is provided in Note 6.15 “Provisions”.

EMPLOYEE BENEFITS (IAS 19)

In accordance with IAS 19, employee benefits are recorded in four categories:

- short-term employee benefits;
- post-employment benefits falling into two categories: defined-benefit schemes and defined-contribution schemes;
- other long-term benefits (long-service awards, bonuses and compensation payable 12 months or more after the end of the financial year);
- severance payments.

Short-term benefits

Short-term benefits are those granted to employees during their working lives, and which would be expected to be paid in full within the 12 months following the financial year in which the services were rendered. These include salaries, premiums, paid annual leave, related social security costs and tax charges, and employee profit-sharing and incentive plans. These benefits are recognised as expenses for the financial year in which the services were provided by employees.

Post-employment benefits

Defined-benefit schemes

At each reporting date, Crédit Agricole S.A. sets aside reserves to cover its liabilities for retirement and similar benefits and all other employee benefits falling in the category of defined-benefit schemes.

In keeping with IAS 19, these commitments are stated based on a set of actuarial, financial and demographic assumptions, and in accordance with the Projected Credit Units method. Under this method, for each year of service, a charge is booked in an amount corresponding to the employee's vested benefits for the financial year. The charge is calculated based on the discounted future benefit.

Calculations of liabilities for retirement and other future employee benefits are based on assumptions made by Management with respect to the discount rate, staff turnover rate and probable increases in salary and social security costs. (See Note 7.4 "Post-employment benefits, defined-benefit schemes").

Discount rates are determined based on the average term of the commitment, that is, the arithmetical average of the terms calculated between the valuation date and the payment date weighted by employee turnover assumptions. The underlying used is the discount rate by reference to the iBoxx AA.

In accordance with IAS 19, Crédit Agricole S.A. recorded all actuarial gains and losses that were recognised in other comprehensive income that cannot be reclassified. Actuarial gains and losses consist of experience adjustments (difference between what has been estimated and what has occurred) and the effect of changes in actuarial assumptions.

The expected return on plan assets is determined using discount rates applied to measure the defined benefit obligation. The difference between the expected and actual return on plan assets is recognised in other comprehensive income that cannot be reclassified.

The cost of past services, incurred when a plan is amended or curtailed, is immediately recognised in profit or loss when the plan is amended or curtailed.

The amount of the provision is equal to:

- the present value of the obligation to provide the defined benefits at the end of the reporting period, calculated in accordance with the actuarial method recommended by IAS 19;

- if necessary, reduced by the fair value of the assets allocated to covering these commitments. These may be represented by an eligible insurance policy. In the event that 100% of the obligation is covered by an insurance policy that meets exactly the expense amount payable over the period for all or part of a defined-benefit plan, the fair value of the policy is deemed to be the value of the corresponding obligation, (i.e. the amount of the corresponding actuarial liability).

For such obligations that are not covered, a provision for termination payments is recognised under "Provisions" on the liabilities side of the balance sheet. This provision is equal to Crédit Agricole S.A.'s liabilities towards employees in service at financial year-end, governed by Crédit Agricole S.A.'s Collective Agreement that came into effect on 1 January 2005.

A provision to cover the cost of early retirement commitments is also listed under "Provisions". This provision covers the additional discounted cost of the various early retirement agreements signed by the Crédit Agricole S.A. entities under which employees of eligible age may take early retirement.

Lastly, certain Group companies are liable to pay supplementary retirement benefits. A provision is calculated on the basis of the Company's actuarial liability for these benefits. These provisions are also shown on the liabilities side of the balance sheet under "Provisions".

Defined-contribution schemes

"Employers" contribute to a variety of compulsory pension schemes. Plan assets are managed by independent organisations and the contributing companies have no legal or implied obligation to pay additional contributions if the funds do not have sufficient assets to cover all benefits corresponding to services rendered by employees during the financial year and during prior years. Consequently, Crédit Agricole S.A. has no liabilities in this respect other than its contributions due for the financial year ended which constitute financial year expenses.

Other long-term benefits

Other long-term benefits are employee benefits other than post-employment benefits or termination benefits but not fully due to employees within 12 months after the end of the financial year in which the related services have been rendered.

These include, in particular, bonuses and other deferred compensation payable 12 or more months after the end of the financial year in which they vest, but which are not share-based.

The measurement method is similar to the one used by the Group for post-employment benefits with defined-benefit schemes.

Severance payments

"Severance payments" arise either from the decision of Crédit Agricole S.A. to terminate the employee's employment before the standard retirement age, or a decision by the latter to accept the indemnities offered by the entity in exchange for termination of their employment (offer made to employees intended to encourage voluntary redundancies).

SHARE-BASED PAYMENTS (IFRS 2)

IFRS 2 "Share-based Payment" requires valuation of share-based payment transactions in the enterprise's income statement and balance sheet. This standard applies to transactions with employees and more specifically to:

- share-based payment transactions settled in equity instruments;
- share-based payment transactions settled in cash.

Share-based payment plans initiated by Crédit Agricole group that are eligible for IFRS 2 are mainly transactions settled in equity instruments (stock options, free share allocation plans, variable compensation settled in indexed cash or in shares etc.).

Options granted are measured at their fair value at the date of grant primarily using the Black & Scholes model. These options are recognised as a charge under "Employee expenses", with a corresponding adjustment to equity, spread over the vesting period.

Employee share issues offered to employees as part of the employee savings schemes are also subject to the IFRS 2 standard. Shares may be offered to employees with a discount. These plans have no vesting period but the shares are subject to a lock-up period of five years. The benefit granted to employees is measured as the difference between the fair value per share acquired at the date of granting and the purchase price paid by the employee on the subscription date multiplied by the number of shares subscribed. If there is no vesting period, the expense is recognised immediately. This benefit does not take into account the lock-up discount.

A more detailed description of the method, existing plans and valuation methods is provided in Note 7.6 "Share-based payments".

The cost of share-based payments settled in Crédit Agricole S.A. equity instruments and the cost of share subscriptions are recognised in the financial statements of the entities that employ the plan beneficiaries. The impact is recorded under Employee expenses, with a corresponding increase in "Consolidated reserves-Group share".

The cost of share-based payments settled in cash is recognised in the financial statements of entities that employ the plan beneficiaries in compensation expenses and spread on a straight-line basis over the vesting period, with a liability recorded in employee expenses. This liability is subject to periodical revaluation through profit or loss until the settlement date. This recognition principle applies in particular to variable compensation plans settled in cash indexed to the share price.

INCOME TAX CHARGE (IAS 12)

In accordance with IAS 12, the income tax charge includes all income taxes, whether current or deferred.

As a reminder, IAS 12 states that current and deferred tax assets and liabilities shall be valued using enacted or substantively enacted tax rates. In France, a text is substantively enacted after receiving the favourable vote of the National Assembly and the Senate and after approval by the Constitutional Council or once the deadline for referral to the Constitutional Council has expired.

It is thus appropriate to consider the corporate tax rate in France as remaining at 25.83% for the valuation of deferred tax assets and liabilities at 31 December 2025.

Current tax liability

IAS 12 defines current tax liability as "the amount of income tax payable (recoverable) in respect of the taxable profit (tax loss) for a period". Taxable income is the profit (or loss) for a given financial year determined in accordance with the rules established by the tax authorities and on the basis of which income tax must be paid (recovered).

The applicable rates and rules used to measure the current tax liability are those in effect in each country where the Group's companies are established.

The current tax liability includes all taxes on income, payable or recoverable, for which payment is not subordinated to the completion of future transactions, even if payment is spread over several financial years.

The current tax liability must be recognised as a liability until it is paid. If the amount that has already been paid for the current financial year and previous years exceeds the amount due for these years, the surplus must be recognised under assets.

When tax credits on revenues from securities portfolios and amounts receivable are effectively used to pay corporate income tax due for the financial year, they are recognised under the same heading as the income with which they are associated. The corresponding tax charge continues to be recognised under the "Income tax" charge heading in the income statement.

Deferred tax

Certain transactions carried out by Crédit Agricole S.A. may generate income taxes that are payable or recoverable in future periods. IAS 12 defines a difference between the carrying amount of an asset or liability and its tax base as a temporary difference.

This standard requires that deferred taxes be recognised in the following cases:

- a deferred tax liability should be recognised for any taxable temporary differences between the carrying amount of an asset or liability on the balance sheet and its tax base, unless the deferred tax liability arises from:
 - initial recognition of goodwill,
 - the initial recognition of an asset or a liability in a transaction that is not a business combination and that does not affect either the accounting or the taxable profit (taxable loss) at the transaction date;
- a deferred tax asset should be recognised for any deductible temporary differences between the carrying amount of an asset or liability on the balance sheet and its tax base, insofar as it is deemed probable that a future taxable profit will be available against which such deductible temporary differences can be allocated;
- a deferred tax asset should also be recognised for carrying forward unused tax losses and tax credits insofar as it is probable that a future taxable profit will be available against which the unused tax losses and tax credits can be allocated.

Deferred taxes are calculated based on the tax rates applicable in each country and must not be discounted.

Deferred tax assets and liabilities are offset against each other if, and only if:

- Crédit Agricole S.A. has a legally enforceable right to offset current tax assets against current tax liabilities; and
- the deferred tax assets and liabilities relate to income taxes levied by the same tax authority, either on the same taxable entity or on different taxable entities that intend either to settle current tax assets and liabilities on a net basis or to realise the assets and settle the liabilities simultaneously in each future financial year in which significant amounts of deferred tax assets or liabilities are expected to be settled or recovered.

Current and deferred tax liability is recognised in net income for the financial year, unless the tax arises from:

- either a transaction or event that is recognised directly through equity, during the same financial year or during another financial year, in which case it is directly debited or credited to equity;
- or a business combination.

Capital gains on securities

Taxable unrealised gains on securities do not generate any taxable temporary differences between the carrying amount of the asset and the tax base. As a result, deferred tax is not recognised on these gains. When the relevant securities are classified financial assets at fair value through other comprehensive income, unrealised gains and losses are recognised directly through offsetting in equity. Similarly, Crédit Agricole S.A.'s tax charge or actual tax savings arising from these unrealised gains or losses are reclassified as a deduction from equity.

In France long-term capital gains on the sale of equity investments, as defined by the French General Tax Code, are exempt from corporate income tax; with the exception of a share of costs, taxed at the normally applicable rate. In addition, unrealised gains recognised at the end of the financial year generate a temporary difference requiring the recognition of deferred tax on this share of costs.

Leases (IFRS 16)

Under IFRS 16 "Leases", a deferred tax liability is recognised on the right of use and a deferred tax asset on the rental debt for leases for which the Group is a lessee.

Tax risks

Tax risks relating to income tax result in the recognition of a tax receivable or liability when the probability of receiving the asset or paying the liability is considered more likely than not. These risks are also taken into account in the valuation of current and deferred tax assets and liabilities.

IFRIC 23 on measuring uncertain tax positions applies when an entity has identified one or more uncertainties about the income tax positions they have adopted. It also provides details of how to estimate them:

- the analysis must be based on a full assessment by the tax authorities;
- the tax risk must be recognised as a liability as soon as it is more likely than unlikely that the tax authorities will question the treatment adopted, for an amount reflecting Management's best estimate;
- in the event that the probability of a refund by the tax authorities is greater than 50%, a receivable must be recognised.

TREATMENT OF FIXED ASSETS (IAS 16, 36, 38 AND 40)

Crédit Agricole S.A. applies component accounting for all of its property, plant & equipment. In accordance with the provisions of IAS 16, the depreciable amount takes account of the potential residual value of property, plant and equipment.

Land is measured at acquisition cost less any impairment losses.

Operating buildings, investment property and equipment are measured at their acquisition cost less accumulated depreciation and impairment losses since the time they were placed in service.

Purchased software is measured at acquisition cost less accumulated depreciation and impairment losses since acquisition.

Proprietary software is measured at cost less accumulated depreciation and impairment losses since completion.

Apart from software, intangible assets are mainly assets acquired during a business combination resulting from contractual rights (e.g. distribution agreement). These were valued on the basis of corresponding future economic benefits or expected service potential.

Fixed assets are depreciated over their estimated useful lives.

The Crédit Agricole Group applies component accounting for property, plant & equipment. The components and depreciation periods are adjusted according to the type of asset and location, and are defined as follows:

Component	Depreciation period
Land	Not depreciable
Structural works	30 to 80 years
Non-structural works	8 to 40 years
Plant and equipment	5 to 25 years
Fixtures and fittings	5 to 15 years
Computer equipment	4 to 7 years
Special equipment	4 to 5 years

In the same way, for example, the following periods generally applied for the different types of intangible assets are used:

Intangible asset class	Depreciation period
Patents, licences	5 years
Software	3 to 5 years

FOREIGN CURRENCY TRANSACTIONS (IAS 21)

At the end of the reporting period, assets and liabilities denominated in foreign currencies are translated to euros, the Crédit Agricole Group's functional currency.

In accordance with IAS 21, a distinction is made between monetary (e.g. debt instruments) and non-monetary items (e.g. equity instruments).

Foreign-currency denominated monetary assets and liabilities are translated at the closing foreign exchange rate. The resulting foreign exchange impact is recorded in the income statement. There are three exceptions to this rule:

- for debt instruments at fair value through recyclable equity, only the translation adjustments calculated on amortised cost are taken to the income statement; the balance is recorded in recyclable equity;
- foreign exchange impact on elements designated as cash flow hedges or forming part of a net investment in a foreign entity is recognised in recyclable equity for the effective portion;
- for financial liabilities designated at fair value through profit or loss, foreign exchange impact related to value changes attributable to own credit risk are recognised in non-recyclable equity.

Non-monetary items are treated differently depending on the type of items before translation:

- items at historical cost are measured at the foreign exchange rate on the transaction date (historical rate);
- items at fair value are measured at the foreign exchange rate at the end of the reporting period.

Foreign exchange impact on non-monetary items is recognised:

- in the income statement if the gain or loss on the non-monetary item is recorded in the income statement;
- in non-recyclable equity if the gain or loss on the non-monetary item is recorded in non-recyclable equity.

REVENUES FROM CONTRACTS WITH CUSTOMERS (IFRS 15)

Fee and commission income and expenses are recognised in income based on the nature of services with which they are associated.

Fees and commissions that form an integral part of the yield on a financial instrument are recognised as an adjustment to the compensation on the instrument and included in its effective interest rate (in accordance with IFRS 9).

The recognition of other types of fees and commissions on the income statement must reflect the rate of transfer to the customer of control of the goods or services sold:

The net income from a transaction associated with the provision of services is recognised under "Fee and commission income" at the time of transfer of control of the service to the customer, if this can be reliably estimated. This transfer may take place as the service is provided (ongoing service) or on a specific date (one-off service).

- a) Fee and commission income from ongoing services (fee and commission income on payment instruments, for example) is recognised in income according to the degree of progress of the service provided.
- b) Fee and commission income paid or received as compensation for one-off services is recognised in income, in its entirety, when the service is provided.

Fee and commission income payable or receivable and contingent upon the achievement of a performance target is recognised for the amount at which it is highly probable that the income thus recognised will not later be subject to a significant downward adjustment upon resolution of the contingency. These estimates are updated at the end of each reporting period.

In practice, this condition can result in the deferred recognition of certain items of performance-related fee and commission income until the expiry of the performance assessment period and until such income has been definitively acquired.

INSURANCE CONTRACTS

Definition and classification of contracts

Contracts issued by the Group fall into the following categories:

- insurance contracts (including reinsurance contracts) issued, which fall within the scope of IFRS 17; and
- investment contracts, which are subject to either IFRS 17 or IFRS 9 depending on whether or not they include discretionary participation features.

Reinsurance contracts held by the Group are also subject to IFRS 17.

Any reference below to insurance contracts also includes investment contracts with discretionary participation features and reinsurance contracts held, except where these are explicitly mentioned.

Insurance contracts

An insurance contract is a contract under which one party (the issuer) accepts a significant insurance risk for another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder.

In the Group, for each portfolio of similar contracts, the insurance risk is analysed on the basis of a representative individual contract. The existence of a scenario (of commercial substance) in which the

insurer would be required to indemnify the holder for a significant amount, i.e. for an amount that would significantly exceed the amount that would be paid if no insured event occurred, represents a significant insurance risk for all contracts in the portfolio, regardless of the probability of this scenario occurring. The Group has adopted a significance level of 5%. Insurance risk can therefore be significant, while the principle of risk pooling within a portfolio limits the likelihood of a significant loss compared to the result of the portfolio as a whole.

The main insurance risks relate to mortality (guarantees in the event of death), longevity (guarantees in the event of survival, e.g. life annuities), morbidity (guarantees in the event of disability), incapacity, health (medical cover) or unemployment of individuals, as well as civil liability and property damage.

In application of the principles of IFRS 17, insurance contracts may be insurance contracts with direct participation features or insurance contracts without direct participation features.

Insurance contracts with direct participation features are insurance contracts that are, in substance, investment-related service contracts under which the entity promises a return based on underlying items. They are defined as insurance contracts for which, at inception:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the entity expects to pay to the policyholder an amount equal to a substantial share of the fair value returns on the underlying items; and
- the entity expects a substantial proportion of any change in the amounts to be paid to the policyholder to vary with the change in fair value of the underlying items.

Compliance with these three conditions is assessed at inception of the contract and is not reassessed subsequently, unless the contract is modified substantially.

Other insurance contracts issued and all reinsurance contracts (issued as well as held) constitute insurance contracts without direct participation features.

Investment contracts

Contracts that do not expose the insurer to significant insurance risk are known as investment contracts. They include investment contracts with discretionary participation features and investment contracts without discretionary participation features.

An investment contract with discretionary participation features is defined as a financial instrument that confers on a given investor the contractual right to receive additional sums over and above a sum that is not at the discretion of the issuer:

- which are likely to represent a significant portion of the total contractual benefits;
- the timing or amount of which is contractually at the issuer's discretion; and
- which are contractually based on:
 - returns from a specified pool of contracts or a specified type of contract,
 - realised and/or unrealised investment returns on a specified pool of assets held by the issuer, or
 - the profit or loss of the entity or fund that issues the contract.

Investment contracts with discretionary participation features mainly cover savings contracts in euros. In the case of a multi-support contract, where the policyholder has the option to transfer all or part of its savings to a euro fund with discretionary profit sharing at any time (under conditions that do not hinder such transfers), the Group considers that, in the absence of a minimum guarantee transferring a significant insurance risk, the contract as a whole is a contract with discretionary participation features, whether or not this option has been exercised by the policyholder. In the case of a minimum guarantee transferring a significant insurance risk, the contract constitutes an insurance contract with discretionary participation features.

Investment contracts that do not meet the above definition are investment contracts without discretionary participation features and fall within the scope of IFRS 9.

Recognition of insurance contracts

Separation of the components of an insurance contract

At inception, the Group separates embedded derivatives, distinct investment components and any promise to provide the policyholder with distinct goods or services other than insurance contract services, and accounts for them as stand-alone components in accordance with the applicable IFRS standards.

Once the distinct stand-alone components have been separated where appropriate, the Group applies IFRS 17 to account for all the remaining components of the insurance contract.

Level of aggregation of insurance contracts

Based on the requirements of the standard regarding the level of aggregation, contracts must be grouped into portfolios of contracts, which are then divided into three groups and must not contain contracts issued more than one year apart (annual cohort principle).

A portfolio of insurance contracts comprises insurance contracts subject to similar risks and managed together.

Each portfolio must be divided into at least the following three groups according to the expected profitability of the contracts at the time of initial recognition:

- onerous contracts;
- contracts that have no significant possibility of becoming onerous subsequently; and
- remaining contracts.

These groups represent the level of aggregation at which insurance contracts are initially measured and recognised.

In order to apply the general principles of the standard concerning the identification of portfolios, the Group carried out various analyses based on the guarantees identified and the way in which the contracts are managed (for example, according to the financial portfolios to which they relate for retirement savings products, according to the grid used for the prospective assessment of risks and solvency for risk products, or according to business lines for property and casualty insurance products). The splitting of these portfolios into groups based on the expected profitability of the contracts has been done on the basis of different information such as contract pricing, past profitability of similar contracts, or forward-looking plans.

As permitted by Article 2 of European Commission Regulation (EU) 2021-2036 of 19 November 2021, Crédit Agricole S.A. intends to use the exemption from the standard's annual cohort requirement for intergenerationally mutualised contracts. This accounting policy choice is applied to the portfolios relating to the Group's savings and retirement activities eligible for exemption.

The Group does not apply the provisions of the standard which allow these contracts to be classified in the same group if contracts in the same portfolio fall into different groups solely because legal or regulatory provisions limit the entity's practical ability to set a price or benefit level that differs according to the characteristics of the policyholders.

Recognition date for insurance contracts

A group of insurance contracts issued must be recognised from the earliest of the following dates:

- the start date of the coverage period of the group of contracts;
- the date when the first payment from a policyholder becomes due or, if there is no due date, the date when that first payment is received; and
- for a group of onerous contracts, the date when the group becomes onerous.

Insurance acquisition cash flows

Insurance acquisition cost cash flows are cash flows arising from the costs of selling, underwriting and starting a group of insurance contracts (issued or expected to be issued) that are directly attributable to the portfolio of insurance contracts to which the group belongs. These cash flows are allocated to the groups of contracts in a systematic and rational manner.

With the exception of certain groups of contracts measured using the premium-allocation approach, where the decision has been made to recognise them directly as expenses, insurance acquisition cost cash flows paid prior to the recognition of the corresponding group of insurance contracts are recognised as an asset. This insurance acquisition cost cash flows asset is derecognised, in whole or in part, when the insurance acquisition cost cash flows are included in the measurement of the corresponding group of insurance contracts.

At the end of each reporting period, the Group assesses whether an insurance acquisition cost cash flow asset is recoverable if facts and circumstances indicate that the asset may be impaired. At 31 December 2025, the insurance acquisition cost cash flow assets identified by the Group were fully impaired and their carrying amount was therefore zero.

Measurement of insurance contracts

Contracts falling within the scope of application of IFRS 17 can be measured using three models:

- the general model, or BBA (Building Block Approach) model, which is the default valuation model;
- the VFA (Variable Fee Approach) model, which is mandatory for insurance contracts with direct participation features;
- the PAA (Premium Allocation Approach) model, a simplified model that is optional when certain criteria are met.

The Group measures its contracts using these three models.

The general model is mainly used for the Group's borrower, long-term care, death & disability, sick leave, term life and certain healthcare activities.

The Group analysed compliance with the three conditions needing to be met in order to be classified as an insurance contract with direct participation features (see section on contract classification above), in order to determine which of its contracts met these criteria. Therefore, the Group's savings, retirement and funeral business activities are valued using the VFA model.

The Group chose to apply the PAA model to its property and casualty insurance activities (insurance contracts issued and reinsurance contracts held).

Measurement of contracts using the standard model and the VFA model

Initial recognition

On initial recognition, the Group measures a group of insurance contracts at the total of:

- the fulfilment cash flows, which comprise:
 - estimates of future cash flows,
 - an adjustment to reflect the time value of money and the financial risks related to the future cash flows, to the extent that the financial risks are not included in the estimates of the future cash flows,
 - an adjustment for non-financial risk;
- the Contractual Service Margin (CSM).

Estimation of future cash flows

The purpose of estimating future cash flows is to determine the expected value of a set of scenarios that reflects the full range of possible outcomes. The cash flows of each scenario are discounted and weighted by the estimated probability of the corresponding outcome to obtain the expected present value.

The estimates of future cash flows incorporate, in an unbiased way, all reasonable and supportable information available without undue cost or effort about the amount, timing and uncertainty of those future cash flows at the end of the reporting period. This information includes historical internal and external data on claims and other features of insurance contracts, updated to reflect conditions prevailing at the valuation date, including assumptions at that date about the future.

The estimates of future cash flows reflect the Group's view of current conditions at the end of the reporting period, provided that the estimates of the relevant market variables are consistent with observable market prices. The estimation of market variables is determined by maximising the use of observable market parameters.

In life insurance, the projection of future cash flows incorporates assumptions about policyholder behaviour and management decisions. These assumptions relate in particular to surrenders, the policyholders' profit-sharing policy and the asset allocation policy.

The estimation of the expected present value includes the impact of financial options and guarantees where these are material. Stochastic simulation methods are used for this estimation. Stochastic modelling involves projecting future cash flows under a large number of possible economic scenarios for market variables such as interest rates and equity returns.

The main options valued by the Group are the surrender option in savings or retirement contracts, guaranteed minimum rates and technical rates, contractual profit-sharing clauses and the minimum guaranteed benefit in respect of unit-linked contracts.

Modelled policyholders' profit sharing complies with local and contractual regulatory constraints and is subject to strategic assumptions reviewed by the entities' management.

Where contracts include a significant mortality (or longevity) risk, projections are also estimated by reference to regulatory mortality tables or experience tables, as applicable.

Where a minimum guaranteed benefit in the event of death is included in a unit-linked contract, in order to ensure that the beneficiary of the contract receives at least the initial capital invested irrespective of changes in the value of the units of account, this is determined using an economic method (stochastic scenarios).

In non-life insurance, the Group estimates the ultimate cost of settling claims incurred but unpaid at the end of the reporting period and the value of expected recoveries by reviewing individual claims reported and making allowance for claims incurred but not yet reported. They are determined by applying deterministic statistical methods based on historical data and by using actuarial assumptions based on expert judgement to estimate the ultimate cost. Changes in the parameters used are likely to have a significant impact on the value of these estimates at the end of the reporting period, particularly for long-tail liability claims across insurance lines, where the uncertainty inherent in the realisation of forecasts is generally greater. These parameters relate in particular to the uncertainty surrounding the classification and quantification of losses, the scales (table and rates) that will be applied at the time of compensation and the probability of annuitisation of bodily injury claims. For the Group, the insurance lines concerned are motor liability, general liability, personal accident cover and professional medical liability.

Contract boundary

The measurement of a group of contracts includes all future cash flows included in the scope (the "boundary") of each of the group's contracts, i.e. all future cash flows that arise from substantive rights and obligations that exist during the reporting period in which the Group can compel the policyholder to pay premiums or in which it has a substantive obligation to provide the policyholder with services under the insurance contract.

A substantive obligation of this kind ceases in particular when the Group has the practical ability to reassess the risks posed specifically by the policyholder and may therefore set a price or level of benefits that fully reflects these reassessed risks.

The determination of the contract boundary requires that judgement be exercised and that the Group's substantial rights and obligations under the contract be taken into account. To this end, the Group has conducted a detailed analysis of the characteristics of its contracts and, in particular, the possibility of revising their pricing. For example, it considered free or scheduled future payments of savings and retirement contracts, and the payment phase of retirement contracts with mandatory annuity drawdown, as being included in the contract boundary; however, renewals of non-life insurance contracts related to the automatic renewal clause are not included in the contract boundary.

Cash flows taken into account in measuring contracts

The cash flows within the insurance contract boundary are those that are directly linked to the performance of the contract. In particular, they include premiums paid by the policyholder, payments to the policyholder, insurance acquisition cost cash flows allocated to the portfolio to which the contract belongs, claims management costs, costs related to the provision of investment-related services and allocations of fixed or variable overheads that are directly attributable to the fulfilment of insurance contracts.

Cash flows are allocated by function (acquisition activities, other activities related to the performance of insurance contracts, and other activities) at the level of each legal entity using activity-based cost allocation methods.

Insurance acquisition and fulfilment cash flows are allocated to groups of contracts using systematic and rational methods applied uniformly to all costs with similar characteristics. They include both direct costs and an allocation of fixed and variable overheads.

The Group did not identify any insurance contracts without direct participation features that give it discretion over the cash flows it will pay to policyholders.

Accounting for premium receivables from intermediaries

In October 2023, the IFRIC published a decision concerning the measurement of premium receivables from intermediaries, in response to a question on the application by the insurer of the provisions of IFRS 17 and IFRS 9 to such receivables when the policyholder has paid the premiums to the intermediary (thus discharging the policyholder's obligation under the insurance contract) but the intermediary, acting on behalf of the insurer, has not yet paid the premiums to the insurer (the insurer being nevertheless obliged to provide insurance contract services to the policyholder). In its decision, the IFRIC observed among other things that IFRS 17 does not state at what moment cash flows within the boundary of an insurance contract are removed from the measurement of a group of insurance contracts. Therefore, an entity must establish an accounting policy in application of IAS 8 to determine when cash flows are removed from the measurement of a group of insurance contracts: either when the cash flows are recovered or settled in cash – in which case the IFRS 17 provisions in terms of measurement, presentation and disclosure requirements apply to premiums receivable from an intermediary (View 1), or when the policyholder's obligation under the insurance contract is discharged – in which case the provisions of IFRS 9 apply to those same premiums receivable (View 2). In application of this decision, the Group has opted for the accounting policy that treats premiums receivable from intermediaries in accordance with IFRS 9 in this case.

Discount rates

The Group adjusts the estimates of future cash flows to reflect the time value of money and the financial risks related to the future cash flows, to the extent that the financial risks were not included in the cash flow estimates.

The table below shows the yield curves used to discount the cash flows of insurance contracts:

	31/12/2025						31/12/2024					
	1 year	5 years	10 years	15 years	20 years	30 years	1 year	5 years	10 years	15 years	20 years	30 years
Life France												
EUR	3.16%	3.56%	3.95%	4.20%	4.30%	4.16%	3.54%	3.45%	3.57%	3.64%	3.56%	3.39%
Property and casualty France												
EUR	2.65%	3.05%	3.44%	3.69%	3.79%	3.72%	2.98%	2.89%	3.01%	3.08%	3.01%	2.91%
International												
EUR	2.75%	3.16%	3.54%	3.79%	3.89%	3.81%	3.26%	3.16%	3.29%	3.35%	3.28%	3.15%
USD	4.64%	4.38%	4.69%	4.96%	5.07%	4.98%	4.19%	4.02%	4.07%	4.13%	4.10%	3.83%
JPY	0.94%	1.36%	1.68%	2.07%	2.42%	2.82%	0.52%	0.77%	1.05%	1.39%	1.69%	1.98%

Under IFRS 17, discount rates are a key parameter for measuring insurance contracts. In particular, they are used to measure fulfilment cash flows and, in respect of insurance contracts without direct participation features, to determine the interest to be capitalised on the Contractual Service Margin (CSM), to measure changes in the CSM and to determine the amount of insurance finance income or expense recognised in profit or loss when the Other Comprehensive Income (OCI) option is applied (see section on subsequent measurement below).

IFRS 17 does not require a specific estimation method for the determination of discount rates, but it does require that the method takes into account factors that arise from the time value of money, cash flow characteristics and liquidity characteristics of insurance contracts, and maximises the use of observable inputs. The methodology used by the Group to define the discount rate curve is a bottom-up approach that is based on a risk-free yield curve with an adjustment for an illiquidity premium reflecting the cash flow characteristics and liquidity of the insurance contracts. The Group determines the risk-free yield curve according to an approach similar to that prescribed by EIOPA under the Solvency 2 regulatory regime. Thus, the risk-free yield curve is determined using observable swap rates in the relevant currency, adjusted for credit risk. This curve is extrapolated between the last liquid point and an ultimate forward rate that reflects expectations of the long-term real interest rate and inflation.

The yield curve extrapolation method used by the Group is the smoothing points method: rates beyond the first smoothing point (FSP) are extrapolated through a function that takes into account the ultimate forward rate (UFR), the last liquid forward rate (LLFR) and a speed of convergence parameter. The illiquidity premiums are determined based on a reference portfolio corresponding to the assets held to cover contracts. Illiquidity premiums for bond assets are determined by comparing bond portfolio spreads with credit risk compensation. The illiquidity premiums for non-bond assets are obtained using a method derived from the Sharpe ratio, which quantifies the excess return attributable to illiquidity in these asset classes. The illiquidity premiums calculated in this way for the assets in the reference portfolio are then used to calculate the illiquidity premiums for the corresponding insurance liabilities, using a coefficient based on the comparison between the respective maturities of the assets and liabilities in order to reflect the increase in illiquidity premiums with the maturity.

The level of illiquidity premiums used is the following:

	31/12/2025	31/12/2024
	1 year	1 year
Life France		
EUR	106	128
Property and casualty France		
EUR	56	73
International		
EUR	66	100
USD	-	-

Risk adjustment for non-financial risk

The estimate of the present value of future cash flows is subject to an explicit adjustment for non-financial risk in order to reflect the compensation required by the Group for the uncertainty about the amount and timing of cash flows that arises from non-financial risk.

The Group makes use of the confidence level technique for determining the risk adjustment for all of its contracts. The Group's valuation metric is VaR (Value at Risk), with a quantile of 80% for life insurance activities and 85% for non-life insurance activities, and an ultimate term (approximated by the maturity of liabilities for life insurance activities). This adjustment reflects the benefits of risk diversification at the entity level, determined using a correlation matrix. Diversification between entities is also taken into account.

Contractual service margin

The CSM of a group of contracts represents the unearned profit that the Group will recognise as it provides insurance contract services in the future.

On initial recognition of a group of contracts, if the aggregate of the fulfilment cash flows measured at the date of initial recognition, any cash flows arising at that date, and any amount arising from the derecognition at that date of any asset or liability previously recognised in respect of the cash flows relating to that group (including any insurance acquisition cost cash flow asset) is a net cash inflow, then the group of contracts is profitable. In this case, the CSM is measured as the equal and opposite amount of this net cash inflow, with the result that there is no income or expense on initial recognition.

If the total calculated above is a net cash outflow, then the group of contracts is onerous. In this case, the net cash outflow is immediately recognised as a loss in profit or loss, such that the carrying amount of the liability relating to the group is equal to the fulfilment cash flows and the group's contractual service margin is therefore zero. A loss element of the liability for remaining coverage is then established to represent the losses thus recognised.

Subsequent measurement

The carrying amount of a group of contracts at the end of each reporting period is the sum of the Liability for Remaining Coverage (LRC) and the Liability for Incurred Claims (LIC).

The liability for remaining coverage comprises the fulfilment cash flows relating to future services allocated to the Group at that date and the Group's contractual service margin at that date.

The liability for incurred claims comprises the fulfilment cash flows for claims incurred and other related expenses that have not yet been paid, including claims incurred but not yet reported.

The fulfilment cash flows of groups of contracts are measured at the end of the reporting period using the discounted estimates of the value of future cash flows, current discount rates and the discounted estimates of the adjustment for non-financial risks. Changes in fulfilment cash flows are recognised as follows:

Changes relating to future service	Recognised against the CSM (or recognised as insurance service result if the group is onerous)
Changes relating to current or past services	Recognised in insurance service result
Effect of the time value of money, financial risk and changes therein on future cash flows	Recognised in insurance finance income or expenses

The CSM of each group of contracts is calculated at the end of each reporting period as follows, depending on whether the contracts are those without direct participation features (standard model) or those with direct participation features (VFA model).

Insurance contracts without direct participation features measured using the general model

For insurance contracts without direct participation features, the carrying amount of the contractual service margin of a group of contracts at the end of the reporting period equals the carrying amount at the start of the reporting period adjusted for:

- the effect of any new contracts added to the group during the period;

- interest accreted on the carrying amount of the contractual service margin during the reporting period, measured at the discount rates at initial recognition;
- the changes in fulfilment cash flows relating to future service, except to the extent that they relate to a loss component;
- the effect of any foreign exchange impact on the contractual service margin; and
- the amount recognised in insurance revenue as a result of the provision of insurance contract services during the period, determined after all the other adjustments described above (see "Recognition of the contractual services margin in profit or loss" below).

Changes in fulfilment cash flows that relate to future service and that adjust the CSM include:

- experience adjustments arising from premiums received in the period that relate to future service, and related cash flows such as insurance acquisition cost cash flows and premium-based taxes, measured at the discount rates determined at initial recognition;
- changes in estimates of the present value of the future cash flows in the liability for remaining coverage, measured using discount rates determined at initial recognition, except those resulting from the effects of the time value of money, financial risk and changes therein;
- differences between investment components and loans granted to policyholders;
- changes in the adjustment for non-financial risk that relate to future service, measured using discount rates determined at initial recognition.

Insurance contracts with direct participation features measured using the VFA model

The variable fee approach (VFA model) reflects the specific nature of the services rendered by insurance contracts with direct participation features (contracts under which the entity promises a return based on underlying items).

The underlying items are those that determine a portion of the amounts to be paid to policyholders. Within the Group, they mainly comprise financial asset portfolios and, in the case of French savings contracts denominated in euros, the technical result of these contracts. The Group's policy is to hold the underlying financial assets. The composition and fair value of these assets are detailed in Note 5.3.

Insurance contracts with direct participation features are contracts under which the Group's obligation to the policyholder is the net of:

- the obligation to pay the policyholder an amount equal to the fair value of the underlying items; and
- a variable fee in exchange for the future services provided by the insurance contract, which corresponds to the difference between the amount of the entity's share of the fair value of the underlying items and the fulfilment cash flows that do not vary based on the returns on the underlying items.

Changes in the obligation to pay the policyholder an amount equal to the fair value of the underlying items are not related to future service and therefore do not result in an adjustment to the CSM: they are recognised in profit or loss.

Changes in the amount equal to the entity's share of the fair value of the underlying items are related to future service and result in an adjustment to the CSM.

The carrying amount of the CSM of a group of insurance contracts with direct participation features at the end of the reporting period is therefore the carrying amount at the opening of the period, adjusted for the following items:

- the effect of any new contracts added to the group during the period;
- the change in the amount equal to the entity's share of the fair value of the underlying items and changes in fulfilment cash flows relating to future service, except to the extent that:
 - the risk mitigation option is applied to exclude changes in the effect of the time value of money and financial risk on the amount of its share of the underlying items or in fulfilment cash flows from the CSM (option not applied by the Group),

- the change in the amount equal to the entity's share of the fair value of the underlying items, or in fulfilment cash flows relating to future services, are related to a loss component; or
- the effect of any foreign exchange impact on the contractual service margin; and
- the amount recognised in insurance revenue as a result of the provision of insurance contract services during the period, determined after all the other adjustments described above (see "Recognition of the contractual services margin in profit or loss" below).

The changes in fulfilment cash flows relating to future service that adjust the CSM include the changes specified above for insurance contracts without direct participation features (valued at current discount rates) and changes in the effect of the time value of money and financial risks that do not result from the underlying items, for example, the effect of financial guarantees.

Loss component

For contracts measured using the standard model and the VFA model, the Group establishes a loss element of the liability for remaining coverage for onerous groups of contracts. It is on the basis of this loss element that the amounts subsequently presented in profit or loss as reversals of losses on onerous groups of contracts are determined, and which are consequently excluded from insurance revenue (see section on presentation below).

When fulfilment cash flows are incurred, they are allocated between the loss component and the liability for remaining coverage excluding the loss component on a systematic basis.

Any subsequent decrease in fulfilment cash flows relating to future service, and any subsequent increase in the amount of the Group share of the fair value of the underlying items, for contracts with direct participation features, are allocated solely to the loss component.

If the loss component is reduced to zero, then any excess over the amount allocated to the loss component constitutes a new CSM for the group of contracts in question.

Measurement of contracts using the PAA model

The premium allocation approach (PAA model) is an optional measurement model that makes it possible to measure the liability for remaining coverage of a group of insurance contracts in a simplified manner if one of the following two eligibility criteria is met at the date the group is established:

- the Group reasonably expects that the measurement of the liability for remaining coverage of the group obtained using this simplified method will not differ materially from that which would be obtained by applying the provisions of the standard model; or
- the coverage period of each of the contracts in the group of contracts does not exceed one year.

The Group opted to apply this approach to its property and casualty insurance activities (insurance contracts issued and reinsurance contracts held). Most of the relevant groups of contracts meet the second eligibility condition, i.e. the period of coverage of each contract in the group is less than or equal to one year.

On initial recognition of a group of insurance contracts, the carrying amount of the liability for remaining coverage is measured at the amount of premiums received at the date of initial recognition minus any insurance acquisition cost cash flows allocated to the group at that date and plus or minus any amount arising from the derecognition at that date of any asset or liability previously recognised for cash flows relating to the group of contracts (including any insurance acquisition cost cash flow asset).

For a group of contracts measured under the PAA, the Group may opt for the accounting policy whereby insurance acquisition cost cash flows, if any, are recognised as expenses at the time these costs are incurred, provided that the coverage period for each of the contracts in the group at initial recognition is no more than one year. The Group opted not to use this option for the measurement of groups of contracts measured using the PAA model.

Upon subsequent measurement, the carrying amount of the liability for remaining coverage is increased by premiums received in the period plus any amounts relating to the amortisation of insurance acquisition cost cash flows recognised as an expense, minus the amount recognised as insurance revenue for insurance services provided in that period and insurance acquisition cost cash flows paid in that period.

On initial recognition of each group of contracts, the Group expects that the time between the provision of the services and the due date of the related premium will not exceed one year. Accordingly, the Group opted not to adjust the carrying amount of the liability for remaining coverage to reflect the time value of money and the effect of financial risk.

If, at any time during the coverage period, facts and circumstances indicate that a group of insurance contracts measured using the PAA model is onerous, the Group recognises a loss in profit or loss and increases the liability for remaining coverage to the extent that current estimates of fulfilment cash flows relating to the remaining coverage of the group exceed the carrying amount of the liability for that coverage. The fulfilment cash flows for these groups of contracts are discounted (at current rates) to the extent that the liability for incurred claims is also discounted.

For contracts measured using the PAA model, the loss component arising in the event of an onerous group of contracts is allocated to the liability for remaining coverage; reversals of this loss component cannot result in a liability for remaining coverage that is less than that which would be determined in the absence of the loss component.

The Group measures the liability for incurred claims of a group of insurance contracts measured using the PAA model as the amount of fulfilment cash flows relating to incurred claims, in accordance with the applicable provisions of the standard model. However, it is not required to adjust future cash flows for the time value of money and the effect of financial risk if the payment or receipt of these cash flows is expected within a period not exceeding one year from the date of the claim. The Group did not make use of this option. Future cash flows are therefore discounted (at current rates).

Recognition of reinsurance contracts held

A reinsurance contract is an insurance contract issued by one entity (the reinsurer) to compensate another entity for claims arising from one or more insurance contracts issued by that other entity (underlying contracts).

No reinsurance contract within the Group has characteristics (such as the absence of risk transfer) that would lead to its qualification as a financial instrument under IFRS 9.

For the application of IFRS 17, reinsurance contracts cannot be insurance contracts with direct participation features and therefore cannot be measured using the VFA model.

Reinsurance contracts held are accounted for in accordance with the provisions applicable to insurance contracts without direct participation features presented above, modified to take account of their specific characteristics.

Level of aggregation

Portfolios of reinsurance contracts held are divided in accordance with the provisions of IFRS 17 applicable to insurance contracts issued. However, since reinsurance contracts held cannot be onerous, the Group considers, for the purposes of applying these provisions to reinsurance contracts held, that any reference to onerous contracts refers to reinsurance contracts held giving rise to a net gain on initial recognition.

Recognition date

A group of reinsurance contracts held is recognised at the beginning of the coverage period of the group. As an exception to this principle, for a group of reinsurance contracts held that provide proportional coverage, the Group defers the recognition date until the initial recognition date of any underlying insurance contract, if this date is later than the beginning of the coverage period of the group of reinsurance contracts held.

However, if the Group recognises an onerous group of underlying insurance contracts at an earlier date and the corresponding reinsurance contract was entered into on or before that earlier date, the group of reinsurance contracts held is recognised at that earlier date.

Contract boundary

The application of the contract boundary provisions set out above for insurance contracts issued to reinsurance contracts held implies that cash flows are included within the boundary of a group of reinsurance contracts held if they arise from substantive rights and obligations that exist during the reporting period in which the ceding company is obliged to pay amounts to the reinsurer or in which the ceding company has a substantive right to receive services from the reinsurer.

The cash flows within the boundary of the reinsurance contracts held are thus determined as those arising from the underlying contracts issued or expected to be issued and ceded by the Group under the reinsurance contract until the earliest possible termination date of the reinsurance contract.

Measurement

The Group measures estimates of the present value of future cash flows of a group of reinsurance contracts held using assumptions consistent with those used to measure estimates of the present value of future cash flows of the underlying group or groups of insurance contracts, with an adjustment to reflect the non-performance risk on the part of the reinsurer, including the effect of guarantees and losses arising from litigation.

The adjustment for non-financial risk corresponds to the amount of risk transferred by the ceding company to the reinsurer.

If the reinsurance contract held is entered into on or before the recognition of the onerous underlying contracts, when the Group recognises a loss on the initial recognition of an onerous group of underlying insurance contracts or on the addition of onerous underlying insurance contracts to an existing group, the Group adjusts the CSM of the group to which the onerous reinsurance contract belongs, and recognises income accordingly. This adjustment constitutes a loss-recovery component of the asset for remaining coverage for the group of reinsurance contracts held, depicting the recovery of losses on the onerous underlying insurance contracts. This component is adjusted to reflect changes in the loss element of the onerous group of underlying insurance contracts. The loss-recovery component determines the amounts that are presented in profit or loss as reversals of recoveries of losses from reinsurance contracts held and are consequently excluded from the allocation of premiums paid.

Derecognition and modification of contacts

The Group derecognises an insurance contract:

- when it is no longer in force, i.e. when the obligation specified therein expires, or is discharged, or cancelled;
- when it is transferred to a third party;
- if its terms are modified in a way that would have substantially changed the accounting for the contract if the new terms had always existed (e.g. different classification, or different measurement model), in which case a new contract based on the modified terms is recognised.

Effect of accounting estimates made in the interim financial statements

The Group prepares interim financial statements in accordance with IAS 34. It opted to modify the treatment of accounting estimates made in its previous interim financial statements when applying IFRS 17 in its subsequent interim financial statements and in its annual financial statements.

Presentation

Presentation in the balance sheet

The Group presents the carrying amount for the following items separately in the balance sheet:

- portfolios of insurance contracts issued that are assets;
- portfolios of insurance contracts issued that are liabilities;
- portfolios of reinsurance contracts held that are assets;
- portfolios of reinsurance contracts held that are liabilities.

Assets and liabilities recognised for cash flows arising prior to the recognition of the related group of contracts (including insurance acquisition cost cash flows) are included in the carrying amount of the related portfolios of contracts.

Presentation in the income statement and the statement of other comprehensive income

The Group recognises income and expenses relating to contracts within the scope of application of IFRS 17 under the following income statement items:

- insurance revenue related to insurance contracts issued;
- insurance service expenses related to insurance contracts issued;
- income and expenses relating to reinsurance contracts held;
- insurance finance income or expenses;
- insurance finance income or expense related to reinsurance contracts held.

Income and expenses relating to reinsurance contracts held are presented separately from income and expenses relating to insurance contracts issued.

The Group opted to present income and expenses from reinsurance contracts held, other than insurance finance income or expenses, as a single amount within insurance service result.

The Group chose to allocate changes in the adjustment for non-financial risk between insurance service result and insurance finance income or expenses for insurance contracts without direct participation features, and to include these changes in full in insurance service result for insurance contracts with direct participation features.

Insurance revenue and insurance service expenses exclude investment components.

Amounts recognised in comprehensive income

Insurance revenue – Contracts measured using the general model and the VFA model

Insurance revenue recognised in the period reflects the provision of services relating to a group of insurance contracts by an amount that reflects the consideration to which the Group expects to be entitled in exchange for these services.

This includes:

- amounts relating to changes in the liability for remaining coverage related to the provision of services in exchange for which the Group expects to receive consideration:
 - insurance service expenses incurred during the period (measured at the amounts expected at the beginning of the reporting period), excluding any amounts allocated to the loss element of the liability for remaining coverage, investment component reimbursements, amounts relating to transactional taxes collected on behalf of third parties, acquisition costs and the amount relating to the adjustment for non-financial risk,
 - changes in the adjustment for non-financial risk, excluding changes included in insurance finance income or expenses, changes related to future service, and amounts allocated to the loss component of the liability for remaining coverage,
 - the amount of the contractual service margin recognised in profit or loss as a result of the provision of insurance contract services during the period,
 - other amounts, where appropriate, for example experience adjustments arising from premium receipts other than those related to future service;
- the amount of the portion of premiums allocated to the recovery of insurance acquisition cost cash flows.

The Group allocates the portion of premiums allocated to the recovery of insurance acquisition cost cash flows to each period in a systematic manner that reflects the passage of time. The Group adopted a straight-line allocation method without taking into account the capitalisation of interest. The same amount is recognised as insurance service expenses.

Recognition of the contractual service margin in profit or loss

The amount of the contractual service margin for a group of insurance contracts, which is recognised in each period in insurance revenue to reflect the insurance contract services provided in respect of that group during the period, is determined by identifying the coverage units in the group, allocating the CSM at the reporting period (before recognition in profit or loss) equally to each coverage unit provided in the current period and expected to be provided in the future, and recognising in profit or loss the amount allocated to coverage units provided in the current period.

The number of coverage units in the group of contracts corresponds to the volume of insurance contract services provided by the contracts in the group, determined by taking into account, for each contract, the volume of benefits provided and the expected period of coverage. Coverage units are reviewed and updated at the end of each reporting period.

Insurance contract services include coverage in respect of an insured event (insurance coverage) as well as, in the case of insurance contracts with direct participation features, the management of the underlying items on behalf of the policyholder (investment-related services) and, in the case of insurance contracts without direct participation features, the generation of an investment return for the policyholder (investment-return services), where applicable.

The period over which the investment-return or investment-related services are provided ends no later than the date on which all amounts due to existing policyholders in respect of those services have been paid.

The Group's contracts measured using the general model do not include investment-return services.

For insurance contracts with direct participation features that include both types of services, the coverage units used reflect both insurance services and investment-related services.

The standard does not specify the appropriate indicator to be used to reflect the volume of services provided in the period, and judgement is therefore required in this regard. The methodology used by the Group to identify the coverage units and consequently the expected timing of recognition of the CSM in profit or loss is adapted to the characteristics of the relevant contracts.

For insurance contracts measured under the general model, the coverage units have been defined based on various indicators adapted to the type of guarantee (such as all-cause death benefit for term life insurance contracts, outstanding principal due on loan contracts in the event of death, capital equipment and the annual annuity at risk for long-term care contracts).

For insurance contracts measured under the VFA, the methodology used to allocate the CSM to profit or loss aims to reflect economically the asset management service provided by the insurer during each period; thus, in addition to the risk-neutral returns on assets projected in the actuarial models used to measure these types of contracts, it also takes into account the additional return corresponding to the actual performance of these assets. The coverage units used for this type of contract (average mathematical provisions) are thus adjusted in order to correct the impact of the difference between the risk-neutral projected returns of the underlying items and the expected returns when applying "real-world" assumptions, on the rate at which the CSM is recognised in the income statement (correction of the so-called bow-wave effect).

The "real-world" assumptions used are based on market data at the end of the reporting period for the starting point of the trajectory, on data reported by Crédit Agricole S.A.'s Economic Research Division in the context of budget financial years over the first five years and, beyond this horizon, over a long-term extrapolation beyond that (40-year horizon projection).

The main "real-world" assumptions used are presented below:

Assumptions at 31 December 2025	N+1	N+5
EUR 10-year swap rate	2.85%	3.00%
CAC 40 (incl. dividends)	7.10%	6.00%
S&P 500 (incl. dividends)	8.60%	9.00%
Real estate (incl. rents)	0.89%	2.16%

Assumptions at 31 December 2024	N+1	N+5
EUR 10-year swap rate	2.50%	2.75%
CAC 40 (incl. dividends)	5.02%	5.00%
S&P 500 (incl. dividends)	3.54%	5.00%
Real estate (incl. rents)	4.47%	5.35%

A breakdown of the expected pace at which the remaining CSM at the end of the reporting period will be recognised in profit or loss is provided in Note 5.3 below.

Insurance revenue – Contracts measured using the PAA model

For groups of contracts measured using the PAA model, insurance revenue for the period is the amount of expected premium receipts allocated to the period (excluding investment components).

The Group allocates the amount of these expected premium receipts to the insurance contract services periods on the basis of the passage of time for all its contracts measured using the PAA model.

Insurance service expenses

Insurance service expenses arising from insurance contracts issued are generally recognised in profit or loss as incurred. They exclude reimbursements of investment components and include the following items:

- claims expenses (excluding investment components) and other insurance service expenses incurred;
- amortisation of insurance acquisition cost cash flows;
- losses on onerous groups of contracts and reversals of such losses;
- changes in the liability for incurred claims that do not arise from the effects of the time value of money, financial risk and changes therein;
- impairment losses on insurance acquisition cost cash flow assets and reversals of such impairment losses.

Income and expenses related to reinsurance contracts held

Income and expenses related to reinsurance contracts held include:

- the allocation of premiums paid, which includes amounts relating to changes in the asset for remaining coverage related to the provision of services for which the Group expects to pay a consideration;
- amounts recovered from the reinsurer;
- the effect of changes in the non-fulfilment risk on the part of the issuer of reinsurance contracts held.

Insurance finance income or expenses

Insurance finance income or expenses consist of changes in the carrying amount of groups of insurance and reinsurance contracts resulting from the effects of the time value of money, financial risk and changes therein.

For groups of insurance contracts measured using the VFA model, these changes exclude changes allocated to the loss element (which are included in insurance service expenses) and include changes in the measurement of groups of contracts attributable to changes in the value of the underlying items (excluding additions and withdrawals).

Insurance financial income or expense for the period may be presented either in full in the income statement or broken down between the income statement and other comprehensive income ("OCI option").

For insurance contracts other than insurance contracts with direct participation features for which the entity holds the underlying items, the amount presented in profit or loss is determined by systematic allocation of the total expected insurance finance income or expense over the duration of the group of contracts:

- for groups of insurance contracts measured using the general model for which changes in financial risk assumptions do not have a material impact on the amounts paid to policyholders: using the discount rates determined at the date of initial recognition of the group of contracts;
- for groups of contracts measured using the PAA model: using the discount rates determined at the date of the occurrence of the claim.

For insurance contracts with direct participation features, for which the Group holds the underlying items, the amount recognised in profit or loss is the amount that eliminates accounting mismatches with the income or expenses included in profit or loss on the underlying items held. Under this option, the Group recognises income or expenses in profit or loss that correspond exactly to the income or expenses recognised in profit or loss for the underlying items, with the result that the sum of the items presented separately is zero.

For most of its insurance portfolios, the Group chose to apply the accounting method ("OCI option") which allows insurance finance income or expenses for the period to be allocated between profit and loss and other comprehensive income. For insurance contracts with direct participation features for which the entity holds the underlying items, application of this option results in the presentation in profit or loss of an amount that eliminates accounting mismatches with the income or expenses recognised in profit or loss on the underlying items held; for other contracts, the impact of changes in discount rates on the value of the contracts is presented in other comprehensive income.

Investment components

The provisions of the standard require the identification of investment components, which are defined as the amounts the Group must repay to the insured under all circumstances, whether or not the insured event occurs; they should not be recognised in insurance revenue or insurance service expenses.

The main investment components identified by the Group relate to savings and retirement contracts with an explicit surrender or transfer value.

Internal margin

IFRS 17 requires an estimate of future costs when measuring insurance liabilities on the balance sheet. The income statement shows the actual costs and the release of the estimated costs for the period.

Crédit Agricole's banking network markets insurance contracts issued and managed by the Group's insurance entities. These entities remunerate the banking network through fee and commission income.

The Group adjusts the insurance liabilities and the income statement for the amount of the internal margin contained in intragroup commissions. Overheads incurred by the banking network when distributing insurance contracts are shown as insurance service expenses. The affected items are:

- on the balance sheet: insurance liabilities for the VFA and BBA models;
- on the income statement: recognition of the CSM for the VFA and BBA models, and actual costs for all models.

The Group uses its banking networks' normalised management data to determine the margin on distributed insurance contracts.

These restatements are included in the Corporate Centre operating segment, Note 5.

LEASES (IFRS 16)

The Group may be the lessor or lessee of a lease.

Leases for which the Group is the lessor

Leases are classified either as a finance lease if the lease contract transfers almost all of the risks and benefits inherent in ownership of the underlying asset or as an operating lease if most of the risks and benefits of the leased asset are not transferred to the lessee.

- In the case of finance leases, they are considered equivalent to a fixed asset sale to the lessee financed by a credit granted to the latter by the lessor. The lessor thus records a financial debt for the lessee under "financial assets at amortised cost" for a value equal to the present value at the contract's implicit rate of the lease payments due, plus any non-guaranteed residual value owed to the lessor.

The lease payments received break down between the interest recorded in the income statement under "Interest and similar income" and the capital amortisation, so that the net income represents a constant rate of return on the residual outstanding amount.

For finance leases, Crédit Agricole S.A. applies the general approach for the impairment of financial assets at amortised cost under IFRS 9.

- In the case of operating leases, the lessor recognises the leased assets under "Property, plant & equipment" on the assets side of its balance sheet and depreciates them on a straight-line basis over their useful life excluding the residual value. Lease payments received are also recognised in profit or loss on a linear basis over the length of the leases.

Lease income and depreciation amortisation are recognised in the income statement under "income from other activities" and "expenses on other activities".

Leases for which the Group is the lessee

Leases are recognised in the balance sheet on the date on which the leased asset is made available. The lessee records an asset representing the right of use of the leased asset under "property, plant & equipment" over the estimated term of the contract and a liability representing the rental payment obligation under "miscellaneous liabilities" over the same term.

The lease period of a contract corresponds to the non-cancellable term of the lease adjusted for the contract extension options that the lessee is reasonably certain to exercise and the termination option that the lessee is reasonably certain not to exercise.

In France, the Group principle applicable to open-ended or automatically renewable contracts is to use the first exit option after five years.

For "3/6/9" commercial leases, the Group principle will be applied to French commercial leases on the lease commencement date and the initial term will therefore generally be estimated at six years, except in specific situations (for example, when the lessee is reasonably certain that it will exercise the exit option after three years). The main exception will be in the case of a lease where intermediate exit options have been waived (for example, in return for a rent reduction); in this case, an initial lease term of nine years will be used in application of the Group principle.

The lease liability is recognised for an amount equal to the present value of the rental payments over the term of the contract. Rental payments include fixed rents, variable rents based on a rate or index, and payments that the lessee expects to pay as residual value guarantees, purchase options or early termination penalties. Variable rents that are not based on an index or rate and the non-deductible VAT on rents are excluded when calculating the debt and are recognised under “operating expenses”.

The discount rate applicable to the calculation of the right-of-use asset and the lease liability is, by default, the lessee’s marginal rate of indebtedness over the term of the agreement at the date of signature of the agreement, when the implicit rate cannot easily be established. The marginal indebtedness rate takes account of the rent payment structure. It reflects the terms of the lease (duration, guarantee, economic environment etc.).

The lease expense is broken down into interest and amortisation of capital.

The right of use of the asset is valued at the initial value of the lease liability plus the initial direct costs, advance payments and restoration costs, reduced by the lease inducements. It is amortised over the estimated term of the lease.

The lease liability and the right of use may be adjusted in the event of amendment to the lease, re-estimation of the lease period or rent review related to the application of indexes or rates.

Deferred taxes are recognised as temporary differences in right-of-use and rental liabilities by the lessee.

In accordance with the exception set out in the standard, short-term leases (initial term of less than 12 months) and leases for which the new value of the leased asset is low are not recognised on the balance sheet. The corresponding leasing expenses are recorded on a straight-line basis in the income statement under “operating expenses”.

In accordance with the standard, the Group does not apply IFRS 16 to leases of intangible assets.

NON-CURRENT ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS (IFRS 5)

A non-current asset (or a disposal group) is classified as held-for-sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use.

For this to be the case, the asset (or disposal group) must be available for immediate sale in its present condition and its sale must be highly probable.

The relevant assets and liabilities are shown separately on the balance sheet under “Non-current assets held for sale and discontinued operations” and “Debt associated with non-current assets held for sale and discontinued operations”.

A non-current asset (or group of assets) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. In case of unrealised losses, impairment is recognised in the income statement. Moreover, non-current assets corresponding to depreciable fixed assets are no longer depreciated after they are declassified.

For equity-accounted investments, the share of earnings equal to the percentage held for sale is no longer booked. If the fair value of a group of assets held for sale less its costs to sell is less than its carrying amount after impairment of non-current assets, the difference is allocated to the other assets in the group of assets held for sale including the financial assets.

A discontinued operation is a component that the Group has either disposed of, or that is classified as held for sale, according to the following situations:

- it represents a separate major business line or geographical area of operations;
- it is part of a single coordinated plan to dispose of a separate major business line or geographical area of operations; or
- it is a subsidiary acquired exclusively with a view to resale.

The following are disclosed on a separate line of the income statement:

- net income from discontinued operations;
- the gain or loss recognised on the disposal or on measurement to fair value less costs to sell the assets and liabilities constituting the discontinued operations, net of tax.

1.3 CONSOLIDATION PRINCIPLES AND METHODS (IFRS 10, IFRS 11 AND IAS 28)

SCOPE OF CONSOLIDATION

The consolidated financial statements include the financial statements of Crédit Agricole S.A. and those of all companies over which, in compliance with IFRS 10, IFRS 11 and IAS 28, Crédit Agricole S.A. exercises control, joint control or significant influence, except for those that are not material in relation to all the companies included in the scope of consolidation.

Definitions of control

In compliance with IFRS, all entities under control, under joint control or under significant influence are consolidated, provided that they are not covered by the exclusions below.

Control over an entity is deemed to exist if Crédit Agricole S.A. is exposed to or entitled to receive variable returns as a result of its involvement with the entity and if the power it holds over this entity allows it to influence these returns. Power in this context

means substantive (voting or contractual) rights. Rights are considered substantive if the holder of the rights can in practice exercise them when decisions about the Company’s relevant activities are made.

Crédit Agricole S.A. is deemed to control a subsidiary through voting rights when its rights give it the practical ability to direct the subsidiary’s relevant activities. Crédit Agricole S.A. is generally considered to control a subsidiary when it holds more than half the existing or potential voting rights in an entity, whether directly or indirectly through subsidiaries, except when it can be clearly demonstrated that such ownership does not give it the power to direct its relevant activities. Control is also deemed to exist where Crédit Agricole S.A. holds half or less than half of the voting rights, including potential rights, in an entity but is able in practice to direct its relevant activities at its sole discretion, notably because of the existence of contractual arrangements, the size of its stake in the voting rights compared to those of other investors, or other reasons.

Control of a structured entity is not assessed solely on the basis of the percentage of voting rights which, by their nature, have no impact on the entity's returns. The analysis of control takes into account contractual arrangements and risks incurred by Crédit Agricole S.A., as well as Crédit Agricole S.A.'s involvement and decisions at the time of the entity's creation, any rights under agreements that give the investor the power to direct relevant activities only in specific circumstances, and any other facts or circumstances that indicate that the investor can direct the entity's relevant activities. Where there is a management agreement, the extent of decision-making powers granted to the delegated manager and the compensation accorded by such contractual arrangements are examined to establish whether the manager is in practice acting as an agent (with delegated powers) or as a principal (on their own account).

Furthermore, when decisions on the entity's relevant activities are taken, the indicators used to assess whether an entity is acting as agent or principal are as follows: the extent of the decision-making powers compared to the powers over the entity delegated to the manager, the compensation provided for under the contractual arrangements, any substantive rights that may affect the decision-making capacity of other parties involved in the entity and the exposure to variable returns of other interests in the entity.

Joint control is deemed to exist when there is a contractual division of control over an economic activity. Decisions affecting the entity's relevant activities require unanimous agreement of the joint controllers.

In traditional entities, significant influence is defined as the power to influence but not control a corporate's financial and operational policies, whether this control is exclusive or joint. Crédit Agricole S.A. is presumed to exercise significant influence if it owns 20% or more of the voting rights in an entity, whether directly or indirectly through subsidiaries.

CONSOLIDATION METHODS

The consolidation methods are defined by IFRS 10, IFRS 11 and IAS 28. They depend on the type of control exercised by Crédit Agricole S.A. over the entities that can be consolidated, regardless of activity or whether or not they have legal entity status:

- full consolidation, for controlled entities, including entities with different financial statement structures, even if their business is not an extension of that of Crédit Agricole S.A.;
- the equity accounting method, for entities over which Crédit Agricole S.A. exercises significant influence and joint ventures (excluding joint activities).

Full consolidation consists in substituting for the value of the shares each of the assets and liabilities carried by each subsidiary. The equity and income attributable to non-controlling interests is presented separately in the consolidated balance sheet and income statement.

Non-controlling interests are as defined by IFRS 10 and incorporate instruments representing current ownership interests and that give right to a proportional share of the net assets in the event of liquidation and the other equity instruments issued by the subsidiary and not held by the Group.

Investments in associates or jointly controlled corporates are recognised as a separate item on the balance sheet under "Investments in equity-accounted entities". The equity accounting method consists of substituting, for the value of shares, the Group's proportional share of the equity and income of the companies concerned.

In the event of incremental share purchases or partial disposals with continued joint control or significant influence, Crédit Agricole S.A. recognises:

- in the case of an increase in the percentage of interest, additional goodwill;
- in the case of a reduction in the percentage of interest, a gain or loss on disposal/dilution in profit or loss.

RESTATEMENTS AND ELIMINATIONS

In accordance with IFRS 10, financial statements are restated by Crédit Agricole S.A. to harmonise the valuation methods applied to consolidated companies.

The impact of Group internal transactions on the consolidated balance sheet and income statement is eliminated for fully consolidated entities.

In the consolidating entity's financial statements, gains or losses arising from intra-group asset disposals are eliminated; the presence of any losses for the transferor may result in recognition of an impairment of the asset transferred in this internal disposal.

TRANSLATION OF THE FINANCIAL STATEMENTS OF FOREIGN OPERATIONS (IAS 21)

The financial statements of entities representing a "foreign operation" (subsidiary, branch, associate or joint venture) are translated to euros in two steps:

- the local currency in which the financial statements are prepared is converted into the functional currency (currency of the main business environment of the entity): the conversion is carried out as if the information had been recognised initially in the functional currency (same conversion principles as for the aforementioned foreign currency transactions);
- the functional currency is converted into euros, the currency in which the Group's consolidated financial statements are presented: assets and liabilities, including goodwill, are converted at the closing exchange rate. Equity items, such as share capital or reserves, are converted at the historical foreign exchange rates. Income and expenses included in the income statement are converted at the average exchange rate for the period. Foreign exchange impacts resulting from this conversion are recognised as a separate component of shareholders' equity. In the event of exit from the foreign operation (disposal, repayment of capital, liquidation, discontinuation of activity) or in the event of deconsolidation due to a loss of control (even without disposal), these translation adjustments are recognised in the income statement when the result of exit or loss of control is recognised.

BUSINESS COMBINATIONS

Business combinations are accounted for using the acquisition method in accordance with IFRS 3, except for business combinations under common control, which are excluded from the scope of application of IFRS 3.

At the date of acquisition, the identifiable assets, liabilities and contingent liabilities of the acquired entity which satisfy the conditions for recognition set out in IFRS 3 are recognised at fair value.

The transferred consideration at the time of a business combination (the acquisition cost) is measured as the total of fair values transferred by the acquirer, at the date of acquisition in exchange for control of the acquired entity (for example: cash, equity instruments etc.).

The costs directly attributable to the business combination shall be recognised as expenses, separately from the business combination. If the transaction is highly probable, they are recognised under "Net gains (losses) on other assets", otherwise they are recognised under "Operating expenses".

The non-controlling interests that are shares of current interests giving rights to a share of the net assets in the event of liquidation may be measured, at acquirer's choice, in two ways:

- at fair value on the date of acquisition ("full goodwill" method);
- at the share of the identifiable assets and liabilities of the acquired company revalued at fair value ("partial goodwill" method).

The option may be exercised at each acquisition.

The initial assessment of assets, liabilities and contingent liabilities may be revised within a maximum period of 12 months after the date of acquisition.

Goodwill

Valuation and recognition of goodwill

The difference between the sum of the transferred consideration and non-controlling interests and the net balance at the date of acquisition of acquired identifiable assets and liabilities assumed, valued at their fair value, is recognised, when it is positive, in the assets side of the consolidated balance sheet, under "Goodwill". Any badwill is recognised immediately through profit or loss.

Goodwill is carried in the balance sheet at its initial amount in the currency of the acquired entity and converted at the closing foreign exchange rate at the end of the reporting period.

When control is taken by stages, goodwill is calculated once on the entire interest held after taking control, using the fair value at the date of acquisition of the acquired assets and liabilities taken over.

When there is a loss of control, the proceeds from the disposal are calculated on the entirety of the entity sold and any investment share kept is recognised in the balance sheet at its fair value on the date control was lost.

Impairment of goodwill

Goodwill is tested for impairment whenever there is objective evidence of a loss of value and at least once a year.

The choices and assumptions used in assessing non-controlling interests at the date of acquisition may influence the amount of initial goodwill and any impairment resulting from a loss of value.

For the purpose of impairment tests, goodwill is allocated to the Group Cash Generating Units (CGUs) that are expected to benefit from the business combination. The CGUs have been defined within the Group's business lines as the smallest identifiable group of assets and liabilities functioning in a single business model. Impairment testing consists of comparing the carrying amount of each CGU, including any goodwill allocated to it, with its recoverable amount.

The recoverable amount of the CGU is defined as the higher of fair value less costs to sell and value in use. The value in use is the present value of the future cash flows of the CGU, as set out in medium-term business plans prepared by the Group for management purposes.

When the recoverable amount is lower than the carrying amount, a corresponding impairment loss is recognised for the goodwill allocated to the CGU. This impairment is irreversible.

Changes to the post-acquisition percentage ownership interest and goodwill

In the event of an increase or decrease in Crédit Agricole S.A.'s percentage ownership interest in an entity that is already controlled and where there is no loss of control, there is no impact on the amount of goodwill recognised at the start of the business combination.

In the case of an increase in the percentage ownership interest of Crédit Agricole S.A. in an entity that is already controlled, the difference between the acquisition cost and the share of net assets acquired is recognised under "Consolidated reserves Group share".

In the event that Crédit Agricole S.A.'s percentage ownership interest in an entity that remains under its control declines, the difference between the disposal price and the carrying amount of the share of net assets sold is also recognised directly under "Consolidated reserves Group share". Expenses arising from these transactions are recognised in equity.

Sale options granted to minority shareholders

The accounting treatment of sale options granted to minority shareholders is as follows:

- when a sale option is granted to the minority shareholders of a fully consolidated subsidiary, a liability is recognised in the balance sheet; on initial recognition, the liability is measured at the estimated present value of the financial year price of the options granted to the minority shareholders. Against this liability, the share of net assets belonging to the minority shareholders concerned is reduced to zero and the remainder is deducted from equity;
- subsequent changes in the estimated value of the financial year price will affect the amount of the liability, offset by an equity adjustment. Symmetrically, subsequent changes in the share of net assets due to minority shareholders are cancelled, offset in equity.

Business combinations under common control

In the absence of an IFRS standard or interpretation specifically applicable to a transaction, IAS 8 "Accounting principles, changes in accounting estimates and errors" leaves open the possibility of referring to the official positions of other normalisation bodies. Accordingly, the Group has elected to apply US standard ASC 805-50, which seems to comply with the IFRS general principles, for entering business combinations under common control at carrying amount using the pooled interests method.

NOTE 2

MAJOR STRUCTURAL TRANSACTIONS AND MATERIAL EVENTS DURING THE PERIOD

2.1 MAJOR STRUCTURAL TRANSACTIONS

2.1.1 CRÉDIT AGRICOLE S.A. COMPLETES THE ACQUISITION OF SANTANDER'S 30.5% STAKE IN CACEIS AND NOW BRINGS ITS OWNERSHIP TO 100%

Following the agreement announced on 19 December 2024, and after receiving all required authorisations, Crédit Agricole S.A. announced on 4 July 2025 that it had completed the acquisition of Santander's 30.5% stake in CACEIS, its asset servicing subsidiary. Following this transaction, Crédit Agricole S.A. now controls 100% of the share capital of CACEIS.

2.1.2 AMUNDI AND VICTORY CAPITAL BECOME STRATEGIC PARTNERS

In accordance with the memorandum of understanding announced on 16 April 2024 and after signing a definitive agreement with Victory Capital on 9 July 2024, Amundi announced the closing of the transaction on 1 April 2025: Amundi's activities in the United States have been merged with Victory Capital.

In exchange, Amundi has become a strategic shareholder of Victory Capital, and reciprocal distribution and services agreements have been set up for a period of 15 years. Following the post-closing adjustments, Amundi's stake in Victory Capital reached 26% ⁽¹⁾.

In the financial statements at 31 December 2025, a gain on disposal of €452.4 million, or €302.1 million in net income Group share, has been recognised, corresponding to the impact of the disposal of Amundi's assets and liabilities in the United States to Victory Capital.

Victory Capital is consolidated using the equity method. At 31 December 2025, its share of income from equity-accounted entities was €66.1 million and its equity-accounted value on the Group's balance sheet was €1,035 million.

2.1.3 FIRST CONSOLIDATION USING THE EQUITY METHOD OF BANCO BPM S.P.A. ("BANCO BPM")

On 3 April 2025, after obtaining the authorisation of the European Central Bank ("ECB"), Crédit Agricole S.A. crossed the threshold of 10% of the capital of Banco BPM by exercising its right to physical delivery of all Banco BPM shares underlying the position in derivatives entered into in the fourth quarter of 2024 and the first quarter of 2025. Crédit Agricole S.A. thus increased its stake in Banco BPM from 9.9% at 31 December 2024 to 19.8% at 30 June 2025.

On 30 July 2025, Crédit Agricole S.A. entered into a derivative position on an additional 0.3% of Banco BPM.

In the second half of 2025, Crédit Agricole S.A. requested authorisation from the European Central Bank to cross the threshold of 20% of the capital of Banco BPM. After completing its investigation of the case, the Bank of Italy, which is responsible for assessing the compliance of the transaction with Italian and European legislation, approved the transaction and forwarded its findings to the ECB on 11 December 2025. No notice of objection to the Bank of Italy's decision was received by Crédit Agricole S.A. before 31 December 2025.

On 9 January 2026, the ECB notified Crédit Agricole S.A. of its authorisation to cross the threshold of 20% of the capital of Banco BPM, thus confirming the position of the Bank of Italy. Crédit Agricole S.A. then exercised its right to physical delivery of Banco BPM shares, increasing its aggregate position in Banco BPM to 20.1%.

At 31 December 2025, Banco BPM was equity-accounted, applying the cost method. An initial consolidation effect resulted, recorded under "Share of income from equity-accounted entities" for -€607 million.

It comprises:

- the cancellation of historical fair value revaluations of Banco BPM securities and derivative instruments since their acquisition, amounting to -€1,971 million;
- badwill of €995 million. In application of IFRS, Crédit Agricole S.A. must finalise the initial allocation of the purchase price within a period of 12 months maximum from the acquisition date;
- and the catching-up through profit or loss of the share of net assets since the first acquisition of Banco BPM securities for €369 million.

The initial equity-accounted value in the Group's balance sheet was €3 billion and Banco BPM's share of income since the first consolidation is €21 million.

Banco BPM is a listed company that publishes its financial statements after those of Crédit Agricole S.A. Therefore, given the unavailability of financial information during the preparation of Crédit Agricole S.A.'s financial statements, the share of quarterly income recognised in the equity-accounted value for Banco BPM corresponds to an estimate based on the last quarter published by the latter, i.e. the income for the previous quarter.

2.1.4 CRÉDIT AGRICOLE PERSONAL FINANCE & MOBILITY TAKES A STAKE IN GAC LEASING

On 27 January 2025, Crédit Agricole Personal Finance & Mobility announced that it had completed the acquisition of 50% of the securities of GAC Finance Leasing Co. Ltd (GAC Leasing), now Guangzhou GAC-Sofinco Finance Leasing Co Ltd. This transaction consolidates the partnership that has existed since 2009 between CA Personal Finance & Mobility and the GAC Group.

The new joint venture offers financial and operating leasing solutions in the Chinese market, promoting the roll-out of electric vehicles in China. It operates alongside GAC-Sofinco AFC, a long-standing joint venture that offers automotive financing and services throughout China.

GAC-Sofinco Finance Leasing is consolidated using the equity method. At 31 December 2025, its share of income from equity-accounted entities was -€5.4 million and its equity-accounted value on the Group's balance sheet was €258 million.

(1) 4.8% of voting rights.

2.1.5 INDOSUEZ WEALTH MANAGEMENT FINALISES THE ACQUISITION OF BANQUE THALER

Following approval from the relevant authorities, Indosuez Wealth Management, the wealth management subsidiary of the Crédit Agricole Group, announced on 1 September 2025 that it had finalised the acquisition of Thaler Bank, of which it now controls 100% of the capital.

The Bank was consolidated on 31 December 2025 using the full consolidation method. This acquisition led to the recognition of goodwill in the amount of €100 million at 31 December 2025. In application of IFRS 3, the acquirer must finalise the recognition of goodwill within a period of 12 months maximum from the acquisition date.

Thaler Bank was merged with CA Indosuez (Suisse) S.A. on 15 December 2025 with retroactive effect to 31 August 2025.

2.1.6 FIRST CONSOLIDATION OF THE ENTITIES PIÙVERA ASSICURAZIONI AND PIÙVERA PROTEZIONE

Following their acquisition in December 2023 by Crédit Agricole Assurances, the entities PiùVera Assicurazioni and PiùVera Protezione are consolidated in the financial statements at 31 December 2025 according to the full consolidation method. This acquisition led to the recognition of goodwill in the amount of €72 million.

The scope of consolidation and changes to the scope of consolidation at 31 December 2025 are presented in detail at the end of the notes to the financial statements in Note 12 "Scope of consolidation at 31 December 2025".

NOTE 3

FINANCIAL MANAGEMENT, RISK EXPOSURE AND HEDGING POLICY

Crédit Agricole S.A.'s Financial Management department is responsible for organising financial flows within Crédit Agricole S.A., defining and implementing refinancing rules, asset and liability management, and managing regulatory prudential ratios. It sets out the principles and ensures a cohesive financial management system throughout the Group.

The Group's management of banking risks is handled by the Group Risk Management and Permanent Controls department. This department reports to the Deputy Chief Executive Officer of Crédit Agricole S.A. and its task is to control credit, financial and operational risks.

A description of these processes and commentary now appear in the chapter on "Risk Management" in the management report, as allowed by IFRS 7 "Financial instruments: disclosures". The accounting breakdowns are presented in the financial statements.

3.1 CREDIT RISK

(See chapter "Risk factors and risk management – Risk management – Credit risk".)

CREDIT RISK MEASUREMENT

In the context of economic and geopolitical uncertainties, the Group continues to regularly review its forward-looking macroeconomic forecasts to determine the estimate of credit risk.

Information on the macroeconomic scenarios used at 31 December 2025

The Group used four scenarios for calculating IFRS 9 provisioning parameters in production on December 2025 with projections going up to 2028.

These scenarios, which were created in October 2025, are based on various assumptions about changes in the international environment. These include changes in inflation rates, prompting separate monetary policy responses from central banks, and contrasting impacts on economic growth projections.

Weightings are assigned to each of these scenarios. A weighting of more than 50% is assigned to DisclosureOfCreditRiskExplanatory the central scenario, reflecting its robustness, but always significant risks and uncertainties have resulted in a relatively high weighting being assigned to the adverse scenarios.

First scenario: "Central" scenario (weighted at 55%)

Resilience of growth

In an international environment that is always unstable there are still many uncertainties. We can nevertheless assume that the uncertainties caused by US economic policy are waning, and that tariffs are at least stabilising.

For the United States, the main lines of the scenario are based on a slowdown in 2025, due to the aggressive increase in customs duties, the anti-immigration policy and persisting inflation, followed by a slight upturn, thanks to the support for budgetary policy provided by the One Big Beautiful Bill Act, and also to deregulation. This scenario assumes an average annual growth of 1.7% for 2025, down significantly from the 2.8% recorded in 2024, followed by an acceleration to around 2%. The current deceleration is accompanied by a weakening of the labour market, with a moderate increase in unemployment. The customs duties, at their point of maximum impact, would add nearly 0.8 points to the increase in prices over a year. This effect would be largely temporary, but would take inflation to around 3% at the end of 2025, before gradually falling in 2026 but remaining above the Fed's target ("Federal Reserve Bank").

In the Eurozone, despite sluggish consumption and a weaker external environment, the recovery continues. The impact of tariffs is currently less significant than anticipated and the trade agreement between the EU and the US, entered into in July 2025, offers more visibility. The growth achieved in early 2025 makes it possible to expect a GDP increase of around 1.3% in 2025 and 2026. The resilience of the economy is driven by domestic demand: this has weakened, but remains at a level slightly higher than its long-term trend, and investment in particular has withstood uncertainty. Our scenario is based, above all, on investment, driven by European funds, defence spending and the German recovery plan.

Monetary policies: a long pause

In the US, the resilience of inflation does not favour rapid, large-scale monetary easing: a final decrease in 2025 reduced the upper bound of the federal fund (Fed fund) rate to 4%, followed by a long pause. In the Eurozone, inflation around target and a recovery – albeit modest – in the economy also suggest stable central bank policy rates, followed by a tightening, but not before 2027.

Long-term interest rates: upward pressure

Interest rates would experience moderate upward pressure. In the United States, the possible resurgence of inflationary concerns, combined with less monetary easing than anticipated, could result in a slight rise in interest rates coupled with a flattening of the curve.

This movement would spread to the Eurozone, driven by European growth that is more resilient than expected, and then supported by fiscal expansion in Germany. The reorganisation of the hierarchy among Eurozone sovereign issuers is expected to continue.

Second scenario: “Moderate adverse” scenario (weighted at 25%)

Sudden materialisation of several risks

This scenario involves a reappraisal of risk in the United States, in the wake of the events of Liberation Day, with a rise in 10-year Treasury yields and a widening of the swap spread, as well as lower demand for the dollar. Moreover, the uncertain nature of the environment creates a crisis of confidence; risk aversion specifically affects the equity markets, as well as the less robust sovereign rates in the Eurozone, particularly French rates. International tensions and another increase in gas prices adversely affect the European Union. France is also experiencing a stalemate in its political situation, depriving it of all credibility in terms of its trajectory of reducing imbalances in public finances.

The area is experiencing a resurgence of inflation, especially in countries that are highly exposed to gas (Italy and Germany). The GDP declines in 2026 in the Eurozone as a whole, as well as in the major countries of the area. In France, by comparison with the central scenario, inflation is 0.3 percentage points higher in 2026, while growth is 1.5 percentage points lower. There is some normalisation thereafter, thanks in particular to a significant drop in inflation, but growth remains lower in 2027 than expected in the central scenario.

Response from central banks and long-term rates

This scenario is assumed that the central banks do not react. They do not ease monetary policy in response to the wave of risk aversion in 2026 due to concerns about inflation; therefore, the central bank policy rates therefore remain stable throughout the period. In the interbank market, indiscriminate mistrust creates tensions over rates (rise in Euribor).

With regard to long-term risk-free rates (Eurozone swap rates), This scenario assume that the markets will anticipate a rapid return to “normal”, with risk linked to the US economy dissipating and confidence recovering, as well as a recovery in the equity markets after the major shock of 2026. The markets tend to underestimate the magnitude and duration of the downward impact on growth and focus on the risk of inflation. Tensions are concentrated on the short end (two-year rates) in 2026. In contrast, rates on long-term maturities are lower than in the central scenario, with the curve inverted. In addition, spreads vis-à-vis the 10-year swap widen markedly in 2026.

Third scenario: “Favourable” scenario (weighted at 5%)

A boost in growth thanks to the German “bazooka”

This scenario assumes that the German investment plan will be implemented more quickly and efficiently. The Bundestag very quickly approves the recovery plan and the KfW (German public investment bank) is actively mobilised. The plan provides for €500 billion of investment over 12 years, or 1% of GDP per year, dedicated to energy, transport, education and digital infrastructure. The debt brake is relaxed, excluding spending related to Ukraine and defence. The German regions can borrow up to 0.35% of their GDP to invest in infrastructure renovation and security.

The fiscal stimulus provided by the German plan and these fiscal easements stimulate many industrial sectors in Germany but also in Europe; the ripple effect on European Union members is significant.

With the proliferation of investment projects, particularly in Germany, Italy and France, European industry experiences a significant turnaround. Investment is dynamic and the business climate and consumer confidence strengthen; the growth outlook is clearly improving. The growth surplus for the Eurozone as a whole is 0.4 percentage points per year on average in the period 2025-2028.

The public deficits in Germany, Italy and France increase but there is no large-scale deterioration in public debt-to-GDP ratios.

Slight monetary tightening and a narrowing of spreads

As growth is driven more by investment spending than by consumption, the rise in inflation is marginal (+0.1 point on average per year). As a result, the ECB raises its interest rates a little more than in the central scenario, leading to a long term higher rates. In the meantime, French and Italian spreads tighten.

Fourth scenario: “Severe adverse” scenario (weighted at 15%)

Worsening of trade and geopolitical tensions

The hypothesis of a further increase in customs tariffs initiated by the American government is being considered. Following a ruling of the US Court of International Trade, the American government favours a significant increase in tariffs on key sectors, including steel, aluminium, automobiles, pharmaceuticals, semiconductors and chips. He also has Congress approve a universal tariff (NB: he can make use of a legislative text that has never been applied, namely Section 122 of the Trade Act of 1974, which allows temporary tariffs of up to 15% on all imports to cover external deficits). The tariff applied is around 20%.

The main partners respond by controlling their exports (retention of strategic exports from China) or by imposing tariffs in turn (China and the EU). The EU refuses to commit to importing more LNG from the US, to which the American government responds by imposing a limit on volumes of LNG exported.

Due to the higher volumes in play, the total blockade of US LNG exports would result in an increase in natural gas prices well above that of 2022. Here we assume a partial embargo that leads to a doubling of the gas price for half a year (H1 2026), the time needed to negotiate.

The trade and geopolitical tensions lead to a partial blockage of certain key shipping routes (Panama, Malacca Strait, Suez Canal), resulting in increased delivery times and occasional disruptions of supply chains.

The shocks related to the trade tensions the resurgence of inflation and the rise in financing costs lead to a crisis of confidence, resulting in an increase in savings and a decrease in investment. Growth is seriously affected.

High inflation and monetary tightening

Inflation rises rapidly. Fears of second-round effects are very present, due in particular to the relatively good performance of the labour markets when the shock occurs, despite the anticipated deceleration of growth.

In response to this inflation and these risks, the Fed and the ECB implement rapid and significant monetary tightening. Ten-year swap rates rise, as do sovereign rates, affected by fears over the fiscal situations. However, the curve is inverted.

The equity markets fall sharply.

FOCUS ON THE CHANGES IN THE MAIN MACROECONOMIC VARIABLES IN THE FOUR SCENARIOS

SENSITIVITY ANALYSIS OF THE MACROECONOMIC SCENARIOS IN THE CALCULATION OF IFRS 9 PROVISIONS (ECL STAGES 1 AND 2) ON THE BASIS OF THE CENTRAL PARAMETERS

Variation of ECL in passage to 100% of the scenario (Crédit Agricole S.A. scope)

Central scenario	Moderate adverse	Severe adverse	Favourable scenario
-11.8%	+6.0%	+39.5%	-15.1%

This sensitivity on the ECLs defined under the central parameters may be subject to adjustments for local forward-looking projects which, as the case may be, could reduce it or increase it.

Regarding all scenarios

To take account of specific local situations (related to geography or certain business lines), some Group entities supplement the macroeconomic scenarios defined at the central level with specific assumptions (local forward looking).

At the end of December 2025, taking into account local economic assumptions, provisions for performing and impaired loans (Stage 1/Stage 2) accounted for 34% of the total provisions of the Group, while provisions for default (Stage 3) accounted for 66%.

The share of the cost of risk attributable to Stage 1 and Stage 2 exposures was -5%, while that relating to Stage 3 (including risks & charges) was 105%.

3.1.1 CHANGE IN CARRYING AMOUNTS AND VALUE CORRECTIONS FOR LOSSES OVER THE PERIOD

Value adjustments for losses correspond to the impairment of assets and to provisions for off-balance sheet commitments recognised in net income (Cost of risk) relating to credit risk.

The following tables present a reconciliation of the opening and closing balances of value adjustments for losses recognised under Cost of risk and associated carrying amounts, by accounting category and type of instrument.

Financial assets at amortised cost: debt securities

	Performing assets

3.1.2 MAXIMUM EXPOSURE TO CREDIT RISK

The maximum exposure to credit risk represents the carrying amount, net of any impairment loss recognised and without taking account of any collateral held or other credit enhancements (e.g. netting contracts that do not qualify for offset in accordance with IAS 32).

The tables below show the maximum exposures as well as the amount of collateral held and other credit enhancements allowing this exposure to be reduced.

Impaired assets at the end of the reporting period constitute the impaired assets (Stage 3).

Financial assets not subject to impairment requirements (accounted at fair value through profit or loss)

	31/12/2025					
	Maximum exposure to credit risk	Financial instruments provided as collateral	Credit risk mitigation			
			Collateral held as security		Other credit enhancement

A description of the assets held as collateral is provided in Note 9 "Financing and guarantee commitments and other guarantees".

3.1.3 MODIFIED FINANCIAL ASSETS

Modified financial assets are those assets that have been restructured due to financial difficulties. Loans for which Crédit Agricole S.A. changed the initial financial terms (interest rate, term) for economic or legal reasons connected with the borrower's financial difficulties, in a manner that would not have been considered under other circumstances. They thus consist of loans

classified as in default and performing loans at the date they are restructured. (A more detailed definition of restructured loans and their accounting treatment can be found in Note 1.2 "Accounting policies and principles", chapter entitled "Financial instruments – Credit risk").

For assets restructured during the period, the carrying amount following restructuring consists of:

	Performing assets		Credit-impaired assets (Stage 3)
	Assets subject to 12-month ECL (Stage 1)	Assets subject to lifetime ECL (Stage 2)	
<i>(in millions of euros)</i>			
Loans and receivables due from credit institutions	-	-	-
Gross carrying amount	-	-	-
Net gains (losses) resulting from the modification	-	-	-
Loans and receivables due from customers	-	1,291	604
Gross carrying amount	-	1,302	613
Net gains (losses) resulting from the modification	-	(11)	(9)
Debt securities	-	-	-
Gross carrying amount	-	-	-
Net gains (losses) resulting from the modification	-	-	-

In accordance with the principles set out in Note 1.2 "Accounting policies and principles", chapter entitled "Financial instruments – Credit risk", restructured assets at a stage of impairment corresponding to that of Stage 2 (performing assets) or Stage 3 (impaired assets) may go back into Stage 1 (performing assets). The carrying amount of modified assets affected by this reclassification during the period is:

	Gross carrying amount
	Assets subject to 12-month ECL (Stage 1)
<i>(in millions of euros)</i>	
Restructured assets previously classified in Stage 2 or Stage 3 and reclassified in Stage 1 during the period	
Loans and receivables due from credit institutions	-
Loans and receivables due from customers	4
Debt securities	-
TOTAL	4

3.1.4 CREDIT RISK CONCENTRATIONS

The carrying amounts and commitments are presented net of impairment and provisions.

Exposure to credit risk by category of credit risk

The credit risk categories are presented by probability of default intervals. The correspondence between internal ratings and probability of default intervals is discussed in the chapter entitled “Risks factors and risk management”.

Given the credit risk management practices of the Crédit Agricole Group, the one-year default probability threshold for retail customers decreased from 20% to 15% at 31 December 2025.

Financial assets at amortised cost (excluding Crédit Agricole internal transactions)

3.2 EXPOSURE TO SOVEREIGN RISK

The scope of sovereign exposures recorded covers exposures to Governments, but does not include local authorities. Tax debt is excluded from these amounts.

Exposure to sovereign debt corresponds to an exposure net of impairment for financial assets not measured at fair value through profit or loss (carrying amount) presented both gross and net of hedging.

Crédit Agricole S.A.'s exposure to sovereign risk is as follows:

BANKING ACTIVITY

31/12/2025 (in millions of euros)	Exposures Banking activity net of impairment						
	Other financial instruments at fair value through profit or loss		Financial assets at fair value through other comprehensive income that may be reclassified to profit or loss		Total banking activity before hedging		Total banking activity after hedging
	Held-for-trading financial assets	Other financial instruments at fair value through profit or loss	Financial assets at amortised cost			Hedging

INSURANCE ACTIVITY

For the insurance activity, exposure to sovereign debt is presented as net of impairment, before hedging, and corresponds to an exposure before application of sharing mechanisms between insurer and policyholder specific to life insurance.

FINANCIAL GUARANTEES AT RISK GIVEN BY EXPECTED MATURITY

The amounts presented correspond to the expected amount of the call of financial guarantees at risk, i.e. guarantees that have been impaired or are on a watch list.

	31/12/2025					
(in millions of euros)	≤ 3 months	> 3 months to ≤ 1 year	> 1 year to ≤ 5 years	> 5 years	Indefinite	Total
Financial guarantees given	70	285	-	-	-	355

	31/12/2024					
(in millions of euros)	≤ 3 months	> 3 months to ≤ 1 year	> 1 year to ≤ 5 years	> 5 years	Indefinite	Total
Financial guarantees given	72	253	-	-	-	325

Contractual maturities of derivative instruments are given in Note 3.3 "Market risk".

3.5 HEDGE ACCOUNTING

(See Note 3.3 “Market risk” and the chapter “Risk factors and risk management – Risk management – Balance sheet management”).

FAIR VALUE HEDGES

A fair value hedge modifies the risk caused by changes in the fair value of a fixed-rate financial instrument as a result of changes in interest rates. Fair value hedges transform fixed-rate assets or liabilities into floating-rate assets or liabilities.

Items hedged are principally fixed-rate loans, securities, deposits and subordinated debt.

CASH FLOW HEDGES

A cash flow hedge modifies the risk related to variability in cash flows arising from floating-rate financial instruments.

Cash flow hedges notably include the floating rate hedges of loans and deposits.

HEDGE OF NET INVESTMENT IN FOREIGN CURRENCY

A hedge of a net investment in foreign currency modifies the risk inherent in exchange rate fluctuations connected with foreign currency investments in subsidiaries.

HEDGING DERIVATIVES

	31/12/2025			31/12/2024		
	Market value		Notional amount	Market value		Notional amount
	positive	negative		positive	negative	
(in millions of euros)						
Fair value hedges	13,900	21,145	1,014,754	16,938	24,481	1,056,315
Cash flow hedges	2,332	2,428	165,421	2,183	2,632	136,230
Hedges of net investments in foreign operations	128	87	6,739	73	148	6,560
TOTAL HEDGING DERIVATIVE INSTRUMENTS	16,360	23,660	1,186,914	19,194	27,261	1,199,105

The Group applies, in accordance with its Accounting Policies and Principles relating to fair value hedges of interest rate portfolios, financial assets or financial liabilities portfolios, IAS 39 as adopted by the European Union (carve-out version). The standard allows the inclusion of low- or non-interest-bearing demand deposits in such hedges.

Crédit Agricole S.A. has not recorded any material disqualification in the 2025 financial year in relation to the rising rates market environment.

HEDGING DERIVATIVES: ANALYSIS BY RESIDUAL MATURITY (NOTIONALS)

The breakdown of notional values of derivative instruments is shown by remaining contractual maturity.

	31/12/2025			
	Exchange-traded transactions and over the counter transactions			Total notional
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	
(in millions of euros)				
Interest rate instruments	407,225	332,897	308,534	1,048,656
Currency instruments	9,150	902	(32)	10,020
Other instruments	285	84	-	369
SUBTOTAL	416,660	333,883	308,502	1,059,045
Forward currency transactions	92,173	27,123	8,572	127,869
TOTAL NOTIONAL OF HEDGING DERIVATIVES	508,833	361,006	317,074	1,186,914

	31/12/2024			
	Exchange-traded transactions and over the counter transactions			Total notional
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	
(in millions of euros)				
Interest rate instruments	435,725	338,020	300,547	1,074,291
Currency instruments	7,188	1,394	101	8,682
Other instruments	222	2	-	224
SUBTOTAL	443,135	339,415	300,648	1,083,198
Forward currency transactions	84,258	26,470	5,180	115,908
TOTAL NOTIONAL OF HEDGING DERIVATIVES	527,392	365,885	305,828	1,199,105

Note 3.3 “Market risk – Derivative instruments: analysis by residual maturity” breaks down the market value of hedging derivatives by remaining contractual maturity.

3.6 OPERATIONAL RISKS

(See chapter “Risk factors and risk management – Risk management – Operational risks”).

3.7 CAPITAL MANAGEMENT AND REGULATORY RATIOS

The Crédit Agricole S.A. Finance Department is tasked with ensuring the adequacy of liquidity and capital between the requirements generated by the Group's global operations and its liquidity and capital financial resources. It is responsible for monitoring the prudential and regulatory ratios (solvency, liquidity, leverage, resolution) of Crédit Agricole Group and of Crédit Agricole S.A. To this end, it sets out the principles and ensures a cohesive financial management system throughout the Group.

Information on capital management and compliance with the regulatory ratios required by IAS 1 is presented in the chapter “Risks factors and risk management”.

The Group's management of banking risks is handled by the Group Risk Management and Permanent Controls department. This department reports to the sole Deputy Chief Executive Officer in charge of Steering and Control of Crédit Agricole S.A. and its task is to control credit, financial and operational risks on a permanent basis.

A description of these processes and commentary appear in the chapter on “Risk factors and risk management” in the management report, as allowed by IFRS 7. Nonetheless, the accounting breakdowns are still presented in the financial statements.

NOTE 4 NOTES ON OTHER COMPREHENSIVE INCOME**4.1 INTEREST INCOME AND EXPENSES***(in millions of euros)*

	31/12/2025	31/12/2024
On financial assets at amortised cost	46,645	53,690
Interbank transactions	8,749	12,228
Crédit Agricole internal transactions	11,304	13,428
Customer transactions	21,826	23,591
Finance leases	2,415	2,202
Debt securities	2,351	2,241
On financial assets recognised at fair value through other comprehensive income	5,889	5,121
Interbank transactions	-	-
Customer transactions	-	-
Debt securities	5,889	5,121
Accrued interest receivable on hedging instruments	2,477	4,534
Other interest income	122	99
INTEREST AND SIMILAR INCOME ^{(1) (3)}	55,133	63,444
On financial liabilities at amortised cost	(36,163)	(43,793)
Interbank transactions	(4,563)	(5,748)
Crédit Agricole internal transactions	(3,057)	(3,554)
Customer transactions	(18,048)	(23,199)
Finance leases	(608)	(464)
Debt securities	(9,575)	(10,436)
Subordinated debt	(312)	(392)
Accrued interest receivable on hedging instruments	(3,477)	(5,182)
Other interest expenses	(184)	(171)
INTEREST AND SIMILAR EXPENSES ^{(2) (3)}	(39,825)	(49,145)

(1) Includes €163 million for impaired loans (Stage 3) at 31 December 2025 versus €208 million at 31 December 2024.

(2) Includes €0 million in negative interest on financial assets at 31 December 2025 (-€25 million at 31 December 2024).

(3) At 31 December 2024, income of €1,448 million and an expense of -€801 million should have been classified respectively as "Interest and similar income" and "Interest and similar expenses". These were recorded under fee and commission income and expenses (see Note 4.2 of these consolidated financial statements). This change in presentation has no effect on the revenues recognised at 31 December 2024.

4.2 FEE AND COMMISSION INCOME AND EXPENSES

(in millions of euros)	31/12/2025			31/12/2024		
	Income	Expense	Net	Income	Expense	Net
Interbank transactions	58	(101)	(42)	398	(95)	303
Crédit Agricole internal transactions	102	(41)	61	1,250	(853)	397
Customer transactions	2,034	(510)	1,524	1,771	(424)	1,347
Securities transactions	91	(315)	(224)	52	(233)	(181)
Foreign exchange transactions	52	(38)	14	52	(42)	10
Derivative instruments and other off-balance sheet items	396	(196)	200	352	(218)	134
Payment instruments and other banking and financial services	4,588	(2,009)	2,579	4,259	(1,650)	2,610
UCITS, fiduciary and similar operations management	6,798	(1,910)	4,887	6,686	(1,940)	4,746
TOTAL FEES AND COMMISSIONS INCOME AND EXPENSE ⁽¹⁾	14,120	(5,121)	8,999	14,820	(5,454)	9,365

(1) At 31 December 2024, fee and commission income included income of €1,448 million and an expense of -€801 million for the collection margin, which should have been classified respectively as "Income and similar income" and "Interest and similar expenses". This change in presentation has no effect on the revenues recognised at 31 December 2024.

Asset Gathering is the main contributor of the fee and commission income from customer transactions and transactions involving payment instruments and other banking and financial services, as well as managing UCIs, trusts and similar activities.

4.3 NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

(in millions of euros)	31/12/2025	31/12/2024
Dividends received	2,269	2,060
Unrealised or realised gains (losses) on held for trading assets/liabilities	3,060	(269)
Unrealised or realised gains (losses) on equity instruments at fair value through profit or loss	2,339	(585)
Unrealised or realised gains (losses) on debt instruments that do not meet the conditions of the "SPPI" test	4,148	4,030
Unrealised or realised gains (losses) on other debt instruments measured by definition at fair value through profit or loss	(100)	(17)
Net gains (losses) on assets backing unit-linked contracts	4,824	5,480
Unrealised or realised gains (losses) on assets/liabilities designated at fair value through profit or loss ⁽¹⁾	(3,739)	(2,722)
Net gains (losses) on Foreign exchange transactions and similar financial instruments (excluding gains or losses on hedges of net investments in foreign operations)	2,540	4,934
Gains (Losses) from hedge accounting	(15)	19
NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS	15,327	12,929

(1) Except spread of issuer loan for liabilities at fair value through equity non-recyclable.

Changes in fair value of hedging instrument – ineffective portion	-	(1)	(1)
TOTAL GAINS (LOSSES) FROM HEDGE ACCOUNTING	20,900	(20,881)	19

Details of gains (losses) from hedge accounting by type of relationship (fair value hedges, cash flow hedges, etc.) are presented in Note 3.5 “Hedge accounting”.

4.4 NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME

(in millions of euros)	31/12/2025	31/12/2024
Net gains (losses) on debt instruments at fair value through other comprehensive income that may be reclassified subsequently to profit or loss ⁽¹⁾	(713)	(506)
Remuneration of equity instruments measured at fair value through other comprehensive income that will not be reclassified subsequently to profit or loss (dividends) ⁽²⁾	291	170
NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH OTHER COMPREHENSIVE INCOME	(422)	(336)

(1) Excluding realised gains or losses from the disposal of impaired debt instruments (Stage 3) mentioned in Note 4.9 “Cost of risk”.

(2) Including €13 million in dividends on equity instruments at fair value through other comprehensive income that cannot be reclassified to profit or loss and derecognised during the financial year (compared with €33 million at 31 December 2024).

4.5 NET GAINS (LOSSES) ARISING FROM THE DERECOGNITION OF FINANCIAL ASSETS AT AMORTISED COST

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Debt securities	24	38
Loans and receivables due from credit institutions	-	-
Loans and receivables due from customers	1	1
Gains arising from the derecognition of financial assets at amortised cost	24	39
Debt securities	(74)	(158)
Loans and receivables due from credit institutions	-	-
Loans and receivables due from customers	(7)	(4)
Losses arising from the derecognition of financial assets at amortised cost	(81)	(163)
NET GAINS (LOSSES) ARISING FROM THE DERECOGNITION OF FINANCIAL ASSETS AT AMORTISED COST ⁽¹⁾	(57)	(124)

(1) Excluding realised gains or losses from the derecognition of impaired debt instruments (Stage 3) mentioned in Note 4.9 "Cost of risk".

4.6 NET INCOME (EXPENSES) ON OTHER ACTIVITIES

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Gains (losses) on fixed assets not used in operations	210	301
Net income from investment property	137	(92)
Other net income (expense)	334	131
INCOME (EXPENSE) RELATED TO OTHER ACTIVITIES	681	340

4.7 OPERATING EXPENSES

<i>(in millions of euros)</i>	31/12/2025			31/12/2024		
	Operating expenses ⁽¹⁾ (a)	Expenses related to insurance contracts (deducted from revenues) (b)	Total Operating expenses in the period (c) = (a) + (b)	Operating expenses ⁽¹⁾ (a)	Expenses related to insurance contracts (deducted from revenues) (b)	Total Operating expenses in the period (c) = (a) + (b)
Employee expenses	(10,160)	(111)	(10,270)	(9,564)	(94)	(9,657)
Taxes other than on income or payroll-related and regulatory contributions	(447)	(63)	(510)	(493)	(48)	(541)
External services and other operating expenses	(4,541)	(673)	(5,214)	(4,425)	(584)	(5,009)
Expenses incurred for the distribution of insurance contracts	862	(862)	-	832	(832)	-
OPERATING EXPENSES	(14,285)	(1,709)	(15,994)	(13,650)	(1,558)	(15,208)

(1) Amounts corresponding to the heading "Operating expenses" of the Income statement.

FEES PAID TO STATUTORY AUDITORS

The breakdown of fees paid to Statutory Auditors by firm and type of engagement by fully consolidated Crédit Agricole S.A. companies was as follows in 2025:

BOARD OF STATUTORY AUDITORS OF CRÉDIT AGRICOLE S.A.:

(in millions of euros excluding taxes)	PricewaterhouseCoopers ⁽¹⁾		Forvis Mazars ⁽¹⁾		Total 2025
	2025	2024	2025	2024	
Statutory audit, certification, review of individual and consolidated financial statements	18.47	19.75	14.65	12.94	33.12
Issuer	2.43	2.29	1.72	1.54	4.15
Fully consolidated subsidiaries	16.04	17.46	12.93	11.40	28.97

Realised gains (losses) on disposal of impaired debt instruments at fair value through other comprehensive income that may be reclassified to profit or loss	-	(11)
Realised gains (losses) on impaired debt instruments at amortised cost	14	(8)
Losses on non-impaired loans and bad debt	(458)	(286)
Recoveries on loans and receivables written off	245	260
<i>recognised at amortised cost</i>	245	260
<i>recognised in other comprehensive income that may be reclassified to profit or loss</i>	-	-
Discounts on restructured loans	(19)	(30)
Losses on commitments by signature	(2)	(2)
Other losses	(48)	(45)
Other gains	-	-
COST OF RISK	(1,973)	(1,850)

4.10 NET GAINS (LOSSES) ON OTHER ASSETS

(in millions of euros)

	31/12/2025	31/12/2024
Property, plant & equipment and intangible assets used in operations	4	20
Gains on disposals	14	44
Losses on disposals	(10)	(24)
Gains or losses on disposals of consolidated equity investments	452	(1)
Gains on disposals	453	-
Losses on disposals	-	(1)
Net income (expense) on combinations transactions	(5)	(23)
NET GAINS (LOSSES) ON OTHER ASSETS	451	(4)

4.11 TAX

TAX CHARGE

(in millions of euros)	31/12/2025	31/12/2024
Current tax charge ^{(1) (2)}	(1,643)	(1,718)
Deferred tax charge	(706)	(753)
TOTAL TAX CHARGE	(2,349)	(2,472)

(1) The amount estimated related to the additional tax under Pillar 2 – GloBE is not material in 2025.

(2) Including €253 million as an exceptional contribution under the 2025 Finance Act (this amount includes the allocation methods within the Group in accordance with the group tax regime agreement).

Pursuant to the 2025 Finance Act, an exceptional contribution on the profits of large corporates was introduced. With a number of different thresholds, this applies to corporates whose 2024 or 2025 revenues exceeded €1 billion or €3 billion.

For the relevant taxpayers whose revenues were between €1 billion and €3 billion, the exceptional contribution rate is set at 20.6%; for those with revenues over €3 billion, the exceptional contribution rate is set at 41.2%. Taxpayers with revenues of less than €1 billion are not subject to this contribution.

There is also a specific basis for calculating this exceptional contribution, which is to find the average corporate income tax due (excluding the 3.3% social contribution on profits) for the financial year in which the contribution is due (2025) and the previous financial year (2024).

In addition, a tax group scheme agreement lays down the rules for the allocation and payment of this exceptional contribution.

The exceptional contribution recognised at 31 December 2025 amounted to €147 million, including €102 million for the 2024 financial year.

RECONCILIATION OF THE THEORETICAL TAX RATE AND THE EFFECTIVE TAX RATE

At 31 December 2025

(in millions of euros)	Base	Tax rate	Tax
Pre-tax income, goodwill impairment, discontinued operations and share of net income of equity-accounted entities	10,930	25.83%	(2,823)
Impact of permanent differences		(2.85%)	312
Impact of different tax rates on foreign subsidiaries		0.91%	(99)
Impact of losses for the year, utilisation of tax loss carryforwards and temporary differences		(0.13%)	14
Impact of reduced tax rate		(2.31%)	253
Impact of tax rate change		-	-
Impact of other items		0.05%	(6)
EFFECTIVE TAX RATE AND TAX CHARGE		21.50%	(2,349)

The theoretical tax rate is the standard tax rate for taxable profits in France at 31 December 2025 (including the additional social contribution). The entire exceptional contribution (along with the effects of the associated group tax regime agreement) has been recognised on the "Effect of other items" line.

At 31 December 2024

(in millions of euros)	Base	Tax rate	Tax
Pre-tax income, goodwill impairment, discontinued operations and share of net income of equity-accounted entities	10,431	25.83%	(2,694)
Impact of permanent differences		(1.59%)	166
Impact of different tax rates on foreign subsidiaries		1.27%	(132)
Impact of losses for the year, utilisation of tax loss carryforwards and temporary differences		0.04%	(4)
Impact of reduced tax rate		(0.71%)	74
Impact of tax rate change		-	-
Impact of other items		(1.13%)	118
EFFECTIVE TAX RATE AND TAX CHARGE		23.71%	(2,472)

The theoretical tax rate is the standard tax rate (including the additional social contribution) on taxable profits in France at 31 December 2024.

4.12 CHANGES IN OTHER COMPREHENSIVE INCOME

The breakdown of income and expenses recognised for the period is presented below:

<i>(in millions of euros)</i>	31/12/2025	31/12/2024

Of which Group share	(1,026)	465
Of which non-controlling interests	(31)	14

NOTE 5 SEGMENT INFORMATION

DEFINITION OF OPERATING SEGMENTS

According to IFRS 8, information disclosed is based on the internal reporting that is used by the Executive Committee to manage Crédit Agricole S.A., to assess performance, and to make decisions about resources to be allocated to the identified operating segments.

Operating segments according to the internal reporting consist of the business lines of the Group.

At 31 December 2025, Crédit Agricole S.A.'s business activities were organised into six operating segments:

- the following five business lines:
 - Asset Gathering,
 - Large Customers,
 - Specialised Financial Services,
 - French Retail Banking – LCL,
 - International Retail Banking;
- as well as the “Corporate Centre”.

PRESENTATION OF BUSINESS LINES

Asset Gathering

This business line brings together:

- the insurance activities of Crédit Agricole Assurances group companies to support customers at every stage of their lives and cover all their property & casualty and life insurance needs in France and abroad, via the following three business lines:
 - Savings and retirement,
 - Death & disability/creditor/group insurance,
 - Property and casualty insurance;
- the asset management activities of Amundi Investment Solutions, offering a full range of savings and investment solutions in Europe, Asia and the Americas, through active and passive management of traditional or real assets for individual customers. This offering is complemented by technology services and tools covering the entire savings value chain;
- as well as wealth management activities conducted mainly by subsidiaries of the Indosuez Wealth Management group (CA Indosuez (Switzerland) S.A., CA Indosuez Wealth (Europe), CFM Indosuez and Degroof Petercam).

Large Customers

The Large Customers division includes corporate and investment banking, which itself consists of two main lines of business most of which are carried out by Crédit Agricole CIB, and asset servicing for institutions and issuers credited by CACEIS:

- financing activities, which include corporate banking and structured finance in France and internationally. Structured finance consists of originating, structuring and financing investment transactions often collateralised by physical assets (planes, boats, office buildings, commodities, etc.) and complex and structured credit instruments;
- capital markets and investment banking activities bring together capital market activities (treasury, foreign exchange, interest rate derivatives, bond markets), and investment banking activities (mergers and acquisitions consulting and primary equity advisory);
- asset servicing for institutional investors and issuers: CACEIS Bank for custody and depositary services, CACEIS Fund Administration for fund administration services and Uptevia for issuer services.

Specialised Financial Services

Specialised Financial Services comprises the Group entities that provide financial products and services to individual customers, corporates, farmers and local authorities in France and abroad. These are:

- companies offering consumer finance, car rental and mobility solutions around Crédit Agricole Personal Finance & Mobility in France (Sofinco, as well as the management of the consumer finance activity on behalf of the Regional Banks and LCL), through its international subsidiaries or partnerships (Agos, Creditplus Bank, Credibom, Sofinco Spain, GAC Sofinco Finance, GAC Sofinco Leasing, Wafasalaf) and a pan-European establishment of entities dedicated to Mobility: CAAB and Leasys (long-term leasing joint venture with Stellantis);
- specialised financial services for corporates, such as factoring and lease finance (Crédit Agricole Leasing & Factoring Group, EFL) and financing specifically for energy and the regions, for corporates, local authorities and farmers, who are actors in the energy transition.

French Retail Banking – LCL

LCL is a French Retail Banking network with a strong presence in urban areas. It is organised into four corporate lines: retail banking for individual customers, retail banking for small corporates, private banking and corporate banking.

LCL offers a full range of banking products and services, together with asset management, insurance and wealth management products.

International Retail Banking

This business line encompasses international subsidiaries that are mainly involved in retail banking.

These subsidiaries are primarily located in Europe: Crédit Agricole Italia in Italy, Crédit Agricole Polska in Poland, as well as in Ukraine, but also in the Mediterranean region with Crédit Agricole Egypt.

The international consumer finance, leasing and factoring subsidiaries (subsidiaries of Crédit Agricole Personal Finance & Mobility, Crédit Agricole Leasing & Factoring and EFL in Poland, etc.) are not included in this segment, but in “Specialised Financial Services”, except Calit in Italy, which is part of International Retail Banking.

Corporate Centre

This segment encompasses four types of activity:

- Crédit Agricole S.A.'s Central Body function, asset and liability management and management of debt connected with acquisitions of subsidiaries or equity investments and the net impact of tax consolidation for Crédit Agricole S.A.;
- the results of the private equity business and results of various other Crédit Agricole S.A. companies (notably CA Immobilier, Uni-médias, Foncaris, BforBank, etc.);
- the results from services companies including IT and payment companies (CA-GIP and CAPS) and real-estate companies;
- the provision of energy transition advisory services, which is structured around the production and supply of decarbonised electricity through direct distribution, as well as energy transition advice and solutions (Crédit Agricole Transitions & Énergies [Transitions & Énergies]).

The division also includes the technical and volatile impacts related to intragroup transactions.

5.1 OPERATING SEGMENT INFORMATION

Transactions between operating segments are effected at arm's length.

Segment assets are determined based on balance sheet elements for each operating segment.

	31/12/2025						
(in millions of euros)	Asset Gathering	Large Customers	Specialised Financial Services	French Retail Banking – LCL	International Retail Banking	Corporate Centre ⁽¹⁾	Total

(1) Related, in 2024, to the reclassification of Amundi US assets under IFRS 5, as part of the agreement between Amundi and Victory Capital (see Note 2).

5.3 SPECIFIC CHARACTERISTICS OF INSURANCE

INCOME OF THE INSURANCE COMPANIES

<i>(in millions of euros)</i>	31/12/2025	30/06/2024
Insurance revenue	15,402	14,015
Insurance service expenses	(12,521)	(11,093)
Income or expenses related to reinsurance contracts held	(150)	(166)
Insurance service result	2,731	2,756
Revenue or income from other activities	99	71
Investment income	9,562	8,313
Investment expenses	(1,023)	(1,285)
Gains (losses) on disposals of investments net of impairment and amortisation reversals	(646)	(385)
Change in fair value of investments at fair value through profit or loss	7,701	6,404
Change in impairment on investments	(43)	(49)
Investment income net of expenses	15,549	12,998
Insurance finance income or expenses	(15,072)	(12,581)
Insurance finance income or expenses related to reinsurance contracts held	41	49
Changes in value of investment contracts without discretionary participation features	(77)	(191)
NET FINANCIAL INCOME	441	275
Other current operating income (expense)	(424)	(369)
Other operating income (expense)	(24)	(18)
OPERATING INCOME	2,824	2,715
Financing expenses	(262)	(215)
Income tax charge	(561)	(572)
Net income from discontinued operations	-	-
Consolidated net income	2,000	1,928
Of which non-controlling interests	8	44
OF WHICH NET INCOME GROUP SHARE	1,992	1,884

INSURANCE REVENUE

A breakdown of insurance revenue recognised during the period is presented in the table below:

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Changes in the liability for remaining coverage	7,181	6,649
<i>Insurance service expenses incurred during the period</i>	4,280	3,865
<i>Change in the risk adjustment for non-financial risk</i>	275	287
<i>Contractual service margin recognised in profit or loss because of the transfer of insurance contract services in the period</i>	2,635	2,503
<i>Other amounts (including experience adjustments for premium receipts)</i>	(9)	(6)
Allocation of the portion of the premiums that relate to the recovery of insurance acquisition cash flows	1,460	1,281
INSURANCE REVENUE FROM CONTRACTS NOT MEASURED APPLYING THE PAA	8,641	7,930
INSURANCE REVENUE FROM CONTRACTS MEASURED APPLYING THE PAA	6,814	6,160
INSURANCE REVENUE	15,455	14,090
of which insurance contracts to which the modified retrospective approach has been applied	5,185	5,533
of which insurance contracts to which the fair value approach has been applied	-	-

INSURANCE FINANCE INCOME OR EXPENSES

The following table presents a breakdown of the total amount of insurance finance income or expenses and net investment income recognised in profit or loss and in OCI over the period:

	31/12/2025			31/12/2024		
	Insurance contracts with direct participation features	Other contracts and own funds	Total	Insurance contracts with direct participation features	Other contracts and own funds	Total
<i>(in millions of euros)</i>						
INVESTMENT RETURN ON ASSETS	12,784	862	13,646	11,807	802	12,609
Investment income net of investment expenses recognised in profit or loss	14,527	789	15,316	12,149	730	12,879
Investment income	8,669	614	9,282	7,441	594	8,035
Investment expenses	(885)	(75)	(960)	(990)	(146)	(1,136)
Gains and losses on disposal of investments net of reversals of impairment and amortisation	(593)	(53)	(646)	(354)	(31)	(385)
Change in fair value of investments recognised at fair value through profit or loss	7,381	302	7,683	6,101	313	6,414
Change in impairment of investments	(45)	2	(43)	(49)	-	(49)
Gains and losses on investments recognised in other comprehensive income	(1,743)	73	(1,670)	(342)	72	(270)
Gains and losses on debt instruments at fair value through other comprehensive income that will be reclassified to profit or loss	(1,917)	8	(1,909)	(421)	98	(323)
Gains and losses on equity instruments measured at fair value through other comprehensive income that will not be reclassified to profit or loss	174	65	239	79	(26)	53
INSURANCE FINANCE INCOME OR EXPENSES	(12,950)	(242)	(13,192)	(11,955)	(257)	(12,212)
Insurance finance income or expenses recognised in profit or loss	(14,758)	(273)	(15,031)	(12,304)	(228)	(12,532)
Insurance finance income or expenses from insurance contracts issued recognised in profit or loss	(14,758)	(314)	(15,072)	(12,304)	(277)	(12,581)

CHANGES IN VALUE OF INVESTMENT CONTRACTS WITHOUT DISCRETIONARY PARTICIPATION FEATURES	-	(77)	(77)	-	(191)	(191)

The composition and fair value of the underlying financial assets of the insurance contracts with direct participation features are presented in the following table:

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Investment property	8,878	9,464
Financial investments	286,427	271,495
Financial assets at fair value through profit or loss (excluding unit-linked)	116,220	109,144
Financial assets held for trading	-	-
Other financial assets at fair value through profit or loss	116,220	109,144
Financial assets at fair value through other comprehensive income	169,642	161,824
Debt instruments at fair value through other comprehensive income that may be reclassified to profit or loss	167,692	159,847
Equity instruments at fair value through other comprehensive income that will not be reclassified to profit or loss	1,950	1,977
Financial assets at amortised cost	565	527
Loans and receivables	565	527
Debt securities	-	-
Unit-linked financial investments	113,795	101,674
Derivative instruments and separated embedded derivatives	319	470
Investments in associates and joint ventures	-	-
TOTAL UNDERLYING ITEMS FOR INSURANCE CONTRACTS WITH DIRECT PARTICIPATION FEATURES	409,419	383,103

INSURANCE AND REINSURANCE CONTRACTS

The carrying amount of the portfolios of insurance contracts issued and reinsurance contracts held, broken down by their position on the balance sheet and detailed according to their components, are presented in the following table.

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
INSURANCE CONTRACTS ISSUED	388,306	362,852
Insurance contracts issued that are assets	(49)	(10)
Remaining coverage	(56)	(492)
Incurred claims	7	482
Assets for insurance acquisition cash flows	-	-
Insurance contracts issued that are liabilities	388,355	362,862
Remaining coverage	376,337	352,002
Incurred claims	12,018	10,860
Assets for insurance acquisition cash flows	-	-
REINSURANCE CONTRACTS HELD	(1,047)	(951)
Reinsurance contracts held that are assets	(1,155)	(1,021)
Remaining coverage	(444)	(236)
Incurred claims	(711)	(785)
Reinsurance contracts held that are liabilities	108	70
Remaining coverage	107	71
Incurred claims	1	(1)
INVESTMENT CONTRACTS WITHOUT DISCRETIONARY PARTICIPATION FEATURES ⁽¹⁾	2,957	3,170

(1) Investment contracts without discretionary participation features are classified under liabilities at fair value through profit or loss.

Reconciliations of the opening and closing balances of the contracts that enter into the scope of application of IFRS 17 are presented below.

These reconciliations show how the net carrying amounts of the insurance contracts issued and reinsurance contracts held, respectively, varied over the period due to cash flows as well as income and expenses recognised in profit or loss and in OCI.

An initial reconciliation (by type of liability) separately analyses the changes in the liability for remaining coverage and changes in the liability for incurred claims and reconciles these changes with the items of the income statement and statement of net income and other comprehensive income recognised directly in equity.

A second reconciliation (by measurement component of the contracts) analyses separately, for contracts that are not measured using the PAA model, the changes in estimates of the present value of future expected cash flow, adjustment for non-financial risk, and a contractual service margin.

RECONCILIATIONS OF THE OPENING AND CLOSING BALANCES OF THE CARRYING AMOUNTS OF INSURANCE CONTRACTS ISSUED BY TYPE OF LIABILITY

Liabilities for incurred claims, net, undiscounted – years of occurrence prior to N-6								962
Effect of discounting								(784)
Effect of the risk adjustment for non-financial risk								166
LIABILITIES FOR INCURRED CLAIMS, NET								5,888

Under the transition requirements of the standard, the Group does not present previously non-reported information on the development of claims incurred more than six years before the end of the annual reporting period for which it applies IFRS 17 for the first time (i.e. claims incurred before 2019).

INSURANCE CONTRACTS – TRANSITIONAL AMOUNTS

Under the transition requirements of IFRS 17, the changes in accounting policies resulting from the application of IFRS 17 must be applied using a full retrospective approach at the date of transition, where practicable. Under the full retrospective approach, the Group must, at the transition date (1 January 2022):

- identify, recognise and measure each group of insurance contracts as if it had always applied IFRS 17;
- identify, recognise and measure assets for insurance acquisition cost cash flows, if any, as if it had always applied IFRS 17 (but without being required to make an assessment of their recoverability before the date of transition);
- derecognise balances that would not exist if it had always applied IFRS 17;
- recognise any remaining net difference in equity.

If and only if the retrospective application of the standard is impracticable for the measurement of a group of insurance contracts or an asset for insurance acquisition cost cash flows, the Group may choose either of the two alternative approaches provided by the transition provisions of the standard (modified retrospective approach or fair value approach).

At the transition date, i.e. 1 January 2022, the Group applied the full retrospective approach to measure the most recent property and casualty insurance contracts (measured according to the PAA model), as well as the retirement insurance contracts of the Crédit Agricole Assurances Retraite (Retirement Insurance) general fund.

The Group used the modified retrospective approach to measure the groups of insurance contracts recognised at the date of transition. The Group has not used the fair value approach. The Group determined that the full retrospective approach was impracticable for the relevant groups of contracts due to the unavailability of all the information necessary for a full retrospective application of the standard (not only in terms of data collected, but also in terms of assumptions or estimates made in prior accounting periods).

The aim of the modified retrospective approach (MRA) is to achieve the closest outcome to full retrospective application possible using reasonable and supportable information available without undue cost or effort.

To that end, this approach includes a list of modifications in several areas; each of these modifications may be used only to the extent that reasonable and supportable information necessary to apply a full retrospective approach is not available.

The main changes to the modified retrospective approach that the Group has used for the measurement of certain groups of contracts at the transition date are as follows:

- the identification of groups of insurance contracts and determination of which contracts qualify as insurance contracts with direct participation features based on the information available at the date of transition;
- the exemption from the requirement to form groups in such a way that they do not include contracts issued more than one year apart;

- the determination of the CSM (or of the loss component, where applicable) for groups of insurance contracts without direct participation features at the transition date, notably:
 - the estimate of the future cash flows at the date of initial recognition as the amount of the future cash flows at the transition date, adjusted by the cash flows that are known to have occurred between the date of initial recognition and the transition date,
 - the determination of the discount rates that applied at the date of initial recognition using an estimated yield curve at the date corresponding to the average age of the contracts in the group,
 - the determination of the adjustment for non-financial risk at the date of initial recognition by adjusting the adjustment for non-financial risk at the transition date by the expected release of risk before the transition date,
 - the use of the discount rates at the date of initial recognition as determined above to accrete interest on the CSM,
 - the determination of the amount of the CSM recognised in profit or loss because of the transfer of services before the transition date, by comparing the remaining coverage units at that date with the coverage units provided under the group of contracts before the transition date;
- the determination of the CSM (or of the loss component, where applicable) for groups of insurance contracts with direct participation features at the transition date, by calculating a proxy for the total CSM for all services to be provided under the group of contracts (fair value of the underlying items minus fulfilment cash flows at that date, and adjusted for amounts charged to the policyholders before that date, amounts paid before that date that would not have varied based on the underlying items, the change in the adjustment for non-financial risk caused by the release from risk before that date, and insurance acquisition cost cash flows incurred before the transition date that are allocated to the group), and by deducting from the latter the amount of the CSM that relates to services provided before that date;
- the determination, in the event that the OCI option is applied, of the cumulative amount of insurance finance income or expenses recognised in equity at the date of transition:
 - for groups of insurance contracts without direct participation features: either by using the discount rates at the date of initial recognition as determined above, or by considering it as nil,
 - for groups of insurance contracts with direct participation features for which the entity holds the underlying items: by considering it as equal to the cumulative amount recognised in equity on the underlying items.

At the transition date, the Group did not apply the modified retrospective approach or the approach based on fair value to identify and measure assets for insurance acquisition cost cash flows.

Reconciliation of the opening and closing balances of the contractual service margin – Insurance contracts issued

A reconciliation of the opening and closing balances of the contractual service margin of insurance contracts issued under the measurement approach used at the transition date is presented in the following table:

	31/12/2025						31/12/2024

Reconciliation of the cumulative amounts presented in OCI for financial assets measured at FVOCI

At the time of the transition to IFRS 17, the Group determined the cumulative amount of insurance finance income or expenses recognised in OCI at 1 January 2022 by applying the modified retrospective approach for certain groups of contracts.

The reconciliation of the cumulative amount recognised in OCI for financial assets measured at fair value through equity that are linked to these groups of contracts is presented in the following table:

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
OPENING BALANCE OF THE CUMULATIVE AMOUNTS INCLUDED IN OTHER COMPREHENSIVE INCOME	(9,398)	(9,610)
Changes in the period	17	212
CLOSING BALANCE OF THE CUMULATIVE AMOUNTS INCLUDED IN OTHER COMPREHENSIVE INCOME	(9,381)	(9,398)

RISKS ARISING FROM FINANCIAL INSTRUMENTS AND INSURANCE CONTRACTS

Risk management is an integral part of the Group's economic model. The Group has developed and implemented governance and a risk management system designed to identify, assess, control and monitor the risks associated with its activity. By relying on this governance and framework, the Group aims to meet its obligations toward its policyholders, customers and creditors, to manage its capital effectively and to comply with applicable laws and regulations.

The general risk management framework within Crédit Agricole S.A. is presented in Section 5 "Risk management" of the Universal Registration Document.

Information on the nature and extent of risks arising from financial instruments that fall within the scope of application of IFRS 7 and risks arising from contracts that fall within the scope of application of IFRS 17, as well as information on how these risks are managed, is provided in this note.

Sensitivity analyses of changes in risk variables arising from financial instruments and insurance contracts are also presented in this note.

The Group issues insurance contracts and investment contracts (see Note 1 "Accounting policies and principles" and Note 5.3, section on "Insurance and reinsurance contracts" below). The nature and extent of underwriting risks and financial risks arising from these contracts are determined by the characteristics of the individual contracts. Risks are assessed for risk management purposes in relation to risks mitigated by associated reinsurance contracts and risks arising from financial assets held to fund the settlement of insurance liabilities. The extent to which earnings and equity in a given period are sensitive to financial risks depends on the extent to which they are economically hedged or borne by the policyholders and the extent of any accounting differences inherent in the accounting policies adopted by the Group.

Given the diversity of the Group's insurance activities, the Group is exposed to the following risks arising from its various contracts:

- Underwriting risks:
 - Insurance risks (such as mortality risk, morbidity risk, longevity risk, risk of drift in claims in property and casualty insurance),
 - Expense risk,
 - Risk related to policyholder behaviour (including risk of withdrawal);
- Financial risks:
 - Market risk, including three types of risk:
 - Interest rate risk,
 - Price risk,
 - Foreign exchange risk,
 - Credit risk,
 - Liquidity risk.

Underwriting risk

Crédit Agricole S.A. operates, through its subsidiaries in France and internationally, in the savings/retirement, death & disability/creditor/group insurance and property and casualty insurance activities.

These activities expose the Group to underwriting risks, which include:

- insurance risk: the risk, other than financial risk, transferred from policyholders to the Group, which arises from the coverage of uncertain future events and the inherent uncertainty regarding the occurrence, amount and timing of resulting claims;
- the risk related to policyholder behaviour: including the risk of withdrawal;
- expense risk: the risk of unexpected increases in administrative costs relating to the management of contracts, rather than costs relating to insured events.

The accounting principles for provisioning the Group's commitments in accordance with IFRS 17 are detailed in the "Insurance contracts" section of Note 1.2 "Accounting policies and principles" above.

The underwriting risk management targets, policies and processes implemented by the Group are as follows.

The Group's aim is to have sufficient resources to be able to cover the liabilities relating to the insurance and reinsurance contracts that it issues. Risk exposure is mitigated both by diversification of insurance activities and by rigorous underwriting according to guidelines defined in the Group's underwriting strategy. Risk management also takes into account ways of mitigating underwriting risks, such as ceded reinsurance.

For savings activities, the main underwriting risk is the risk of withdrawal. Against a backdrop of significantly higher interest rates, this is reflected in the realisation of losses on the disposal of bond assets at a loss, when cash is insufficient. The proportion of assets with reduced liquidity is monitored in the same way as withdrawals.

The withdrawal risk is controlled by monitoring policyholder behaviour, by a competitive policyholder profit-sharing policy designed to build policyholder loyalty; by a prudent financial policy, particularly in the management of reserves; and to a lesser extent by the use of withdrawal penalties where appropriate (subject to the option being included in the information leaflets).

In particular, since 2022, the withdrawal rate has been monitored more closely at several levels:

- entities concerned: the amounts and withdrawal rates are monitored regularly and reported to the entity's governing bodies by the entities concerned in order to detect cyclical or structural deviations;
- quarterly monitoring is used to compare the rates of withdrawal with those in the market.

Since 2023, as part of the monitoring of unit-linked contracts (performance, property funds, assets with reduced liquidity, general asset carrying, etc.) and the context of the property markets, a report is provided on a monthly basis.

Savings activities are also exposed to insurance risk, and more particularly to mortality risk (risk of the policyholder dying earlier than anticipated). In fact, certain multi-support contracts include a guarantee by the insurer to pay, in the event of the death of the policyholder, a minimum capital amount to the beneficiaries (i.e. a minimum guarantee).

For retirement activities, the main insurance risk is longevity risk (risk of the policyholder dying later than anticipated), which arises from the annuity phase.

For death & disability and creditor insurance activities, the Group is mainly exposed to biometric insurance risks (notably mortality, longevity, morbidity, incapacity and disability).

For property and casualty insurance activities, the main risks to which the Group is exposed are uncertainties about the frequency and severity of claims. These risks are influenced by the nature of the assets covered and the geographical location in which the risks are underwritten.

Two types of claims can have critical consequences: claims resulting from extreme weather events (floods, droughts, fires, storms, earthquakes, etc.) and large individual claims ("major" claims).

The heightened climate risk could introduce significant uncertainty into the assumptions of models, potentially leading to a greater number of more significant claims than projected as well as to inadequate pricing. This risk and the drift in claims are mitigated by reinsurance programmes and even insurance-linked securities (ILS, such as CAT bonds), which aim to protect shareholders' equity and contain earnings volatility.

Monitoring the consumption of a weather claims budget and a major claims budget is one of the ways in which insurance risks are managed for property and casualty and Group death & disability portfolios.

For all activities, underwriting risks are managed, on the one hand, by a diversified underwriting policy and, on the other hand, by recourse to reinsurance in order to limit the financial consequences of major risk events (storms, hailstorms, natural disasters, etc.), with the reinsurance policy taking this dimension into account.

To maintain these risks within its appetite framework, Crédit Agricole S.A. ensures that it has:

- an appropriate underwriting (and pricing) policy;
- banking networks and financial partners that coordinate the underwriting policy;
- a claims management policy carried out by dedicated claims management units or French or multi-country structures, or delegated to local service providers.

With regard to Group activities, the underwriting policy specifies the risks covered, the underwriting conditions (target customers, exclusions), and the pricing standards (notably the statistical tables used, based on national and international data or experience).

With regard to distribution partners, the underwriting policy defines the risk acceptance framework (with the aim of ensuring appropriate risk selection and pooling within the contract portfolio

to optimise technical margins while respecting the Group's appetite framework). Pricing rules and procedures are also formalised.

In addition to the underwriting policy, each entity applies a provisioning policy to ensure effective control of the related risk.

The ratio between the cost of claims (paid and provisioned) and earned premiums is the key indicator for monitoring underwriting risk in the property & casualty and death & disability/creditor portfolios. For each entity, a warning threshold is set and compared with the target ratio based on a central scenario.

Finally, the Group is exposed for all of its activities to the risk of charges, that is to say the risk of unexpected increases in administrative costs relating to the management of the contracts (such as operating expenses and commissions paid to distributors). This risk is managed through budgetary exercises and regular cost assessments.

In terms of the geographic concentration of the underwriting risk, the Group is mainly exposed to the French and Italian markets, which represented 85.3% and 9.9% of premium income (gross premiums issued) and 89.6% and 6.6% of the carrying amount of insurance contracts, respectively, as at 31 December 2025.

With regard to activities, savings and retirement activities represented 76% of revenues as at 31 December 2025. The property and casualty insurance and death & disability/creditor/Group insurance activities represented 13% and 11% of premium income, respectively, at 31 December 2025.

In non-life insurance, concentrations of risk, resulting in an aggregation of liabilities to be paid in the event of a single claim, may arise from:

- underwriting concentration in which insurance policies are underwritten by one or more Group entities on the same risk;
- claim concentration, where contracts are underwritten by one or more Group entities for different risks likely to be affected by claims resulting from the same damaging event or the same root cause.

This risk is covered by the underwriting policy and the use of reinsurance, as detailed above.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in the main insurance risk variables at the end of the reporting period (i.e. mortality risk and drift in claims in property and casualty insurance). This analysis presents sensitivities before and after risk mitigation by reinsurance contracts held and assumes that all other variables remain constant.

In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

Sensitivities are based on the assumption of a 10% increase/decrease in mortality risk and a 5% increase/decrease in claims (best estimate).

The impacts on net income and equity are presented net of deferred tax.

		31/12/2025					
		Impact on CSM		Impact on profit or loss		Impact on equity	
		Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance
(in millions of euros)							
Mortality	10% increase	(507)	(546)	(4)	(7)	4	1
	10% decrease	517	565	2	6	(6)	(2)
Claims experience drift	5% increase			(229)	(201)	(225)	(197)
	5% decrease			229	201	225	197

		31/12/2024					
		Impact on CSM		Impact on profit or loss		Impact on equity	
		Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance
(in millions of euros)							
Mortality	10% increase	(427)	(468)	4	(23)	12	(14)
	10% decrease	461	510	21	3	10	(8)
Claims experience drift	5% increase			(228)	(197)	(221)	(193)
	5% decrease			220	190	214	186

Market risk

Market risk is the risk that changes in market prices (e.g. interest rates, exchange rates, share prices) will affect the fulfilment cash flows of insurance and reinsurance contracts and the fair value or future cash flows of financial instruments. It includes three types of risk: interest rate risk, foreign exchange risk and price risk.

This risk arises from the variability of the fair values of financial instruments or associated future cash flows, as well as from the variability of the fulfilment cash flows of insurance contracts due to changes in market risk variables.

Given the preponderance of savings/retirement activities in France and abroad (mainly Italy), and therefore the very large volume of financial assets representing commitments to policyholders, the Crédit Agricole Group, via its subsidiary Crédit Agricole Assurances, is particularly concerned by market risk.

The Crédit Agricole Assurances Group is mainly exposed to interest rate risk and the price risk on equities and so-called “diversification” assets. It is only marginally exposed to foreign exchange risk.

Market risk arises mainly from the Group’s investments in equity instruments, interest-bearing financial assets and liabilities, and financial assets and liabilities denominated in foreign currencies, but these exposures are largely offset by similar exposures on insurance and reinsurance contracts.

For insurance contracts with direct participation features (corresponding mainly to the Group’s saving/retirement business), changes in the fair value of the underlying items due to changes in market variables are reflected in the value of the corresponding insurance contracts; the Group is therefore exposed mainly to market risk in respect of changes in its share of the fair value of the underlying items.

In the case of unit-linked commitments (representing €115,598 million at 31 December 2025), market risk is largely borne by policyholders, who directly bear the risk of fluctuations in the value of the underlying assets; the insurer is nevertheless exposed to this risk because of its impact on the basis for deducting fees from outstandings.

The market risk management targets, policies and processes implemented by the Group are set out below.

The objective of market risk management is to maintain exposures to market risk within acceptable limits while optimising the return on this risk.

The Group manages its assets and liabilities as part of an asset and liability management approach aimed at matching the cash flows from its financial investments with the cash flows from its insurance contracts, while optimising the long-term return on its investments for an acceptable level of risk.

The Crédit Agricole Assurances Group’s financial policy includes an asset-liability framework designed to reconcile the search for returns for policyholders, the preservation of asset-liability balances and the management of earnings for shareholders. This framework is based on “return/risk” studies, “stress scenarios” and “risk factor sensitivity analyses”, to identify the characteristics of the amounts to be invested, the constraints and targets over the short, medium and long term, and a market diagnosis, accompanied by economic scenarios, to identify opportunities and constraints in terms of the environment and the markets.

The Crédit Agricole Group manages its investments prudently. The Group relies both on analyses performed by the Investment Department, which take into account the appetite framework set by the Group, and on information provided by external sources (financial institutions, asset managers, rating agencies).

The Investment department of Crédit Agricole Assurances group is involved in developing and monitoring the implementation of the investment policies of the Group and of the subsidiaries (taking into account individual ALM limitations and financial targets), which are submitted to their respective Board of Directors for approval. In this capacity, it supervises the investment management services delegated to Amundi (management mandates entrusted by the companies). Moreover, it makes investments directly (without a mandate) on behalf of the Crédit Agricole Assurances Group companies (in property and real estate, in particular), as part of the policy of diversification.

Information on the market risk arising from financial instruments and insurance contracts is provided below for each type of market risk.

In addition, with regard to market risk relating to financial instruments, qualitative information on the measurement of the carrying amount and fair value of financial instruments is provided in the “Financial instruments” section of Note 1 “Accounting policies and principles” above. Quantitative information on the carrying amount of financial instruments is provided in the above Note 5.3 “Specific characteristics of insurance” to the financial statements. Quantitative information on the fair value of financial instruments is included in Note 11.1 “Fair value of financial assets recognised in the balance sheet at amortised cost” and Note 11.2 “Information on financial instruments measured at fair value” to the financial statements below.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in the market interest rates.

The Group’s exposure to interest rate risk relates to debt instruments and all insurance contracts. The Group’s exposure to debt instruments is presented in this note, in the “Insurance finance income or expenses” section.

The Group’s exposure to insurance contracts is presented in the “Insurance and reinsurance contracts” section of this note.

The Group is exposed to interest rate risk arising from the sensitivity of its investments in debt instruments to changes in interest rates relative to the value of the insurance contracts backing these investments.

The sensitivity associated with insurance contracts arises from the effects below.

For insurance contracts with no direct participation features (corresponding mainly to the death & disability, creditor and property and casualty insurance businesses), fulfilment cash flows are discounted using a discount rate curve that depends on the prevailing interest rates at the end of the reporting period. The risk mainly concerns the extent to which the return on the investments matches the finance income or finance expenses from the insurance.

For insurance contracts with direct participation features (corresponding mainly to savings/retirement activities), changes in the value of the insurance contracts reflect changes in the value of the underlying financial assets. The risk mainly concerns changes in the insurer’s share of the fair value of the underlying financial assets.

In the case of unit-linked commitments, the interest rate risk is largely borne by policyholders. On the other hand, in the case of euro-denominated contracts, the existence of guaranteed minimum rates paid to policyholders heightens this risk.

The Group manages interest rate risk as part of an overall asset and liability management approach aimed at matching the duration of the investment portfolio with that of the insurance contracts. This approach combines several aspects: financial strategy, commercial policy, accounting considerations and financial performance, while taking into account the Group’s risk appetite and local regulatory constraints.

The Group has established an interest rate risk management system that includes risk limits and associated governance (“Asset-Liability Management Committee”, presentation of stress scenarios to the Board of Directors, etc.).

The Crédit Agricole Assurances Group has a number of levers at its disposal to deal with the various downward and upward movements in interest rates:

- a prudent policy of profit-sharing distribution among policyholders and building up reserves;
- hedging programmes using derivatives (spread caps to hedge against rising interest rates, swaps and options on swaps to reduce the risk of falling interest rates);
- an appropriate marketing policy (guaranteed minimum rate (GMR) contracts have not been marketed since 2000);
- adjustment of duration according to the forecast run-off of liabilities;
- managing cash and bond assets that can be sold with little impact in terms of losses.

The Crédit Agricole Assurances Group and each of its companies have established indicators and bodies to monitor these levers.

In terms of investments, risk concentrations are controlled by different sets of limits calibrated according to the nature of the counterparty:

- for sovereigns and similar, limits take into account country GDP and internal rating;
- for financial and industrial corporates, the Group modulates the limits based on the rating and supplements them using a Group issuer approach;
- for the Crédit Agricole Group, the prudent measurement of exposure includes a proportion of unit-linked bonds, in order to take account of the potential carry risk that could arise from a wave of redemptions.

The using of these limits is monitored on a monthly basis, so that the appropriate management level can be informed of any corrective measures to be taken if these limits are exceeded.

Given the concentration limits governing exposure to the debt instruments mentioned above, the Group has no significant concentration of interest rate risk. With regard to concentrations of spread risk, please refer to the “Credit risk” section below.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in interest rates and spreads on corporate and sovereign bonds at the end of the reporting period. This analysis shows the impact on the valuation of insurance and reinsurance contracts and financial investments, assuming that all other variables remain constant. In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

Sensitivities are based on the assumption of an increase/decrease in interest rates of 100 basis points, as well as an increase of 100 basis points in spreads on corporate and sovereign bonds.

For insurance and reinsurance contracts, sensitivities are based on the “risk-neutral” yield curve for the impact on CSM, and on the “real-world” yield curve for the impact on net income and shareholders’ equity.

The impacts on net income and equity are presented net of deferred tax.

INTEREST RATE

		31/12/2025		
		Impact on CSM	Impact on profit or loss	Impact on equity

	Net impact	(22)	(11)	(329)

Price risk

Price risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in market prices (other than those arising from interest rate risk or foreign exchange risk), whether those changes are caused by factors specific to the instrument or contract in question or to its issuer, or by factors affecting all similar financial instruments traded in the market or all similar contracts.

The Group's exposure to price risk relates to financial assets and liabilities whose values fluctuate due to changes in market prices, i.e. financial assets measured at fair value and insurance contracts with direct participation features.

The Group's exposure to equity instruments and debt instruments measured at fair value (through profit or loss or equity) is presented in this note, in the "Insurance finance income or expenses" section.

The Group's exposure to insurance contracts is presented in the "Insurance and reinsurance contracts" section of this note above.

Group entities may hold equities or other so-called “diversification” financial assets (private equity and listed or unlisted structured products, property and hedge funds) in order to diversify their asset portfolios and benefit from the expected return on these markets over the long term. With regard to insurance contracts, the Group is exposed to the risk stemming from fluctuations in the prices of these assets only in respect of insurance contracts with direct participation features (corresponding mainly to savings/retirement business), owing to the impact that these fluctuations could have on the change in the insurer’s share of the fair value of the underlying financial assets. In respect of unit-linked commitments, this risk is significantly mitigated because it is largely transferred to policyholders.

In order to control this risk, asset allocation studies are carried out to determine a limit on the proportion of the diversification assets, and a maximum level of price volatility.

Limits are set globally for diversification investments and individually for each asset class (equities, property, private equity and structured products, hedge funds).

While these assets are likely to generate higher returns and provide decorrelation with fixed-income portfolios, they also entail a valuation risk. They are therefore constrained both in terms of their share in the total portfolio and in terms of their volatility.

Investments in diversification assets also comply with unit and category concentration rules (weighting of the top ten exposures for physical property, on the one hand, and for equities, whether listed or unlisted, on the other).

As a result of the concentration limits on exposure to equities and diversification assets mentioned above, the Group has no significant concentration of price risk.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in the value of shares and real estate at the end of the reporting period. This analysis shows the impact on the valuation of insurance and reinsurance contracts and financial investments, assuming that all other variables remain constant. In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

The sensitivities below have been calculated for equity risk and real estate risk, assuming a 10% increase/decrease in the value of equities and real estate.

The impacts on net income and equity are presented net of deferred tax.

EQUITIES

		31/12/2025		
		Impact on CSM	Impact on profit or loss	Impact on equity
(in millions of euros)				
10% increase in equity prices	Insurance and reinsurance contracts	738	(6,330)	(6,407)
	Financial investments		6,371	6,464
	Net impact	738	41	57
10% decrease in equity prices	Insurance and reinsurance contracts	(730)	6,306	6,382
	Financial investments		(6,356)	(6,449)
	Net impact	(730)	(50)	(67)
		31/12/2024		
		Impact on CSM	Impact on profit or loss	Impact on equity
(in millions of euros)				
10% increase in equity prices	Insurance and reinsurance contracts	737	(5,658)	(5,733)
	Financial investments		5,719	5,809
	Net impact	737	61	76
10% decrease in equity prices	Insurance and reinsurance contracts	(746)	5,655	5,730
	Financial investments		(5,718)	(5,809)
	Net impact	(746)	(63)	(79)

PROPERTY/REAL ESTATE

	Financial investments		1,573	1,596
	Net impact	378	81	68
10% decrease in real estate prices	Insurance and reinsurance contracts	(392)	1,489	1,524
	Financial investments		(1,573)	(1,596)
	Net impact	(392)	(84)	(72)

Foreign exchange risk

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in foreign exchange rates.

The Group's exposure to foreign exchange risk is marginal.

Most of the Group's transactions are carried out in euros.

Its exposure to foreign exchange risk arises partly from consolidated entities whose functional currency is not the euro, and partly from transactions carried out by entities in currencies other than their functional currency. At Group level, such transactions are marginal. Furthermore, the Group's financial assets are almost exclusively denominated in the same currencies as its insurance liabilities.

This exposure is managed by applying a foreign exchange risk hedging strategy, whether for subsidiaries whose functional currency is different from that of the Group, or for financial instruments and insurance contracts denominated in currencies other than the functional currencies of the entities.

The Crédit Agricole Assurances Group is exposed to two types of foreign exchange risk:

- a limited structural exposure to the yen on its Japanese subsidiary CA Life Japan, and to the zloty on its Polish subsidiaries CA Zycie and CATU. The associated foreign exchange risk is managed by hedging the net assets and liabilities of these subsidiaries using foreign currency borrowings (NIH hedges: hedges of net investments in foreign operations); the hedging ratio was 94% for CA Life Japan (unhedged net exposure of €6.5 million), 86% for CA Zycie (unhedged net exposure of €3.8 million) and 95% for CATU (unhedged net exposure of €1.4 million) at 31 December 2025;
- an operational exposure resulting from the mismatch between the currencies of financial assets and insurance liabilities. The global portfolio of the Crédit Agricole Assurances Group, representing commitments in euros, is mainly invested in financial instruments denominated in euros. Nevertheless, in

order to optimise the risk/return trade-off and achieve diversification in dedicated funds and fixed-income positions, it will seek to benefit from anticipated growth lags and interest-rate differentials between major geographic areas. The foreign exchange risk hedging strategy consists of not hedging emerging country currencies, regardless of the asset class, and instead hedging developed country currencies, with the option of limited tactical exposure to a single currency, the US dollar. Exposure to the US dollar in fixed income positions is systematically hedged by cross-currency swaps. Overall, foreign exchange exposure at Crédit Agricole Assurances Group is constrained by a market value limit in relation to the total portfolio and two sub-limits for emerging currencies and the US dollar.

As the Group is only marginally exposed to this risk, it has no significant concentration of foreign exchange risk.

As a result, reasonably possible changes in exchange rates at the end of the reporting period do not have a material impact on the CSM, profit or loss or equity.

Credit risk

Credit risk is the risk that one party to a financial instrument, an insurance contract issued and recognised as an asset, or a reinsurance contract held, will default on an obligation and cause the other party to incur a financial loss.

For the Group, credit risk corresponds mainly to the risk of default by the following counterparties:

- the issuers of securities for investments in debt instruments;

and, to a lesser extent:

- financial counterparties on forward financial instruments (failure of the counterparty to honour its commitments) used for over-the-counter market transactions (derivatives) or on bank deposits/liquidity (failure of the bank managing the deposit account to honour its commitments);
- reinsurers for reinsurance disposal transactions (default of a reinsurer that would no longer allow it to pay its share of the claims).

The Group's exposure to debt instruments is presented in this note, in the "Insurance finance income or expenses" section above. Exposure to credit risk of financial assets is presented in Notes 3.1.2 "Maximum exposure to credit risk" and 3.1.4 "Credit risk concentrations – Exposure to credit risk by category of credit risk" above.

The Group's exposure to reinsurance contracts held is presented in the table below.

The Group's credit risk management targets, policies and processes are set out below.

Financial instruments

Analysis of counterparty risk for issuers and for over-the-counter market transactions (derivatives) is carried out by Amundi's Risk teams, as part of the management mandates entrusted to Amundi by the companies.

The bond portfolio ⁽¹⁾ by credit rating breaks down as follows:

Issuer risk is analysed and closely monitored by Amundi's Risk teams (to whom portfolio management is delegated). Quarterly portfolio reviews examine issuers individually and also address sector, country or economic themes, as well as any areas of concern identified. These portfolio reviews allow for active management of this risk: if necessary, an issuer may be placed on a watch list (a list of issuers in which investment is prohibited) or be subject to a risk disposal programme.

Concentration in a single issuer (equities and fixed-income instruments) may not exceed a percentage of the global portfolio set according to the nature and quality of the issuer.

Concentrations of sovereign and similar debt are subject to individual limits calibrated according to the weight of the countries measured by their GDP and the internal rating of the sovereigns.

Exposure to the sovereign debt of Italy, Spain and Portugal is authorised by Crédit Agricole S.A.'s Group Risk Committee. Holdings of Italian sovereign debt are concentrated in Crédit Agricole Assurances group's Italian subsidiary. Debt issued by Greek issuers remains unavailable for purchase.

Counterparty risk is controlled, both at the level of the Crédit Agricole Assurances Group as a whole and at the level of the portfolios of each entity, through limits on ratings, issuer concentration and sector concentration.

Limits are therefore set for the distribution of issues across the different rating bands. The rating used is the so-called "Solvency 2" rating, corresponding to the second best of the three Standard & Poor's, Moody's and Fitch ratings. The share of "high-yield" issues held directly or indirectly via funds is subject to strict limits. Only issues with a minimum BB rating are authorised for purchase in mandates. To complete the system, Predica sets a minimum spread when a corporate bond is purchased, by rating and maturity, which offsets the loss given default and the capital cost of purchasing the bond. Issuers that have not been rated by an external agency but have an internal Crédit Agricole S.A. rating are selected according to a rigorous process.

Cash is generally not held in current accounts, but rather invested in money market or long-term Treasury UCIs.

Over-the-counter derivatives are used to prudently hedge interest rate risk, both upwards (portfolio of spread caps) and downwards (swaps, swap options, etc.), with counterparties selected for their credit quality. As these transactions are backed by collateral contracts with daily margin calls, the residual counterparty risk is marginal.

In accordance with the principles of IFRS 9, debt instruments measured at amortised cost or fair value through recyclable equity are provisioned for credit risk by recognising loss allowances for expected credit losses.

Qualitative information on recognising and measuring expected credit losses is provided in the "Financial instruments" section of Note 1 "Accounting policies and principles" above. Quantitative information on changes in value corrections for losses is provided in Note 3.1.1 "Credit risk – Change in carrying amounts and loss allowances over the period" above.

(1) Bonds held by the Crédit Agricole Assurances Group at market value, with a look-through approach to fixed income and equity funds, excluding repurchase and reverse repurchase agreements.

With regard to risk concentrations, the breakdown of the bond portfolio by type of issuer, rating and geographic area is presented in Note 3.1.4 “Credit risk concentrations” above; exposure to sovereign debt is presented in Note 3.2 “Exposure to sovereign risk” above.

The transactions in the Crédit Agricole Assurances Group’s derivatives portfolio at the end of 2025 had been carried out with around twenty counterparties.

Insurance contracts

With regard to the credit risk arising from contracts that fall within the scope of application of IFRS 17, the credit risk associated with future premium receipts from insurance contracts issued is mitigated by the Group’s ability to terminate insurance contract services when policyholders default on their premium payment obligations, resulting in insignificant credit risk exposures for these contracts.

The credit risk therefore relates mainly to reinsurance contracts held (risk of a reinsurer defaulting and no longer being able to pay its share of the claims).

Amounts recoverable from reinsurers are estimated so as to be consistent with the liabilities of the underlying insurance contracts and in line with the reinsurance contracts (see Note 1 “Accounting policies and principles” above). The Group’s entry into reinsurance programmes does not release it from its direct obligations to policyholders, and it is therefore exposed to a credit risk in respect of business ceded to reinsurance, to the extent that the reinsurer may not be able to meet its obligations under the reinsurance contract.

Credit quality of reinsurance contracts held

Information about the credit quality of reinsurance contracts held that are assets is given in the table below:

	31/12/2025										
(in millions of euros)	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	NR	Total

Liquidity risk

Liquidity risk is the risk that the Group might struggle to honour commitments related to insurance policies and financial liabilities to be settled through the use of cash or another financial asset.

As regards the liquidity risk arising from policies that fall within the scope of application of IFRS 17, this concerns the risk that the Group might not be able to meet its obligations upon maturity due to payouts to insured parties (particularly savings/retirement, surrenders and deaths), cash requirements related to contractual commitments or other cash outflows. Such outflows would exhaust the cash resources available for insurance and investment activities. In certain circumstances, the lack of liquidity could result in sales of assets at a loss, or potentially an inability to honour commitments to insured parties. The risk that the Group might be unable to honour its commitments to insured parties is inherent to all insurance operations and may be affected by an entire range of factors specific to the Group and to the market in general, including but not limited to credit events, systemic shocks and natural disasters.

Each entity establishes its own reinsurance policy, which incorporates risk management principles that are standardised across the Crédit Agricole Assurances Group.

Managing the risk of default by reinsurers is based on the Group’s internal standards:

- firstly, by contracting with reinsurers meeting a minimum financial strength criterion (A-), with compliance monitored throughout the relationship;
- rules on the dispersion of reinsurers (by treaty) and concentration limits on the premiums ceded to a single reinsurer defined by each entity that monitors them; the Group monitors the concentration of the overall premiums ceded, by reinsurer;
- measures to secure the provisions ceded through standard collateral clauses.

In addition, reinsurance programmes are reviewed annually by the Board of Directors of each entity.

47% of reinsurance counterparty risk, excluding internal reinsurance, is concentrated with Caisse Centrale de Réassurance (CCR), a 100% state-owned, AA-rated reinsurer authorised to provide coverage for Cat Nat risks in France, the country’s main natural catastrophe compensation scheme. At the end of 2025, more 87% of counterparty risk was borne by reinsurers with a rating of more than A.

Maximum exposure to credit risk

The amount that best represents the Group’s maximum exposure to credit risk at the end of the reporting period, for insurance contracts written, is the amount of receivable premiums: this was €2,716 million at 31 December 2025 (vs. €2,469 million at 31 December 2024).

The liquidity risk management targets, policies and processes put in place by the Group are as follows.

The Group’s target in managing liquidity risk is to ensure, as far as possible, that it will have sufficient liquidity to honour its commitments upon maturity, whether under normal or stress conditions, without suffering unacceptable losses or risking damaging the Group’s reputation.

The Group entities combine several approaches to their liquidity risk management.

On the one hand, liquidity is taken into account when selecting investments: majority of securities listed on regulated markets, limitation of less-liquid assets such as real estate, private equity, non-investment-grade bonds, equity investments and alternative asset management.

On the other hand, liquidity management mechanisms standardised at Group level are defined by the entities in the context of their Asset and Liability Management, with indicators adapted to different horizons (short term, medium term, long term). For the life insurance entities, liquidity risk is controlled and structured using three mechanisms:

- long-term liquidity: monitoring and limitation of annual cash gaps, estimated on the portfolio in run-off, so as to ensure that the maturities of assets and liabilities are aligned, both in normal times and in stress conditions (wave of surrenders/deaths);
- medium-term liquidity: calculation of an indicator known as the “two-year reactivity rate”, which measures the capacity to mobilise short-term or variable-rate assets whilst limiting the impact in terms of capital losses. This indicator is compared to a minimum threshold defined by each of the entities so as to be able to absorb a wave of surrenders. Faced with the risk of mass withdrawals in the event of a sharp rise in interest rates, the Crédit Agricole Assurances Group also uses a liquidity monitoring indicator: (ISL): this measures liquidity under stress over a one-year period, with assumptions on assets, which are those of a systemic and global crisis scenario, and on liabilities, which correspond to the parameters defined by the Solvency 2 standard model (Pillar 1) and used by Crédit Agricole Assurances group in its ORSA scenarios (Pillar 2). Lastly, ALM has introduced an indicator measuring the level of liquidity that can be mobilised quickly, without generating significant losses and taking account of backing constraints;
- short-term liquidity: in the event of uncertainty about net inflows, setting minimum one-week and one-month liquidity amounts, with daily monitoring of surrenders. The Crédit Agricole Assurances Group also has a surrender crisis management plan.

Breakdown of maturities of insurance liabilities

For insurance and reinsurance contracts that are liabilities a breakdown of contracts by scheduled maturity of the estimates of the present value of future cash flows is presented in the following table:

(in millions of euros)	31/12/2025						Total
	≤ 1 year	> 1 year to ≤ 2 years	> 2 years to ≤ 3 years	> 3 years to ≤ 4 years	> 4 years to ≤ 5 years	> 5 years	
Insurance contracts issued that are liabilities	7,592	16,045	15,507	14,818	14,341	286,541	354,844
Reinsurance contracts held that are liabilities	696	(22)	(22)	(22)	(22)	(344)	264
TOTAL INSURANCE AND REINSURANCE CONTRACTS LIABILITIES	8,288	16,023	15,485	14,796	14,319	286,197	355,108

(in millions of euros)	31/12/2024						Total
	≤ 1 year	> 1 year to ≤ 2 years	> 2 years to ≤ 3 years	> 3 years to ≤ 4 years	> 4 years to ≤ 5 years	> 5 years	
Insurance contracts issued that are liabilities	6,764	4,204	5,481	7,128	8,097	300,164	331,837
Reinsurance contracts held that are liabilities	671	(16)	(12)	(31)	(1)	(353)	258
TOTAL INSURANCE AND REINSURANCE CONTRACTS LIABILITIES	7,435	4,187	5,468	7,097	8,096	299,812	332,095

This analysis does not include the remaining hedging liability on contracts valued using the PAA model.

Amounts payable on demand

A breakdown of the amounts payable at sight and of the carrying amount of the related contracts is presented in the following table:

(in millions of euros)	31/12/2025		31/12/2024	
	Amounts payable on demand	Carrying amount	Amounts payable on demand	Carrying amount
TOTAL INSURANCE CONTRACTS LIABILITIES	347,295	388,355	310,064	362,862

Amounts payable on demand correspond to the surrender value of the contracts concerned (presented gross of penalties) at the end of the reporting period.

TOTAL	86,467	(1,608)	233	350	15

(1) The amount realised during derecognition is transferred to consolidated reserves when the instrument in question is derecognised.

Pursuant to IFRS 9, Crédit Agricole S.A. calculates changes in fair value attributable to changes in own credit risk using a methodology that allows for them to be separated from changes in value attributable to changes in market conditions.

Basis for calculating own credit risk

The source taken into account for the calculation of own credit risk may vary from one issuer to another. Within Crédit Agricole S.A., the source used is the change in its cost of market refinancing based on the type of issuance.

Calculation of unrealised gains/losses on own credit adjustment (recognised in other comprehensive income)

Crédit Agricole S.A.'s preferred approach is based on the liquidity component of issues. All issues are replicated by a group of vanilla loans/borrowings.

Changes in fair value attributable to changes in own credit risk of all issues therefore correspond to those of said loans. These are equal to the changes in fair value of the loan book caused by changes in the cost of refinancing.

Calculation of realised gains/losses on own credit risk (recognised in consolidated reserves)

Crédit Agricole S.A. has elected to transfer fair value changes attributable to changes in own credit risk upon unwinding to consolidated reserves. Accordingly, when there is a total or partial early redemption, a sensitivity-based calculation is done. This consists of measuring the change in fair value attributable to the changes in own credit risk of a given issuance as being the sum of the credit spread sensitivities multiplied by the change in this spread between the issuance date and the redemption date.

Financial liabilities for which changes in issuer spread are recognised in net income

31/12/2025

(1) Of which securities lending without cash collateral.

(2) In the event that the "guarantee of the other party or parties to the agreement giving rise to the associated liabilities is limited to the transferred assets" (IFRS 7.42D. (d)).

Securitisations

Consolidated securitisations with external investors are a transfer of assets within the meaning of IFRS 7. The Group effectively has an indirect contractual obligation to deliver to external investors the cash flows from assets sold to the securitisation fund (although these assets are recorded in the Group balance sheet through the consolidation of the fund). Receivables assigned to the securitisation fund are used as collateral for investors.

Fully self-subscribed consolidated securitisations do not constitute a transfer of assets within the meaning of IFRS 7.

Crédit Agricole Consumer Finance Securitisations

At 31 December 2025, Crédit Agricole Consumer Finance managed 29 consolidated securitisation vehicles for retail consumer loans and car dealer financing in Europe. Securitisation transactions carried out within Crédit Agricole Consumer Finance Group are not considered to form part of a deconsolidation transaction under IFRS and have therefore been reinstated in the Crédit Agricole S.A. consolidated financial statements.

The carrying amounts of the relevant assets (net of related liabilities) amounted to €7,729 million at 31 December 2025. They include, in particular, outstanding customer loans with a net carrying amount of €4,795 million. The amount of securities mobilised on the market stood at €4,795 million. The value of securities still available to be mobilised stood at €14,272 million.

Crédit Agricole Italia securitisations

At 31 December 2025, Crédit Agricole Italia managed one home loan securitisation vehicle. This securitisation transaction is not considered to form part of a deconsolidation transaction under IFRS and was therefore reintegrated into the Crédit Agricole S.A. consolidated financial statements.

The carrying amounts of the relevant assets amounted to €16,522 million at 31 December 2025.

6.7 FINANCIAL LIABILITIES AT AMORTISED COST

(in millions of euros)	31/12/2025	31/12/2024
Due to credit institutions	186,012	178,418
Due to customers	894,540	868,115

CARRYING AMOUNT	285,073	284,512

“Green bond” issues included in the item “Debt securities” totalled €17.9 billion at 31 December 2025 compared with €13.5 billion in 2024.

“Social bond” issues included in the item “Debt securities” totalled €10.9 billion at 31 December 2025 compared with €7.9 billion in 2024.

Senior non-preferred debt issues

With the law on transparency, the fight against corruption and the modernisation of the economy (also referred to as the “Sapin II Law”) of 9 December 2016, France has a new category of senior debt – senior non-preferred debt – meeting certain eligibility criteria (as currently defined) of the TLAC and MREL ratios (codified in Articles L. 613-30-3-I-4° and R. 613-28 of the French Monetary and Financial Code). This category of debt is also referred to in the BRRD.

Senior non-preferred debt differs from senior preferred debt by virtue of its ranking in liquidation contractually defined by reference to the aforementioned Articles L. 613-30-3-I-4° and R. 613-28 of the French Monetary and Financial Code (senior non-preferred debt is junior to senior preferred debt and senior to subordinated notes (including deeply subordinated notes [TSS] and dated subordinated notes [TSR])).

Crédit Agricole S.A.’s outstanding senior non-preferred debt amounted to €39.3 billion at 31 December 2025 compared with €36.6 billion at 31 December 2024.

6.8 INFORMATION ON THE OFFSETTING OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES

OFFSETTING – FINANCIAL ASSETS

31/12/2025						
Offsetting effects on financial assets covered by master netting agreements and similar agreements						
Type of financial instrument (in millions of euros)	Gross amounts of recognised financial assets before offsetting	Gross amounts of recognised financial liabilities set off in the financial statements	Net amounts of financial assets presented in the financial statements ⁽¹⁾	Other amounts that can be offset under given conditions		Net amount after all offsetting effects
				Gross amounts of financial liabilities covered by master netting agreements	Amounts of other financial instruments received as collateral, including security deposits	
Derivatives ^{(1) (2)}	150,813	-	150,813	99,736	19,599	31,479
Reverse repurchase agreements ^{(4) (3)}	384,799	199,911	184,887	10,162	174,705	20
Other financial instruments	-	-	-	-	-	-
TOTAL FINANCIAL ASSETS SUBJECT TO OFFSETTING	535,612	199,911	335,701	109,898	194,304	31,499

(1) Including margin calls but before any XVA impact.

(2) The amount of derivatives subject to clearing represents 79% of derivatives in assets at the closing date.

(3) The net amount of financial assets presented in the summary statements is equal to the amount shown under assets in the balance sheet.

(4) The amount of reverse repurchase agreements for securities subject to clearing represents 100% of reverse repurchase agreements for securities in assets at the closing date.

At 31 December 2025, derivative instruments were not subject to accounting clearing within the meaning of IAS 32R, but daily settlement (application of the so-called “settlement to market” mechanism).

31/12/2024						
Offsetting effects on financial assets covered by master netting agreements and similar agreements						
Type of financial instrument (in millions of euros)	Gross amounts of recognised financial assets before offsetting	Gross amounts of recognised financial liabilities set off in the financial statements	Net amounts of financial assets presented in the financial statements ⁽¹⁾	Other amounts that can be offset under given conditions		Net amount after all offsetting effects
				Gross amounts of financial liabilities covered by master netting agreements	Amounts of other financial instruments received as collateral, including security deposits	
Derivatives ^{(1) (2)}	165,192	-	165,192	111,323	19,450	34,419

6.9 CURRENT AND DEFERRED TAX ASSETS AND LIABILITIES

(in millions of euros)

	31/12/2025	31/12/2024
Current tax	2,382	2,030
Deferred tax	3,063	3,002
TOTAL CURRENT AND DEFERRED TAX ASSETS	5,445	5,032
Current tax	1,818	1,984
Deferred tax	2,098	1,259
TOTAL CURRENT AND DEFERRED TAX LIABILITIES	3,915	3,243

Net deferred tax assets and liabilities break down as follows:

(in millions of euros)

	31/12/2025	31/12/2024
Temporary timing differences – tax	1,323	1,811
Non-deductible accrued expenses	655	548
Non-deductible provisions for liabilities and charges	1,694	1,643
Other temporary differences ⁽¹⁾	(1,027)	(380)
Deferred tax on reserves for unrealised gains or losses	614	577
Financial assets at fair value through other comprehensive income	4,513	4,076
Cash flow hedges	275	248
Gains and losses/Actuarial differences	47	51
Other comprehensive income attributable to changes in own credit risk	118	57
Reclassification of net gains (losses) of designated financial assets applying the overlay approach	(4,339)	(3,855)
Deferred tax on income and reserves	(971)	(644)
TOTAL DEFERRED TAX	965	1,743

(1) The portion of deferred tax related to tax loss carryforwards was €222 million for 2025, compared with €319 million in 2024.

Deferred tax assets are netted on the balance sheet by tax consolidation level.

In order to assess the level of deferred tax assets to be recognised, Crédit Agricole S.A. takes into account for each company or tax group concerned the dedicated tax status and the earnings projections established during the budgetary process.

TAX AUDITS

CLSA liability guarantee

In 2013, Crédit Agricole Group sold the CLSA entities to the Chinese group CITICS.

Following tax adjustments made on some CLSA entities in India and the Philippines, CITICS invoked the liability guarantee against Crédit Agricole Group. The adjustments have been challenged with stated arguments. A provision has been recognised to cover the estimated risk.

Crédit Agricole Consumer Finance tax audit

Crédit Agricole Consumer Finance was audited in 2018 and 2019 for the periods 2014-2015 and 2016-2017 respectively, with arrears collected for those periods. In 2021, Crédit Agricole Consumer Finance filed claims with the tax authorities disputing some of those arrears. Litigation proceedings are ongoing.

Pacifica tax audit

Pacifica was the subject of an audit of accounts in 2024 and 2025 covering the 2021, 2022 and 2023 financial years. All audits of accounts had been completed at the end of 2025. Pacifica has contested certain adjustment points with a statement. A provision has been recognised to cover the estimated risk.

6.10 ACCRUALS, PREPAYMENTS AND SUNDRY ASSETS AND LIABILITIES

ACCRUALS, PREPAYMENTS AND SUNDRY ASSETS

INVESTMENT PROPERTY MEASURED AT FAIR VALUE	9,971	-	505	(715)	-	(200)	(48)	9,513

FAIR VALUE OF INVESTMENT PROPERTIES

Crédit Agricole S.A.'s investment properties are valued by qualified experts. These independent property experts use a combination of several valuation methods to establish a market value. The weighting of each of these methods against another requires a certain amount of judgement and evolves depending on the market characteristics of each property (location, property type, i.e. residential, commercial or offices, etc.).

The main valuation methods and the related key hypotheses are as follows:

- the capitalisation method, which involves capitalising the revenues that the property is likely to generate by applying a capitalisation rate to an assigned rental income, which is generally determined in comparison with the rents charged for properties of the same type located in the same geographical area as the property. The other key hypotheses used are the indexation rate for rent in future years and the average length of time for which vacant properties are on the market;

- the comparison method, which consists of determining a metric market value to be used for a comparison relating to sales of identical or similar properties;
- the Discounted Cash Flow (DCF) method, which consists of discounting gross or net expected cash flows over a given period. This method rests on two main hypotheses: the cash flows that will be generated, as well as the indexation rate for rent in future years, and the discount rate used.

The valuation of investment properties takes into account any planned investments that will need to be made in order to meet regulatory requirements related to climate change, such as the tertiary decree for commercial and office property, and the new rules on energy diagnostics for residential properties.

(in millions of euros)		31/12/2025	31/12/2024

(1) Increase in goodwill for the insurance business in the amount of €114 million in connection with the entry into the scope of consolidation of Abanca and Piu Vera.

(2) Decrease in goodwill for the asset management business in the amount of €66 million following the disposal of the Amundi US entities.

(3) Increase in goodwill for the private banking business in the amount of €101 million as part of the acquisition of Banque Thaler.

(4) Transfer of Degroof Petercam assets to CACEIS involving a transfer of goodwill in the amount of €26 million.

(5) Increase in goodwill for CAL&F in the amount of €11 million as part of the acquisition of Merca Leasing.

(6) The Group share of goodwill increased following the purchase of Santander's stake in CACEIS.

DETERMINING THE VALUE IN USE OF THE CGUS

Goodwill was subject to impairment tests based on the assessment of the value in use of the Cash Generating Units (CGU) with which it is associated. Determining the value in use was based on discounting the CGUs' estimated future cash flows calculated from activities forecasts over a period over three years (2026-2028) in the context of the MTP 2028, extrapolated over a fourth and fifth year in order to merge towards a standardised final year. The projected financial trajectories are based on an economic scenario taking into account expected changes in interest rates and inflation in particular.

In 2025, despite the unstable international environment, the global economy resisted well. In the United States, growth resisted well in 2025 (2.1%) and is expected to accelerate slightly in 2026 (2.3%): economic fundamentals expected to remain healthy, labour market slowdown without a significant recovery in unemployment, continued investment in AI at a slower pace and fiscal support for wealthy businesses and households. On the other hand, inflation is

expected to remain above the 2% target in 2026. In the Eurozone, despite foreign trade impacted by tariffs, the strength of the euro and Asian competition, growth accelerated in 2025. In 2026, the good health of private agents, still favourable financial terms and a slightly expansionary fiscal policy are expected to absorb the confidence shock associated with the trade war and geopolitical uncertainty. The scenario retains growth in line with its potential pace, supported by the acceleration of investment. Growth could thus be around 1.2% in 2026, after 1.4% in 2025. Both total and underlying inflation rates are expected to fall below the 2% target by the end of 2026. On the monetary front, the scenario opts for the Fed's "hard line" and assumes a stable Fed funds rate in 2026, followed by an easing in 2027. In the Eurozone, the anticipated resilience of growth should encourage the ECB not to further relax its monetary policy in 2026. The stability of central bank policy rates projected for 2026 would be followed by tightening, bringing the deposit rate to 2.50% in 2027.

For the purposes of the impairment tests carried out at 31 December 2025, perpetual growth rates, discount rates and equity allocated rates as a proportion of risk-weighted assets were distributed by business line as shown in the table below:

In 2025 (for Crédit Agricole S.A. fully consolidated entities)	Perpetual growth rates	Discount rate	Capital allocated
French Retail Banking – LCL	2.0%	7.6%	11% to 12%
International Retail Banking – Italy	2.0%	9.3%	14% to 15%
International Retail Banking – Others	4.0%	20.2%	12% to 13%
Specialised Financial Services	2.0%	7,6% to 9,8%	11% to 12%
Asset Gathering	2.0%	7,6% to 8,5%	11% to 15% 80% of solvability margin (Insurance)
Large Customers	2.0%	8,1% to 9,4%	11% to 15%

Discount rates are determined based on a rolling monthly average over 15 years. At the end of 2025, the discount rate level was slightly lower, by 5 to 15 basis points, compared to the prior financial year.

Perpetual growth rates as of 31 December 2025 remain unchanged from those used as of 31 December 2024.

SENSITIVITY OF THE VALUATION OF CGUS TO THE MAIN VALUATION PARAMETERS

The sensitivity of the value in use of the CGUs comprising each of the major business segments to the variation of certain valuation parameters, applied on a uniform basis to all CGUs, is presented in the following table:

In 2025	Sensitivity to capital allocated	Sensitivity to discount rates		Sensitivity to cost of risk in the final year	Capital allocated	Sensitivity to the cost/income ratio in the final year	
	+100 pb	-50 pb	+50 pb	-10%	+10%	-100 pb	+100 pb
French Retail Banking – LCL	(2.4%)	9.1%	(7.6%)	1.9%	(1.9%)	2.8%	(2.8%)
International Retail Banking – Italy	(3.7%)	6.1%	(5.3%)	2.0%	(2.0%)	2.0%	(2.0%)
International Retail Banking – Others	(3.0%)	2.2%	(2.1%)	0.8%	(0.8%)	0.9%	(0.9%)
Specialised Financial Services	(4.4%)	7.9%	(6.7%)	5.4%	(5.4%)	2.6%	(2.6%)
Asset Gathering	(0.6%)	9.8%	(8.2%)	0.1%	(0.1%)	1.5%	(1.5%)
Large Customers	(1.2%)	8.0%	(6.9%)	0.5%	(0.5%)	2.3%	(2.3%)

The French Retail Banking – LCL CGU and the Consumer finance (excluding Agos) CGU, however, do remain sensitive to changes in certain parameters.

With regard to financial parameters:

- a 50-basis point increase in the discount rate would not result in a negative difference between value in use and consolidated value for any of the CGUs.
On the assumption of a significant increase of 100 basis points in discount rates, the difference would remain positive across all CGUs;
- a 100-basis point increase in the level of CET1 equity allocated to the CGUs would still result in a positive difference for all CGUs.

With regard to operational parameters:

- the simulated deterioration assumptions, namely a scenario of a 10% increase in the cost of risk in the last year of the projection combined with a +100 basis point change in the cost/income ratio for the same year, would not result in a negative difference between value in use and the consolidated carrying amount for all CGUs.

6.15 PROVISIONS

<i>(in millions of euros)</i>	31/12/2024	Changes in scope	Additions	Reversals, amounts used	Reversals, amounts not used	Translation adjustments	Other movements	31/12/2025

(1) Of which €851 million for post-employment benefits under defined-benefit schemes, including €117 million for the provision for long-service awards.

INVESTIGATIONS, INFORMATION REQUESTS AND LITIGATION PROCEEDINGS

In the normal course of business, Crédit Agricole S.A. is regularly subject to litigation proceedings, as well as requests for information, investigations, controls and other regulatory or judicial procedures from various institutions in France and abroad. The provisions recognised reflect the management's best judgement, considering the information in its possession at the closing date of the accounts.

Office of Foreign Assets Control (OFAC)

In October 2015, Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate and Investment Bank (Crédit Agricole CIB) reached agreements with the US and New York authorities that had been conducting investigations regarding US dollar transactions with countries subject to US economic sanctions. The events covered by this agreement took place between 2003 and 2008.

Crédit Agricole CIB and Crédit Agricole S.A., which cooperated with the US and New York authorities in connection with their investigations, have agreed to pay a total penalty amount of \$787.3 million (i.e. €692.7 million). The payment of this penalty has been allocated to the pre-existing reserve that had already been taken and, therefore, has not affected the accounts for the second half of 2015.

The agreements with the Board of Governors of the Federal Reserve System (Fed) and the New York State Department of Financial Services (NYDFS) are with CASA and Crédit Agricole CIB. The agreement with the Office of Foreign Assets Control (OFAC) of the US Department of the Treasury is with Crédit Agricole CIB. Crédit Agricole CIB also entered into separate deferred prosecution agreements (DPAs) with the United States Attorney's Office for the District of Columbia (USAO) and the District Attorney of the County of New York (DANY), the terms of which are three years. On 19 October 2018 the two deferred prosecution agreements with USAO and DANY ended at the end of the three year period, Crédit Agricole CIB having complied with all its obligations under the DPAs.

Crédit Agricole continues to strengthen its internal procedures and its compliance programs regarding laws on international sanctions and will continue to cooperate fully with the US and New York authorities with its home regulators, the European Central Bank and the French Regulatory and Resolution Supervisory Authority (ACPR), and with the other regulators across its worldwide network.

Pursuant to the agreements with NYDFS and the US Federal Reserve, Crédit Agricole's compliance program is subject to regular reviews to evaluate its effectiveness, including a review by an independent consultant appointed by NYDFS for a term of one year and annual reviews by an independent consultant approved by the Federal Reserve.

Euribor/Libor and other indexes

Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB, in their capacity as contributors to a number of interbank rates, have received requests for information from a number of authorities as part of investigations into: (i) the calculation of the Libor (London Interbank Offered Rates) in a number of currencies, the Euribor (Euro Interbank Offered Rate) and certain other market indices; and (ii) transactions connected with these rates and indices. These demands covered several periods from 2005 to 2012.

As part of its cooperation with the authorities, Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB carried out investigations in order to gather the information requested by the various authorities and in particular the American authorities – the DOJ (Department of Justice) and CFTC (Commodity Future Trading Commission) – with which they were in discussions. Since then, these authorities have not come forward to Crédit Agricole S.A. or Crédit Agricole CIB.

Furthermore, Crédit Agricole CIB is currently under investigation opened by the Attorney General of the State of Florida on both the Libor and the Euribor. This authority has not come forward to Crédit Agricole CIB since then.

Following its investigation and an unsuccessful settlement procedure, on 21 May 2014, the European Commission sent a statement of objection to Crédit Agricole S.A. and to Crédit Agricole CIB pertaining to agreements or concerted practices for the purpose and/or effect of preventing, restricting or distorting competition in derivatives related to the Euribor.

In a decision dated 7 December 2016, the European Commission jointly fined Crédit Agricole S.A. and Crédit Agricole CIB €114,654,000 for participating in a cartel in euro interest rate derivatives. Crédit Agricole S.A. and Crédit Agricole CIB are challenging this decision and have asked the General Court of the European Union to overturn it. On 20 December 2023, the Court handed down its decision, reducing the fine to €110,000,000 and dismissing certain conduct attributed to Crédit Agricole S.A. and Crédit Agricole CIB, but rebutting most of the arguments raised by Crédit Agricole S.A. and Crédit Agricole CIB. Crédit Agricole S.A. and Crédit Agricole CIB filed an appeal against this decision before the EU Court of Justice on 19 March 2024. The European Commission filed a cross-appeal also requesting the annulment of the decision of the General Court of the European Union.

O'Sullivan and Tavera

On 9 November 2017, a group of individuals, (or their families or estates), who claimed to have been injured or killed in attacks in Iraq filed a complaint ("O'Sullivan I") against several banks including Crédit Agricole S.A., and its subsidiary Crédit Agricole Corporate Investment Bank (Crédit Agricole CIB), in US Federal District Court in New York.

On 29 December 2018, the same group of individuals, together with 57 new plaintiffs, filed a separate action ("O'Sullivan II") against the same defendants.

On 21 December 2018, a different group of individuals filed a complaint ("Tavera") against the same defendants.

All three complaints allege that Crédit Agricole S.A., Crédit Agricole CIB, and other defendants conspired with Iran and its agents to violate US sanctions and engage in transactions with Iranian entities in violation of the US Anti-Terrorism Act and the Justice Against Sponsors of Terrorism Act and seek an unspecified amount of compensatory damages.

In O'Sullivan I, the court dismissed the complaint on 28 March 2019, denied plaintiffs' motion to amend their complaint on 25 February

2020, and denied plaintiffs' motion for a final judgment to allow the plaintiffs to appeal on 29 June 2021. On 9 November 2023, the court stayed the O'Sullivan I case until resolution of certain motions in three Anti-Terrorism Act cases to which Crédit Agricole S.A. and Crédit Agricole CIB are not parties – Freeman v. HSBC Holdings, PLC, No. 14-cv-6601 (E.D.N.Y.) ("Freeman I"), Freeman v. HSBC Holdings plc, No. 18-cv-7359 (E.D.N.Y.) ("Freeman II") and Stephens v. HSBC Holdings plc, No. 18-cv-7439 (E.D.N.Y.).

On 6 April 2020, the O'Sullivan II case was stayed pending resolution of the O'Sullivan I case, and the stay was further extended on 20 December 2023.

The Tavera case has been stayed since 19 February 2019. On 8 November 2023, the stay was extended pending resolution of certain motions in Freeman I, Freeman II, and Stephens. The stay was further extended on 21 October 2025.

Crédit Agricole Consumer Finance Nederland B.V.

The conditions for the review of the interest rates of revolving loans marketed by Crédit Agricole Consumer Finance Nederland BV, a fully owned subsidiary of Crédit Agricole Consumer Finance SA, and its subsidiaries are the subject of borrowers' claims relating to the criteria for revising these rates and possible overpayments of interests.

On 21 January 2019, in two individual cases concerning two subsidiaries of Crédit Agricole Consumer Finance Nederland BV, the Appeals Committee of KIFID (the Financial Services Complaints Authority) in the Netherlands decided that in case the consumers had no or insufficient information on the specific factors that determine the interest rate, the individual interest rate needed to follow the movement of market interest rates on consumer loans.

Crédit Agricole Consumer Finance Nederland BV implemented a compensation plan for the benefit of the borrowers in May 2020 which considers the aforementioned decisions of KIFID. Other institutions in the Netherlands have implemented compensation plans. Crédit Agricole Consumer Finance Nederland B.V. Supervisory Board decided to close this compensation plan on 1 March 2021.

CACEIS Germany

CACEIS Germany received from the Bavarian tax authorities on 30 April 2019 a claim for the repayment of the dividend tax refunded to a number of its customers in 2010.

This claim amounted to €312 million. It was accompanied by a demand for the payment of €148 million of interests (calculated at the rate of 6% per annum).

CACEIS Germany (CACEIS Bank SA) strongly challenge this claim that it finds to be totally unfounded. CACEIS Germany filed several claims before the Munich Tax office in order to, on the one hand, challenge the Munich Tax office's claim for the repayment of the dividend tax and, on the other hand, request a stay of enforcement of the payment obligation pending a final decision on the substance. The stay of enforcement was granted for the payment of €148 million of interests and rejected for the repayment of the amount of €312 million. CACEIS Bank SA appealed against the decision to reject. The rejection being enforceable, the sum of €312 million was paid by CACEIS Bank SA which, given the ongoing appeal proceedings, recorded a claim for an equivalent amount in its accounts. As CACEIS Bank SA's arguments have been rejected by the Munich Tax office on 25 November 2022, CACEIS Bank SA filed on 21 December 2022 a lawsuit with the Munich Tax Court against the said Munich Tax office's decision and against the claim for the repayment of the dividend tax. As CACEIS Bank SA is confident in its arguments, it has not made any modification to its accounts.

CA Bank Polska

Between 2007 and 2008, CA Bank Polska as well as other Polish banks granted mortgage loans denominated in or indexed to Swiss currency (CHF) and repayable in PLN currency. The significant raise of the CHF exchange rate against Polish currency (PLN) led to an important increase in the cost of repayment for borrowers.

Given that courts consider that the mortgage provisions which allow banks to unilaterally determine the applicable exchange rate are unfair, the number of cases raised against the banks is constantly growing.

In May 2022, CA Bank Polska opened a settlement program of the claims raised by the borrowers.

H2O unitholders claim

On 20 and 26 December 2023, members of an association called “Collectif Porteurs H2O” summoned CACEIS Bank before the Paris Economic Activity Court alongside Natixis Investment Managers and KPMG Audit, in the context of an action mainly brought against H2O AM LLP, H2O AM Europe SAS and H2O AM Holding. BPCE, Natixis SA and KPMG SA were subsequently summoned to join the proceedings.

The plaintiffs present themselves as unitholders of funds managed by companies of the H2O group, some of whose assets were hived off into “side pockets” in 2020, as well as holders of life insurance policies invested in units linked to such funds.

Since the action was initiated, the number of plaintiffs — initially 6,077 — has evolved both upward (voluntary interventions) and downward (withdrawals) and now stands at approximately 8,800.

The plaintiffs are seeking that the H2O group and all other defendants be held severally liable for the damages allegedly caused to them by the hiving-off of the relevant fund assets.

The amount claimed has also evolved over the course of the proceedings and currently stands at around €610 million.

In order to seek the in solidum liability of CACEIS Bank together with the co-defendants, the plaintiffs allege that it breached its supervisory obligations in its capacity as custodian of the funds.

In a decision dated 17 December 2025, the AMF Enforcement Committee imposed on CACEIS Bank a financial penalty of €3.5 million and a warning for breaches relating to certain controls carried out in its capacity as custodian over seven funds managed by H2O. The Enforcement Committee mentions in its decision, however, that “while these breaches did not allow for the early detection of some of H2O’s failures to meet its own obligations, it remains nonetheless true that the investment decisions taken by the latter in ineligible securities are at the origin of the harm that the unitholders of the funds may have suffered.”

This decision is not final and may be appealed within a two-month period.

Dividend arbitration – Investigation conducted by the French National Financial Prosecutor’s Office

Crédit Agricole CIB, like other banking institutions, was the subject of a preliminary investigation launched in early 2023 by the French National Financial Prosecutor’s Office (*Parquet national financier*) in connection with the so-called “dividend arbitration” case.

Crédit Agricole CIB cooperated with the authorities in the context of this investigation, which demonstrated that it had not established any system or policy aimed at encouraging its foreign clients to carry out securities lending or borrowing transactions or securities derivatives transactions for the purpose of tax fraud. The investigation also showed that Crédit Agricole CIB had put in place internal rules aiming to strictly regulate transactions involving dividend detachment as soon as the provisions of Article 119 bis of the General Tax Code resulting from the 2019 Finance Act came into force.

For the period from 2013 to 2023, the National Financial Prosecutor’s Office considered that a number of securities lending and borrowing transactions, as well as equity derivatives transactions, concluded at market-determined prices, constituted transactions involving dividend arbitration.

In this context, the National Financial Prosecutor’s Office proposed a settlement of this case in the form of a public interest judicial agreement, under which Crédit Agricole CIB agreed to pay a public interest fine of €88.2 million.

This agreement, which does not constitute a criminal conviction and does not imply any admission of guilt by Crédit Agricole CIB, was validated by the President of the Paris Judicial Court on 8 September 2025.

The payment of the public interest fine will not affect Crédit Agricole CIB’s accounts for the 2025 financial year, given the provisions that have been made.

Crédit Agricole Auto Bank

On 7 October 2025, the Financial Conduct Authority (FCA) in the United Kingdom released a draft compensation plan concerning borrowers having concluded a motor finance agreement between the 6 April 2007 and the 1 November 2024. Are included in the plan all agreements which, according to the FCA, would have led to an unfair relationship between the borrower and his/her financial institution due to the remuneration modalities of the motor distributor in his capacity as credit intermediary.

This initiative follows a decision from the UK Supreme Court on 1 August 2025 concerning competing institutions challenged by their customers regarding the conditions of their motor finance agreements. In its decision, the Supreme Court called into question the modalities of remuneration of credit intermediaries considering they created an imbalance between the parties.

The draft compensation plan was subject to public consultation until the 12 December 2025. The FCA plans to confirm the exact parameters of the compensation plan by March 2026.

Are notably concerned by the draft plan, CA Auto Finance UK, 100% owned subsidiary of Crédit Agricole Auto Bank itself fully owned subsidiary of CA Consumer Finance SA and Ferrari Financial Services, a joint venture between Crédit Agricole Auto Bank and the motor manufacturer Ferrari.

HOME PURCHASE SAVING PLANS

Deposits collected in home purchase savings schemes and accounts during the savings phase

(in millions of euros)	31/12/2025	31/12/2024
HOME PURCHASE SAVINGS PLANS		
Under 4 years old	7,090	10,497

Over 10 years old	51	30
TOTAL HOME PURCHASE SAVINGS PLANS	55	38
TOTAL HOME PURCHASE SAVINGS ACCOUNTS	4	1
TOTAL PROVISIONS FOR HOME PURCHASE SAVINGS CONTRACTS	59	39

Home Purchase Saving Plans have three components:

- a savings component linked to an option sold to HPSP (Home Purchase Saving Plan) holders to extend their investment under pre-set rate conditions;
- a commitment component linked to HPSP and HPSA (Home Purchase Saving Account) credits which may be achieved in the future under pre-set rate conditions;
- a credit component linked to HPSP and HPSA loans already made at rate conditions which, at the time they were made, may not have been the same as the market rates.

The utilisation coefficient of loan entitlements had been estimated by experts following the rate increase in 2022. At 31 December 2024, Crédit Agricole S.A. had decided to freeze the Home Purchase Saving Plan at its 30 June 2024 level, given the uncertainty surrounding the future level of the utilisation coefficient of PEL loan entitlements in view of the stabilisation of the real estate market.

The Group now considers that it has sufficient hindsight to calibrate the utilisation coefficient of loan entitlements, taking into account historical observations.

The Group has also continued to refine its methodology, in particular the methods used to take interest rate scenarios into account (multi-scenario approach).

Age plan is determined based on the date of the midway point in the generation of plans to which they belong.

All of the home purchase savings plans and accounts collected by the Regional Banks are recognised at 100% as liabilities in the consolidated financial statements of Crédit Agricole S.A.

Half of the amount of outstanding loans related to home purchase savings plans and accounts is recognised by Crédit Agricole S.A. and the other half by the Regional Banks in the tables above.

The amounts recognised under provisions represent the portion of risk borne by Crédit Agricole S.A. and LCL.

Consequently, the ratio between the provision booked and the amounts outstanding shown on Crédit Agricole S.A.'s balance sheet is not representative of the level of provisioning for the home purchase savings risk.

Irrevocable payment commitments paid to the Single Resolution Fund

The European regulatory framework intended to preserve financial stability has been supplemented by Directive 2014/59/EU of 15 May 2014, which establishes a framework for the recovery and resolution of credit institutions and investment firms. The system for funding the Single Resolution Mechanism (SRM) was set up by Regulation (EU) 806/2014 of 15 July 2014 for the relevant institutions.

The security deposit corresponds to the guarantees for institutions having recourse to the irrevocable payment commitments set out in Article 70, paragraph 3, of Regulation (EU) 806/2014, which stipulates that the share of those commitments shall not exceed 30% of the total amount of contributions raised in accordance with said article.

In accordance with Implementing Regulation (EU) 2015/81 of 19 December 2014, when a resolution action requires the Single Resolution Fund to intervene in application of Article 76 of Regulation (EU) 806/2014, the Single Resolution Board (SRB) calls on all or part of the irrevocable payment commitments, as made in accordance with Regulation (EU) 806/2014, in order to maintain

the Fund's available financial resources, as set by the Single Resolution Board within the limit of the ceiling set in the aforementioned Article 70, paragraph 3, of Regulation (EU) 806/2014.

The guarantees that come with these commitments will be restored in accordance with Article 3 of Regulation EU 2015/81 of 19 December 2014 once the Fund duly receives the contribution pertaining to the irrevocable payment commitments called upon.

This security deposit, which is classed under sundry accounts receivable in the institution's assets, with no change compared with the previous financial years, is paid in accordance with the agreement on the irrevocable payment commitment and the guarantee mechanism agreed between the Group and the Single Resolution Board. This line item amounted to €636.4 million at 31 December 2025, compared with €636.4 million at 31 December 2024 (See Note 6.10).

The Group does not expect a resolution action requiring a call for contribution for the Group, in the context of the aforementioned mechanism, to take place in the Eurozone, nor does it expect a loss or a withdrawal of its banking authorisation.

6.16 SUBORDINATED DEBT

(in millions of euros)

	31/12/2025	31/12/2024

CARRYING AMOUNT	26,171	29,273

(1) Includes issues of dated subordinated notes (TSR)

(2) Includes issues of deeply subordinated notes (TSS) and undated subordinated notes (TSDI).

SUBORDINATED DEBT ISSUES

Crédit Agricole S.A. subordinated debt issues are part of the regulatory equity management, while contributing to the refinancing of all of Crédit Agricole S.A.'s operations.

The European Directive and Regulation on capital requirements for credit institutions and investment firms (CRD 4/CRR ⁽¹⁾) and their terms of application in French law set out the conditions under which subordinated instruments can qualify as regulatory equity and stipulate the terms and conditions for phasing out the qualification of old instruments that do not meet or exceed those conditions.

All subordinated debt issuances, whether new or old, are likely to be subject to bail-in through their total or partial depreciation or their conversion into capital in certain circumstances and in accordance with applicable French law transposing the European Directive on the reorganisation and resolution of credit institutions and investment firms (BRRD ⁽²⁾).

Subordinated debt differs from senior preferred or non-preferred unsecured bonds by virtue of its ranking in liquidation (principal and interest) contractually defined by their subordination clause, which refers explicitly to applicable French law: subordinated debt is junior to senior non-preferred and preferred unsecured debt. Consequently, subordinated debt instruments are converted into capital or impaired as a priority and in any case before unsecured senior debt instruments, particularly in the event of implementation of the bail-in tool by the competent authorities as part of the resolution of the issuing entity. Likewise, in the event of liquidation of this same issuing entity, the creditors of these subordinated debt instruments will only potentially be paid, if there are still available funds after the preferred and non-preferred unsecured debt instruments are paid.

(1) Directive 2013/36/EU of 26 June 2013 as amended and modified by Directive (EU) 2019/878 of 20 May 2019, (and its transpositions into French law) and Regulation (EU) 575/2013 of 26 June 2013 as supplemented and amended, including in particular through Regulation (EU) 2019/876 of 20 May 2019.

(2) Directive 2014/59/EU of 15 May 2014 as supplemented and amended, including in particular through Directive (EU) 2019/879 of 20 May 2019.

6.17 TOTAL EQUITY

OWNERSHIP STRUCTURE AT 31 DECEMBER 2025

At 31 December 2025, to the knowledge of Crédit Agricole S.A., the distribution of capital and voting rights was as follows:

Shareholders	Number of shares at 31/12/2025	% of the share capital	% of voting rights
SAS Rue La Boétie	1,921,090,370	63.49%	63.50%
Treasury shares	394,529	0.01%	-
Employees (ESOP)	198,299,902	6.55%	6.55%
Public	906,117,549	29.95%	29.95%
TOTAL	3,025,902,350	100.00%	100.00%

At 31 December 2025, Crédit Agricole S.A.'s share capital stood at €9,077,707,050, divided into 3,025,902,350 fully paid-up ordinary shares each with a par value of €3.

SAS Rue La Boétie is wholly owned by the Crédit Agricole Regional Banks.

On 13 November 2025, the Board of Directors, acting on the authorisation of the General Meeting of Shareholders of 22 May 2024, decided to reduce the share capital of Crédit Agricole S.A. through the cancellation of 22,886,191 treasury shares, representing around 0.75% of the share capital.

The definitive reduction in share capital took place on 13 November 2025.

These shares were acquired between 1 October 2025 and 30 October 2025, as part of a share buyback programme that sought to offset the dilutive effect of the 2025 capital increase

reserved for employees, for a total amount of €374,414,014 following a decision by the Board of Directors made at its meeting held on 14 May 2025.

Concerning Crédit Agricole S.A. stock, a market-making agreement was signed on 25 October 2006 with Crédit Agricole Cheuvreux S.A., purchased by Kepler, and renamed Kepler Cheuvreux in 2013.

This agreement is automatically renewed every year. So that the operator can conduct the operations stipulated in the agreement with complete independence, and in accordance with the provisions of Regulations EU 596/2014 and 2016/908 and AMF Decision No. 2021-01, the agreement has been allocated a maximum amount of €50 million.

To the Company's knowledge, no other shareholder owns 5% or more of the share capital or voting rights, either directly or indirectly or with others.

EARNINGS PER SHARE

		31/12/2025	31/12/2024
Net income Group share during the period	(in millions of euros)	7,074	7,087
Interests paid to undated deeply subordinated securities	(in millions of euros)	(556)	(463)
Impact of change on AT1 repayment	(in millions of euros)	80	(266)
Net income attributable to holders of ordinary shares	(in millions of euros)	6,598	6,358
Weighted average number of ordinary shares in circulation during the period		3,027,231,491	3,015,082,065
Adjustment ratio		1.000	1.000
Weighted average number of ordinary shares for calculation of diluted earnings per share		3,027,231,491	3,015,082,065
BASIC EARNINGS PER SHARE	(in euros)	2.180	2.109
BASIC EARNINGS PER SHARE FROM ONGOING ACTIVITIES	(in euros)	2.180	2.109
BASIC EARNINGS PER SHARE FROM DISCONTINUED OPERATIONS	(in euros)	-	-
DILUTED EARNINGS PER SHARE	(in euros)	2.180	2.109
DILUTED EARNINGS PER SHARE FROM ONGOING ACTIVITIES	(in euros)	2.180	2.109
DILUTED EARNINGS PER SHARE FROM DISCONTINUED OPERATIONS	(in euros)	-	-

Net income attributable to subordinated and deeply subordinated notes corresponds to the issuance costs and interest accrued on subordinated and deeply subordinated Additional Tier 1 bond issues. This amounted to -€556 million at 31 December 2025.

Taking into consideration the change in the average price of the Crédit Agricole S.A. share, all Crédit Agricole S.A. stock option plans are non-dilutive.

In the absence of any dilutive issue by Crédit Agricole S.A., basic earnings per share are identical to diluted earnings per share.

DIVIDENDS

For the 2025 financial year, Crédit Agricole S.A.'s Board of Directors' meeting of 3 February 2026 decided to recommend to the General Meeting of Shareholders of 20 May 2026 the payment of a cash dividend of €1.13 per share with a payment date of 28 May 2026.

(in euros)	2025	2024	2023	2022	2021	2020
Dividend	1.13	1.10	1.05	1.05	1.05	0.80

DIVIDENDS PAID DURING THE PERIOD

The Crédit Agricole S.A. General Meeting of Shareholders of 14 May 2025 approved the payment of a cash dividend of €1.10 per share. Dividends totalling €3.3 billion were therefore paid.

APPROPRIATION OF NET INCOME

The proposed appropriation of net income is set out in the draft resolutions to be presented by the Board of Directors at Crédit Agricole S.A.'s Combined General Meeting on Wednesday 20 May 2026.

Crédit Agricole S.A. Parent Company's net income for the 2025 financial year was positive and stood at €6,207,171,564.

The Board of Directors has decided to make the following proposals to the Combined General Meeting:

- to record that the profit for the financial year amounts to €6,207,171,564;
- to record that distributable income amounts to €22,073,543,676 given (i) the absence of allocation to the legal reserve, which has already reached one-tenth of the capital and (ii) retained earnings of €15,866,372,112;
- to establish the amount of the regular dividend at €1.13 per share;
- to distribute the dividend paid out of distributable income in the amount of €3,418,823,838 ⁽¹⁾;
- to allocate the undistributed earnings balance of €18,654,719,838 ⁽¹⁾ to retained earnings.

UNDATED FINANCIAL INSTRUMENTS

The main issues of undated subordinated and deeply subordinated debt classified in Equity – Group share are:

Issue date	Currency	At 31 December 2025						
		Amount in currency at 31 December 2024	Partial repurchases and redemptions	Amount in currency at 31 December 2025	Amount in euros at inception rate	Interests paid Group share	Issuance costs net of taxes	Shareholders' equity Group share
		(in millions of units)	(in millions of units)	(in millions of units)	(in millions of euros)	(in millions of euros)	(in millions of euros)	(in millions of euros)
08/04/2014	GBP	103	(103)	-	-	-	-	-
19/01/2016	USD	1,250	(1,250)	-	-	-	-	-
14/10/2020	EUR	750	-	750	750	(156)	(5)	589

TOTAL	-	-	-	-	8,144	(848)	(65)	7,229

⁽¹⁾ This amount, established on the basis of the number of shares eligible for dividends at 31 December 2025, will be adjusted, as applicable, in the event of a change in the number of shares eligible for dividends. As applicable, the amount allocated to the retained earnings account would then be determined on the basis of the dividend actually paid.

Changes relating to undated subordinated and deeply subordinated debt classified in shareholder's equity – Non controlling interests share (insurance) are:

Issue date	Currency	Amount in currency at 31 December 2024 (in millions of units)	Partial repurchases and redemptions (in millions of units)	At 31 December 2025		
				Amount in currency at 31 December 2025 (in millions of units)	Amount in euros at inception rate (in millions of euros)	Income – Non controlling interests (in millions of euros)
14/10/2014	EUR	215	(215)	-	-	-
13/01/2015	EUR	246	(246)	-	-	-
17/03/2025	EUR	-	-	750	750	-
Crédit Agricole Assurances issues					750	-
Group share/Non controlling interests effect					-	(204)
TOTAL				-	750	(204)

Changes relating to undated subordinated and deeply subordinated debt affecting shareholders' Equity Group share and non-controlling interests share are as follows:

	Equity-Group share		Non-controlling interests	
	31/12/2025	31/12/2024	31/12/2025	31/12/2024
<i>(in millions of euros)</i>				
UNDATED DEEPLY SUBORDINATED NOTES				
Interests paid accounted as reserves	(491)	(436)	(36)	(63)
Changes in nominal amounts	925	(2)	-	-
Income tax savings related to interest paid to security holders recognised in net income	136	129	-	-
Issuance costs (net of tax) accounted as reserves	(18)	(18)	-	-
Other	-	-	-	-
UNDATED SUBORDINATED NOTES				
Interests paid accounted as reserves	(35)	(9)	(20)	(64)
Changes in nominal amounts	-	-	290	(786)

International	44,060	43,602
TOTAL	81,948	80,518

7.3 POST-EMPLOYMENT BENEFITS, DEFINED-CONTRIBUTION SCHEMES

“Employers” contribute to a variety of compulsory pension schemes. Plan assets are managed by independent organisations and the contributing companies have no legal or implied obligation to pay additional contributions if the funds do not have sufficient assets to cover all benefits corresponding to services rendered by employees during the financial year and during prior years.

Consequently, Crédit Agricole S.A. companies have no liability in this respect other than the contributions payable.

Within the Group, there are several compulsory defined-contribution pension schemes, the main ones being Agirc/Arrco, which are French supplementary retirement plans, and some supplementary plans in place notably within UES Crédit Agricole S.A.

ANALYSIS OF SUPPLEMENTARY PENSION SCHEMES IN FRANCE

Other assets	48,0%	525		16,5%	258		29,5%	784	

(1) Change in fair value of reimbursement rights.

At 31 December 2025, the sensitivity rates showed that:

- a 50-basis point increase in discount rates would reduce the commitment by -5.26%;
- a 50-basis point decrease in discount rates would increase the commitment by 5.62%.

The benefits expected to be paid in respect of post-employment plans for 2025 are as follows:

- benefits paid by the employer or by reimbursement rights funds: €58 million (compared with €71 million paid in 2024);

- benefits paid by plan assets: €115 million (compared with €107 million paid in 2024).

Crédit Agricole S.A.'s policy on covering employment-related commitments reflects local rules on funding post-employment benefits in countries with minimum funding requirements. Overall, commitments arising from the Group's post-employment obligations were 88% covered at 31 December 2025 (including reimbursement rights).

7.5 OTHER EMPLOYEE BENEFITS

In France, the Group's main entities pay long-service awards. The amounts vary according to practices and collective bargaining agreements in place.

The provisions funded by Crédit Agricole S.A. for these other employment-related commitments amounted to €482 million at 31 December 2025.

7.6 SHARE-BASED PAYMENTS

7.6.1 STOCK OPTIONS PLAN

No new plan was implemented in 2025.

7.6.2 DEFERRED VARIABLE COMPENSATION PAID IN SHARES OR IN CASH INDEXED TO THE SHARE PRICE

The deferred variable compensation plans implemented by the Group take two forms:

- equity-settled plans;
- cash-settled plans indexed to the Crédit Agricole S.A. share price.

Since 1 January 2016, all existing and future deferred variable compensation plans are now cash-settled plans indexed to the Crédit Agricole S.A. share price. The impact of the revaluation of the commitment on the basis of the Crédit Agricole S.A. share price, which is not material, was recognised in net income.

This deferred variable compensation is subject to continued employment and a performance condition and deferred to March 2026, March 2027, March 2028, March 2029 and March 2030.

The expense related to these plans is recognised in compensation expenses. It is spread on a straight-line basis over the vesting period to factor in continued employment, and a liability is recorded in employee expenses, the amount of which is subject to periodical revaluation through profit or loss until the settlement date, depending on the evolution of the share price of Crédit Agricole S.A. and on vesting conditions (continued employment and performance).

7.7 EXECUTIVE COMPENSATION

Senior management at Crédit Agricole S.A. includes all members of the Executive Committee, namely the Chief Executive Officers, Deputy Chief Executive Officers, Deputy General Managers for the Group's different divisions, Chief Executive Officers of the main subsidiaries and the Heads of the Group's core business activities.

Compensation and benefits paid to the members of the Executive Committee in 2025 were as follows:

- short-term benefits: €29.2 million for fixed and variable compensation (of which €4 million paid in share-indexed instruments), including social security costs and benefits in kind;
- post-employment benefits: €2.9 million for end-of-career allowances and for the supplementary pension scheme for Group executive managers;

- other long-term employee benefits: the amount of long-service awards granted was not material;
- employment contract termination indemnities: not material;
- other share-based payment: not applicable.

In 2025, the members of the Board of Directors of Crédit Agricole S.A. received, in consideration for their position as Directors of Crédit Agricole S.A., a gross total of €1,819,700 in Directors' fees, or €1,326,440 net.

These amounts include the compensation and benefits paid to the Chief Executive Officer and Deputy Chief Executive Officers of Crédit Agricole S.A.

NOTE 8 LEASES

8.1 LEASES FOR WHICH THE GROUP IS THE LESSEE

The item "Property, plant & equipment" in the balance sheet consists of own and leased assets that do not meet the definition of investment properties.

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Owned property, plant & equipment	8,706	8,028
Right-of-use on lease contracts	1,605	1,684
TOTAL PROPERTY, PLANT & EQUIPMENT USED IN OPERATIONS	10,311	9,712

Crédit Agricole S.A. is also a lessee under lease agreements for IT equipment (photocopiers, computers, etc.) with terms of one to three years. These are low-value and/or short-term leases. Crédit Agricole S.A. has opted to apply the exemptions provided for in IFRS 16 and not to recognise the right-of-use asset and the lease liability for these leases in the balance sheet.

CHANGE IN RIGHT OF USE ASSETS

Crédit Agricole S.A. is the lessee of many assets including offices, agencies and computer equipment.

Information relating to the contracts of which Crédit Agricole S.A. is a lessee is presented below:

<i>(in millions of euros)</i>	31/12/2024	Changes in scope	Increases (Acquisitions)	Decreases (Disposals)	Translation adjustments	Other movements	31/12/2025

8.2 LEASES FOR WHICH THE GROUP IS THE LESSOR

Crédit Agricole S.A. offers its customers leasing activities that take the form of finance leases, leases with purchase options, finance leases and long-term leases. Lease agreements are classified as finance leases when the terms of the lease transfer substantially all of the risks and benefits inherent in ownership to the lessee.

Other lease agreements are classified as operating leases.

INCOME FROM RENTAL CONTRACTS

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Finance leases	1,967	1,929
Selling profit or loss	(31)	(2)
Finance income on the net investment in the lease	1,998	1,931
Income relating to variable lease payments	-	-
Operating leases	1,344	1,229
Lease income	1,344	1,229

SCHEDULE OF RENT PAYMENTS TO BE RECEIVED

<i>(in millions of euros)</i>	31/12/2025						
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	Total Lease payments receivable	Unearned finance income	Discounted residual value	Financial lease receivables
Finance leases	10,858	16,695	3,968	31,520	1,739	1,672	31,454

<i>(in millions of euros)</i>	31/12/2024						
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	Total Lease payments receivable	Unearned finance income	Discounted residual value	Financial lease receivables
Finance leases	8,586	18,618	4,791	31,995	1,603	1,178	31,570

Lease agreements expire on their residual maturity date.

The amount by expiry corresponds to the undiscounted contractual amount.

NOTE 9 FINANCING AND GUARANTEE COMMITMENTS AND OTHER GUARANTEES

Financing and guarantee commitments and other guarantees include discontinued operations.

COMMITMENTS GIVEN AND RECEIVED

(in millions of euros)	31/12/2025	31/12/2024
COMMITMENTS GIVEN		
Financing commitments	214,322	207,897
Commitments given to credit institutions	2,952	5,448
Commitments given to customers	211,370	202,449
Guarantee commitments	226,918	216,883
Credit institutions	9,775	9,779
Customers	217,143	207,104
Securities commitments	6,306	10,835
Securities to be delivered	6,306	10,835
COMMITMENTS RECEIVED		
Financing commitments	121,818	125,816
Commitments received from credit institutions	115,694	119,593
Commitments received from customers	6,124	6,223
Guarantee commitments ⁽¹⁾	322,849	329,254
Commitments received from credit institutions	105,274	108,185
Commitments received from customers	217,575	221,069
Securities commitments	6,885	9,450
Securities to be received	6,885	9,450

(1) The amounts reported in this note take into account the correction of a technical error in the consolidation of guarantees received from customers and credit institutions, estimated at -€70,393 million at 31 December 2024, broken down as follows:

- Commitments received from credit institutions of -€402 million;
- Commitments received from customers of -€69,991 million.

As from 13 December 2024, Banque de France has discontinued the Additional Credit Claims Corporates waiver channel within the framework of the exceptional measures put in place in 2011 in response to the financial crisis. Only "State-guaranteed loans" receivables remain eligible for central bank debt waivers.

FINANCIAL INSTRUMENTS GIVEN AND RECEIVED AS COLLATERAL

(in millions of euros)	31/12/2025	31/12/2024
CARRYING AMOUNT OF FINANCIAL ASSETS PROVIDED AS COLLATERAL (INCLUDING TRANSFERRED ASSETS)		
Securities and receivables provided as collateral for the refinancing structures (Banque de France, CRH, etc.)	282,240	276,056

Fair value of instruments received as reusable and reused collateral		
Securities borrowed	9	9
Securities bought under repurchase agreements ⁽¹⁾	479,911	468,051
Securities sold short	39,284	47,362
TOTAL FAIR VALUE OF INSTRUMENTS RECEIVED AS REUSABLE AND REUSED COLLATERAL	519,204	515,423

(1) The amounts reported in this note take into account the correction of a technical error in the consolidation of guarantees received from customers and credit institutions, estimated at -€5,237 million at 31 December 2024, broken down as follows:

- Securities and assets received under repurchase agreements of -€5,237 million.

RECEIVABLES PLEDGED AS COLLATERAL

At 31 December 2025, Crédit Agricole S.A. deposited €69.7 billion of receivables (mainly on behalf of the Regional Banks and subsidiaries) for refinancing transactions to the Banque de France, compared to €70.6 billion at 31 December 2024.

At 31 December 2025, Crédit Agricole S.A. deposited €7.6 billion of receivables for refinancing transactions to the Caisse de Refinancement de l'Habitat on behalf of the Regional Banks, compared to €7.1 billion at 31 December 2024, and €1.92 billion of receivables were deposited directly by LCL.

At 31 December 2025, €192.6 billion of Regional Bank and LCL receivables had been pledged as collateral for the secured bond issues of Crédit Agricole Home Loan SFH (CA HL SFH) and Crédit Agricole Financement de l'Habitat SFH (CA FH SFH), financial companies wholly owned by Crédit Agricole S.A. This amount comprises €156.7 billion in Regional Bank receivables (of which €50.2 billion for CA HL SFH and €106.5 billion for CA FH SFH) and €35.9 billion from LCL (of which €12.3 billion for CA HL SFH and €23.6 billion for CA FH SFH).

At 31 December 2025, in the context of transactions with EIB/CEB supranationals, Crédit Agricole S.A. deposited €1.8 billion in receivables on behalf of the Regional Banks.

At 31 December 2025, in the context of refinancing transactions with CDC, Crédit Agricole S.A. deposited €2.4 billion in receivables on behalf of the Regional Banks.

These provisions for which there is no contractual transfer of cash flow will fall outside the scope of the asset transfers referred to in Note 6.6 "Transferred assets not derecognised or derecognised with ongoing involvement".

GUARANTEES HELD

Guarantees held and assets received as collateral by Crédit Agricole S.A., which it is allowed to sell or to use as collateral are mostly held within Crédit Agricole S.A. The majority of these are receivables pledged as collateral by the Regional Banks and their main bank subsidiaries to Crédit Agricole S.A., the latter acting as the central body with regard to the external refinancing organisations, in order to obtain refinancing. These receivables (property-related, or loans to corporates or local authorities) are selected and rated for their quality and retained on the balance sheet of the contributing entities.

The majority of these guarantees consist of mortgage liens, collateral or guarantees received, regardless of the quality of the assets guaranteed. They are mainly related to repurchase agreements and securities pledged to guarantee brokerage transactions.

Crédit Agricole S.A.'s policy is to sell seized collateral as soon as possible. Crédit Agricole S.A. had no such assets at 31 December 2025.

NOTE 10

RECLASSIFICATIONS OF FINANCIAL INSTRUMENTS

PRINCIPLES APPLIED BY CRÉDIT AGRICOLE S.A.

Reclassifications are performed only under exceptional circumstances and following a decision by the Executive Management of the entity as a result of internal or external changes: significant changes in Crédit Agricole S.A.'s activity.

RECLASSIFICATION PERFORMED BY CRÉDIT AGRICOLE S.A.

In 2025, Crédit Agricole S.A. did not carry out any reclassification pursuant to paragraph 4.4.1 of IFRS 9.

NOTE 11 FAIR VALUE OF FINANCIAL INSTRUMENTS

Fair value is the price that would be received at the sale of an asset or paid to transfer a liability in a standard transaction between market participants at the valuation date.

Fair value is defined on the basis of the exit price.

The fair values shown below are estimates made on the reporting date using observable market data wherever possible. These are subject to change in subsequent periods due to developments in market conditions or other factors.

The calculations represent best estimates. They are based on a number of assumptions. It is assumed that market participants act in their best economic interest.

To the extent that these models contain uncertainties, the fair values shown may not be achieved upon actual sale or immediate settlement of the financial instruments concerned.

The fair value hierarchy of financial assets and liabilities is broken down according to the general observability criteria of the valuation inputs, pursuant to the principles defined under IFRS 13.

Level 1 of the hierarchy applies to the fair value of financial assets and liabilities quoted in active markets.

Level 2 of the hierarchy applies to the fair value of financial assets and liabilities with observable inputs. This agreement includes

market data relating to interest rate risk or credit risk when the latter can be revalued based on observable Credit Default Swap (CDS) spreads. Securities bought or sold under repurchase agreements subject of an active market, depending on the underlying and the maturity of the transaction are also included in Level 2 of the hierarchy, as are financial assets and liabilities with a demand component for which fair value is measured at unadjusted amortised cost.

Level 3 of the hierarchy indicates the fair value of financial assets and financial liabilities for which there is no observable data or for which some parameters can be remeasured based on internal models that use historical data.

In some cases, market values are close to carrying amounts. These include:

- variable-rate assets or liabilities for which changes in interest rates do not significantly affect fair value since the interest rates for these instruments adjust frequently to the market rates;
- short-term assets or liabilities where the redemption value is considered to be close to the market value;
- demand assets and liabilities;
- transactions for which there is no reliable observable data.

11.1 FAIR VALUE OF FINANCIAL ASSETS AND LIABILITIES RECOGNISED AT AMORTISED COST

IFRS 7 requires the disclosure of information on financial instruments that are not recognised at fair value.

Amounts shown under the “carrying amount” of the financial instruments concerned include accrued interests and debt and, in the case of assets, are net of impairment. Furthermore, the carrying amount in the tables includes the Fair Value of the hedged portion of the micro-hedged items in Fair Value hedging (see Note 3.5 “Hedge accounting”). However, the carrying amount of the items presented in this table does not include the revaluation adjustment on interest rate hedged portfolios.

In order to be recognised at amortised cost on the asset side of the balance sheet, debt instruments must satisfy both of the following criteria:

- be managed in a portfolio whose management objective is the collection of contractual cash flows over the lifetime of the assets and whose sales are strictly regulated and limited;
- give entitlement only to the repayment of the principal and when the payment of interest reflects the time value of money, the credit risk associated with the instrument, the other costs and risks of a conventional loan contract and a reasonable margin, whether the interest rate is fixed or variable (the “Solely Payments of Principal & Interests” or “SPPI” test).

In that sense, disclosures relating to the market value of these instruments must be analysed with special care:

- The values indicated represent an estimate of the market value at 31 December 2025. However, these market values may be subject to variations depending on market data, in particular the interest rate trends and the quality of the credit risk of the counterparties. These fluctuations can lead to a potentially substantial difference between the indicative fair value presented in the table below and the derecognition value, particularly at maturity or close to maturity compatible with a collection management model in which the financial instruments are classified.

Accordingly, the difference between the indicated fair value and the carrying amount does not represent the institution's going concern realisable value.

- Given the management model consisting of collecting the cash flows of the portfolio's financial instruments, it is recalled that these financial instruments are not managed according to their fair value trends and that the performance of these assets is assessed on the basis of the contractual cash flows received over the lifetime of the instrument.
- The estimated indicative fair value of the instruments recognised at amortised cost is subject to the use of valuation models, in particular customer loans and receivables and more specifically those whose valuation is based on Level 3 unobservable data.

FAIR VALUE OF FINANCIAL ASSETS RECOGNISED IN THE BALANCE SHEET AT AMORTISED COST

<i>(in millions of euros)</i>	Value at 31/12/2025	Estimated fair value at 31/12/2025	Quoted prices in active markets for identical instruments: Level 1	Valuation based on observable data: Level 2	Valuation based on unobservable data: Level 3

11.2 INFORMATION ON FINANCIAL INSTRUMENTS MEASURED AT FAIR VALUE

Market transactions are valued by management information systems and checked by a team that reports to the Risk Management department and is independent from the market operators.

Valuations are based on the following:

- prices or inputs obtained from independent sources and/or approved by the Market Risk department using a series of available sources (market data providers, market consensus and broker data, etc.);
- models approved by the quantitative teams in the Market Risk department.

The valuation produced for each instrument is a mid-market valuation, which does not take account of the direction of the trade, the bank's aggregate exposure, market liquidity or counterparty quality. Adjustments are then made to the market valuations to incorporate those factors, as well as the potential uncertainties inherent in the models or inputs used.

The main types of valuation adjustments are the following:

Mark-to-market adjustments: these adjustments correct any potential variance between the mid-market valuation of an instrument obtained using internal valuation models and the associated inputs and the valuation obtained from external sources or market consensus data. This adjustment can be either positive or negative.

Bid/ask reserves: these adjustments incorporate the bid/ask spread for a given instrument in order to reflect the price at which the position could be reversed. These adjustments are always negative.

Uncertainty reserves: these adjustments constitute a risk premium taken into consideration by any market participant. These adjustments are always negative:

- input uncertainty reserves seek to incorporate in the valuation of an instrument any uncertainty that might exist as regards one or more of the inputs used;
- model uncertainty reserves seek to incorporate in the valuation of an instrument any uncertainty that might exist due to the choice of model used.

In addition, in accordance with IFRS 13 "Fair value measurement", Crédit Agricole S.A. includes within the fair value calculated for its OTC derivatives (i.e. those traded over the counter) various adjustments linked to:

- default risk or creditworthiness (Credit Valuation Adjustment/Debit Valuation Adjustment);
- future funding costs and benefits (Funding Valuation Adjustment/Initial Margin Valuation Adjustment/Collateral Valuation Adjustment);
- liquidity risk associated with the collateral (Liquidity Valuation Adjustment).

CVA (Credit Valuation Adjustment)

The CVA (Credit Valuation Adjustment) is a mark-to-market adjustment to incorporate the market value of the default risk (risk of non-payment of amounts due in the event of default or deterioration in credit quality) in the value of OTC derivatives of our counterparties. This adjustment is calculated per counterparty based on the positive future exposure of the trading portfolio (taking into account any netting or collateral agreements, where such exist) weighted by the probabilities of default and losses given default. The methodology used maximises the use of observable input data/

market prices (probabilities of default are derived in priority directly from listed CDS where these exist, proxies of listed CDS and other credit instruments where these are deemed sufficiently liquid). This adjustment is always negative and reduces the fair value of the OTC derivative assets held in the portfolio.

DVA (Debit Valuation Adjustment)

The Debit Valuation Adjustment (DVA) is a mark-to-market adjustment that aims to incorporate the market value of the default risk (potential losses to which Crédit Agricole S.A. may expose its counterparties in the event of default or a deterioration in its creditworthiness) in the value of OTC derivatives. This adjustment is calculated by collateral contract type on the basis of negative future exposure profiles of the trading portfolio weighted by default probabilities (Crédit Agricole S.A.) and losses incurred in the event of default.

The methodology used maximises the use of data/market prices (use of Crédit Agricole S.A. CDS to determine default probabilities). This adjustment is always positive and reduces the fair value of the OTC derivative liabilities held in the portfolio.

FVA (Funding Valuation Adjustment)

The Funding Valuation Adjustment (FVA) is a mark-to-market adjustment that aims to incorporate the additional future funding costs and benefits based on ALM (Asset & Liability Management) funding costs into the fair value of uncollateralised or imperfectly collateralised OTC derivatives. This adjustment is calculated per counterparty based on the future exposure of the trading portfolio (taking into account any netting or collateral agreements, where such exist) weighted by ALM funding spreads.

As regards the scope of cleared derivatives, an FVA adjustment called IMVA (Initial Margin Value Adjustment) is calculated to take into account the future financing costs and gains of the initial margins to be posted with the main derivatives clearing houses until the portfolio matures.

ColVA (Collateral Valuation Adjustment) adjustment

The Collateral Valuation Adjustment (ColVA) is a mark-to-market adjustment that aims to incorporate the additional future funding costs and benefits based on the actual funding costs of these securities (on the repo market) into the fair value of OTC derivatives collateralised by non-sovereign securities. This adjustment is calculated per counterparty based on the future exposure of the trading portfolio weighted by a specific spread.

Depending on the case, this adjustment may be a specific provision or be included in mark-to-market figures via a specific discount curve.

LVA (Liquidity Valuation Adjustment)

The Liquidity Valuation Adjustment (LVA) is the positive or negative valuation adjustment intended to reflect both the potential absence of collateral payments for counterparties with a CSA (Credit Support Annex), as well as the non-standard compensation of CSAs.

Therefore, the LVA reflects the profit or loss resulting from additional liquidity costs. It is calculated on the scope of OTC derivatives with CSAs.

BREAKDOWN OF FINANCIAL INSTRUMENTS AT FAIR VALUE BY VALUATION MODEL

Amounts presented below include accrued interests and debt and are net of impairment.

Financial assets measured at fair value

Liability transfers to and from Level 3 mainly involve securities bought/sold under repurchase agreements to credit institutions, trading derivatives and financial liabilities at fair value through profit or loss.

Transfers between Level 1 and Level 2 mainly involve short sales.

Financial instruments classified in Level 1

Level 1 comprises all derivatives quoted in an active market (options, futures, etc.), regardless of their underlying (interest rate, exchange rate, precious metals, major stock indexes), as well as equities and bonds quoted in an active market.

A market is considered as being active if quoted prices are readily and regularly available from exchange, brokers, dealers, pricing services or regulatory agencies, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

Corporate, government and agency bonds that are valued on the basis of prices obtained from independent sources, deemed to be enforceable and updated regularly, are classified in Level 1. This represents the bulk of the Sovereign and Agency Bonds and Corporate securities held. Issuers whose bonds are not quoted are classified in Level 3.

Financial instruments classified in Level 2

The main financial instruments classified in Level 2 are:

- securities bought/sold under repurchase agreements;
- debt designated at fair value:
Debt designated at fair value is classified in Level 2 when its embedded derivative is deemed to be classified in Level 2;
- over-the-counter derivatives:
The main OTC derivatives classified in Level 2 are those valued using inputs considered to be observable and where the valuation technique does not generate any significant exposure to a model risk.

Level 2 therefore mainly includes:

- linear derivative products such as interest rate swaps, currency swaps and forward FX. They are valued using simple models widely used in the market, based on directly observable inputs (foreign exchange rates, interest rates), or inputs derived from observable market prices (currency swaps);
- non-linear vanilla instruments such as caps, floors, swaptions, currency options, equity options and credit default swaps, including digital options. They are valued using simple models widely used in the market, based either on directly observable inputs (foreign exchange rates, interest rates, share prices) or inputs that can be derived from observable market prices (volatilities);
- the usual mono-underlying exotic products of the voidable swap type and currency baskets on major currencies.
These products are valued using models that are sometimes slightly more complex, but are shared by the market. The material valuation parameters are observable. Prices are observable in the market, primarily via brokers' prices. Market consensus, if applicable, allow corroboration of internal valuations;
- securities, equity options and future shares listed on a market deemed inactive and for which independent valuation data are available.

Financial instruments classified in Level 3

Financial instruments classified in Level 3 are those which do not meet the conditions for classification in Level 1 or 2. They are therefore mainly financial instruments whose valuation depends on parameters that cannot be observed in a meaningful way and/or which present a model risk.

The initial margin on all new transactions classified in Level 3 is reserved at the date of initial recognition. It is spread into profit or loss over the period considered to be unobservable, which, in certain cases, may be the maturity of the transaction.

Level 3 therefore mainly includes:

- securities bought/sold under repurchase agreements:
Repurchase transactions depending on the maturity of the transactions in question and their underlying assets;
- loans and receivables due from customers;
- securities:
Securities classified in Level 3 are essentially:
 - unlisted shares or bonds for which no independent valuation is available,
 - ABS for which indicative but not necessarily enforceable independent valuations exist;
- debt designated at fair value:
Debt designated at fair value is classified in Level 3 when its embedded derivative is deemed to be classified in Level 3;
- over-the-counter derivatives:
Unobservable income includes complex financial instruments that involve parameters deemed unobservable and thus significantly exposed to model risk.

The aggregate of these principles is mapped for observability map by risk factor/product, underlying (currency, index, etc.) and maturity indicating the classification used.

The following are classified primarily in Level 3:

- linear rate or foreign exchange products for very long maturities in the case of major currencies, and for lower maturities in the case of emerging currencies;
- non-linear rate or foreign exchange products for long maturities in the case of major currencies, and for lower maturities in the case of emerging currencies;
- the complex derivatives listed below are not considered to be observable because of a significant model risk and a reduced liquidity that does not permit a regular and precise estimation of the valuation parameters:
 - certain equity derivative products: options on markets that are insufficiently deep, or options with a very long maturity or products the valuation of which depends on non-observable correlations between different underlying shares,
 - non-standard voidable swaps on G10 currencies or certain voidable swaps on emerging market currencies,
 - hybrid interest rate/credit products involving contingent risk on an issuer (sovereign or corporate/financial) of the non-standard credit-linked or repackaged note type, whose valuation depends on several unobservable parameters,
 - certain products for which the underlying element is the forward volatility of an index or is significantly exposed to basis risk between two indexes,
 - multi-underlying products that generate exposures to unobservable correlations among several risk classes (rates, credit, foreign exchange, inflation and shares),
 - securitisation swaps generating an exposure to the prepayment rate. The prepayment rate is determined on the basis of historical data on similar portfolios.

CLOSING BALANCE (31/12/2025)	25,480	3	3,005	-	-	-	5,014	17,458	-

(1) This balance includes gains and losses for the period arising from liabilities held on the balance sheet at the reporting date for the following amounts:

Gains/losses for the period from Level 3 assets held at the end of the period	1,905
Recognised in profit or loss	2,042
Recognised in other comprehensive income	(136)

Gains and losses recognised in profit or loss relating to financial instruments held for trading and designated at fair value through profit or loss and derivative instruments are recognised in “Net gains (losses) on financial instruments at fair value through profit or loss”; gains and losses recognised in profit or loss relating to financial assets at fair value through other comprehensive income are recognised in “Net gains (losses) on financial instruments at fair value through other comprehensive income”.

11.3 ASSESSMENT OF THE IMPACT OF INCLUSION OF THE MARGIN AT INCEPTION

(in millions of euros)

	31/12/2025	31/12/2024
Deferred margin at beginning of period	304	359
Margin generated by new transactions during the period	208	245
Margin recognised in net income during the period	(147)	(300)
DEFERRED MARGIN AT END OF PERIOD	365	304

The first day margin on market transactions falling within Level 3 of fair value is reserved on the balance sheet and recognised in profit or loss as time passes or when unobservable parameters become observable again.

NOTE 12

SCOPE OF CONSOLIDATION AT 31 DECEMBER 2025

12.1 INFORMATION ON SUBSIDIARIES

12.1.1 RESTRICTIONS ON CONTROLLED ENTITIES

Regulatory, legal or contractual provisions may limit Crédit Agricole S.A.’s ability to have free access to the assets of its subsidiaries and to settle the Group’s liabilities.

Crédit Agricole S.A. is subject to the following restrictions:

Regulatory constraints

The subsidiaries of Crédit Agricole S.A. are subject to prudential regulation and regulatory capital requirements in their host countries. The minimum equity capital (solvency ratio), leverage ratio and liquidity ratio requirements limit the capacity of these entities to pay dividends or to transfer assets to Crédit Agricole S.A.

Legal constraints

The subsidiaries of Crédit Agricole S.A. are subject to legal provisions concerning the distribution of capital and distributable income. These requirements limit the ability of the subsidiaries to distribute dividends. In the majority of cases, these are less restrictive than the regulatory limitations mentioned above.

Contractual constraints related to guarantees

Constraints related to guarantees: Crédit Agricole S.A. encumbers certain financial assets to raise funds through securitisations or refinancing with central banks. Once pledged as guarantees, the assets can no longer be used by Crédit Agricole S.A. This mechanism is described in Note 9 “Financing and guarantee commitments and other guarantees”.

Restriction on assets backing unit-linked contracts for the Insurance business

Assets backing unit-linked contracts of Crédit Agricole S.A. are held for the benefit of policyholders. Assets on the balance sheet of the insurance subsidiaries of Crédit Agricole S.A. are mainly held for satisfying their obligation towards their policyholders. Assets transfers to other entities are possible following the legal conditions. However, in case of a transfer, a part of the profit due to the transfer must be intended for the policyholders.

Other constraints

Some Crédit Agricole Group subsidiaries must obtain prior approval from their regulatory authorities for the distribution of dividends.

For both CA Egypt and CA Bank Polska, dividend payments are subject to prior approval by their respective regulators.

According to Resolution No. 23 of the Central Bank of Ukraine of 25 February 2022, the allocation of profits to the payment of dividends and the actual payment of the dividends (other than dividends on preferred shares) are prohibited for an indefinite period, with the exception of the State banks, whose dividends are allocated to the Ukrainian State budget.

Corporates will be able to repatriate “new” dividends: corporates will be able to repatriate dividends on interests or shares in corporates abroad accrued based on performance results from the period starting on 1 January 2024. This easing of the rules does not apply to the payment of dividends on undistributed earnings from previous periods allocated to retained earnings or reserve capital.

To minimise the risks to macroeconomic and financial stability, the National Bank has set a monthly repatriation limit for “new” dividends at an equivalent of €1 million. Compliance with this requirement will be ensured through the National Bank of Ukraine’s automated E-Limits IT system.

12.1.2 SUPPORT FOR CONTROLLED STRUCTURED ENTITIES

Crédit Agricole CIB has contractual arrangements with some consolidated structured entities that equate to commitments to provide financial support.

To meet its funding needs, Crédit Agricole CIB uses structured debt issuance vehicles to raise cash on financial markets. Securities issued by these entities are fully underwritten by Crédit Agricole CIB. At 31 December 2025, the outstanding volume of these issues was €37.4 billion.

As part of its third-party securitisation business, Crédit Agricole CIB provides liquidity facilities to its ABCP conduits. At 31 December 2025, these liquidity facilities totalled €42.7 billion.

Crédit Agricole S.A. provided no other financial support for any structured entities consolidated at 31 December 2025 and 31 December 2024.

12.1.3 SECURITISATION TRANSACTIONS AND DEDICATED FUNDS

Various Group entities conduct securitisation transactions on their own account as part of collateralised refinancing transactions. Depending on the circumstances, these transactions can be wholly or partially placed with investors, sold under repurchase agreements or kept on the issuer's balance sheet as liquid securities reserves that can be used to manage refinancing.

Following the IFRS 9 decision tree, these transactions are considered to form part of deconsolidating or non-deconsolidating transactions: for non-deconsolidating transactions, the assets are retained on the consolidated balance sheet of Crédit Agricole S.A.

For more details on these securitisation transactions and on the indication of the carrying amount of the assets concerned and associated liabilities, see Note 6.6 "Transferred assets not derecognised or derecognised with ongoing involvement".

12.2 JOINT VENTURES AND ASSOCIATES

FINANCIAL INFORMATION OF JOINT VENTURES AND ASSOCIATES

At 31 December 2025,

- the equity-accounted value of joint ventures totalled €1,787 million (€1,512 million at 31 December 2024);
- the equity-accounted value of associates totalled €5,352 million (€1,415 million at 31 December 2024).

Material associates and joint ventures are presented in the table below. These are the main joint ventures and associates that make up the "Equity-accounted value on the balance sheet".

	31/12/2025					
(in millions of euros)	% of interest	Equity-accounted value	Share of market value	Dividends paid to Group's entities	Share of net income 1	Share of shareholders' equity 2

NET CARRYING AMOUNT OF INVESTMENTS IN EQUITY-ACCOUNTED ENTITIES		7,140			(527)	7,370

(1) The share of net income from deferred profit sharing of joint ventures and associated companies in the Asset Gathering division is classified as Net Banking Income in the Income Statement.

(2) Equity – Group share in the financial statements of the joint venture or the associate when the joint venture or associate is a sub-group.

(3) Includes data from LEASYS S.P.A and LEASYS SAS.

The market value shown in the table above is the quoted price of the shares on the market at 31 December 2025. This value may not be representative of the selling value since the value in use of equity-accounted entities may be different from the equity-accounted value determined pursuant to IAS 28. Investments in

equity-accounted entities were subject to impairment tests, in case of an indication of impairment, using the same methodology as for goodwill. The sensitivity analyses carried out, particularly on Leasys, did not reveal any indicators of impairment that would justify recognising an impairment loss for the financial year.

INVESTMENTS IN JOINT VENTURES AND ASSOCIATES NOT CONSOLIDATED AT INSURANCE LEVEL

Crédit Agricole Assurances has used the simplified option allowed by IAS 28 to measure 28 joint ventures and 23 associates.

Investments in these corporates are therefore measured at fair value through profit or loss in accordance with IFRS 9.

The summarised financial information of Crédit Agricole Assurances' significant joint ventures and associates measured at fair value through profit or loss is presented below:

SIGNIFICANT RESTRICTIONS ON JOINT VENTURES AND ASSOCIATES

Crédit Agricole S.A. is subject to the following restrictions:

Regulatory constraints

The subsidiaries of Crédit Agricole S.A. are subject to prudential regulation and regulatory capital requirements in their host countries. The minimum equity capital (solvency ratio), leverage ratio and liquidity ratio requirements limit the capacity of these entities to pay dividends or to transfer assets to Crédit Agricole S.A.

Legal constraints

The subsidiaries of Crédit Agricole S.A. are subject to legal provisions concerning the distribution of capital and distributable income. These requirements limit the ability of the subsidiaries to distribute dividends. In the majority of cases, these are less restrictive than the regulatory limitations mentioned above.

Restriction on assets backing unit-linked contracts for the Insurance business

Assets backing unit-linked contracts of Crédit Agricole S.A. are held for the benefit of policyholders. Assets on the balance sheet of the insurance subsidiaries of Crédit Agricole S.A. are mainly held for satisfying their obligation towards their policyholders. Assets transfers to other entities are possible following the legal conditions. However, in case of a transfer, a part of the profit due to the transfer must be intended for the policyholders.

12.3 NON-CONTROLLING INTERESTS

INFORMATION ON THE SCOPE OF SIGNIFICANT NON-CONTROLLING INTERESTS

The table below presents information on the consolidated subsidiaries and structured entities with significant non-controlling interests in relation to the total equity of the Group or of the sub-group level or where the total balance sheet of the entities held by the non-controlling interests is significant.

	31/12/2025				
(in millions of euros)	% of voting rights held by non-controlling interests	% of ownership interests held by non-controlling interests	Net income allocated to non-controlling interests during the reporting period	Accumulated non-controlling interests at the end of the reporting period	Dividends paid to non-controlling interests
Amundi Group	33%	33%	526	3,558	287
Crédit Agricole Italia Group	22%	22%	174	1,513	95
Agos SPA	39%	39%	80	507	51
CA Egypt	35%	35%	39	154	28
Other entities ⁽¹⁾	0%	0%	160	2,470	129
TOTAL			979	8,202	590

(1) Including €750 million related to issues of Additional Tier 1 perpetual subordinated bonds carried out on 17 March 2025 by Crédit Agricole Assurances recognised in equity of non-controlling interests. The previous issues have been fully repaid.

	31/12/2024				
(in millions of euros)	% of voting rights held by non-controlling interests	% of ownership interests held by non-controlling interests	Net income allocated to non-controlling interests during the reporting period	Accumulated non-controlling interests at the end of the reporting period	Dividends paid to non-controlling interests
Amundi Group	32%	33%	418	3,331	272
Crédit Agricole Italia Group	22%	22%	176	1,457	79
CACEIS Group	30%	30%	140	1,105	115
Agos SPA	39%	39%	74	486	51
CA Egypt	35%	35%	51	147	15
Other entities	0%	0%	208	2,076	71
TOTAL			1,067	8,601	602

(1) Including €460 million related to issues of Additional Tier 1 perpetual subordinated bonds carried out on 14 October 2014 and 13 January 2015 by Crédit Agricole Assurances recognised in equity of non-controlling interests.

INDIVIDUAL SUMMARY FINANCIAL INFORMATION ON SIGNIFICANT NON-CONTROLLING INTERESTS

(a) Scope change (b) Nature of control (c) Activity (see details at the end of the table)

Branches are mentioned in italic.

(1) UCITS, unit funds and SCIs held by insurance entities.

At 31 December 2025, 111 structured entities were divested and 56 structured entities were included in the scope of consolidation due to a loss or a takeover, respectively.

These changes account for a total change of -€1.6 billion in the balance sheet item “Amounts due to unitholders of consolidated mutual funds” between 31 December 2024 and 31 December 2025 (the remainder of the change in the item relates to the entities changes in the scope of consolidation and to entities in the scope whose percentage of interest varied during the period).

Scope changes (a)**Inclusions (I) into the scope of consolidation**

I1: Breach of threshold

I2: Creation

I3: Acquisition (including controlling interests)

Exclusions (E) from the scope of consolidation:

E1: Discontinuation of business (including dissolution and liquidation)

E2: Sale to non Group companies or deconsolidation following loss of control

E3: Deconsolidated due to non-materiality

E4: Merger or takeover

E5: Transfer of all assets and liabilities

Other (O)

O1: Change of company name

O2: Change in consolidation method

O3: First time listed in the Note on scope of consolidation

O4: Entities classified as Non-current Assets Held for Sale and Discontinued Operations

NOTE 13 NON-CONSOLIDATED EQUITY INVESTMENTS AND STRUCTURED ENTITIES**13.1 NON-CONSOLIDATED EQUITY INVESTMENTS**

These securities, which are recorded at fair value through profit or loss or at fair value through equity that will not be reclassified to profit or loss, are variable-income securities representing a significant portion of the share capital of the companies that issued them and are intended to be held on a long-term basis.

This line item amounted to €24,704 million at 31 December 2025, compared with €25,101 million at 31 December 2024. At 31 December 2025, the main investment in non-consolidated companies where percentage of control is greater than 20% and there is a significant carrying amount is Crédit Logement (shares A and B). The Group's investment represents 32.50% of Crédit Logement's capital and amounts to €482 million but does not confer any significant influence over this entity, which is jointly held by various French banks and corporates.

13.1.1 NON-CONSOLIDATED ENTITIES

Information relating to conventional entities under exclusive control, under joint control and subject to significant influence, and to controlled structured entities not included in the scope of consolidation are available on the Crédit Agricole S.A. website at the time of publication of the Universal Registration Document.

13.1.2 MATERIAL NON-CONSOLIDATED EQUITY INVESTMENTS

Material equity investments accounting for a fraction of capital greater than or equal to 10% and not included in the scope of consolidation are presented in a table available online on the Crédit Agricole website at the time of publication of the Universal Registration Document.

13.2 INFORMATION ON NON-CONSOLIDATED STRUCTURED ENTITIES

IFRS 12 defines a structured entity as an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to the administrative tasks only and the relevant activities are directed by means of contractual arrangements.

INFORMATION ON THE NATURE AND EXTENT OF INTERESTS HELD

At 31 December 2025, Crédit Agricole S.A. entities had interests in certain non-consolidated structured entities, the main characteristics of which are presented below on the basis of their type of activity:

Securitisation vehicles

Crédit Agricole S.A., mainly through its subsidiaries in the Large Customers business line, is tasked with structuring securitisation vehicles through the purchase of trade or financial receivables. The vehicles fund such purchases by issuing multiple tranches of debt and equity investments, with repayment being linked to the performance of the assets in such vehicles. Crédit Agricole S.A. invests in and provides liquidity facilities to the securitisation vehicles it has sponsored on behalf of customers.

Asset management

Crédit Agricole S.A., through its subsidiaries in the Asset Gathering business line, structures and manages entities on behalf of customers wishing to invest in specific assets in order to obtain the best possible return having regard to the chosen level of risk. Crédit Agricole S.A. entities may thus either be required to hold interests in such entities in order to ensure a successful launch or to guarantee the performance of such structures.

Investment funds

Entities in the Crédit Agricole S.A. Asset Gathering business line invest in companies established to meet investor demand in connection with cash management and with the investment of insurance premiums received from insurance company customers, in accordance with the regulatory provisions in the French Insurance Code. Insurance company investments cover commitments to policyholders over the life of insurance policies. Their value and returns are correlated to these commitments.

Structured finance

Lastly, Crédit Agricole S.A., via its subsidiaries in the Large Customers business line, is involved in special purpose asset acquisition entities. These entities may take the form of asset financing companies or lease financing companies. In structured entities, the financing is secured by the asset. The Group's involvement is often limited to the financing or to financing commitments.

Sponsored entities

Crédit Agricole S.A. sponsors structured entities in the following instances:

- Crédit Agricole S.A. is involved in establishing the entity and that involvement, which is remunerated, is deemed essential for ensuring the proper completion of transactions;
- structuring takes place at the request of Crédit Agricole S.A. and it is the main user thereof;
- Crédit Agricole S.A. transfers its own assets to the structured entity;
- Crédit Agricole S.A. is the manager;
- the name of a subsidiary or of the parent company of Crédit Agricole S.A. is linked to the name of the structured entity or of the financial instruments issued by it.

Crédit Agricole S.A. has sponsored non-consolidated structured entities in which it does not hold an interest at 31 December 2025.

Gross revenues from sponsored entities mainly comprise interest expense and income in securitisation and investment funds, in which Crédit Agricole Group does not hold any interests at the end of the financial year. For Crédit Agricole Assurances, these amount to €141 million.

INFORMATION ON THE RISKS RELATED TO INTERESTS

Financial support for structured entities

In 2025, Crédit Agricole S.A. did not provide financial support to any non-consolidated structured entities.

At 31 December 2025, Crédit Agricole S.A. did not intend to provide financial support to any non-consolidated structured entities.

Interests in non-consolidated structured entities by type of activities

At 31 December 2025 and 31 December 2024, the Group's involvement in non-consolidated structured entities is disclosed in the following tables, for each group of sponsored structured entities that are significant to the Group:

	31/12/2025

MAXIMUM EXPOSURE TO LOSSES

The maximum exposure to losses on financial instruments corresponds to the carrying amount, with the exception of option sale derivatives and CDS (Credit Default Swaps) for which the exposure corresponds to assets for the notional amount and to liabilities for the notional amount less the mark-to-market. The maximum exposure to loss risk on commitments given corresponds to the notional amount and the provision for commitments given in the amount recognised on the balance sheet.

NOTE 14 EVENTS AFTER 31 DECEMBER 2025

There have been no material events subsequent to the reporting period end.

STATUTORY AUDITORS' REPORT ON THE CONSOLIDATED FINANCIAL STATEMENTS

(For the year ended 31 December 2025)

This is a translation into English of the Statutory Auditors' report on the consolidated financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users.

This Statutory Auditors' report includes information required by European regulation and French law, such as information about the appointment of the Statutory Auditors or verification of the information concerning the Group presented in the management report and other documents provided to shareholders.

This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the General Meeting of Shareholders

CRÉDIT AGRICOLE S.A.

12, place des États-Unis

92127 Montrouge Cedex

OPINION

In compliance with the engagement entrusted to us by your General Meeting of Shareholders, we have audited the accompanying consolidated financial statements of CRÉDIT AGRICOLE S.A. ("the Group") for the year ended 31 December 2025.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at 31 December 2025 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

BASIS FOR OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory auditors' responsibilities for the audit of the consolidated financial statements" section of our report.

INDEPENDENCE

We conducted our audit engagement in compliance with the independence rules set out in the French Commercial Code and in the Code of Ethics for statutory auditors for the period from January 1, 2025 to the date of issuance of our report, and in particular, we did not provide any services prohibited under Article 5(1) of Regulation (EU) No. 537/2014.

JUSTIFICATION OF ASSESSMENTS – KEY AUDIT MATTERS

In accordance with the requirements of Articles L. 821-53 and R. 821-180 of the French Commercial Code (*code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

CREDIT RISK AND ESTIMATE OF EXPECTED LOSSES ON PERFORMING AND NON-PERFORMING LOANS

Description of risk

In accordance with IFRS 9, the Crédit Agricole S.A. group recognises loss allowances in respect of expected credit losses (ECL) on exposures that are performing (Stages 1 and 2) and non-performing (Stage 3).

Given the level of judgment required to determine these impairment adjustments in an environment still characterized by economic and geopolitical uncertainties, we considered that their estimation constituted a key audit matter, particularly with regard to:

- the determination of risk parameters incorporating macroeconomic projections used to assess expected credit losses on performing exposures, as well as any expert-based (management overlay) adjustments;
- the assessment of significant increases in credit risk in order to determine the appropriate horizon for the impairment measurement (12 month or lifetime);
- the degree of judgment required in estimating recovery cash flows for defaulted exposures, particularly within Crédit Agricole CIB.

As at 31 December 2025, the loss allowances for expected credit losses related to all eligible exposures (excluding Credit Agricole internal transactions) amounted to €11.4 billion, including:

- €4.4 billion of loss allowances on performing exposures (€1.5 billion classified in Stage 1 and €2.9 billion for Stage 2);
- €7.0 billion of loss allowances on non-performing exposures (Stage 3).

See Notes 1.2 and 3.1 to the consolidated financial statements.

How our audit addressed this risk

We examined the procedures implemented by the Risk Department to classify loans (Stages 1, 2 or 3) and measure the amount of recorded loss allowances.

We examined the methods used to take into account the economic and geopolitical uncertainties, the macroeconomic forecasts used for the calculation of loss allowances, as well as the related financial information.

We tested the controls we judged as key, implemented by the main entities for the annual portfolio reviews, the updating of credit ratings, the identification of sectors impacted by the macro-economic context, the identification of performing or non-performing exposures and the measurement of loss allowances.

We also read the main conclusions of the main Crédit Agricole S.A. group entities' specialised committees in charge of monitoring performing and non-performing loans as well as recommendations from supervisory authorities.

Regarding impairment on exposures classified in Stages 1 and 2, we have:

- appreciate the economic scenarios used, and the methods and measurements for the various loss allowance inputs and calculation models with the support of our experts. In particular, we analysed the adjustments made to take into account the impact of the economic and geopolitical context;
- examined the methodology used by the Risk Department to identify significant increases in credit risk since origination and the accounting treatments implemented;
- tested the controls that we deemed to be of key importance in relation to the transfer of the data used to calculate loss allowances or the reconciliations between the bases used for their calculation and the accounting records;
- carried out independent loss allowance calculations based on samples, compared the calculated amount with the amount booked and examined the adjustments made by management where applicable;
- assessed the analyses carried out by management on the Crédit Agricole CIB's exposures with a negative outlook with a focus on sectors hit hard by the uncertain economic and geopolitical environment.

Regarding individually calculated value adjustments on exposures classified in Stage 3:

- we reviewed the estimates used for the significant impaired counterparties;
- we tested, based on a sample of credit files (whether impaired or not), the elements supporting the main assumptions used to assess expected recovery cash flows, particularly with regard to the valuation of collateral.

We examined the disclosures in relation to credit risk coverage provided in the notes to the consolidated financial statements.

IMPAIRMENT OF GOODWILL

Description of risk

Goodwill is tested for impairment whenever there are objective indications of impairment and otherwise at least once a year. These tests are based on a comparison between the carrying amount of each Cash Generating Unit (CGU) and its recoverable amount, defined as the higher of fair value less costs to sell and value in use.

Value in use is determined by discounting the estimated future cash flows generated by the CGU, as defined in the three-year financial forecasts determined by each entity's management for the purpose of its business monitoring and extended over two years.

We deemed the impairment of goodwill to be a key audit matter. The impairment tests require management to make decisions regarding the key assumptions to be used, in particular for determining financial forecasts and discount rates in the context of economic and geopolitical uncertainties.

Given the difference between the value in use and the carrying amount, past performance and the sensitivity of the values in use to the assumptions used by management, we paid particular attention to the test conducted on the CGU French retail banking – LCL and the CGU Consumer Finance (excluding Agos).

At 31 December 2025, goodwill recorded in the balance sheet amounted to €16.4 billion. See Notes 1.2 and 6.14 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the processes implemented by the Group to assess the need for impairment of goodwill.

We brought in valuation experts to our audit teams to assess the assumptions used to determine the discount rates and the perpetual growth rates used as well as the models used for calculating discounted cash flows.

We tested the calculations based on samples and compared the main assumptions, such as discount rate, with external sources.

We examined the financial forecasts prepared by the management of each entity concerned and used in the model to:

- check their consistency with those that have been presented to the governance bodies (Board of Directors or Supervisory Board) of the entities or sub-groups, and the justification of potential adjustments made;
- assess the main underlying assumptions, including for the determination of the terminal value. These assumptions were assessed in view of economic and geopolitical uncertainties, the former financial forecasts and the actual performance over prior periods;
- conduct sensitivity analyses of the value in use to some of the assumptions (discount rate, cost of risk, cost to income ratio).

We also examined the disclosures provided in the notes to the consolidated financial statements on the results of these impairment tests and the level of sensitivity to various measurement inputs.

ASSESSMENT OF PROVISIONS FOR REGULATORY, LEGAL AND TAX LITIGATION

Description of risk

The Crédit Agricole S.A. group is the subject of litigation procedures, requests for information, investigations, controls and other procedures of a regulatory or legal nature from various institutions in France and abroad.

Various tax investigations are also ongoing in France and some of the countries in which the Group operates (including Germany).

The decision to recognise a provision or a receivable and the amount to be recorded requires, by its nature, the use of judgement, due to the difficulty in assessing the outcome of procedures or uncertainties regarding certain tax treatments.

Given the importance of judgement made by the management when evaluating the financial risks and consequences for Crédit Agricole S.A. group, the assessment of the provision for regulatory, legal and tax litigation constitute a key audit matter.

The investigations, requests for information and actions of certain authorities, as well as the main tax inspections as of 31 December 2025, are presented in Notes 1.2, 6.9 and 6.15 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the process implemented by management to assess the risks arising from these procedures of regulatory and legal nature and tax uncertainties, as well as the provisions or receivables, where applicable, through quarterly inquiries with management and more specifically with the Legal, Tax and Compliance departments of Crédit Agricole S.A. and its main subsidiaries.

Our work involved in particular:

- assessing the assumptions made to determine provisions or receivables based on available information such as documentation prepared by the Legal, Compliance or Tax department or external counsel of Crédit Agricole S.A. and main Group entities, correspondence from regulators and minutes of Legal Risks Committee meetings;
- reading the analyses and conclusions of the Group's legal advisors and their responses to our requests for confirmation;
- regarding more specifically tax risks, examining, with our tax specialists, the responses provided by the Group to the relevant authorities as well as the risk assessment made by the Group;
- assessing, accordingly, the level of provisions or receivables.

Lastly, we examined the related disclosures provided in the notes to the consolidated financial statements.

MEASUREMENT OF CERTAIN FINANCIAL ASSETS AND LIABILITIES OF CRÉDIT AGRICOLE CIB MEASURED AT FAIR VALUE

Description of risk

Within the Large Corporate business line of the Crédit Agricole S.A. group, Crédit Agricole CIB originates, structures, sells and trades derivative financial instruments, for corporates, financial institutions and large issuers. Moreover, the issue of debt instruments, some of which are "hybrid", to the Group's international and domestic customers contributes to the management of the Crédit Agricole CIB medium- and long-term refinancing:

- derivative financial instruments held for trading are recorded on the balance sheet at fair value through profit or loss;
- "hybrid" debt issued is recognised in financial liabilities at fair value through profit or loss by option.

These financial instruments are classified in level 3 when their measurement requires the use of significant unobservable market inputs. The classification of such instruments by level of fair value and their measurement require judgement from management, in particular regarding:

- the definition of the observability mapping of the valuation inputs;
- the use of internal and non-standard valuation models;
- the valuation of inputs not supported by observable market data;
- the assessment of valuation adjustments designed to take into account uncertainties in the models, inputs used or counterparty and liquidity risks.

Within assets, Crédit Agricole CIB's derivative financial instruments are recorded in the balance sheet of the Crédit Agricole S.A. group as financial assets at fair value which, in level 3, represent €38.1 billion at 31 December 2025.

Within liabilities, Crédit Agricole CIB's derivative financial instruments and structured debt issues are recorded in the balance sheet of the Crédit Agricole S.A. group as financial liabilities at fair value which, in level 3, represent €25.5 billion at 31 December 2025.

See Notes 1.2, 6.2 and 11.2 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the processes and controls implemented by Crédit Agricole CIB to identify, measure and recognise derivative financial instruments and "hybrid" debt issuances classified in level 3.

We examined:

- the controls that we have deemed of key importance, performed by the Risk department of Credit Agricole CIB, such as the review of the observability mapping, the independent verification of measurement inputs and the internal approval of valuation models;
- the framework governing the recognition of certain valuation adjustments and the classification of financial instruments within the fair value hierarchy defined by IFRS 13.

With the support of our specialists in the valuation of financial instruments, we carried out independent valuations and analysed those performed by Crédit Agricole CIB as well as the assumptions, inputs, methodologies and models used. In particular, we examined the documentation relating to developments in the observability mapping during the period.

We also assessed the main valuation adjustments recognised, as well as the justification provided by management for the main differences observed in margin calls and losses and/or gains in the event of the disposal of financial products.

MEASUREMENT OF INSURANCE CONTRACT LIABILITIES

Description of risk

Within the Insurance division of the Crédit Agricole S.A. group, insurance contract liabilities are recorded in accordance with IFRS 17.

Their measurement of these liabilities is based on the determination of the best estimate of the discounted value of future cash flows necessary to satisfy the contractual obligations towards policyholders, and the adjustment for non-financial risks designed to cover the uncertainty of the amount based on a level of confidence took by the Group, as well as on a contractual service margin representing the unearned profit that the Group will recognize as income as it delivers the services provided for in the insurance contracts (general method and variable fee method).

Given the sensitivity of the above insurance liabilities to the various underlying assumptions (long-term horizon of commitments, policyholder behaviours, discount rates...) and the high proportion of experts judgments, and the complexity of the actuarial methods used, we considered that the measurement of insurance liabilities contracts constituted a key audit matter.

As at 31 December 2025, insurance contracts in issue recorded under liabilities represent €388.4 billion.

See Notes 1.2 and 5.3 to the consolidated financial statements.

How our audit addressed this risk

For the main insurance liabilities, we realized the following procedures with the assistance of our actuarial experts:

- obtaining an understanding of the internal control environment related to the process of determining insurance liabilities, the best estimate of the discounted value of future cash flows required to meet contractual obligations to policyholders under insurance contracts, and the information systems supporting the processing of technical data and their input into the accounting system;
- appreciating the methodology applied by the Group to measure these provisions in accordance with the principles of IFRS 17;
- testing of the controls we considered key in the process of measuring insurance liabilities relating to the methodologies, judgments and assumptions made by management, including the internal control environment for information systems;
- testing, on a sample basis, of the main methodologies, assumptions, underlying data and key actuarial parameters used in determining estimates of discounted future cash flows, the adjustment for non-financial risks and the margin on contractual services;
- assessment of the appropriateness of the discount rate curve used;
- independent recalculation of the estimated future cash flows of certain insurance liabilities;
- assessing the appropriateness of the information disclosed in the notes to the consolidated financial statements.

SPECIFIC VERIFICATIONS

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the Group's information given in the management report of the Board of Directors.

We have no matters to report as to their fair presentation and their consistency with the consolidated financial statements.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

FORMAT OF PRESENTATION OF THE CONSOLIDATED FINANCIAL STATEMENTS INCLUDED IN THE ANNUAL FINANCIAL REPORT

We have also verified, in accordance with the professional standard applicable in France relating to the procedures performed by the statutory auditor relating to the annual and consolidated financial statements presented in the European single electronic format, that the presentation of the consolidated financial statements included in the annual financial report mentioned in Article L. 451-1-2-I of the French Monetary and Financial Code (*code monétaire et financier*), prepared under the responsibility of the Chief Executive Officer, complies with the single electronic format defined in the European Delegated Regulation No. 2019/815 of 17 December 2018. As it relates to consolidated financial statements, our work includes verifying that the tagging of these consolidated financial statements complies with the format defined in the above delegated regulation.

Based on the work we have performed, we conclude that the presentation of the consolidated financial statements included in the annual financial report complies, in all material respects, with the European single electronic format.

APPOINTMENT OF THE STATUTORY AUDITORS

We were appointed as statutory auditors of Crédit Agricole S.A. by the annual general meeting of shareholders held on 19 May 2004 for PricewaterhouseCoopers Audit and on 22 May 2024 for Forvis Mazars S.A.

As at 31 December 2025, PricewaterhouseCoopers Audit was in the twenty-two year of total uninterrupted engagement, and Forvis Mazars S.A. was in the second year.

RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE CONSOLIDATED FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union and for such internal control as Management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, Management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

STATUTORY AUDITORS' RESPONSIBILITIES FOR THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS

OBJECTIVES AND AUDIT APPROACH

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L. 821-55 of the French Commercial Code (*code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management in the consolidated financial statements;
- assesses the appropriateness of Management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein;
- evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation;
- obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L. 821-27 to L. 821-34 of the French Commercial Code (*code de commerce*) and in the French Code of Ethics (*code de déontologie*) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards

NOTE 1

LEGAL AND FINANCIAL BACKGROUND AND SIGNIFICANT EVENTS
DURING THE FINANCIAL YEAR

1.1 LEGAL AND FINANCIAL BACKGROUND

Crédit Agricole S.A. is a French Public Limited Company (*société anonyme*) with share capital of €9,077,707 thousand (i.e. 3,025,902,350 shares with a par value of €3 each).

At 31 December 2025, the share capital of Crédit Agricole S.A. broke down as follows:

- 63.49% owned by SAS Rue La Boétie;
- 36.50% free float (including employees).

In addition, Crédit Agricole S.A. had 394,529 treasury shares at 31 December 2025, i.e. 0.01% of its capital, compared with 16,247,289 treasury shares at 31 December 2024.

Crédit Agricole S.A. coordinates the activities of the Regional Banks, is responsible for exercising administrative, technical and financial control over them and has right of supervision in accordance with the French Monetary and Financial Code. By virtue of its duties as a Corporate Centre, as confirmed by the banking law, it is responsible for ensuring the cohesion and proper functioning of the network, as well as each Regional Bank's compliance with operating standards. It guarantees their liquidity and solvency. Moreover, in 1988, the Regional Banks granted a guarantee to third-party creditors of Crédit Agricole S.A., on a joint and several basis up to the aggregate amount of their equity. This guarantee may be exercised in the event of an asset shortfall at Crédit Agricole S.A. identified following its bankruptcy or dissolution.

1.2 CRÉDIT AGRICOLE INTERNAL RELATIONS

INTERNAL FINANCING MECHANISMS

The affiliation of Crédit Agricole S.A. with the Crédit Agricole network also means being part of a system of financial relationships that operates as described below:

Special savings accounts

Funds held in special savings accounts (popular savings passbook accounts [*Livret d'épargne populaire*], sustainable and inclusive development passbook accounts [*Livret de développement durable et solidaire*], home purchase savings schemes and accounts, youth passbook accounts [*Livret Jeune*] and passbook savings accounts [*Livret A*]) are collected by the Regional Banks on behalf of Crédit Agricole S.A. and must be centralised at the latter. Crédit Agricole S.A. recognises them on its balance sheet as "Due to customers".

TERM DEPOSITS AND ADVANCES

The Regional Banks also collect non-government-regulated savings funds (passbook accounts, bonds, warrants, certain term accounts and similar accounts etc.) on behalf of Crédit Agricole S.A. These funds are transferred to Crédit Agricole S.A., and are recognised as such on its balance sheet.

Special savings accounts and time deposits and advances are used by Crédit Agricole S.A. to make "advances" (loans) to the Regional Banks, with a view to funding their medium and long term loans.

50% of savings funds collected by the Regional Banks are transferred back to them in the form of so-called "mirror advances" (with maturities and interest rates precisely matching those of the savings funds received), which they are free to use at their discretion.

Since April 2020, the Regional Banks have had to refinance themselves in the form of advances, called "global advances", from Crédit Agricole S.A. for the remaining 50% of the savings funds they have collected.

Furthermore, the Regional Banks may be refinanced in the form of unsecured loans negotiated at market price with Crédit Agricole S.A.

Transfer of Regional Banks' liquidity surpluses

The Regional Banks may use their "monetary" deposits (demand deposits, non-centralised time deposits and negotiable certificates of

deposit) to finance lending to their customers. Surpluses must be transferred to Crédit Agricole S.A. where they are booked in current accounts, under "Loans and receivables due from credit institutions" or "Due to credit institutions" (depending on whether the current account open in the books of Crédit Agricole CIB is credit or debit – see above) or in term accounts, under "Crédit Agricole internal transactions".

FOREIGN CURRENCY TRANSACTIONS

The Regional Banks' foreign currency activities are refinanced through Crédit Agricole S.A.

Medium and long-term notes issued by Crédit Agricole S.A.

These are placed on the market or by the Regional Banks with their customers. They are booked on the balance sheet by Crédit Agricole S.A. under liabilities either as "Debt securities" or as "Provisions and subordinated debt", depending on the type of security issued.

LIQUIDITY AND SOLVENCY RISKS HEDGING
AND BANKING RESOLUTION

Under the legal internal financial strength mechanism enshrined in Article L. 511-31 of the French Monetary and Financial Code (CMF), Crédit Agricole S.A., as the corporate centre of the Crédit Agricole network, must take all necessary measures to ensure the liquidity and solvency of each affiliated credit institution, as well as the network as a whole. As a result, each member of the network benefits from this internal financial strength.

The general provisions of the CMF (Code monétaire et financier – French Monetary and Financial Code) have been reflected in the internal provisions setting out the operational measures required for this legal solidarity mechanism.

In the initial public offering of Crédit Agricole S.A., CNCA (now Crédit Agricole S.A.) signed an agreement with the Regional Banks in 2001 aiming notably at governing internal relations within the Crédit Agricole network. In particular, the agreement provides for the creation of a Fund for bank liquidity and solvency risks (FRBLS) designed to enable Crédit Agricole S.A. to fulfil its role as corporate centre by providing assistance to any affiliated members that may experience difficulties. The main provisions of this agreement are set out in Chapter III of the Registration Document filed by Crédit Agricole S.A. with France's Commission des opérations de Bourse on 22 October 2001 under number R. 01-453.

The European banking crisis management framework was adopted in 2014 by Directive (EU) 2014/59 (known as the “Bank Recovery and Resolution Directive – BRRD”), transposed into French law by Order 2015-1024 of 20 August 2015, which also adapted French law to the provisions of European Regulation 806/2014 of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions in the framework of a single resolution mechanism and a single resolution fund. Directive (EU) 2019/879 of 20 May 2019, known as “BRRD2”, amended the BRRD and was incorporated into French law by Order 2020-1636 of 21 December 2020.

This framework, which includes measures to prevent and to resolve banking crises, is intended to preserve financial stability, to ensure the continuity of activities, services and operations of institutions whose failure could significantly impact the economy, to protect depositors, and to avoid or limit the use of public financial support as much as possible. In this context, the European Resolution Authorities, including the Single Resolution Board, have been granted extensive powers to take all necessary measures in connection with the resolution of all or part of a credit institution or the group to which it belongs.

For cooperative banking groups, the “extended single point of entry” (“extended SPE”) resolution strategy is favoured by the resolution authorities, whereby resolution tools would be applied simultaneously at the level of Crédit Agricole S.A. and the affiliated entities. In this respect, and in the event of a resolution of the Crédit Agricole Group, the scope comprising Crédit Agricole S.A. (in its capacity as corporate centre) and its affiliated entities would be considered as a whole as the expanded single entry point. Given the foregoing and the solidarity mechanisms that exist within the network, a member of the Crédit Agricole network cannot be put individually in resolution.

The resolution authorities may initiate resolution proceedings against a credit institution where they consider that: the institution has failed or is likely to fail, there is no reasonable prospect that another private measure will prevent the failure within a reasonable time, a resolution measure is necessary, and a liquidation procedure would be inadequate to achieve the resolution targets mentioned above.

The resolution authorities may use one or more resolution tools, as described below, with the aim of recapitalising or restoring the viability of the institution. The resolution tools should be implemented in such a way that equity holders (shares, mutual shares, CCIs, CCAs) bear losses first, with creditors following up immediately, provided that they are not excluded from bail-in legally speaking or by a decision of the resolution authorities. French law also provides for a protective measure when certain resolution tools or decisions are implemented, such as the principle that equity holders and creditors of an institution in resolution may not incur greater losses than those they would have incurred if the institution had been liquidated in the context of a judicial liquidation procedure under the French Commercial Code (*Code de Commerce*) (NCWOL principle referred to in Article L. 613-57-I of the CMF). Thus, investors are entitled to claim compensation if the treatment they receive in a resolution is less favourable than the treatment they would have received if the institution had been subject to normal insolvency proceedings.

In the event that the resolution authorities decide to put the Crédit Agricole Group in resolution, they will first write down the par value of the CET1 instruments (shares, mutual shares, CCI and CCA), additional Tier 1 instruments, and Tier 2 instruments, in order to absorb losses, and then possibly convert the additional Tier 1 instruments and Tier 2 instruments⁽¹⁾ into equity securities. Then, if the resolution authorities decide to use the bail-in tool, the latter would be applied to debt instruments⁽²⁾, resulting in the partial or total write-down of these instruments or their conversion into equity in order to absorb losses.

With respect to the corporate centre and all affiliated entities, the resolution authorities may decide to implement, in a coordinated manner, impairment or conversion measures and, where applicable, internal bailouts. In such an event, the impairment or conversion measures and, where applicable, internal bailout measures would apply to all entities within the Crédit Agricole network, regardless of the entity in question and regardless of the origin of the losses.

The creditor hierarchy in resolution is defined by the provisions of Article L. 613-55-5 of the CMF, effective as at the date of implementation of the resolution.

Equity holders and creditors of the same rank or with identical rights in liquidation will then be treated equally, regardless of the Group entity of which they are creditors.

The scope of this bail-in, which also aims to recapitalise the Crédit Agricole Group, is based on equity requirements at the consolidated level.

Investors must then be aware that there is a significant risk that holders of shares, mutual shares, CCIs and CCAs and holders of debt instruments of a member of the network will lose all or part of their investment if a resolution procedure is implemented on the Group, regardless of the entity of which they are a creditor.

The other resolution tools available to the resolution authorities are essentially the total or partial disposal of the activities of the institution to a third party or to a bridge institution and the separation of the assets of the institution.

This resolution framework does not affect the legal internal financial strength mechanism provided for in Article L. 511-31 of the French Monetary and Financial Code, which applies to the Crédit Agricole network, as defined in Article R. 512-18 of the same Code. Crédit Agricole S.A. considers that, in practice, this mechanism should be implemented prior to any resolution procedure.

The implementation of a resolution procedure to the Crédit Agricole Group would thus mean that the legal internal solidarity mechanism had failed to remedy the failure of one or more network entities, and hence of the network as a whole. It would also limit the likelihood that the conditions for triggering the guarantee covering the liabilities of Crédit Agricole S.A. (granted in 1988 to its third-party creditors by the Regional Banks on a joint and several basis, and up to the aggregate amount of their equity) are met. It should be recalled that this guarantee may be triggered in the event of an asset shortfall following Crédit Agricole S.A.'s bankruptcy or dissolution.

(1) Articles L. 613-48 and L. 613-48-3 of the CMF.

(2) Articles L. 613-55 and L. 613-55-1 of the CMF.

1.3 SIGNIFICANT EVENTS IN FINANCIAL YEAR 2025

CAPITAL REDUCTION THROUGH THE CANCELLATION OF TREASURY SHARES

On 17 December 2024, the Board of Directors, acting on the authorisation of the General Meeting of Shareholders of 22 May 2024, decided to reduce the share capital of Crédit Agricole S.A. through the cancellation of 15,128,677 treasury shares, representing around 0.5% of the share capital.

The definitive reduction in share capital took place on 13 January 2025.

These shares were acquired between 1 October 2024 and 6 November 2024, as part of a share buyback programme that sought to offset the dilutive effect of the 2024 capital increase reserved for employees, for a total amount of €208,465,605 following a decision by the Board of Directors made at its meeting held on 22 May 2024.

Following the cancellation of these shares, the share capital of Crédit Agricole S.A. amounts to €9,077,707,050 divided into 3,025,902,350 shares.

ACQUISITION OF CACEIS SECURITIES

On 4 July 2025, Crédit Agricole S.A. acquired 30.5% of the CACEIS securities held by Santander for €1.3 billion. Crédit Agricole S.A. now holds 100% of the capital of CACEIS, a major European player in asset servicing, thus continuing its development in this strategic business for the Crédit Agricole Group.

SHARE CAPITAL INCREASE RESERVED FOR EMPLOYEES

The share capital increase of Crédit Agricole S.A. reserved for the 190,000 employees of Crédit Agricole Group (ACR 2025), with the subscription period running from 24 June to 8 July 2025, was completed definitively on 28 August 2025.

The investment scheme proposed a classic offer with a subscription price including a 20% discount on the share price. The issue and delivery of the new shares took place on 28 August 2025.

Subscriptions by the Crédit Agricole Group's employees in France and 18 other countries totalled €294.5 million.

This share capital increase created 22,886,191 shares, bringing Crédit Agricole S.A.'s share capital to 3,048,788,541 shares for an amount of €9,146,365,623.

ACQUISITION OF CRELAN SECURITIES

On 7 October 2025, Crédit Agricole S.A. acquired 6% of the capital of CRELAN, a Belgian bank, for €141 million. This acquisition allows Crédit Agricole S.A. to strengthen its operations and expand in Belgium.

REDUCTION OF SHARE CAPITAL THROUGH THE CANCELLATION OF TREASURY SHARES PURCHASED UNDER A SHARE BUYBACK PROGRAMME

The Board of Directors, acting on the authorisation of the General Meeting of Shareholders, decided to reduce the share capital of Crédit Agricole S.A. through the cancellation of 22,886,191 treasury shares, representing around 0.75% of the share capital.

The definitive reduction in share capital took place on 13 November 2025.

These shares were acquired between 1 October 2025 and 30 October 2025, as part of a share buyback programme that sought to offset the dilutive effect of the 2025 capital increase reserved for employees, for a total amount of €374,414,014 following a decision by the Board of Directors made at its meeting held on 14 May 2025.

Following the cancellation of these shares, the share capital of Crédit Agricole S.A. amounts to €9,077,707,050 divided into 3,025,902,350 shares.

1.4 EVENTS AFTER THE END OF FINANCIAL YEAR 2025

Crédit Agricole S.A. has not recorded any significant events since the end of financial year 2025.

NOTE 2 ACCOUNTING POLICIES AND PRINCIPLES

Crédit Agricole S.A. prepares its financial statements in accordance with the accounting principles applicable to banks in France.

The presentation of the financial statements of Crédit Agricole S.A. complies with the provisions of ANC Regulation 2014-07 which combines in a single regulation all accounting standards applicable to credit institutions.

Changes in accounting policy and the presentation of financial statements compared to the previous financial year relate to the following items:

Regulations / Recommendations	Date of first-time application for operations or financial years beginning on:
ANC Regulation No. 2022-06 amending ANC Regulation No. 2014-03 of 5 June 2014 on the general plan of accounts (updating of financial statements)	01/01/2025
ANC Regulation No. 2023-03 of 7 July 2023 amending various ANC regulations in coordination with ANC Regulation No. 2022-06 of 22 November 2022 on the updating of financial statements	01/01/2025

2.1 LOANS AND FINANCING COMMITMENTS

Receivables from credit institutions, Crédit Agricole Group entities and customers are governed by ANC Regulation 2014-07.

They are presented according to their residual maturity or their nature:

- demand and time deposits for credit institutions;
- current accounts, term deposits and advances for Crédit Agricole internal transactions;
- trade receivables, other facilities and ordinary accounts for customers.

The customer category includes transactions executed with financial customers.

Subordinated loans and repurchase agreements (represented by certificates or securities) are included under the various categories of loans and receivables according to counterparty type (interbank, Crédit Agricole internal transactions, customers).

Receivables due from credit institutions and customers are recorded in the balance sheet at their par value, including interest accrued but not yet due.

Accrued interest on loans is recognised on the balance sheet under accrued interests and taken to profit or loss.

Under ANC Regulation 2014-07, the fees and commissions received, and the marginal transaction costs borne are deferred over the effective term of the loan and are thus included in the outstanding amount of the relevant loan.

Financing commitments recognised off-balance sheet represent irrevocable commitments to cash advances and guarantee commitments that have not resulted in fund movements.

The credit risk accounting treatment is defined below.

Loans and financing commitments are divided into performing and doubtful loans.

PERFORMING LOANS

So long as loans are not classified as doubtful, they are classified as either performing or underperforming, they remain as initially classified.

Provisions for credit risk on performing and underperforming loans

For credit exposures, Crédit Agricole S.A. recognises provisions on the liabilities side of its balance sheet to cover the expected credit risks over the coming 12 months (exposures classified as performing) and/or over the life of the exposure if the credit quality of the exposure has been significantly underperforming (exposures classified as underperforming).

These provisions are determined as part of a specific monitoring process and are based on estimates reflecting changes in the level of expected credit loss.

The notion of “Expected Credit Loss” or “ECL”

ECL is defined as the weighted expected probable value of the discounted credit loss (principal and interest). It represents the present value of the difference between the contractual cash flows and the expected cash flows (including principal and interest).

The ECL approach is designed to anticipate as early as possible the recognition of expected credit losses.

ECL governance and measurement

The governance of the measurement system of provisioning parameters is based on the structures put in place for the Basel system. The Risk Management Department of the Crédit Agricole Group is responsible for defining the methodological framework and supervising the loan impairment system.

The Crédit Agricole Group primarily relies on the internal rating system and current Basel processes to define the scope of the parameters needed to calculate the ECL. The assessment of the change in credit risk is based on an expected loss model and extrapolation based on reasonable scenarios. All available, relevant, reasonable and documentable information, including forward-looking information, has been used.

The ECL estimate includes, among others, the probability of default, loss given default and exposure at default.

These calculations are broadly based on the internal models used as part of the regulatory process when they exist, but with specific features to determine an economic ECL.

The accounting approach also requires the recalculation of certain Basel parameters, in particular to eliminate internal recovery costs or floors that are imposed by the regulator in the regulatory calculation of Loss Given Default ("LGD").

The manner in which ECL is calculated should be assessed on the basis of the type of products: loans and receivables due from customers and financing commitments.

The expected credit losses for the coming 12 months make up a percentage of the lifetime expected credit losses; they represent the lifetime cash flow shortfalls in the event of a default during the 12 months following the reporting period (or a shorter period if the expected lifetime of the financial instrument is less than 12 months), weighted by the probability of default within 12 months.

Expected credit losses are discounted at the effective interest rate (EIR) or at the contractual rate (when the EIR is not available) used for the initial recognition of the outstanding amount. The effective interest rate is the discount rate used to equalise the sum of cash flows disbursed and received in respect of the issue or acquisition of a loan and the present value of the contractual cash flows to be received from the counterparty over the effective term of said loan.

The terms of measurement of ECLs include collateral and other credit enhancements that are part of the contractual terms and which Crédit Agricole S.A. does not account for separately. The estimate of the expected cash flow shortfalls from a guaranteed financial instrument reflects the amount and timing of the recovery of the guarantees. The inclusion of guarantees and sureties does not affect the assessment of the significant deterioration in credit risk: this is based on the evolution of the debtor's credit risk without taking into account guarantees.

Provisioning parameters are measured and updated using the methodologies defined by the Crédit Agricole Group and thereby establishing a first reference level, or shared base, for provisioning. The use of external and/or internal ratings systems allows the level of credit risk to be assessed.

Backtesting of the models and parameters used is done at least annually.

Forward-looking macroeconomic data are taken into account in accordance with a methodological framework applicable at two levels:

- at the Crédit Agricole Group level, in determining a shared framework for factoring in forward-looking inputs when projecting the PD and LGD parameters over the repayment term of transactions;
- at the level of each entity in respect of its own portfolios. Crédit Agricole S.A. applies additional forward-looking parameters to the performing and underperforming loans and receivables due from customers and financing and guarantee commitments portfolios that are exposed to additional losses not covered in the scenarios defined at the Group level due to the local economic and/or structural factors.

Significant deterioration of credit risk

Crédit Agricole S.A. assesses, for each loan, the deterioration in credit risk since origination at each end of period date. Based on this assessment of the change in credit risk, the entities must classify their exposure into different risk categories (exposures qualified as performing/exposures qualified as underperforming/doubtful exposures).

Stage 1 represents ECL at 12 months, *Stage 2* represents ECL at maturity.

To assess significant deterioration, the Crédit Agricole Group employs a process based on two levels of analysis:

- the first level is based on absolute and relative quantitative criteria and rules as well as qualitative Group criteria that apply to all Group entities;
- the second level is specific to each entity and linked to an expert assessment – based on additional forward-looking parameters that expose it to additional losses not covered in the scenarios defined at the Group level through local economic and/or structural factors – of the risk held by each entity in its portfolios that may lead to an adjustment in the Group's performing to underperforming reclassification criteria (switching a portfolio or sub-portfolio or one-third of ECL at 12 months to ECL at maturity).

Each loan is, subject to exceptions, assessed for significant deterioration. Contagion is not required for the downgrading of same-counterparty loans from performing to underperforming. The significant deterioration assessment must consider the change in credit risk of the principal debtor without taking account of any guarantee, including for transactions with a shareholder guarantee.

Possible losses in respect of portfolios of small loans with similar characteristics may be estimated on a statistical basis rather than individually assessed.

The assessment of the significant increase in credit risk under the first level, defined above, for financial instruments with a rating model is based on the following criteria:

1. Low credit risk exemption

In accordance with current standards, the Group has opted to apply the "low credit risk" exemption to investment-grade debt securities (see IFRS 9.B5.5.23) and loan agreements with a probability of default below a given threshold (i.e. 0.30%).

2. Quantitative indicators

The Crédit Agricole Group has selected several quantitative criteria to classify a *Stage 2* deterioration. It should be noted that any of these criteria is sufficient for a *Stage 2* deterioration. The types of criteria are as follows:

- a relative criterion** that measures, at the contract level, the change in the associated risk since the initial recognition date. It measures the difference (as a ratio) between the default risk on the reporting date of a counterparty and the default risk assessed at the initial recognition date.
- three absolute criteria.** The Group has defined:
 - an absolute threshold criterion based on the Basel probabilities of default to capture an absolute deterioration not correlated with economic conditions. In practice, it captures the last two grades before the default regarded as risky, and therefore with a *Stage 2* classification for the calculation of ECL;
 - an absolute threshold criterion based on the probability of default at one year (forward looking) at the reporting date, capturing an absolute significant deterioration correlated with the economic situation;
 - an absolute threshold criterion based on the number of days past due exceeding 30 days for a *Stage 2* classification.

3. Qualitative indicators

The Group uses a set of qualitative indicators allowing for a *Stage 2* deterioration. These indicators may be at contract, counterparty or portfolio level and make it possible to identify exposures that have seen a significant deterioration in credit risk.

In the absence of an internal rating model, the Crédit Agricole Group uses the absolute threshold of non-payment for over 30 days as the maximum threshold for significant deterioration and classification as underperforming loan (*Stage 2*).

If credit risk increase since origination is no longer observed, impairment may be reduced to the 12-month expected credit losses (*Stage 1*).

To make up for the fact that certain significant deterioration factors or indicators may not be identifiable at instrument level, the standard allows for the assessment of significant deterioration at financial instrument portfolio level, or for groups of portfolios or parts of portfolios.

Portfolios can be created for the collective assessment of deterioration for instruments that share common characteristics, such as:

- type of loan;
- credit risk rating (including internal Basel 2 rating for entities with an internal ratings system);
- collateral type;
- date of initial recognition;
- remaining term until maturity;
- business sector;
- geographical location of the borrower;
- the value of collateral relative to the financial assets, if this has an impact on the probability of default (for example, in the case of loans secured only by collateral in certain countries or loan-to-value ratios);
- distribution channel, purpose of financing etc.

Differentiation of significant deterioration by market is therefore possible (home loans, consumer finance, loans to farmers or small businesses, corporate loans etc.).

The grouping of financial instruments for the purposes of credit risk assessment on a homogeneous portfolio basis may change over time, as new information becomes available.

Additions to and reversals of provisions for credit risk on performing and underperforming loans are recognised under cost of risk.

DOUBTFUL LOANS

These are loans of all types, including collateralised, with an identified credit risk corresponding to one or more of the following situations:

- a payment generally more than 90 days past due, unless specific circumstances point to the fact that the delay is due to reasons independent of the debtor's financial situation;
- the entity believes that the debtor is unlikely to settle its credit obligations unless it avails itself of certain measures such as enforcement of collateral security right.

A loan in default is said to be doubtful when one or more events occur which have a negative effect on the estimated future cash flows. The following events are observable data, indicative of doubtful loans:

- significant financial difficulties of the issuer or borrower;
- a breach of contract, such as default or overdue payment;
- the granting, by the lender(s) to the borrower, for economic or contractual reasons related to financial difficulties of the borrower, of one or more favours that the lender(s) would not have considered under other circumstances;

- the increasing probability of bankruptcy or financial restructuring of the borrower;
- the disappearance of an active market for the financial asset due to financial difficulties;
- the purchase or creation of a financial asset with a significant discount, which reflects the credit losses suffered.

The doubtful nature of a loan may result from the combined effect of several events.

A defaulting counterparty returns to a sound situation only after a period of observation that makes it possible to confirm that the debtor is no longer in a doubtful position.

Among doubtful loans, Crédit Agricole S.A. makes a distinction between doubtful loans and irrecoverable loans:

- doubtful loans:
All doubtful loans that do not fall into the irrecoverable loans category are classified as doubtful loans;
- irrecoverable doubtful loans:
Loans for which the prospects of recovery are highly impaired and that are likely to be written off over time.

Interest continues to accrue on doubtful loans but no longer accrues once the loan is classified as irrecoverable.

The classification as doubtful loan may be discontinued and the loan is once again classified as performing loans.

Impairment resulting from credit risk on doubtful loans

Loans and receivables provided by Crédit Agricole S.A. to the Regional Banks do not represent a direct risk for Crédit Agricole S.A. with respect to the corresponding customer loans made by the Regional Banks. They do, however, represent a potential indirect risk with respect to the financial strength of the Regional Banks. Accordingly, Crédit Agricole S.A. has not funded provisions for such loans and receivables to the Regional Banks.

Once a loan is doubtful, the likely loss is recognised by Crédit Agricole S.A. through impairment deducted from the asset on the balance sheet. This impairment represents the difference between the carrying amount of the loan and the estimated future flows discounted at the effective interest rate, having regard to the financial position of the counterparty, its economic outlook as well as any guarantees net of the cost of realising them.

Probable losses in respect of off-balance sheet commitments are covered by provisions recognised as equity and liabilities.

Accounting treatment of impairments

Impairment losses and reversals for non-recovery of doubtful loans are recognised under cost of risk.

Pursuant to ANC Regulation 2014-07, the Group made the choice to record as cost of risk the effects of the cost unwinding of the impairment discounts.

WRITE-OFFS

Decisions as to when to apply a write-off are taken on the basis of expert opinion. Crédit Agricole S.A. makes such determinations in conjunction with its Risk Management Department, according to its business knowledge.

Loans that become irrecoverable are written off and the corresponding impairment reversed.

COUNTRY RISKS

Country risks (or risks on international commitments) consist of the total amount of unimpaired loans, both on and off-balance sheet, carried by an institution directly or via hive-off vehicles, involving private or public debtors residing in the countries identified by the French Regulatory and Resolution Supervisory Authority (Autorité de contrôle prudentiel et de résolution – ACPR), or where settlement thereof depends on the position of public or private debtors residing in those countries.

RESTRUCTURED LOANS

Loans restructured due to financial difficulties are those for which the entity has amended the original financial terms (interest rate, term etc.) for economic or legal reasons linked to the financial difficulties of the borrower, under conditions that would not have been considered under other circumstances.

The definition of loans restructured due to financial difficulty is therefore comprised of two cumulative criteria:

- contract modification or debt refinancing (concessions);
- a customer who is in a difficult financial position (a debtor facing, or about to face, difficulties in honouring financial commitments).

This definition of restructuring must be applied to each agreement and not at client level (no contagion).

They consist of loans classified as doubtful and performing loans at the time of restructuring.

Restructured loans do not include loans whose characteristics have been renegotiated on a commercial basis with counterparties not showing any insolvency problems or financial difficulties. Renegotiated receivables are derecognised. The portion of fee and commission income and marginal transaction costs to be deferred is recognised in the income statement at the date of such renegotiation, insofar as it's considered that a new outstanding amount has been created.

The reduction of future cash flows granted to a counterparty, or the postponing of these flows as part of a restructuring, shall result in the recognition of a discount. It represents future loss of cash flow discounted at the original effective interest rate. It is equal to the difference between:

- the par value of the loan;
- and the sum of theoretical future cash flows from the restructured loan, discounted at the original effective interest rate (defined at the date of the financing commitment).

The discount recognised when a receivable is restructured is recorded as a deduction from the asset and accounted for under cost of risk.

Loans restructured due to the debtor's financial position are rated in accordance with Basel rules and are impaired on the basis of the estimated credit risk.

Once the restructuring has been carried out, the exposure continues to be classified as "restructured" for an observation period of at least two years, if the exposure was performing when restructured, and three years if the exposure was in default when restructured. These periods are extended in the event of the occurrence of certain events (e.g. further incidents).

2.2 SECURITIES PORTFOLIO

The rules on the recognition of credit risk and the impairment of fixed-income securities are defined by Articles 2311-1 to 2391-1 and by Articles 2211-1 to 2251-13 of ANC Regulation 2014-07.

These securities are presented in the financial statements according to their asset class: treasury bills (treasury bonds and similar securities), bonds and other fixed-income securities (negotiable debt securities and interbank market instruments), equities and other variable income securities.

They are classified in portfolios defined by regulation (trading, long-term investment, short-term investment, medium term portfolio, fixed assets, other long-term equity investments, equity investments, investments in subsidiaries and affiliates), depending on the management objective of the entity and the characteristics of the instrument at the time the product is subscribed.

TRADING SECURITIES

Trading securities are those that are originally:

- bought with the intention of selling them in the near future, or sold with the intention of repurchasing them in the near future; or
- held by the institution as a result of its market-making activity. The classification of these securities as trading securities depends on the effective turnover of the securities and on a significant trading volume taking into account market opportunities.

These securities must be tradable on an active market and market prices thus available must represent real transactions regularly undertaken in the market on an arm's length basis.

Trading securities also include:

- securities bought or sold as part of specialised management of a trading portfolio, including forward financial instruments, securities or other financial instruments that are managed collectively and on which there is an indication of recent short term profit taking;
- securities on which there is a commitment to sell as part of an arbitrage transaction on an organised exchange for financial instruments or similar market;
- borrowed securities (including, as applicable, borrowed securities used in securities lending, reclassified to "trading securities lending") as part of lending transactions/borrowings classified as trading securities and offset by the debt representing securities borrowed posted to the liabilities side of the balance sheet.

Except as provided in ANC Regulation 2014-07, trading securities may not be reclassified to another accounting category; they continue to be presented and measured as trading securities until they are removed from the balance sheet after being sold, fully repaid or written off.

Trading securities are recognised on the date they are purchased in the amount of their purchase price, excluding transaction expenses and including accrued interest.

Liabilities relating to securities sold short are recognised on the liabilities side of the institution's balance sheet for the selling price excluding transaction expenses.

At each reporting date, securities are measured at the most recent market price. The overall amount of the gains and losses resulting from price changes is recorded in the income statement under "Net gains (losses) on trading books".

INVESTMENT SECURITIES

This category consists of securities that do not fall into any other category.

The securities are recorded at purchase price, including transaction expenses.

Bonds and other fixed-income securities

These securities are recognised at purchase price including interest then accrued. The difference between the purchase price and the redemption value is staggered over the residual maturity of the security on an actuarial basis.

Revenues are recorded in the income statement under: "Interest and similar income on bonds and other fixed-income securities".

Equities and other variable income securities

Equities are recognised in the balance sheet at purchase value including acquisition costs. The revenues from dividends attached to the share are recorded as income under "Revenues from variable income securities".

Revenues from Undertakings for Collective Investment are recognised when received under the same heading.

At each reporting date, short-term investment securities are measured at the lower of acquisition cost and market value. If the current value of a holding or of a homogeneous set of securities (calculated from market prices at the reporting date, for example) is lower than its carrying amount, an impairment loss is recorded for the unrealised loss without offset against any gains recognised on other categories of securities. Gains from hedging within the meaning of ANC Regulation 2014-07, in the form of purchases or sales of forward financial instruments, are factored in for the calculation of impairment losses. Potential gains are not recorded.

In addition, impairment intended to take into account counterparty risk and recognised under cost of risk is booked in fixed-income securities as follows:

- in the case of listed securities, impairment is based on market value, which intrinsically reflects credit risk. However, if Crédit Agricole S.A. has specific information on the issuer's financial position that is not reflected in the market value, a specific impairment loss is recorded;
- in the case of unlisted securities, impairment is recorded in the same way as for loans and receivables due from customers based on identified probable losses (see Note 2.1 "Loans and financing commitments – Impairment for the credit risk on doubtful loans").

Sales of securities are deemed to take place on a first-in, first-out basis.

Depreciation and reversals and gains or losses on disposals of short-term investment securities are recorded under "Net gains (losses) on short-term investment portfolios and similar" in the income statement.

LONG TERM INVESTMENT SECURITIES

Long term investment securities are fixed-income securities with a fixed maturity date that have been acquired or transferred to this category with the manifest intention of holding them until maturity.

This category only includes securities for which Crédit Agricole S.A. has the necessary financial ability to continue holding them until maturity and that are not subject to any legal or other restriction that could interfere with its intention to hold them until maturity.

Long term investment securities are recognised at purchase price, including acquisition costs and accrued interest.

The difference between the purchase price and the repayment price is staggered over the residual maturity of the security.

Impairment is not booked for long term investment securities if their market value falls below cost. On the other hand, if the impairment arises from a risk relating specifically to the issuer of the security, impairment is recorded under "Cost of risk".

In the case of the disposal or reclassification to another category of long term investment securities representing a material amount, the institution is no longer authorised, during the current financial year and the two subsequent financial years, to classify securities previously bought or to be bought as long term investment securities, in accordance with ANC Regulation 2014-07.

MEDIUM-TERM PORTFOLIO SECURITIES

In accordance with ANC Regulation 2014-07, these securities are "investments made on a normal basis, with the sole aim of securing a gain in the medium term, with no intention of investing in the issuer on a long-term basis or taking an active part in its operational management".

Securities can only be included in this category if the activity is carried out to a significant extent and on an ongoing basis within a structured framework and gives the institution a recurring return mainly in the form of gains on disposals.

Crédit Agricole S.A. meets these conditions and some of its securities can be classified in this category.

Medium-term portfolio securities are recorded at purchase price, including transaction expenses.

They are recognised at the end of the reporting period at the lower of historical cost or value in use, which is determined on the basis of the issuer's general outlook and the estimated residual maturity.

For listed companies, value in use is generally the average market price over a sufficiently long period of time, depending on the estimated time horizon for holding the securities, to mitigate the impact of substantial fluctuations in market prices.

Impairment losses are booked for any unrealised losses calculated for each holding and are not offset against any unrealised gains. They are recorded under "Net gains (losses) on short-term investment portfolios and similar", along with impairment losses and reversals on these securities.

Unrealised gains are not recognised.

INVESTMENTS IN SUBSIDIARIES AND AFFILIATES, EQUITY INVESTMENTS AND OTHER LONG-TERM EQUITY INVESTMENTS

- Investments in subsidiaries and affiliates are investments in companies that are under exclusive control and that are or are liable to be fully consolidated into a consolidated unit;
- Equity investments are investments (other than investments in subsidiaries and affiliates), of which the long-term ownership is judged beneficial to the institution, in particular because it allows it to exercise influence or control over the issuer;
- Other long-term equity investments consist of securities held with the intention of promoting long-term business relations by creating a special relationship with the issuer, but with no influence on the issuer's management due to the small percentage of voting rights held.

These securities are recognised at purchase price, including transaction expenses.

At the reporting date, the value of these securities is measured individually, based on value in use, and they are recorded on the balance sheet at the lower of historical cost or value in use.

This represents what the institution would be prepared to pay to acquire them having regard to its reasons for holding them.

The estimation of the value in use may be based on various factors such as the profitability and profitability prospects of the issuer, its shareholders' equity, economic conditions or the average stock market price in recent months or the mathematical value of the security.

When value in use of securities is lower than historical cost, impairment losses are booked for these unrealised losses and are not offset against any unrealised gains.

Depreciation and reversals and gains or losses on disposals of these securities are recorded under "Net gains (losses) on fixed assets".

MARKET PRICE

The market price at which the various categories of securities are measured is determined as follows:

- securities traded on an active market are measured at the latest price;
- if the market on which the security is traded is not or no longer considered active, or if the security is unlisted, Crédit Agricole S.A. determines the likely value at which the security concerned would be traded using valuation techniques. Firstly, these techniques take into account recent transactions carried out in normal competition conditions. If required, Crédit Agricole S.A. uses valuation techniques commonly used by market participants to price these securities, when it has been demonstrated that these techniques provide reliable estimates of prices obtained in actual market transactions.

RECORDING DATES

Crédit Agricole S.A. records securities classified as long term investment securities and as trading securities on the settlement date. Other securities, regardless of type or classification, are recognised on the trading date.

SECURITIES BOUGHT/SOLD UNDER REPURCHASE AGREEMENTS

Securities sold under repurchase agreements are kept on the balance sheet. The amount received, representing the liability to the buyer, is recorded as a liability.

Securities bought under repurchase agreements are not recorded on the balance sheet, but the amount paid, representing the receivable from the seller, is recorded as an asset on the balance sheet.

Securities sold under repurchase agreements are subject to the accounting treatment applying to the portfolio from which they originate.

RECLASSIFICATION OF SECURITIES

In accordance with ANC Regulation 2014-07, the following securities reclassifications are allowed:

- from "trading portfolio" to "long-term investment portfolio" or "short-term investment portfolio" in the case of exceptional market conditions or, for fixed-income securities that are no longer tradable in an active market and if the institution has the intention and ability to hold the securities for the foreseeable future or until maturity;
- from "short-term investment portfolio" to "long-term investment portfolio" in the case of exceptional market conditions or for fixed-income securities that are no longer tradable in an active market.

In 2025, Crédit Agricole S.A. did not carry out any reclassification of securities under ANC Regulation 2014-07.

TREASURY SHARE BUYBACK

Treasury shares bought back by Crédit Agricole S.A., including shares and stock options held to hedge stock option plans, are recognised as assets under a specific balance sheet heading.

They may, where necessary, be impaired where the current value is below the purchase price, except for transactions connected with employee free share allocation plans and stock option and share subscription plans under ANC Regulation 2014-03 (General plan of accounts).

2.3 PROPERTY, PLANT AND EQUIPMENT AND INTANGIBLE ASSETS

Crédit Agricole S.A. applies ANC Regulation 2014-03 relating to the depreciation, amortisation and impairment of assets.

It applies component accounting for all of its property, plant & equipment. In accordance with the provisions thereof, the depreciable amount takes account of the potential residual value of fixed assets.

The acquisition cost of fixed assets includes the purchase price plus any incidental expenses, namely expenses directly or indirectly incurred in connection with bringing the asset into service or "into inventory".

Land is recorded at acquisition cost.

Property and equipment are measured at acquisition cost less accumulated depreciation and impairment losses since the time they were placed in service.

Purchased software is measured at acquisition cost less accumulated amortisation and impairment losses since acquisition.

Proprietary software is measured at cost less accumulated amortisation and impairment losses since completion.

Intangible assets other than software, patents and licences are not amortised. They may be subject to impairment.

In the event of technical merger losses, these are recognised in the balance sheet under the asset headings to which they are allocated in "Other property, plant & equipment, intangible assets, financial assets etc.". They are then amortised, impaired and written off, in the same way as the underlying asset where applicable.

Fixed assets are depreciated over their estimated useful life.

The following components and depreciation periods have been adopted by Crédit Agricole S.A. following the application of the measures on component accounting for fixed assets. These depreciation periods must be adjusted according to the type of asset and its location:

Component	Depreciation period
Land	Not depreciable
Structural works	30 to 80 years
Non-structural works	8 to 40 years
Plant and equipment	5 to 25 years
Fixtures and fittings	5 to 15 years
Computer equipment	4 to 7 years (declining or straight-line)
Special equipment	4 to 5 years (declining or straight-line)

Finally, based on available information, Crédit Agricole S.A. has concluded that impairment testing would not lead to any change in the existing depreciable base.

2.4 AMOUNTS DUE TO CUSTOMERS AND CREDIT INSTITUTIONS

Amounts due to credit institutions, Crédit Agricole entities and customers are presented in the financial statements according to their residual maturity or their nature:

- demand and time deposits for credit institutions;
- current accounts, term deposits and advances for Crédit Agricole internal transactions;
- special savings accounts and other amounts due to customers (notably including financial customers).

Special savings accounts are presented after offsetting the claim on the savings fund (in respect of regulated savings centralised by the Caisse des dépôts et consignations).

Repurchase agreements represented by certificates or securities are included under these various headings, according to counterparty type.

Accrued interests on these deposits is recognised under accrued interest and taken to profit or loss.

2.5 DEBT SECURITIES

Debt securities are presented according to their form: interest-bearing notes, interbank market instruments, negotiable debt securities, bonds and other debt securities, excluding subordinated notes, which are classified in liabilities under "Subordinated debt".

Interest accrued but not yet due is recognised under accrued interest and taken to profit or loss.

Issue or redemption premiums on bonds are amortised over the maturity period of each bond. The corresponding charge is recorded under "Interest and similar expenses on bonds and other fixed-income securities".

Redemption and share premiums on debt securities are amortised using the actuarial method.

Crédit Agricole S.A. also amortises borrowing expenses in its parent company financial statements.

Fee and commission expenses on financial services paid by the Regional Banks are recognised as expenses under "Fee and commission expenses".

2.6 PROVISIONS

Crédit Agricole S.A. applies ANC Regulation 2014-03 for the recognition and measurement of provisions.

Provisions include provisions relating to financing commitments, retirement and early retirement liabilities, litigation and various risks.

The provisions also include country risks. All these risks are reviewed quarterly.

Provisions are set aside for country risks following an analysis of the types of transactions, the term of commitments, their form (receivables, securities, market products) as well as country quality.

Crédit Agricole S.A. partially hedges provisions on these foreign currency-denominated receivables by buying foreign currency to limit the impact of changes in foreign exchange rates on provision levels.

The provision for home purchase savings scheme imbalance risk is designed to cover obligations in the event of unfavourable movements in home purchase savings schemes. These obligations

are: (i) to pay a fixed interest rate on the savings contract determined at inception for an undefined period of time; and (ii) to grant a loan to home purchase savings schemes and account savers at a rate fixed at inception of the contract. The provision is calculated for each generation of a home purchase savings scheme and for all home purchase savings accounts, with no netting of obligations between generations.

The amount of these obligations is calculated taking account notably of:

- saver behaviour, as well as an estimate of the amount and term of the loans that will be granted in the future. These estimates are based on historical observations over a long period;
- the yield curve for market rates and reasonably foreseeable trends.

This provision is calculated in accordance with part 6 “Regulated Savings” of Book II “Special Transactions” of ANC Regulation 2014-07.

2.7 FUND FOR GENERAL BANKING RISK (FGBR)

The funds for general banking risks are provisioned by Crédit Agricole S.A. at the discretion of its executives to meet any banking operation-related charges or risks whose incidence is not certain.

Provisions are released to cover any incidence of these risks during a given financial year.

2.8 TRANSACTIONS ON FORWARD FINANCIAL INSTRUMENTS AND OPTIONS

Hedging and market transactions on forward interest rate, currency or equity instruments are recorded in accordance with the provisions of ANC Regulation 2014-07.

Commitments relating to these transactions are recorded off-balance sheet at the par value of the contracts: this amount represents the volume of pending transactions.

Gains or losses relating to these transactions are recorded on the basis of the type of instrument and the strategy used:

HEDGING TRANSACTIONS

Gains or losses realised on hedging transactions (category “b” Article 2522-1 of ANC Regulation 2014-07) are recorded on the income statement symmetrically with the recognition of income and expenses on the hedged item and under the same accounting heading.

Income and expenses relating to forward financial instruments used for hedging and managing Crédit Agricole S.A.’s overall interest rate risk (category “c” Article 2522-1 of ANC Regulation 2014-07) are recorded pro rata temporis under “Interest and similar income (expenses) – Net gains (losses) on macro-hedging transactions”. Unrealised gains and losses are not recorded.

MARKET TRANSACTIONS

Market transactions include:

- isolated open positions (category “a” Article 2522-1 of ANC Regulation 2014-07);
- specialised management of a trading portfolio (category “d” Article 2522 of ANC Regulation 2014-07).

They are measured in reference to their market value at the end of the reporting period.

If there is an active market, the instrument is stated at the available market price. In the absence of an active market, fair value is determined using internal valuation techniques and models.

Instruments:

- for isolated open positions traded on organised or similar exchanges, all realised and unrealised gains and losses are recognised;
- for isolated open positions traded over the counter, gains and losses are posted to profit and loss prorata temporis. In addition, only unrealised losses are recognised through a provision. Realised gains and losses are taken to profit or loss when the transaction is settled;
- as part of a trading portfolio, all realised and unrealised gains and losses are recognised.

COUNTERPARTY RISK ON DERIVATIVE INSTRUMENTS

In accordance with ANC Regulation 2014-07, Crédit Agricole S.A. makes a credit valuation adjustment to the market value of its derivative assets to reflect counterparty risk. For this reason, only derivatives recognised as isolated open positions and as part of a trading portfolio (derivatives respectively classified in categories “a” and “d” of Article 2522-1 of the aforementioned regulation) are subject to a calculation of counterparty risk on active derivatives (CVA – *Credit Valuation Adjustment*).

The CVA makes it possible to calculate counterparty losses expected by Crédit Agricole S.A.

The CVA is calculated on the basis of an estimate of expected losses based on the probability of default and loss given default. The methodology used maximises the use of observable input data.

It is based:

- primarily on market parameters such as registered and listed CDS (credit default swaps) (or Single Name S/N CDS) or index-based CDS;
- in the absence of registered CDS on the counterparty, an approximation based on a basket of S/N CDS of counterparties with the same rating operating in the same sector and located in the same area.

In certain circumstances, historical default data may also be used.

2.9 FOREIGN CURRENCY TRANSACTIONS

At each reporting date, receivables and debt as well as foreign exchange contracts included in off-balance sheet commitments denominated in foreign currencies are translated using the foreign exchange rate at the reporting date.

Income received and expenses paid are recorded at the exchange rate on the transaction date. Accrued income and expenses not yet due are translated at the closing rate.

Foreign currency denominated assets held on a long-term basis, including allocations to branches, fixed assets, long term investment securities, subsidiary securities and equity investments in foreign currencies financed in euros remain converted at the exchange rate on the day of acquisition (historical exchange rate). However, a provision may be booked if there is a permanent deterioration in foreign exchange rates affecting Crédit Agricole S.A.'s foreign equity investments.

At each reporting date, forward foreign exchange transactions are measured at the relevant forward exchange rate. Recognised gains or losses are recorded on the income statement under “Net gains (losses) on trading book – Net gains (losses) on foreign exchange transactions and similar financial instruments”.

Pursuant to the implementation of ANC Regulation 2014-07, Crédit Agricole S.A. has instituted multi-currency accounting to enable it to monitor its foreign exchange position and to measure its exposure to this risk.

2.10 CONSOLIDATION OF FOREIGN BRANCHES

Branches keep separate accounts that comply with the accounting rules in force in the countries in which they are based.

At each reporting date, the branches' balance sheets and income statements are adjusted according to French accounting rules, translated into euros and integrated with the accounts of their head office after the elimination of intra-group transactions.

The rules for translation into euros are as follows:

- balance sheet items are translated at the closing rate;
- income and expenses paid and received are recorded at the exchange rate on the transaction date, whereas accrued income and expenses are translated at the closing rate.

Gains or losses resulting from this translation are recorded on the balance sheet under “Accruals and deferred income”.

2.11 OFF-BALANCE SHEET COMMITMENTS

Off-balance sheet items mainly reflect the unused portion of financing commitments and guarantee commitments given and received.

A charge is booked to provisions for commitments given if there is a probability that calling in the commitment will result in a loss for Crédit Agricole S.A.

Reported off-balance sheet items do not mention commitments on forward financial instruments or foreign exchange transactions. Similarly, they do not include commitments received concerning treasury bonds, similar securities and other securities pledged as collateral.

2.12 EMPLOYEE PROFIT-SHARING AND INCENTIVE PLANS

Employee profit-sharing is recognised in the income statement in the financial year in which the employees' rights are earned.

Incentive plans are covered by the 21 June 2011 agreement.

The cost of employee profit-sharing and incentive plans is included in “Employee expenses”.

2.13 POST-EMPLOYMENT BENEFITS

RETIREMENT, EARLY RETIREMENT AND END-OF-CAREER ALLOWANCE COMMITMENTS – DEFINED-BENEFIT SCHEMES

Crédit Agricole S.A. has applied ANC Recommendation 2013-02 relating to the measurement and recognition of retirement and similar benefit obligations, repealed and incorporated into ANC Regulation 2014-03.

This recommendation was amended by the ANC on 5 November 2021. Based on it, defined-benefit schemes in which benefits are contingent both on length of service, for a maximum amount that cannot exceed a ceiling and on being employed by the entity at the time a staff member reaches retirement age, benefit entitlements can be allocated on a straight-line basis based on:

- either the staff members employment start date;
- or the yearly anniversary date used to determine the vesting of benefit rights.

In accordance with this regulation, Crédit Agricole S.A. sets aside provisions to cover its retirement and similar benefit obligations falling within the category of defined-benefit schemes.

These commitments are stated based on a set of actuarial, financial and demographic assumptions, and in accordance with the projected unit credit method. The charge is calculated based on the discounted future benefit.

Since financial year 2021, Crédit Agricole S.A. has applied the determination of attributing benefits on a straight-line basis from the date on which each year of service applies to the vesting of benefit entitlement (i.e. convergence with IFRS IC decision of April 2021 relative to IAS 19).

For the 2025 financial year, Crédit Agricole S.A. is maintaining its historical method of determining the allocation of benefit entitlements on a straight-line basis from the date on which the employee enters service.

Crédit Agricole S.A. has opted for method 2 which allows in particular for the recognition of gains or losses arising from changes to defined-benefit schemes when the curtailment or settlement occurs.

The regulation also allows for the recognition of actuarial gains and losses using the “corridor method” or any other method that results in faster recognition in profit or loss.

Crédit Agricole S.A. elected to immediately recognise the actuarial gains and losses in profit or loss, and accordingly, the amount of the provision is equal to:

- the present value of the obligation to provide the defined benefits at the end of the reporting period, calculated in accordance with the actuarial method advised by the regulation;
- less, where applicable, the fair value of plan assets. These may be represented by an eligible insurance policy. In the event that the obligation is fully covered by such a policy, the fair value thereof is deemed to be the value of the corresponding obligation – i.e. the amount of the corresponding actuarial liability.

RETIREMENT PLANS – DEFINED-CONTRIBUTION SCHEMES

“Employers” contribute to a variety of compulsory pension schemes. Plan assets are managed by independent organisations and the contributing companies have no legal or implied obligation to pay additional contributions if the funds do not have sufficient assets to cover all benefits corresponding to services rendered by employees during the financial year and during prior years.

Consequently, Crédit Agricole S.A. has no liabilities in this respect other than its contributions to be paid for the previous financial year.

The amount of contributions under the terms of these pension schemes is shown under “Employee expenses”.

2.14 STOCK OPTIONS AND SHARE SUBSCRIPTIONS OFFERED TO EMPLOYEES UNDER THE EMPLOYEE SAVINGS SCHEME

STOCK OPTION PLANS

Stock option plans granted to certain categories of employees are recorded when exercised. Exercise gives rise to either an issue of shares, recorded in accordance with requirements relating to capital increases, or the transfer to employees of treasury shares, previously purchased by Crédit Agricole S.A. and recognised in accordance with the terms set out in the “Treasury shares buyback” section.

SHARE SUBSCRIPTIONS UNDER THE EMPLOYEE SAVINGS SCHEME

Share subscriptions offered to employees under the employee savings scheme, with a maximum discount of 30%, do not have a vesting period but are subject to a five-year lock-up period. These share subscriptions are recognised in accordance with requirements relating to capital increases.

2.15 EXTRAORDINARY INCOME AND EXPENSES

These comprise income and expenses that are extraordinary in nature and relate to transactions that do not form part of Crédit Agricole S.A.’s ordinary activities.

2.16 INCOME TAX CHARGE

In general, only the current tax liability is recognised in the parent company financial statements.

The tax charge appearing in the income statement is the corporate income tax due in respect of the financial year. It includes the effect of the social contribution on profits.

Revenues from loans and securities portfolios are recognised net of tax credits.

Crédit Agricole S.A. has had a tax consolidation mechanism in place since 1990. At 31 December 2025, 1,305 entities had signed tax consolidation agreements with Crédit Agricole S.A. Under these agreements, each company that is part of the tax consolidation mechanism recognises in its financial statements the tax that it would have had to pay in the absence of tax consolidation.

Estimated values	42	21,351	-	124,417	145,810	146,509

(1) With the exception of trading securities borrowed (including, if applicable, borrowed securities that have been loaned and reclassified as "trading securities loaned") presented as a deduction from debt representative of the value of the securities borrowing that appears in liabilities on the balance sheet (see Note 26.1 "Securities borrowing").

(2) of which €300 million of subordinated notes (excluding accrued interests) at 31 December 2025 and €300 million at 31 December 2024.

The long term investment securities disposed of prior to maturity as per the derogations provided in ANC Regulation 2014-07 amounted to €1,572 million. The corresponding gains or losses amounted to -€16 million.

Estimated values:

The estimated value of unrealised gains on the short-term investment securities portfolio amounted to -€278 million at 31 December 2025 compared with -€459 million at 31 December 2024.

The estimated value of short-term investment securities is based on the most recent market price.

The estimated value of unrealised gains on the long term investment securities portfolio amounted to €216 million at 31 December 2025, compared with €2,302 million at 31 December 2024.

The estimated value of the unrealised losses on the long term investment securities portfolio amounted to -€1,364 million at 31 December 2025, compared with €2,313 million at 31 December 2024.

The receivables relating to securities loaned in connection with Treasury bills amounted to €1,361 million, and stood at €15,873 million for bonds and other fixed-income securities.

6.1 EQUITY INVESTMENTS AND INVESTMENTS IN SUBSIDIARIES AND AFFILIATES

Equity investments and investments in subsidiaries and affiliates were subject to impairment tests based on the assessment of the value in use. Determining the value in use was based on discounting the estimated future cash flows from equity investments and investments in subsidiaries and affiliates as shown over a period of three years (2026-2028) as part of the MTP 2028, extrapolated over a fourth and fifth year in order to merge towards a standardised final year. The projected financial trajectories are based on an economic scenario taking into account expected changes in interest rates and inflation in particular. In 2025, despite the particularly tense international environment, the global economy resisted well. In the United States, growth resisted well in 2025 (2.1%) and is expected to accelerate slightly in 2026 (2.3%): economic fundamentals expected to remain healthy, labour market slowdown without a significant recovery in unemployment, continued investment in AI at a slower pace and fiscal support for wealthy businesses and households. On the other hand, inflation is expected to remain above the 2% target in 2026. In the eurozone, despite foreign trade being undermined by tariffs, the strength of the euro and Asian competition, growth accelerated in 2025. In

2026, the good health of private agents, still favourable financial terms and a slightly expansionary fiscal policy are expected to absorb the confidence shock associated with the trade war and geopolitical uncertainty. The scenario retains growth in line with its potential pace, supported by the acceleration of investment. Growth could thus be around 1.2% in 2026, after 1.4% in 2025. Both total and underlying inflation rates are expected to fall below the 2% target by the end of 2026. On the monetary front, the scenario opts for the Fed's "hard line" and assumes a stable Fed funds rate in 2026, followed by an easing in 2027. In the eurozone, the anticipated resilience of growth should encourage the ECB not to further relax its monetary policy in 2026. The stability of central bank policy rates projected for 2026 would be followed by tightening, bringing the deposit rate to 2.50% in 2027.

For the purposes of the impairment tests carried out at 31 December 2025, perpetual growth rates, discount rates and equity allocated rates as a proportion of risk-weighted assets were distributed by business line as shown in the table below:

In 2025 (full scope of consolidation of Crédit Agricole Group)	Perpetual growth rates	Discount rates	Capital allocated
French Retail Banking – LCL	2.00%	7.60%	11% to 12%
International Retail Banking – Italy	2.00%	9.30%	14% to 15%
International Retail Banking – Others	4.00%	20.20%	12% to 13%
Specialised Financial Services	2.00%	7.6% to 9.8%	11% to 12%
Asset Gathering			11% to 15% 80% of the solvency margin (Insurance)
Large customers	2.00%	8.1% to 9.4%	11% to 15%

Discount rates are determined based on a rolling monthly average over 15 years. At the end of 2025, the discount rate level was slightly lower, by 5 to 15 basis points, compared to the prior financial year.

Perpetual growth rates at 31 December 2025 remain unchanged from those used at 31 December 2024.

(1) Provisions for already notified tax adjustments.

(2) These provisions are prepared on a collective basis primarily from estimates drawn from the Basel models.

(3) Mainly comprises tax liabilities due to subsidiaries under the tax consolidation mechanism.

(4) Including provisions for economic interest group investment risks.

INVESTIGATIONS, INFORMATION REQUESTS AND LITIGATION PROCEEDINGS

In the normal course of business, Crédit Agricole S.A. is regularly subject to litigation proceedings, as well as requests for information, investigations, controls and other regulatory or judicial procedures from various institutions in France and abroad. The provisions recognised reflect the management's best judgement, considering the information in its possession at the closing date of the accounts.

Office of Foreign Assets Control (OFAC)

In October 2015, Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate and Investment Bank (Crédit Agricole CIB) reached agreements with the US and New York authorities that had been conducting investigations regarding US dollar transactions with countries subject to US economic sanctions. The events covered by this agreement took place between 2003 and 2008. Crédit Agricole CIB and Crédit Agricole S.A., which cooperated with the US and New York authorities in connection with their investigations, have agreed to pay a total penalty amount of \$787.3 million (i.e. €692.7 million). The payment of this penalty has been allocated to the pre-existing reserve that had already been taken and, therefore, has not affected the accounts for the second half of 2015.

The agreements with the Board of Governors of the Federal Reserve System (Fed) and the New York State Department of Financial Services (NYDFS) are with Crédit Agricole S.A. and Crédit Agricole CIB. The agreement with the Office of Foreign Assets Control (OFAC) of the US Department of the Treasury is with Crédit Agricole CIB. Crédit Agricole CIB also entered into separate Deferred Prosecution Agreements (DPAs) with the United States Attorney's Office for the District of Columbia (USAO) and the District Attorney of the County of New York (DANY), the terms of which are three years. On 19 October 2018 the two deferred prosecution agreements with USAO and DANY ended at the end of the three-year period, Crédit Agricole CIB having complied with all its obligations under the DPAs.

Crédit Agricole continues to strengthen its internal procedures and its compliance programmes regarding laws on international sanctions and will continue to cooperate fully with the US and New York authorities with its home regulators, the European Central Bank and the French Regulatory and Resolution Supervisory Authority (ACPR), and with the other regulators across its worldwide network.

Pursuant to the agreements signed with NYDFS and the US Federal Reserve, Crédit Agricole's compliance programme is subject to regular reviews to evaluate its effectiveness. These reviews include a review by an independent consultant appointed by NYDFS for a term of one year and annual reviews by an independent consultant approved by the US Federal Reserve.

EURIBOR/LIBOR and other indexes

Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB, in their capacity as contributors to a number of interbank rates, have received requests for information from a number of authorities as part of investigations into: (i) the calculation of the LIBOR (London Interbank Offered Rates) in a number of currencies, the EURIBOR (Euro Interbank Offered Rate) and certain other market indexes; and (ii) transactions connected with these rates and indexes. These demands covered several periods from 2005 to 2012.

As part of its cooperation with the authorities, Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB carried out investigations in order to gather the information requested by the various authorities and in particular the American authorities – the DOJ (Department of Justice) and CFTC (Commodity Future Trading Commission) – with which they were in discussions. Since then, these authorities have not contacted Crédit Agricole S.A. or Crédit Agricole CIB.

Furthermore, Crédit Agricole CIB is currently under investigation by the Attorney General of the State of Florida on both the LIBOR and the EURIBOR; this authority has not contacted Crédit Agricole CIB since. Following its investigation and an unsuccessful settlement procedure, on 21 May 2014, the European Commission sent a statement of objection to Crédit Agricole S.A. and to Crédit Agricole CIB pertaining to agreements or concerted practices for the purpose and/or effect of preventing, restricting or distorting competition in derivatives related to the EURIBOR. In a decision dated 7 December 2016, the European Commission jointly fined Crédit Agricole S.A. and Crédit Agricole CIB €114,654,000 for participating in a cartel in euro interest rate derivatives.

Crédit Agricole S.A. and Crédit Agricole CIB are challenging this decision and have asked the European Court of Justice to overturn it. On 20 December 2023, the European Court of Justice handed down its decision, which reduced the fine imposed on Crédit Agricole S.A. and Crédit Agricole CIB to €110 million, exonerating them of certain alleged practices, but rejecting most of the grounds for annulment put forwards. Crédit Agricole S.A. and Crédit Agricole CIB lodged an appeal against this decision with the Court of Justice of the European Union on 19 March 2024. The European Commission filed a cross-appeal also requesting the annulment of the decision of the European Court of Justice.

O'Sullivan and Tavera

On 9 November 2017, a group of individuals, (or their families or estates), who claimed to have been injured or killed in attacks in Iraq filed a complaint ("O'Sullivan I") against several banks including Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate Investment Bank (Crédit Agricole CIB), in the US District Court of New York.

On 29 December 2018, the same group of individuals, joined by 57 new plaintiffs, filed a separate action ("O'Sullivan II") against the same defendants.

On 21 December 2018, a different group of individuals also filed a complaint ("Tavera") against the same defendants. All three complaints allege that Crédit Agricole S.A., Crédit Agricole CIB, and other defendants conspired with Iran and its agents to violate US sanctions and engage in transactions with Iranian entities in violation of the US Anti-Terrorism Act and the Justice against Sponsors of Terrorism Act and seek damages of an unspecified amount.

In O'Sullivan I, the court dismissed the complaint on 28 March 2019, denied the plaintiffs' motion to amend their complaint on 25 February 2020, and denied the plaintiffs motion for final judgement to allow the plaintiffs to appeal on 29 June 2021.

On 9 November 2023, the court stayed the O'Sullivan I case until resolution of certain motions in three Anti-Terrorism Act cases to which Crédit Agricole S.A. and Crédit Agricole CIB are not parties – Freeman v. HSBC Holdings, PLC, No. 14-cv-6601 (E.D.N.Y.) ("Freeman I"), Freeman c. HSBC Holdings plc, no 18-cv-7359 (E.D.N.Y.) ("Freeman II") and Stephens c. HSBC Holdings plc, no 18-cv-7439 (E.D.N.Y.).

On 6 April 2020, the O'Sullivan II case was stayed until resolution of the O'Sullivan I case. This stay was extended on 20 December 2023. The Tavera case has also been stayed since 19 February 2019.

On 8 November 2023, the stay was extended pending the resolution of certain motions in the Freeman I, Freeman II and Stephens cases. The stay was again extended on 21 October 2025.

NOTE 16 HOME PURCHASE SAVINGS

DEPOSITS COLLECTED IN HOME PURCHASE SAVINGS SCHEMES AND ACCOUNTS DURING THE SAVINGS PHASE

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
HOME PURCHASE SAVINGS SCHEMES		
Seniority of less than 4 years	6,570	9,418
Seniority of more than 4 and less than 10 years	5,113	33,310
Seniority of more than 10 years	58,293	33,696
TOTAL HOME PURCHASE SAVINGS SCHEMES	69,976	76,424
TOTAL HOME PURCHASE SAVINGS ACCOUNTS (HPSPS)	12,572	12,628
TOTAL CUSTOMER ASSETS IN HOME PURCHASE SAVINGS SCHEMES	82,548	89,052

Customer assets, excluding government subsidies, are based on the carrying amount at the end of November 2025 for the financial statements at 31 December 2025 and at the end of November 2024 for the financial statements at 31 December 2024.

Seniority is determined in accordance with ANC Regulation 2014-07.

The customer assets are deposits excluding government premium.

OUTSTANDING LOANS GRANTED FOR HOME PURCHASE SAVINGS ACCOUNTS AND SCHEMES

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Home purchase savings schemes	-	-
Home purchase savings accounts	-	-
TOTAL LOANS GRANTED FOR HOME PURCHASE SAVINGS SCHEMES	-	-

PROVISION FOR HOME PURCHASE SAVINGS ACCOUNTS AND SCHEMES

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
HOME PURCHASE SAVINGS SCHEMES		
Seniority of less than 4 years		-
Seniority of more than 4 and less than 10 years		-
Seniority of more than 10 years	37	19
TOTAL HOME PURCHASE SAVINGS SCHEMES	37	19
TOTAL HOME PURCHASE SAVINGS ACCOUNTS (HPSPS)	3	1
TOTAL PROVISION FOR HOME PURCHASE SAVINGS CONTRACTS	40	20

Home Purchase Saving Plans have three components:

- a savings component linked to an option sold to HPSP (Home Purchase Saving Plan) holders to extend their investment under pre-set rate conditions;
- a commitment component linked to HPSP and HPSA (Home Purchase Saving Account) credits which may be achieved in the future under pre-set rate conditions;
- a credit component linked to HPSP and HPSA loans already made at rate conditions which, at the time they were made, may not have been the same as the market rates.

The utilisation coefficient of loan entitlements had been estimated by experts following the rate increase in 2022. At 31 December 2024, Crédit Agricole S.A. had decided to freeze the Home Purchase Saving Plan at its 30 June 2024 level, given the uncertainty surrounding the future level of the utilisation coefficient of PEL loan entitlements in view of the stabilisation of the real estate market.

The Group now considers that it has sufficient hindsight to calibrate the utilisation coefficient of loan entitlements, taking into account historical observations.

The Group has also continued to refine its methodology, in particular the methods used to take interest rate scenarios into account (multi-scenario approach).

NOTE 17

Yield on plan assets

The effective yield on plan assets is 3.27% in 2025.

Actuarial assumptions used

At 31 December 2025, sensitivity rates show that:

- a variation of plus 50 bp in discount rates would lead to a decrease in the commitment of 4.11% on IFC and 1.07% on pensions Article 39;
- a variation of minus 50 bp in discount rates would lead to an increase in the commitment of 4.40% on IFC and 1.11% on pensions Article 39.

NOTE 36 INCOME TAX*(in millions of euros)*

	31/12/2025	31/12/2024
Income tax ⁽¹⁾	576	478
Net additions to provisions for taxes under the tax consolidation scheme	(184)	(190)
NET BALANCE	392	288

(1) The tax gain mainly consists of the taxes that Crédit Agricole S.A., as head of the tax consolidation group, collected from the subsidiaries included in the tax consolidation scheme.

Pursuant to the 2025 Finance Act, an exceptional contribution on the profits of large corporates was introduced. With a number of different thresholds, this applies to corporates whose 2024 or 2025 revenues exceeded €1 billion or €3 billion.

For the relevant taxpayers whose revenues were between €1 billion and €3 billion, the exceptional contribution rate is set at 20.6%; for those with revenues over €3 billion, the exceptional contribution rate is set at 41.2%. Taxpayers with revenues of less than €1 billion are not subject to this contribution.

There is also a specific basis for calculating this exceptional contribution, which is to find the average corporate income tax due (excluding the 3.3% social contribution on profits) for the financial

year in which the contribution is due (2025) and the previous financial year (2024).

In addition, a tax group scheme agreement lays down the rules for the allocation and payment of this exceptional contribution.

Crédit Agricole S.A. Parent Company, as head of the tax consolidation group, made an exceptional contribution of €191 million to the Large Corporates department.

After taking into account the amounts received from the various Group entities and applying the internal reallocation mechanisms, the net amount recognised by Crédit Agricole S.A. totals €41 million.

NOTE 37 PRESENCE IN NON-COOPERATIVE STATES AND TERRITORIES

Investment and divestment projects carried out by all entities controlled directly or indirectly by Crédit Agricole S.A. must be in line with the strategic guidelines defined by the Board of Directors of Crédit Agricole S.A. and implemented by the Group's Executive Management.

A Group procedural note clarifies the framework within which the Various business lines and central functions of Crédit Agricole S.A. operate. In this respect, the Group Finance department and the Strategy and Development department are consulted to ensure that the economic and financial expectations of the transaction are met. They also ensure the appropriateness of the proposed transaction and its consistency with the Group's strategic guidelines. The involvement of the Risk Management and Permanent Controls business line and the Compliance and Legal

The information as at 31 December 2025 concerning these presences is provided below:

Country	Company's name	Legal form	Approval type (if applicable)	Share of capital (in %)	Nature of activity
RUSSIAN FEDERATION,	CRÉDIT AGRICOLE CIB AO (RUSSIA)	CORPORATION – LIMITED		97.79	651C – BANKS

The above entities are included in the scope of the internal control of Crédit Agricole S.A. and therefore in the Group's non-compliance risk prevention and control system (including, in particular, the due diligence necessary for the prevention of money laundering and

Affairs departments is reflected by opinions issued within the scope of their respective responsibilities.

This principle is applied across the subsidiaries where new products or activities are introduced, within the framework of Specific committees.

Crédit Agricole S.A. has the following direct or indirect presences in non-cooperative States or territories within the meaning of Article 238-0-A of the French General Tax Code.

As of 31 December 2025, Crédit Agricole Group has had a presence in Russia since 1991. In 2024, France registered this country on the list of non-cooperative States and territories appearing in the second paragraph of Article 238-0 A 1 of the French General Tax Code.

the fight against the financing of terrorism), also described in the report of the Chairman of the Board of Directors included in the Registration Document of Crédit Agricole S.A. (if applicable).

STATUTORY AUDITORS' REPORT ON THE FINANCIAL STATEMENTS

(For the year ended 31 December 2025)

This is a translation into English of the Statutory Auditors' report on the financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users.

This Statutory Auditors' report includes information required by European regulation and French law, such as information about the appointment of the Statutory Auditors or verification of the management report and other documents provided to shareholders.

This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the General Meeting of Shareholders

CRÉDIT AGRICOLE S.A.

12, place des États-Unis

92127 Montrouge Cedex

OPINION

In compliance with the engagement entrusted to us by your General Meeting of Shareholders, we have audited the accompanying financial statements of Crédit Agricole S.A. for the year ended 31 December 2025.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company as at 31 December 2025 and of the results of its operations for the year then ended in accordance with French accounting principles.

The audit opinion expressed above is consistent with our report to the Audit Committee.

BASIS FOR OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory auditors' responsibilities for the audit of the financial statements" section of our report.

INDEPENDENCE

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (*code de commerce*) and the French Code of Ethics (*code de déontologie*) for statutory auditors, for the period from 1 January 2025 to the date of our report and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No. 537/2014.

OBSERVATION

Without calling into question the opinion expressed above, we draw your attention to Note 2 to the annual financial statements, which details the changes in accounting methods and presentation related to the entry into force, on 1st January 2025, of ANC Regulations No. 2023-03 and No. 2022-06.

JUSTIFICATION OF ASSESSMENTS – KEY AUDIT MATTERS

In accordance with the requirements of Articles L. 821-53 and R. 821-180 of the French Commercial Code (*code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the financial statements as a whole and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the financial statements.

MEASUREMENT OF EQUITY INVESTMENTS AND INVESTMENTS IN SUBSIDIARIES AND AFFILIATES WHOSE VALUATION REQUIRES JUDGEMENT

Description of risk

Equity investments and investments in subsidiaries and affiliates are recognised at acquisition cost. These shares are measured depending on their value in use, and are recorded in the balance sheet at the lower of historical cost or value in use. Value in use represents what the company would be willing to pay to acquire them, taking into account its holding objectives. An impairment loss is recognized when the value in use of a security is less than its historical cost.

Measurement of value is judgmental when it is based on various factors, including profitability and the profitability outlook of the company. In this case, the measurement of value in use is determined by discounting the estimated future cash flows generated by the company, as defined in the three-year financial forecasts determined by each entity's management for the purpose of its business monitoring and extended over two years.

We considered that the measurement of equity investments and investments in subsidiaries and affiliates, whose valuation involves the use of judgment, constituted a key audit matter due to the significance of management's judgment in determining the assumptions underlying the estimates of value in use – in particular the assumptions used to determine financial projections or discount rates – and due to the sensitivity of the value-in-use estimate of the shares in related companies to these assumptions.

Equity investments and investments in subsidiaries and affiliates on the balance sheet amount to a net value of €72.9 billion, including €1.75 billion of impairment losses as of 31 December 2025. Refer to notes 2.2, 6 and 7 of the notes to the annual financial statements.

How our audit addressed this risk

We obtained an understanding of the processes implemented to determine value in use and the related impairment of equity investments and investments in subsidiaries and affiliates, whose valuation requires judgement.

We brought in valuation experts to our audit teams to assess the assumptions used to determine the discount rates and the perpetual growth rates used as well as the models used for calculating discounted cash flows.

We tested the calculations based on samples and compared the main assumptions, such as discount rate, with external sources.

We examined the financial forecasts prepared by the management of each entity concerned and used in the model to:

- check their consistency with those that have been presented to the governance bodies (Board of Directors or Supervisory Board) of the entities or sub-groups, and the justification of potential adjustments made;
- assess the main underlying assumptions, including for the determination of the terminal year. These assumptions were assessed in view of the economic and geopolitical uncertainties, the former financial forecasts and the actual performance over prior periods;
- conduct sensitivity analyses of the value in use to some of the assumptions (discount rate, cost of risk, cost to income ratio).

We also examined the disclosures provided in the notes to the financial statements on the equity investments and investments in subsidiaries and affiliates.

ASSESSMENT OF PROVISIONS FOR REGULATORY, LEGAL AND TAX LITIGATION

Description of risk

Crédit Agricole S.A. is the subject of litigation procedures, requests for information, investigations, controls and other procedures of a regulatory or legal nature from various institutions in France and abroad.

Various tax investigations are also ongoing.

The decision to recognise a provision and the amount to be recorded requires, by its nature, the use of judgement, due to the difficulty in assessing the outcome of procedures or uncertainties regarding certain tax treatments.

Given the importance of judgement made by the management when evaluating the financial risks and consequences for Crédit Agricole S.A., the assessments of provisions for regulatory, legal and tax litigation constitute a key audit matter.

Note 15 to the financial statements presents the provisions recorded at 31 December 2025, including those relating to the investigations, information or actions of certain authorities.

How our audit addressed this risk

We obtained an understanding of the process implemented by management to assess the risks arising from regulatory and legal procedures and tax uncertainties, as well as the provisions or receivables, where applicable, through quarterly inquiries with management and more specifically with the Legal, Tax and Compliance departments of Crédit Agricole S.A.

Our work involved in particular:

- assessing the assumptions made to determine provisions based on available information such as documentation prepared by the Legal, Compliance or Tax department or external counsel of Crédit Agricole S.A., correspondence from regulators and minutes of Legal Risks Committee meetings;
- reading the analyses and conclusions of the bank's legal advisers and their responses to our requests for confirmation;
- regarding more specifically tax risks, examining, with our tax specialists, the responses provided by Crédit Agricole S.A. to the relevant authorities as well as the risk assessment made by the entity;
- assessing, accordingly, the level of provisions or receivables as at 31 December 2025.

Lastly, we examined the related disclosures provided in the notes to the financial statements.

SPECIFIC VERIFICATIONS

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations.

INFORMATION GIVEN IN THE MANAGEMENT REPORT AND IN THE OTHER DOCUMENTS WITH RESPECT TO THE FINANCIAL POSITION AND THE FINANCIAL STATEMENTS PROVIDED TO SHAREHOLDERS

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report of the Board of Directors and in the other documents with respect to the financial position and the financial statements provided to Shareholders.

Concerning the fair presentation and the consistency with the financial statements of the information relating to payment deadlines mentioned in Article D. 441-6 of the French Commercial Code (*code de commerce*), we have the following matter to report: as indicated in the management report, these disclosures do not include banking and related transactions, as the Company considers that such transactions do not fall within the scope of the disclosures to be provided.

REPORT ON CORPORATE GOVERNANCE

We attest that the Board of Directors' report on corporate governance sets out the information required by Articles L. 225-37-4, L. 22-10-10 and L. 22-10-9 of the French Commercial Code (*code de commerce*).

Concerning the information given in accordance with the requirements of Article L. 22-10-9 of the French Commercial Code (*code de commerce*) relating to remunerations and benefits received by or allocated to the directors and any other commitments made in their favour, we have verified its consistency with the financial statements, or with the underlying information used to prepare these financial statements and, where applicable, with the information obtained by your company from controlled companies which are included in the scope of consolidation. Based on these procedures, we attest the accuracy and fair presentation of this information.

With respect to the information relating to items that your company considered likely to have an impact in the event of a takeover bid or exchange offer, provided pursuant to Article L. 22-10-11 of the French Commercial Code (*code de commerce*), we have agreed this information to the source documents communicated to us. Based on these procedures, we have no observations to make on this information.

OTHER INFORMATION

In accordance with French law, we have verified that the required information concerning purchase of investments and controlling interests and the identity of the shareholders and holders of the voting rights has been properly disclosed in the management report.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

FORMAT OF PRESENTATION OF THE FINANCIAL STATEMENTS INCLUDED IN THE ANNUAL FINANCIAL REPORT

We have also verified, in accordance with the professional standard applicable in France relating to the procedures performed by the statutory auditor relating to the annual and consolidated financial statements presented in the European single electronic format, that the presentation of the financial statements included in the annual financial report mentioned in Article L. 451-1-2-I of the French Monetary and Financial Code (*code monétaire et financier*), prepared under the responsibility of the Chief Executive Officer complies with the single electronic format defined in the European Delegated Regulation No. 2019/815 of 17 December 2018.

Based on the work we have performed, we conclude that the presentation of the financial statements included in the annual financial report complies, in all material respects, with the European single electronic format.

APPOINTMENT OF THE STATUTORY AUDITORS

We were appointed as statutory auditors of Crédit Agricole S.A. by the General Meeting of Shareholders held on 19 May 2004 for PricewaterhouseCoopers Audit and on 22 May 2024 for Forvis Mazars S.A.

As of 31 December 2025, the firm PricewaterhouseCoopers Audit was in the twenty-two year of its mission without interruption, and the firm Forvis Mazars S.A. was in the second year.

RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The financial statements were approved by the Board of Directors.

STATUTORY AUDITORS' RESPONSIBILITIES FOR THE AUDIT OF THE FINANCIAL STATEMENTS

OBJECTIVES AND AUDIT APPROACH

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified in Article L. 821-55 of the French Commercial Code (*code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements;
- assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein;
- evaluates the overall presentation of the financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee, which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L. 821-27 to L. 821-34 of the French Commercial Code (*code de commerce*) and in the French Code of Ethics (*code de déontologie*) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

The consolidated financial statements consist of the general framework, the consolidated financial statements themselves and the notes to the financial statements.

GENERAL FRAMEWORK

CRÉDIT AGRICOLE GROUP

Crédit Agricole Group comprises 2,376 Local Banks, 39 Regional Banks, its Central Body “Crédit Agricole S.A.” and their subsidiaries.

Crédit Agricole Mutuel was established by the law of 5 November 1894, which authorised the creation of Crédit Agricole Local Banks, the law of 31 March 1899, which grouped these Local Banks together into various Crédit Agricole Regional Banks, and the law of 5 August 1920, which established the *Office National du Crédit Agricole*, later to become the *Caisse Nationale de Crédit Agricole* (CNCA), then Crédit Agricole S.A., whose role as the Central Body was reiterated and clarified by the French Monetary and Financial Code (CMF – *Code monétaire et financier*).

Crédit Agricole Group is a banking group with a Central Body as defined in the French Monetary and Financial Code, within which:

- commitments by the Central Body and its affiliated institutions are joint and several in nature;
- the solvency and liquidity of all the affiliated institutions are monitored as a whole on the basis of consolidated financial statements.

For groups with a Central Body, Council Directive 86/635/EEC, which relates to the financial statements of European credit

institutions, stipulates that the whole constituted by the Central Body and its affiliated institutions must be the subject of consolidated financial statements, which shall be drawn up, audited and published in accordance with this Directive.

Pursuant to this Directive, the Central Body and its affiliated institutions constitute the reporting entity representing the common interests established in particular by the system of cross guarantees which jointly and severally cover the commitments of the different Crédit Agricole Group entities. In addition, the laws referred to above explain and set out the legal, financial, economic and political common interests between Crédit Agricole S.A., the Regional Banks and the Crédit Agricole Mutuel Local Banks. This commonality is notably based on a shared financial transactions mechanism, a single economic and commercial policy and common decision-making bodies, which have been the foundation of Crédit Agricole Group for more than a century.

In accordance with Regulation (EC) No. 1606/02, the consolidated financial statements of the reporting entity are prepared in accordance with IFRS as adopted by the European Union. The reporting entity comprises the Local Banks, the Regional Banks and the Central Body “Crédit Agricole S.A.”

CRÉDIT AGRICOLE INTERNAL RELATIONS

INTERNAL FINANCING MECHANISMS

Crédit Agricole has instituted a number of internal financing mechanisms specific to the Group.

REGIONAL BANKS' CURRENT ACCOUNTS

Each Regional Bank holds a current account with Crédit Agricole CIB, which records the financial movements resulting from internal financial transactions within the Group. This account, which may be in credit or debit, is presented in the balance sheet under the line item “Loans and receivables due from credit institutions” or “Debt due to credit institutions”.

SPECIAL SAVINGS ACCOUNTS

Funds held in special savings accounts (popular savings passbook accounts [*Livret d'épargne populaire*], sustainable and inclusive development passbook accounts [*Livret de développement durable et solidaire*], home purchase savings schemes and accounts, youth passbook accounts [*Livret Jeune*] and passbook savings accounts [*Livret A*]) are collected by the Regional Banks on behalf of Crédit Agricole S.A. and must be centralised at the latter. Crédit Agricole S.A. recognises them on its balance sheet as “Debt due to customers”.

TERM DEPOSITS AND ADVANCES

The Regional Banks also collect non-government-regulated savings funds (passbook accounts, bonds, warrants, certain term accounts and similar accounts etc.) on behalf of Crédit Agricole S.A. These funds are transferred to Crédit Agricole S.A. and are recognised as such on its balance sheet.

Special savings accounts and time deposits and advances are used by Crédit Agricole S.A. to make “advances” (loans) to the Regional Banks, with a view to funding their medium and long term loans.

50% of savings funds collected by the Regional Banks are transferred back to them in the form of so-called “mirror advances” (with maturities and interest rates precisely matching those of the savings funds received), which they are free to use at their discretion.

Since April 2020, the Regional Banks have had to refinance themselves in the form of advances, called “global advances”, from Crédit Agricole S.A. for the remaining 50% of the savings funds they have collected.

Furthermore, the Regional Banks may be refinanced in the form of unsecured loans negotiated at market price with Crédit Agricole S.A.

TRANSFER OF REGIONAL BANKS' LIQUIDITY SURPLUSES

The Regional Banks may use their “monetary” deposits (demand deposits, non-centralised time deposits and negotiable certificates of deposit) to finance lending to their customers. Surpluses must be transferred to Crédit Agricole S.A. where they are booked in current accounts, under “Loans and receivables due from credit institutions” or “Debt due to credit institutions” (depending on whether the current account open in the books of Crédit Agricole CIB is credit or debit – see above) or in term accounts, under “Crédit Agricole internal transactions”.

FOREIGN CURRENCY TRANSACTIONS

The Regional Banks' foreign currency activities are refinanced through Crédit Agricole S.A.

MEDIUM AND LONG-TERM NOTES ISSUED BY CRÉDIT AGRICOLE S.A.

These are placed on the market or by the Regional Banks with their customers. They are booked on the balance sheet by Crédit Agricole S.A. under liabilities either as “Debt securities” or as “Subordinated debt”, depending on the type of security issued.

LIQUIDITY AND SOLVENCY RISKS HEDGING AND BANKING RESOLUTION

Under the legal internal financial strength mechanism enshrined in Article L. 511-31 of the French Monetary and Financial Code (CMF), Crédit Agricole S.A., as the Central Body of the Crédit Agricole network, must take all necessary measures to ensure the liquidity and solvency of each affiliated credit institution, as well as the network as a whole. As a result, each member of the network benefits from this internal financial strength.

The general provisions of the CMF (*Code monétaire et financier* – French Monetary and Financial Code) have been reflected in the internal provisions setting out the operational measures required for this legal solidarity mechanism.

In the initial public offering of Crédit Agricole S.A., CNCA (now Crédit Agricole S.A.) signed an agreement with the Regional Banks in 2001 aiming notably at governing internal relations within the Crédit Agricole network. In particular, the agreement provides for the creation of a Fund for Bank Liquidity and Solvency Risks (FRBLS) designed to enable Crédit Agricole S.A. to fulfil its role as Central Body by providing assistance to any affiliated members that may experience difficulties. The main provisions of this agreement are set out in Chapter III of the Registration Document filed by Crédit Agricole S.A. with France's *Commission des opérations de Bourse* (now the French Financial Markets Authority – AMF) on 22 October 2001 under number R. 01-453.

The European banking crisis management framework was adopted in 2014 by EU Directive 2014/59 (known as the “Bank Recovery and Resolution Directive – BRRD”), incorporated into French law by Order 2015-1024 of 20 August 2015, which also adapted French law to the provisions of European Regulation 806/2014 of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund. Directive (EU) 2019/879 of 20 May 2019, known as “BRRD2”, amended the BRRD and was incorporated into French law by Order 2020-1636 of 21 December 2020.

This framework, which includes measures to prevent and to resolve banking crises, is intended to preserve financial stability, to ensure the continuity of activities, services and operations of institutions whose failure could significantly impact the economy, to protect depositors, and to avoid or limit the use of public financial support as much as possible. In this context, the European Resolution Authorities, including the Single Resolution Board, have been granted extensive powers to take all necessary measures in connection with the resolution of all or part of a credit institution or the group to which it belongs.

For cooperative banking groups, the “extended single point of entry” (“extended SPE”) resolution strategy is favoured by the resolution authorities, whereby resolution tools would be applied simultaneously at the level of Crédit Agricole S.A. and the affiliated entities. In this respect, and in the event of a resolution of the Crédit Agricole Group, the scope comprising Crédit Agricole S.A. (in its capacity as Central Body) and its affiliated entities would be considered as a whole as the expanded single entry point. Given the foregoing and the solidarity mechanisms that exist within the network, a member of the Crédit Agricole network cannot be put individually in resolution.

The resolution authorities may initiate resolution proceedings against a credit institution where they consider that: the institution has failed or is likely to fail, there is no reasonable prospect that another private measure will prevent the failure within a reasonable time, a resolution measure is necessary, and a liquidation procedure would be inadequate to achieve the resolution targets mentioned above.

The resolution authorities may use one or more resolution tools, as described below, with the aim of recapitalising or restoring the viability of the institution. The resolution tools should be implemented in such a way that equity holders (shares, mutual shares, CCLs, CCAs) bear losses first, with creditors following up immediately, provided that they are not excluded from bail-in legally speaking or by a decision of the resolution authorities. French law also provides for a protective measure when certain resolution tools or decisions are implemented, such as the principle that equity holders and creditors of an institution in resolution may not incur greater losses than those they would have incurred if the institution had been liquidated in the context of a judicial liquidation procedure under the French Commercial Code (*Code de commerce*) (NCWOL principle referred to in Article L. 613-57-I of the CMF). Thus, investors are entitled to claim compensation if the treatment they receive in a resolution is less favourable than the treatment they would have received if the institution had been subject to normal insolvency proceedings.

In the event that the resolution authorities decide to put the Crédit Agricole Group in resolution, they will first write down the par value of the CET1 instruments (shares, mutual shares, CCI and CCA), additional Tier 1 instruments, and Tier 2 instruments, in order to absorb losses, and then possibly convert the additional Tier 1 instruments and Tier 2 instruments ⁽¹⁾ into equity securities. Then, if the resolution authorities decide to use the bail-in tool, the latter would be applied to debt instruments ⁽²⁾, resulting in the partial or total write-down of these instruments or their conversion into equity in order to absorb losses.

With respect to the Central Body and all affiliated entities, the resolution authorities may decide to implement, in a coordinated manner, impairment or conversion measures and, where applicable, internal bailouts. In such an event, the impairment or conversion measures and, where applicable, internal bailout measures would apply to all entities within the Crédit Agricole network, regardless of the entity in question and regardless of the origin of the losses.

The creditor hierarchy in resolution is defined by the provisions of Article L. 613-55-5 of the CMF, effective as of the date of implementation of the resolution.

Equity holders and creditors of the same rank or with identical rights in liquidation will then be treated equally, regardless of the Group entity of which they are creditors.

The scope of this bail-in, which also aims to recapitalise the Crédit Agricole Group, is based on equity requirements at the consolidated level.

Investors must then be aware that there is a significant risk that holders of shares, mutual shares, CCLs and CCAs and holders of debt instruments of a member of the network will lose all or part of their investment if a resolution procedure is implemented on the Group, regardless of the entity of which they are a creditor.

(1) Articles L. 613-48 and L. 613-48-3 of the CMF

(2) Articles L. 613-55 and L. 613-55-1 of the CMF

The other resolution tools available to the resolution authorities are essentially the total or partial disposal of the activities of the institution to a third party or to a bridge institution and the separation of the assets of the institution.

This resolution framework does not affect the legal internal financial strength mechanism provided for in Article L. 511-31 of the French Monetary and Financial Code, which applies to the Crédit Agricole network, as defined in Article R. 512-18 of the same Code. Crédit Agricole S.A. considers that, in practice, this mechanism should be implemented prior to any resolution procedure.

The implementation of a resolution procedure to the Crédit Agricole Group would thus mean that the legal internal solidarity mechanism had failed to remedy the failure of one or more network entities, and hence of the network as a whole. It would also limit the likelihood that the conditions for triggering the guarantee covering the liabilities of Crédit Agricole S.A. (granted in 1988 to its third-party creditors by the Regional Banks on a joint and several basis, and up to the aggregate amount of their equity) are met. It should be recalled that this guarantee may be triggered in the event of an asset shortfall following Crédit Agricole S.A.'s bankruptcy or dissolution.

CAPITAL TIES BETWEEN CRÉDIT AGRICOLE S.A. AND THE REGIONAL BANKS

The capital ties between Crédit Agricole S.A. and the Regional Banks are governed by an agreement entered into by the parties prior to Crédit Agricole S.A.'s initial public offering.

Under the terms of this agreement, the Regional Banks exercise their control over Crédit Agricole S.A. through SAS Rue La Boétie, a holding company wholly owned by the Regional Banks. The purpose of SAS Rue La Boétie is to hold enough shares to ensure that it always owns at least 50% of the share capital and voting rights of Crédit Agricole S.A.

In addition, under the same agreement, Crédit Agricole S.A. directly owned approximately 25% of the share capital of each Regional Bank (except for *Caisse régionale de la Corse* owned at 99.9%). Following the transaction to simplify the Group's capital structure on 3 August 2016, the bulk of the cooperative investment certificates ("certificats coopératifs d'investissement" or CCIs) and the cooperative associate certificates ("certificats coopératifs d'associés" or CCAs) held by Crédit Agricole S.A. were transferred to a holding company ("Sacam Mutualisation") jointly owned by the Regional Banks.

INFORMATION PERTAINING TO THE RELATED PARTIES

The related parties of Crédit Agricole Group are the consolidated companies, including equity-accounted entities, the Group's Senior Executives and the Regional Banks, given the Group's legal structure and due to the fact that Crédit Agricole S.A. is the Central Body of the Crédit Agricole network.

In accordance with Crédit Agricole internal financial mechanisms, transactions between Crédit Agricole S.A. and the Regional Banks are presented on the balance sheet and income statement as Crédit Agricole internal transactions (Note 4.1 "Interest income and expenses", Note 4.2 "Net fees and commissions", Note 6.5 "Financial assets at amortised cost" and Note 6.7 "Financial liabilities at amortised cost").

OTHER SHAREHOLDERS' AGREEMENTS

Shareholder agreements signed during the financial year are detailed in Note 2 "Major structural transactions and material events during the period".

RELATIONS AMONG CONSOLIDATED COMPANIES AFFECTING THE CONSOLIDATED BALANCE SHEET

The list of Crédit Agricole Group companies is presented in Note 12 "Scope of consolidation at 31 December 2025". Since, at year-end, the existing transactions and outstandings between the Group's fully consolidated companies are eliminated on consolidation, only transactions with equity-accounted companies affect the Group's consolidated financial statements.

The main corresponding outstandings and commitments in the consolidated balance sheet at 31 December 2025 relate to transactions with the equity-accounted entities for the following amounts:

- loans and receivables due from credit institutions: €26 million (€13 million at 31 December 2024);
- loans and receivables due from customers: €1,300 million (€2,202 million at 31 December 2024);
- debt due to credit institutions: €20 million (€23 million at 31 December 2024);
- debt due to customers: €683 million (€915 million at 31 December 2024);

- commitments given on financial instruments: €1,984 million (€1,899 million at 31 December 2024);
- commitments received on financial instruments: €6,404 million (€5,559 million at 31 December 2024).

The transactions entered into with these entities did not have a material effect on the income statement for the period.

MANAGEMENT OF RETIREMENT, EARLY RETIREMENT AND END-OF-CAREER ALLOWANCES: INTERNAL HEDGING CONTRACTS WITHIN THE GROUP

As presented in Note 1.2 "Accounting policies and principles", employees are provided with various types of post-employment benefits. These are:

- end-of-career allowances;
- retirement plans, which may be either "defined-contribution" or "defined-benefit" plans.

The liability in this respect is partially funded by collective insurance contracts taken out with Predica, the Crédit Agricole Group's life insurance company.

These contracts govern:

- the setting up by the insurance company of mutual funds for investing contributions made by the employer to build up sufficient funds to cover end-of-career allowances or the various pension schemes;
- the management of the funds by the insurance company;
- the payment to the beneficiaries of the allowances and of the benefits due under the various plans.

Information on post-employment benefits is provided in Note 7 "Employee benefits and other compensation" in paragraphs 7.3 and 7.4.

RELATIONS WITH SENIOR MANAGEMENT

Given the mutual structure of the Crédit Agricole Group and the broad scope of the reporting entity, the concept of key management personnel as defined by IAS 24 is not representative of the governance rules in force within the Crédit Agricole Group.

Accordingly, the information required by IAS 24 on executive compensation is not presented.

CASH FLOW STATEMENT

The cash flow statement is presented using the indirect method.

Operating activities are representative of income-generating activities of Crédit Agricole Group.

Tax inflows and outflows are included in full within operating activities.

Investment activities show the impact of cash inflows and outflows associated with purchases and disposal of investments in consolidated and non-consolidated corporates, property, plant & equipment and intangible assets. This section includes strategic equity investments classified as "Fair value through profit or loss" or "Fair value through other comprehensive income that will not be reclassified to profit or loss".

Financing activities show the impact of cash inflows and outflows associated with operations of financial structure concerning equity and long-term borrowing.

The **net cash flows** attributable to the operating, investment and financing activities of **discontinued operations** are presented on separate lines in the cash flow statement.

Net cash and cash equivalents include cash, debit and credit balances with central banks and debit and credit demand balances with credit institutions.

NOTE 1

GROUP ACCOUNTING POLICIES AND PRINCIPLES, ASSESSMENTS AND ESTIMATES APPLIED

1.1 APPLICABLE STANDARDS AND COMPARABILITY

Unless otherwise stated, all amounts in this financial report are expressed in euros and shown in millions, with no decimal places. Rounding amounts to the nearest million euros may occasionally result in negligible differences in the totals and subtotals shown in the tables.

Pursuant to EC Regulation No. 1606/2002, the consolidated financial statements have been prepared in accordance with IAS/IFRS standards and IFRIC interpretations applicable at 31 December 2025 and as adopted by the European Union (carve-out version), thus using certain exceptions in the application of IAS 39 on macro-hedge accounting.

These cover the following:

Standards, amendments or interpretations	Date of first-time application: financial years from	Potential material impact for the Group
Amendment to IAS 21/IFRS 1 Lack of exchangeability	1 January 2025	No

ANC Regulation No. 2025-01 dated 7 February 2025, amending ANC Regulation No. 2016-09 and ANC Regulation No. 2020-01, dated 9 October 2020, should also be noted. This regulation covers the specific information to be provided by companies in the notes to their financial statements, from the 2025 financial year onwards, regarding certification fees for sustainability information.

Moreover, as long as the early application of standards and interpretations adopted by the European Union is optional for a period, this option is not selected by the Group, unless otherwise stated.

STANDARDS AND INTERPRETATIONS ADOPTED BY THE EUROPEAN UNION AT 31 DECEMBER 2025 NOT YET APPLIED BY THE GROUP

IFRS 9/IFRS 7 – Classification and measurement of financial instruments

The amendments to IFRS 9 and IFRS 7, adopted on 27 May 2025 and applicable to financial years beginning on or after 1 January 2026, clarify in particular the classification of financial assets with conditional characteristics, such as environmental, social and corporate governance (ESG) characteristics, through the SPPI test. Although this amendment is retroactive, the Group does not expect instruments with ESG clauses that existed before 1 January 2026 to fail the SPPI test.

These amendments will require additional information about financial instruments with contingent features as of the date of application.

These standards and interpretations are available on the European Commission website at: https://ec.europa.eu/info/business-economy-euro/company-reporting-and-auditing/company-reporting/financial-reporting_en

The standards and interpretations are the same as those applied and described in the Group's financial statements for the financial year ended 31 December 2024.

They have been supplemented by the IFRS standards as adopted by the European Union at 31 December 2025 and for which application is mandatory for the first time during financial year 2025.

STANDARDS AND INTERPRETATIONS NOT YET ADOPTED BY THE EUROPEAN UNION AT 31 DECEMBER 2025

The standards and interpretations published by the IASB at 31 December 2025 but not yet adopted by the European Union are not applied by the Group. They will become mandatory only as from the date planned by the European Union and have not been applied by the Group at 31 December 2025.

IFRS 18 – Presentation and disclosure in financial statements

IFRS 18 "Presentation and Disclosure in Financial Statements" published in April 2024 will replace IAS 1 "Presentation of Financial Statements" and will apply to financial years beginning on or after 1 January 2027, subject to adoption by the European Union. The Group will not apply this new standard in advance.

IFRS 18 will introduce a new structure for the income statement and the mandatory subtotals with classification of income and expenses into three categories: "operating", "investing" and "financing" in the income statement.

IFRS 18 will also require entities to provide a description in the notes to the financial statements of the performance measures defined by Management and used in public communications outside IFRS financial statements.

It also includes new requirements for how financial information is aggregated and disaggregated based on the identified roles of the primary financial statements and the notes.

Work is currently ongoing to analyse and prepare for its implementation within the Group.

IFRS IC DECISIONS, FINALISED AND APPROVED BY THE IASB, THAT MAY IMPACT THE GROUP

Standards, amendments or interpretations	Publication date	Potential material impact for the Group
IAS 7 Classification of the cash flows related to variation margin calls “Collateralised-to-Market” contracts	4 December 2024	No
IAS 38 Recognition of intangible assets resulting from climate-related commitments	20 March 2025	No
IFRS 9/IFRS 17/IFRS 15/IAS 37 Guarantees issued on obligations of other entities	20 March 2025	No
IFRS 15 Recognition of revenues from tuition fees	20 March 2025	No
IAS 29 Financial reporting in hyperinflationary economies	11 July 2025	No

1.2 ACCOUNTING POLICIES AND PRINCIPLES

USE OF ASSESSMENTS AND ESTIMATES TO PREPARE THE FINANCIAL STATEMENTS

Given their nature, estimates made to draw up the financial statements are based on certain assumptions and involve risks and uncertainties as to whether they will be achieved in the future.

Future results may be influenced by many factors, including:

- activity in domestic and international financial markets;
- fluctuations in interest and foreign exchange rates;
- the economic and political climate in certain business sectors or countries;
- changes in regulations or legislation;
- policyholder behaviour;
- demographic changes.

This list is not exhaustive.

Despite the unstable international environment, the global economy has resisted well. In the United States, the slowdown was less pronounced than anticipated. The inflationary impact of tariffs was more contained than expected, but inflation remained significantly above the Fed's target. The labour market has shown clear signs of a slowdown since the summer, which led the Fed, after nine months of status quo, to make three rate cuts at the end of the year.

In the eurozone, despite foreign trade being impacted by tariffs, the strength of the euro and Asian competition, the good health of private agents and the resilience of domestic demand caused accelerated growth. Inflation returned to its target level, leaving the ECB comfortably able to keep its rates unchanged from June 2025, after the decrease recorded in the first half of 2025.

The differences in the timing of the monetary policies of the Fed and the ECB, as well as slowing activity in the United States and something of an acceleration in the eurozone, caused a divergence in the evolution of interest rates on both sides of the Atlantic in 2025: overall, decreasing in the United States and rising in the eurozone. European sovereign spreads narrowed, particularly the Italian spread, which, adversely affected by the political and budgetary situation, fell slightly below the French spread. These various elements may have had an impact on the main accounting estimates at 31 December 2025.

Accounting estimates based on assumptions are principally used in the following assessments:

- financial instruments measured at fair value (including non-consolidated equity investments);
- insurance contract assets and liabilities;
- reinsurance contract assets and liabilities;
- liabilities under investment contracts without discretionary participation features;
- pension schemes and other post-employment benefits;
- stock option plans;
- impairment of debt instruments at amortised cost or at fair value through other comprehensive income that can be reclassified to profit or loss;
- provisions;
- impairment of goodwill;
- deferred tax assets;
- valuation of equity-accounted entities.

The procedures for the use of assessments or estimates are described in the relevant sections below.

In particular, the measurement of insurance contracts under IFRS 17 requires important judgements to be made. The main matters requiring judgement in the Group's application of IFRS 17 are as follows, and information about them is provided in the sections and notes referred to below:

- the estimation of future cash flows, in particular the projection of these cash flows and the determination of the contract boundary: in the sections “Measurement of insurance contracts/Estimation of future cash flows” and “Measurement of insurance contracts/Contract boundary”;
- the technique used to determine the adjustment for non-financial risk: in the section “Measurement of insurance contracts/Adjustment for non-financial risk”;
- the approach used to determine discount rates: in the section entitled “Measurement of insurance contracts/Discount rates”;
- the definition of hedging units and the determination of the amount of CSM allocated to profit or loss in each period to reflect the services provided under insurance contracts; in the section entitled “Recognition of the contractual service margin in profit or loss”;
- the determination of transitional amounts relating to groups of contracts existing at the transition date: in Note 5.3 “Specific characteristics of insurance”, section “Insurance contracts – Transitional amounts”.

FINANCIAL INSTRUMENTS (IFRS 9, IFRS 13, IAS 32 AND IAS 39)

Definitions

IAS 32 defines a financial instrument as any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity, meaning any contract representing contractual rights or obligations to receive or pay cash or other financial assets.

Financial assets and liabilities are treated in the financial statements in accordance with IFRS 9 as adopted by the European Union.

Derivative instruments are financial assets or liabilities whose value changes according to that of an underlying (provided, in the case of a non-financial variable, that the variable is not specific to a party to the contract), which require a small or no initial investment and for which settlement occurs at a future date.

IFRS 9 sets the principles governing the classification and measurement of financial instruments, impairment/provisioning of credit risk and hedge accounting, excluding macro-hedging transactions.

It should nevertheless be noted that the Crédit Agricole Group has opted not to apply the IFRS 9 general hedging model. All hedging relationships consequently remain within the scope of IAS 39 pending future provisions relating to macro-hedging.

“Green” or “ESG” financial assets and “green bond” financial liabilities comprise a variety of instruments and mainly relate to loans and borrowings used to finance environmental projects and the environmental transition. It should be noted that not all financial instruments with these qualifications necessarily have a remuneration that varies depending on the achievement of ESG targets. This terminology is liable to change as a result of European regulations on sustainable finance. These instruments are recognised in accordance with IFRS 9 using the principles set out below. In particular, loans whose indexation of the ESG factor compensation does not introduce leverage or is considered immaterial in terms of variability of the cash flows of the instrument are not considered as failing the SPPI test (analysis of contractual clauses) on the basis of this single factor.

Conventions for valuing financial assets and liabilities

Initial measurement

During their initial recognition, financial assets and liabilities are measured at fair value as defined by IFRS 13.

Fair value as defined by IFRS 13 corresponds to the price that would be received to sell an asset or paid to transfer a liability in an ordinary transaction between market participants, on the principal or the most advantageous market, at the valuation date.

Subsequent measurement

After initial recognition, financial assets and liabilities are measured according to their classification either at amortised cost using the effective interest rate method (EIR) for debt instruments or at fair value as defined by IFRS 13. Derivative instruments are always measured at fair value.

The effective interest rate (EIR) is the rate that discounts estimated future cash payments or receipts through the expected life of the financial instrument to obtain the net carrying amount of the financial asset or financial liability.

Amortised cost corresponds to the amount at which the financial asset or liability is measured during its initial recognition, including transaction costs directly attributable to its acquisition or issue, reduced by repayments of principal, increased or reduced by the cumulative amortisation calculated by the effective interest rate method (EIR) on any difference (discount or premium) between the initial amount and the amount at maturity. In the case of a financial asset at amortised cost or at fair value through recyclable equity, the amount may be adjusted if necessary in order to correct for impairment (see the paragraph on “Provisions for credit risk”).

Financial assets

Classification and measurement of financial assets

Non-derivative financial assets (debt or equity instruments) are classified on the balance sheet in accounting categories that determine their accounting treatment and their subsequent valuation mode.

The criteria for the classification and valuation of financial assets depends on the nature of the financial assets, according to whether they are qualified as:

- debt instruments (e.g. loans and fixed or determinable income securities); or
- equity instruments (e.g. shares).

These financial assets are classified in one of the following three categories:

- financial assets at fair value through profit or loss;
- financial assets at amortised cost (debt instruments only);
- financial assets at fair value through equity (recyclable for debt instruments; non-recyclable for equity instruments).

Debt instruments

The classification and valuation of a debt instrument depend on the combination of two criteria: the business model defined at portfolio level and the analysis of the contractual terms (SPPI test) determined by debt instrument, unless the fair value option is used.

The three business models

The business model represents the strategy followed by the management of Crédit Agricole Group for managing its financial assets in order to achieve its targets. The business model is specified for a portfolio of assets and does not constitute a case-by-case intention for an isolated financial asset.

We distinguish three business models:

- the Hold to Collect model where the aim is to collect contractual cash flows over the lifetime of the assets; this model does not always imply holding all of the assets until their contractual maturity; however, sales of assets are strictly governed;
- the Hold to Collect and Sell model where the aim is to collect the contractual cash flows over the lifetime of the assets and to sell the assets; under this model, both the sale of the financial assets and receipt of cash flows are essential; and
- the Other/Sell model, where the main aim is to sell the assets.

In particular, it concerns portfolios where the aim is to collect cash flows via disposals, portfolios whose performance is assessed based on fair value and portfolios of financial assets held for trading.

When the management strategy for managing financial assets does not correspond to either the collect model or the collect and sell model, these financial assets are classified in a portfolio whose management model is other/sell.

The contractual terms (“Solely Payments of Principal & Interest” or “SPPI” test)

“SPPI” testing combines a set of criteria, examined cumulatively, to establish whether contractual cash flows meet the characteristics of simple financing (principal repayments and interest payments on the remaining amount of principal due).

The test is satisfied when the financing gives entitlement only to the repayment of the principal and when the payment of interest received reflects the time value of money, the credit risk associated with the instrument, the other costs and risks of a conventional loan contract and a reasonable margin, whether the interest rate is fixed or variable.

In simple financing, interest represents the cost of the passage of time, the price of credit and liquidity risk over the period, and other components related to the cost of carrying the asset (e.g. administrative costs etc.).

In some cases, when qualitative analysis of this nature does not allow a conclusion to be made, quantitative analysis (or benchmark testing) is carried out. This additional analysis consists of comparing the contractual cash flows of the asset under review with the cash flows of a benchmark asset.

If the difference between the cash flows of the financial asset and the benchmark asset is considered immaterial, the asset is deemed to be simple financing.

Moreover, specific analysis is conducted when the financial asset is issued by special purpose entities establishing a differentiated order of payment among the holders of the financial assets by contractually linking multiple instruments and creating concentrations of credit risk (“tranches”).

Each tranche is assigned a rank of subordination that specifies the order of distribution of cash flows generated by the structured entity.

In this case, the “SPPI” test requires an analysis of the characteristics of contractual cash flows of the asset concerned and underlying assets according to the “look-through” approach and the credit risk borne by the tranches subscribed compared to the credit risk of the underlying assets.

The mode of recognition of debt instruments resulting from qualification of the business model combined with the “SPPI” test may be presented in the following diagram:

Debt instruments		Business models		
		Hold to collect	Hold to collect and sell	Other/Sell
SPPI test	Satisfied	Amortised cost	Fair value through other comprehensive income that may be reclassified to profit or loss	Fair value through profit or loss (SPPI test N/A)
	Not satisfied	Fair value through profit or loss	Fair value through profit or loss	Fair value through profit or loss (SPPI test N/A)

Debt instruments at amortised cost

Initially measured at fair value, debt instruments are subsequently measured at amortised cost if they are eligible for the “Hold to collect” model and if they pass the “SPPI” test.

They are recorded at the settlement/delivery date and their initial valuation also includes accrued interest and transaction costs.

Amortisation of any premiums or discounts and loans and receivables transaction costs on fixed-income securities is recognised in the income statement using the effective interest rate method.

This category of financial instruments is impaired under the conditions described in the specific paragraph “Impairment/provisioning for credit risks”.

Debt instruments at fair value through other comprehensive income that can be reclassified to profit or loss

Initially measured at fair value, debt instruments are subsequently measured at fair value through recyclable equity if they are eligible for the “Hold to collect and sell” model and if they pass the “SPPI” test.

They are recorded at the trade date and their initial valuation also includes accrued interest and transaction costs. Amortisation of any premiums or discounts and transaction costs on fixed-income securities is recognised in the income statement using the effective interest rate method.

These financial assets are subsequently measured at fair value, with changes in fair value recorded in other comprehensive income that can be reclassified to profit or loss and offset against the outstandings account (excluding accrued interest recognised in profit or loss according to the effective interest rate method).

In the case of disposal of the securities, these changes are transferred to the income statement.

This category of financial instruments is adjusted for expected credit losses (ECL) under the conditions described in the specific paragraph “Impairment/provisions for credit risks” (without this affecting the fair carrying amount).

Debt instruments at fair value through profit or loss

Debt instruments are measured at fair value through profit or loss in the following cases:

- the instruments are classified in portfolios composed of financial assets held for trading or for which the main aim is disposal: Financial assets held for trading are assets acquired or managed by the enterprise primarily with the aim of disposal in the short term or which are included in a portfolio of financial instruments managed as a unit and with the purpose of making a profit from short-term price fluctuations or an arbitrage margin. Although contractual cash flows are received during the period that the Crédit Agricole Group holds the assets, receiving these contractual cash flows is not essential but ancillary;
- debt instruments that do not fulfil the criteria of the “SPPI” test. This is notably the case for UCIs (Undertakings for Collective Investment);
- financial instruments classified in portfolios which the Crédit Agricole Group designates at fair value in order to reduce an accounting treatment difference on the income statement. In this case, the instrument is classified as designated at fair value through profit or loss.

Financial assets measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (directly recorded to profit or loss) and including accrued interest.

They are subsequently measured at fair value and changes in fair value are recognised in profit or loss, under “Revenues”, offset against the outstandings account. Interest on these instruments is recorded under “Net gains (losses) on financial instruments at fair value through profit and loss”.

This category of financial assets is not impaired for credit risk.

Equity instruments

Equity instruments are by default recognised at fair value through profit or loss, except in the case of the irrevocable option for classification and measurement at fair value through other comprehensive income that cannot be reclassified to profit or loss, providing that these instruments are not held for trading purposes.

Instruments at fair value through profit or loss

Financial assets measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (directly recorded to profit or loss). Equity instruments held for trading purposes are recorded at the trade date. Equity instruments measured at fair value through profit or loss and not held for trading are recorded at the settlement date.

They are subsequently measured at fair value and changes in fair value are recognised in profit or loss, under “Revenues”, offset against the outstandings account.

This category of financial assets is not impaired.

Equity instruments at fair value through other comprehensive income that cannot be reclassified to profit or loss (irrevocable option)

The irrevocable option to recognise equity instruments at fair value through other comprehensive income that cannot be reclassified to profit or loss is adopted at the transactional level (line by line) and applies on the date of initial recognition. These securities are recorded at the trade date.

The initial fair value includes transaction costs.

During subsequent valuations, changes in fair value are recognised in other comprehensive income that cannot be reclassified to profit or loss. In case of disposal, these changes are not reclassified to profit or loss. The gain or loss on disposal is recognised in equity.

Only dividends are recognised in profit or loss, if:

- the right of the entity to receive payment is established;
- it is probable that the economic benefits associated with the dividends will flow to the entity;
- the amount of dividends can be reliably estimated.

Debt instruments measured by definition at fair value through profit or loss whose business model is “Other/Sell” are recorded at the settlement/delivery date.

Debt instruments designated at fair value through profit or loss are recorded on the trade date.

Debt instruments measured by definition at fair value through profit or loss, failing the SPPI test, are recorded at the settlement date.

This category of financial assets is not impaired.

Reclassification of financial assets

In the case of a significant change in the business model used for managing financial assets (new activity, acquisition of entities, disposal or discontinuation of a significant activity), a reclassification of these financial assets is necessary. The reclassification applies to all financial assets in the portfolio from the date of reclassification.

In other cases, the business model remains unchanged for existing financial assets. If a new business model is identified, it applies prospectively to new financial assets grouped in a new management portfolio.

Temporary investments in/disposals of securities

Temporary disposals of securities (loans of securities, securities bought/sold under repurchase agreements) do not generally fulfil the conditions for derecognition.

Securities lent or sold under repurchase agreements remain on the balance sheet of the transferor. In the case of securities under repurchase agreements, the amounts received, representing the liability to the transferee, are recognised on the liabilities side of the balance sheet by the transferor.

Securities borrowed or received under repurchase agreements are not recognised on the balance sheet of the transferee.

In the case of securities under repurchase agreements, a debt to the transferor is recorded on the balance sheet of the transferee and offset against the amount paid. If the security is subsequently resold, the transferee records a liability equivalent to the fair value of fulfilling their obligation to return the security received under the agreement.

Income and expenses relating to such transactions are posted to profit and loss on a prorated basis, except in the case of classification of assets and liabilities at fair value through profit or loss.

Derecognition of financial assets

A financial asset (or group of financial assets) is fully or partially derecognised if:

- the contractual rights to the cash flows from the financial asset expire;
- or are transferred or are deemed to have expired or been transferred because they belong de facto to one or more beneficiaries; and substantially all the risks and rewards of the financial asset are transferred.

In this case, any rights or obligations created or retained at the time of transfer are recognised separately as assets and liabilities.

If the contractual rights to the cash flows are transferred but some of the risks and rewards of ownership as well as control are retained, the Crédit Agricole Group continues to recognise the financial asset to the extent of the Group's continuing involvement in that asset. Continuing involvement pertains to the portion of the asset that remains exposed to changes in the value of the transferred asset.

Financial assets renegotiated for commercial reasons without financial difficulties of the counterpart with the aim of developing or keeping a commercial relation are derecognised at the date of the renegotiation. The new loans granted to customers are recorded at their fair value on the date of renegotiation. Subsequent recognition depends on the business model and the "SPPI" test.

Interest paid by the government (IAS 20)

Under French government measures to support the agricultural and rural sector and to help home buyers, certain Crédit Agricole Group entities grant subsidised loans at rates fixed by the government. Consequently, the government pays these entities the difference between the subsidised lending rate and a predetermined benchmark rate. Thus, the loans that benefit from these subsidies are granted at market rates.

The subsidy system is periodically reviewed by the government.

In accordance with IAS 20, subsidies received from the government are recorded in profit or loss under "Interest and similar income" and spread over the life of the corresponding loans.

Financial liabilities

Classification and measurement of financial liabilities

Financial liabilities are classified on the balance sheet in the following two accounting categories:

- financial liabilities at fair value through profit or loss, either due to their nature or optionally;
- financial liabilities at amortised cost.

Financial liabilities at fair value through profit or loss due to their nature

Financial instruments issued primarily to be bought back in the short term, instruments forming part of an identified portfolio of financial instruments which are managed together and which have indications of a recent profile of short-term profit-taking, and derivatives (with the exception of certain hedging derivatives) are measured at fair value due to their nature.

Changes in the fair value of this portfolio are recognised through profit or loss.

Financial liabilities designated at fair value through profit or loss

Financial liabilities fulfilling one of the three conditions defined by the standard below may be designated for measurement at fair value through profit or loss: for hybrid issues comprising one or more separable embedded derivatives, in order to reduce or eliminate the distortion of accounting treatment or groups of managed financial liabilities for which performance is measured at fair value.

This option is irrevocable and applies mandatorily from the date of initial recognition of the instrument.

During subsequent measurement, these financial liabilities are measured at fair value through profit or loss for changes in fair value not related to own credit risk and through other comprehensive income that cannot be reclassified to profit or loss for changes in value related to own credit risk, unless this aggravates an accounting mismatch (in which case any changes in value related to the Company's own credit risk are recorded in the income statement, as required by the standard).

Financial liabilities measured at amortised cost

All other liabilities fulfilling the definition of a financial liability (excluding derivatives) are measured at amortised cost.

These liabilities are initially measured at fair value (including transaction income and costs) and subsequently at amortised cost using the effective interest rate method.

Deposits and savings accounts

Deposits and savings accounts are recorded under the category "Financial liabilities at amortised cost – Due to customers" in spite of the characteristics of the collection system within the Crédit Agricole Group, with deposits originating from the Regional Banks centralised at Crédit Agricole Group. For the Group, the ultimate counterparty for these deposits is the end customer.

The deposits and savings are initially measured at fair value and subsequently at amortised cost.

Regulated savings products are by nature deemed to be at market rates.

Home purchase savings schemes and home purchase savings accounts (HPSPs) as set out in Note 6.15 "Provisions".

Reclassification of financial liabilities

The initial classification of financial liabilities is irrevocable. No subsequent reclassification is authorised.

Distinction between debt instruments and equity

Securities are classed as debt instruments or equity instruments based on the substance of the contractual terms.

A financial liability is a debt instrument if it includes a contractual obligation:

- to provide another entity with cash, another financial asset or a variable number of equity instruments;
- or
- to exchange financial assets and liabilities with another entity at potentially unfavourable conditions.

An equity instrument is a non-redeemable financial instrument which offers discretionary compensation representing a residual interest in a corporate after deduction of all its financial liabilities (net assets) and which is not qualified as a debt instrument.

Treasury share buyback

Treasury shares or equivalent derivative instruments such as options on treasury shares bought by Crédit Agricole Group with a fixed strike ratio, including shares held to cover stock option plans, do not meet the definition of a financial asset and are deducted from equity. They do not generate any impact on the income statement.

Derecognition and modification of financial liabilities

A financial liability is derecognised in full or in part:

- when it is extinguished; or
- when quantitative or qualitative analyses suggest it has undergone a substantial change following restructuring.

A substantial modification of an existing financial liability must be recorded as an extinction of an initial financial liability and the recognition of a new financial liability (novation). Any differential between the carrying amount of the extinct liability and the new liability will be recognised immediately in the income statement.

If the financial liability is not derecognised, the original effective interest rate is maintained. A discount/premium is recognised immediately in the income statement at the date of modification and is then spread, using the original effective interest rate, over the remaining life of the instrument.

Negative interest on financial assets and financial liabilities

In accordance with the IFRS IC decision of January 2015, negative interest income (expense) on financial assets that does not meet the definition of income under IFRS 15 is recognised as interest expense in the income statement and not as a reduction of interest income. The same applies to negative interest expense (income) on financial liabilities.

Impairment/provisions for credit risks

Scope of application

In accordance with IFRS 9, the Crédit Agricole Group recognises a value adjustment for expected credit losses (ECL) on the following outstandings:

- financial assets of debt instruments at amortised cost or fair value through other comprehensive income that can be reclassified to profit or loss (loans and receivables, debt securities);
- financing commitments which are not measured at fair value through profit or loss;
- financial guarantee commitments coming under IFRS 9 and which are not measured at fair value through profit or loss;
- rental receivables coming under IFRS 16; and
- trade receivables generated by transactions under IFRS 15.

Equity instruments (at fair value through profit or loss or through other comprehensive income that cannot be reclassified to profit or loss) are not concerned by impairment provisions.

Derivative and other financial instruments measured at fair value through profit or loss are subject to the calculation of counterparty risk which is not covered by the ECL model. This calculation is described in the chapter entitled "Risks factors and risk management" of the Universal Registration Document.

Credit risk and impairment/provisioning stages

Credit risk is defined as risk of loss related to default by a counterparty leading to its inability to meet its commitments to the Group.

The process of provisioning credit risk has three stages:

- **Stage 1:** upon initial recognition of the financial instrument (credit, debt security, guarantee etc.), the Crédit Agricole Group recognises the 12-month expected credit losses;
- **Stage 2:** if the credit quality deteriorates significantly for a given transaction or portfolio, the Crédit Agricole Group recognises the expected losses over its lifetime;
- **Stage 3:** when one or more default events have occurred on the transaction or on a counterparty with an adverse effect on the estimated future cash flows, Crédit Agricole Group recognises incurred losses over its lifetime. Subsequently, if the conditions for classifying financial instruments in Stage 3 are not met, the financial instruments are reclassified in Stage 2, then in Stage 1 according to the subsequent improvement in the quality of the credit risk.

Definition of default

The definition of default for the requirements of ECL provisioning is identical to that used in management and for the calculation of regulatory ratios. A debtor is, therefore, considered to be in default when at least one of the following two conditions has been met:

- a significant arrear in payment, generally more than ninety days past due, unless specific circumstances point to the fact that the delay is due to reasons independent of the debtor's financial situation;
- Crédit Agricole Group believes that the debtor is unlikely to settle its credit obligations unless it avails itself of certain measures such as enforcement of collateral security right.

A loan in default (Stage 3) is said to be impaired when one or more events occur which have a negative effect on the estimated future cash flows from this financial asset. Indications of impairment of a financial asset cover observable data on the following events:

- significant financial difficulties of the issuer or borrower;
- a breach of contract, such as default or overdue payment;
- the granting, by the lender(s) to the borrower, for economic or contractual reasons related to financial difficulties of the borrower, of one or more favours that the lender(s) would not have considered under other circumstances;
- the increasing probability of bankruptcy or financial restructuring of the borrower;
- the disappearance of an active market for the financial asset due to financial difficulties;
- the purchase or creation of a financial asset with a significant discount, which reflects the credit losses suffered.

It is not necessarily possible to isolate a particular event. The impairment of the financial asset could result from the combined effect of several events.

The defaulting counterparty returns to a healthy situation only after an observation period (90 days) that makes it possible that the debtor is no longer in default (assessment by the Risk Management Department).

Definition of expected credit loss (“ECL”)

ECL is defined as the weighted expected probable value of the discounted credit loss (principal and interest). It represents the present value of the difference between the contractual cash flows and the expected cash flows (including principal and interest).

The ECL approach is designed to anticipate as early as possible the recognition of expected credit losses.

ECL governance and measurement

The governance of the system for measuring IFRS 9 parameters is based on the structure implemented as part of the Basel framework. The Group Risk department is responsible for defining the methodological framework and supervising the loan loss provisioning system.

The Group primarily relies on the internal rating system and current Basel processes to define the scope of the IFRS 9 parameters required to calculate ECL. The assessment of the change in credit risk is based on an expected loss model and extrapolation based on reasonable scenarios. All information that is available, relevant, reasonable and justifiable, including of a forward-looking nature, must be retained.

The formula includes among others the probability of default, loss given default and exposure at default parameters.

These calculations are broadly based on the internal models used as part of the regulatory framework, but with specific characteristics to determine an economic ECL. IFRS 9 recommends a Point in Time analysis while having regard to historical loss data and forward-looking macroeconomic data, whereas the prudential regulation analyses the perspectives Through The Cycle for probability of default (PD) and in a Downturn for Loss Given Default.

The accounting approach also requires the recalculation of certain Basel parameters, in particular to eliminate internal recovery costs or floors that are imposed by the regulator in the regulatory calculation of Loss Given Default (“LGD”).

ECLs are calculated according to the type of product concerned: financial instruments or off-balance sheet instruments.

The expected credit losses for the coming 12 months (Stage 1) make up a percentage of the lifetime expected credit losses (Stages 2 and 3), and represent the lifetime cash flow shortfalls in the event of a default during the 12 months following the reporting period (or a shorter period if the expected lifetime of the financial instrument is less than 12 months), weighted by the probability of default within 12 months.

Expected credit losses are discounted at the effective interest rate or at the contractual rate (when the EIR is not available) used for the initial recognition of the financial instrument.

The terms of measurement of ECLs include collateral and other credit enhancements that are part of the contractual terms and which the Crédit Agricole Group does not account for separately. The estimate of the expected cash flow shortfalls from a guaranteed financial instrument reflects the amount and timing of the recovery of the guarantees. In accordance with IFRS 9, the inclusion of guarantees and sureties does not affect the assessment of the significant deterioration in credit risk: this is based on the evolution of the debtor's credit risk without taking into account guarantees.

The models and parameters used are backtested at least annually.

Forward-looking macroeconomic data are taken into account in accordance with a methodological framework applicable at two levels:

- at Group level for the determination of a shared framework for the consideration of forward-looking data in the estimation of PD and LGD parameters over the transaction amortisation period;
- at the level of each entity in respect of its own portfolios.

Significant deterioration of credit risk

All Group entities must assess, for each financial instrument, the deterioration of credit risk from origination to each reporting date. Based on this assessment of the change in credit risk, the entities must classify their exposure into different risk categories (Stages).

To assess significant deterioration, the Group uses a process based on two levels of analysis:

- the first level is based on absolute and relative quantitative criteria and rules as well as qualitative Group criteria that apply to all Group entities (central forward looking);
- the second level is linked to the expert assessment, based on local forward-looking information, of the risk held by each entity in its portfolios that may lead to an adjustment in the Group Stage 2 reclassification criteria (switching a portfolio, sub-portfolio or third party from 12-month ECL to lifetime ECL).

Each financial instrument is, without exception, assessed for significant deterioration. Contagion is not required for the downgrading of financial instruments of the same counterparty from Stage 1 to Stage 2. The significant deterioration assessment must consider the change in credit risk of the principal debtor without taking account of any guarantee, including for transactions with a shareholder guarantee.

Possible losses in respect of portfolios of small loans with similar characteristics may be estimated on a statistical basis rather than individually assessed.

The assessment of the significant increase in credit risk under the first level, defined above, for financial instruments with a rating model is based on the following two criteria:

1. Low credit risk exemption:

In accordance with current standards, the Group has opted to apply the “low credit risk” exemption to investment-grade debt securities (see IFRS 9.B5.5.23) and loan agreements with a probability of default below a given threshold (i.e. 0.30%).

2. Quantitative indicators:

The Crédit Agricole Group has selected several quantitative criteria to classify a Stage 2 deterioration. It should be noted that any of these criteria is sufficient for a Stage 2 deterioration. The types of criteria are as follows:

- A relative criterion that measures, at the contract level, the change in the associated risk since the initial recognition date. It measures the difference (as a ratio) between the default risk on the reporting date of a counterparty and the default risk assessed at the initial recognition date.
- Three absolute criteria. The Group has defined:
 - an absolute threshold criterion based on the Basel probabilities of default to capture an absolute deterioration not correlated with economic conditions. In practice, it captures the last two grades before the default regarded as risky, and therefore with a Stage 2 classification for the calculation of ECL,

- an absolute threshold criterion based on the probability of default at one year (forward looking) at the reporting date, capturing an absolute significant deterioration correlated with the economic situation,
- an absolute threshold criterion based on the number of days past due exceeding 30 days for a Stage 2 classification.

3. Qualitative indicators:

The Group uses a set of qualitative indicators allowing for a Stage 2 deterioration. These indicators may be at contract, counterparty or portfolio level and make it possible to identify exposures that have seen a significant deterioration in credit risk.

In the absence of an internal rating model, the Crédit Agricole Group uses the absolute threshold of payment 30 days past due as the maximum threshold for significant credit risk increase and classification in Stage 2.

If the credit risk increase since origination is no longer observed, impairment may be reduced to the 12-month expected credit losses (Stage 1).

To make up for the fact that certain significant deterioration factors or indicators may not be identifiable at instrument level, the standard allows for the assessment of significant deterioration at financial instrument portfolio level, or for groups of portfolios or parts of portfolios.

Portfolios can be created for the collective assessment of deterioration for instruments that share common characteristics, such as:

- instrument type;
- credit risk rating (including internal Basel 2 rating for entities with an internal ratings system);
- collateral type;
- date of initial recognition;
- remaining term until maturity;
- business sector;
- geographical location of the borrower;
- the value of collateral relative to the financial assets, if this has an impact on the probability of default (for example, in the case of loans secured only by collateral in certain countries or loan-to-value ratios);
- distribution channel, purpose of financing etc.

Differentiation of significant deterioration by market is therefore possible (home loans, consumer finance, loans to farmers or small corporates, corporate loans etc.).

The grouping of financial instruments for the purposes of credit risk assessment on a homogeneous portfolio basis may change over time, as new information becomes available.

For securities, the Crédit Agricole Group uses an approach that consists of applying an absolute level of credit risk, in accordance with IFRS 9, below which exposures are classified in Stage 1 and provisions are made based on 12-month ECL.

As such, the following rules shall apply for monitoring the significant deterioration of securities:

- “Investment Grade” securities, at the reporting date, are classified in Stage 1 and provisions are made based on 12-month ECL;
- “Non-Investment Grade” securities (NIG), at the reporting date, must be subject to monitoring for significant deterioration since origination, and be classified in Stage 2 (lifetime ECL) in the event of significant deterioration in credit risk.

Relative deterioration must be assessed prior to the occurrence of a known default (Stage 3).

Restructuring due to financial difficulty

Debt instruments restructured due to financial difficulties are those for which Crédit Agricole Group has amended the original financial terms (interest rate, term etc.) for economic or legal reasons linked to the financial difficulties of the borrower, under conditions that would not have been considered under other circumstances. As such, these can be any debt instruments, regardless of the risk deterioration category of the debt instrument since the initial recognition.

In accordance with the EBA (European Banking Authority) definition as stated in the “Risk factors and risk management – Risk management” chapter, debt restructuring for financial difficulties of the debtor refers to any modification to one or more credit agreements for that same reason, as well as any refinancing granted due to financial difficulties experienced by the customer.

This definition of restructuring must be applied to each agreement and not at client level (no contagion).

The definition of loans restructured due to financial difficulty is therefore comprised of two cumulative criteria:

- contract modification or debt refinancing (concessions);
- a customer who is in a difficult financial position (a debtor facing, or about to face, difficulties in honouring financial commitments).

“Contract modification” refers to the following example situations:

- there is a difference between the modified contract and the former terms of the contract, to the benefit of the borrower;
- the contract modifications result in more favourable conditions for the borrower, from which other customers of the bank, with a similar risk profile and at the same time, do not benefit.

“Refinancing” refers to situations in which a new debt is granted to the client to enable it to repay in full or in part another debt for which it cannot meet the contractual terms and conditions due to its financial position.

The restructuring of a loan (whether performing or non-performing) infers the presumed existence of a proven risk of loss (Stage 3).

The need to recognise impairment on the restructured exposure must therefore be analysed accordingly (a restructuring does not automatically result in the recognition of impairment for proven losses or classification as default).

The “restructured loan” classification is temporary.

Once the restructuring as defined by the EBA has been carried out, the exposure continues to be classified as “restructured” for at least two years, if the exposure was performing when restructured, and three years if the exposure was in default when restructured. These periods are extended in the event of the occurrence of certain events (e.g. further incidents).

In the absence of derecognition for this type of event, the reduction of future cash flows granted to a counterparty, or the postponing of these flows as part of a restructuring, shall result in the recognition of a discount in the cost of risk.

It represents loss of future cash flow discounted at the original effective rate. It is equal to the difference between:

- the carrying amount of the loan;
- and the sum of theoretical future cash flows from the “restructured” loan, discounted at the original effective interest rate (defined at the date of the financing commitment).

In the event of a waiver of part of the share capital, this amount shall constitute a loss to be recorded immediately in cost of risk.

The discount recognised when a loan is restructured is accounted for under cost of risk.

Upon reversal of the discount, the portion associated with the passage of time is recorded in "Revenues".

Accounts uncollectible

When a loan is deemed uncollectible, i.e. when it cannot be recovered in full or in part, the amount deemed uncollectible must be derecognised from the balance sheet and written off.

The decision as to when to write off a loan is taken on the basis of an expert opinion. This must therefore be established by each entity, with its Risk Management Department, according to its own business knowledge. Before any write-offs, a Stage 3 impairment loss must be recognised (with the exception of assets at fair value through profit or loss).

For loans at amortised cost or fair value through other comprehensive income that can be reclassified to profit or loss, the amount written off is recorded under cost of risk (nominal amount) and "Revenues" (interests).

Derivative financial instruments

Classification and measurement

Derivative instruments are financial assets or liabilities classified by default as derivative instruments held-for-trading unless they can be considered to be hedging derivatives.

For their initial recognition, they are recorded on the balance sheet at their initial fair value on the trading date.

They are subsequently recognised at their fair value.

At the end of each reporting period, the counterparty of the change in fair value of derivatives on the balance sheet is recorded:

- through profit or loss if it concerns derivative instruments held-for-trading and for fair value hedges;
- through recyclable equity for cash flow hedging derivatives and net investments in foreign operations for the effective portion of the hedge.

Hedge accounting

General framework

In accordance with a decision made by the Group, the Crédit Agricole Group chooses not to apply the "hedge accounting" component of IFRS 9, as permitted by the standard. All hedging relationships will continue to be documented in accordance with the rules of IAS 39 until, at the latest, the date on which the macro-hedging text is adopted by the European Union. However, hedge accounting under IAS 39 uses the classification and measurement principles of IFRS 9 to decide which financial instruments qualify.

Under IFRS 9, and taking account of the IAS 39 hedging principles, debt instruments at amortised cost and at fair value through recyclable equity qualify as fair value hedges and as cash flow hedges.

Documentation

Hedging relationships must comply with the following principles:

- fair value hedges are intended to provide protection from exposure to changes in the fair value of an asset or a liability that has been recognised, or of a firm commitment that has not been recognised, attributable to the risk(s) hedged and that may have an impact on net income (for instance, the hedging of all or some changes in fair value caused by the interest rate risk of a fixed-rate debt);

- cash flow hedges are intended to provide protection from exposure to changes in the future cash flow of an asset or liability that has been recognised, or of a transaction considered to be highly probable, attributable to the risk(s) hedged and that could (in the event of a planned transaction not carried out) have an impact on net income (for instance, the hedging of changes in all or some of the future interest payments on a floating-rate debt);
- net investment hedges in foreign operations are intended to provide protection against the risk of unfavourable changes in fair value associated with the foreign exchange risk of an investment carried out abroad in a currency other than the euro, Crédit Agricole Group's presentation currency.

Hedges must also meet the following criteria in order to be eligible for hedge accounting:

- the hedging instrument and the hedged item must be eligible;
- there must be formal documentation from inception, primarily including the individual identification and characteristics of the hedged item, the hedging instrument, the nature of the hedging relationship and the nature of the hedged risk;
- the effectiveness of the hedge must be demonstrated, at inception and retrospectively, by testing at each reporting date.

For interest rate hedges for a portfolio of financial assets or financial liabilities, Crédit Agricole Group documents the hedging relationship for fair value hedges in accordance with the carve-out version of IAS 39 as adopted by the European Union. In particular:

- the Group documents these hedging relationships based on its gross position in derivative instruments and hedged items;
- the effectiveness of the hedging relationships is measured by maturity schedules.

Measurement

The remeasurement of the derivative at fair value is recorded in the financial statements as follows:

- **fair value hedges:** the change in value of the derivative is recognised in the income statement symmetrically with the change in value of the hedged item in the amount of the hedged risk. Only the net amount of any ineffective portion of the hedge is recognised in the income statement;
- **cash flow hedges:** the change in value of the derivative, excluding accrued interest receivable, is recognised in the balance sheet through a specific account in other recyclable comprehensive income for the effective portion and any eventual ineffective portion of the hedge is recognised in the income statement. Profits or losses on the derivative accrued through equity are reclassified to profit or loss when the hedged cash flows occur;
- **hedges of net investment in a foreign operation:** the change in value of the derivative is recognised in the balance sheet in the translation adjustment account in recyclable equity and any ineffective portion of the hedge is recognised in the income statement.

Where the conditions for benefiting from hedge accounting are no longer met, the following accounting treatment must be applied prospectively, unless the hedged item disappears:

- **fair value hedges:** only the derivative instrument continues to be revalued through profit or loss. The hedged item is wholly accounted for according to its classification. For debt instruments at fair value through other comprehensive income that can be reclassified to profit or loss, changes in fair value subsequent to the ending of the hedging relationship are recorded in equity in their entirety. For hedged items valued at amortised cost, which were interest rate hedged, the revaluation adjustment is amortised over the remaining life of those hedged items;

- **cash flow hedges:** the hedging instrument is valued at fair value through profit or loss. The amounts accumulated in equity under the effective portion of the hedge remain in equity until the hedged flows of the hedged item affect profit or loss. For interest rate hedged items, income statement is impacted according to the payment of interest. In practice, the revaluation adjustment is amortised over the remaining life of those hedged items;
- **hedges of net investment in a foreign operation:** The amounts accumulated in equity under the effective portion of the hedge remain in equity as long as the net investment is held. The income is recorded once the net investment in a foreign operation exits the scope of consolidation.

Embedded derivatives

An embedded derivative is a component of a hybrid contract that meets the definition of a derivative product. This definition applies only to financial liabilities and non-financial contracts. Embedded derivatives must be accounted for separately from the host contract if the following three conditions are met:

- the hybrid contract is not measured at fair value through profit or loss;
- the embedded component taken separately from the host contract has the characteristics of a derivative;
- the characteristics of the derivative are not closely related to those of the host contract.

Determination of the fair value of financial instruments

When determining the fair value of financial instruments observable inputs must be prioritised. It is presented using the hierarchy defined in IFRS 13.

IFRS 13 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an ordinary transaction between market participants, on the principal or the most advantageous market, at the valuation date.

Fair value applies individually to each financial asset or financial liability. A portfolio exemption may be used where the management and risk monitoring strategy so allow and are appropriately documented. Thus, certain fair value parameters are calculated on a net basis when a group of financial assets and financial liabilities is managed on the basis of its net exposure to market or credit risks.

The Crédit Agricole Group considers that the best evidence of fair value is reference to quoted prices published in an active market.

When such quoted prices are not available, fair value is determined using valuation techniques that maximise the use of relevant observable data and minimise the use of unobservable data.

When a debt is valued at fair value through profit or loss (by nature or designated), fair value takes account of the own credit risk of the issuer.

Fair value of structured issues

In accordance with IFRS 13, the Crédit Agricole Group values its structured issues, recognised at fair value, by taking as a reference the issuer spread that specialist participants would agree to receive to acquire new Group issues.

Fair value hierarchy

The standard classifies fair value into three levels based on the observability of inputs used in valuation techniques:

Level 1: fair value corresponding to quoted prices (unadjusted) in active markets

Level 1 is composed of financial instruments that are directly quoted in active markets for identical assets and liabilities that the Crédit Agricole Group can access at the valuation date. These are stocks and bonds quoted in active markets, fund securities quoted in an active market and derivatives traded on an organised market, in particular futures.

A market is regarded as being active if quoted prices are readily and regularly available from an exchange, broker, dealer, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

For financial assets and liabilities with offsetting market risks, the Crédit Agricole Group uses mid-prices as a basis for determining fair values for the offsetting risk positions. The Group applies the current asking price to open short positions and the current bid price to open long positions.

Level 2: fair value measured using directly or indirectly observable inputs other than those in Level 1

The inputs used are observable either directly (i.e. prices) or indirectly (derived from prices) and generally consist of data from outside Crédit Agricole Group, which are publicly available or accessible and based on a market consensus.

Level 2 consists of:

- stocks and bonds quoted in an inactive market or not quoted in an active market but for which the fair value is established using a valuation methodology usually used by market participants (such as discounted cash flow techniques or the Black & Scholes model) and based on observable market data;
- instruments that are traded over the counter, the fair value of which is measured with models using observable market data, i.e. that can be derived from various independently available external sources which can be obtained on a regular basis. For example, the fair value of interest rate swaps is generally derived from the yield curves of market interest rates as observed at the reporting date.

When the Crédit Agricole Group uses the standard models and observable market data (such as interest rate yield curves or implied volatility surfaces), the day one gain or loss resulting from the initial fair value measurement of the related instruments is recognised in profit or loss at inception.

Level 3: fair value that is measured using significant unobservable inputs

For some complex instruments that are not traded in an active market, fair value measurement is based on valuation techniques using assumptions that cannot be observed on the market for an identical instrument. These instruments are disclosed within Level 3.

This mainly concerns complex interest rate instruments, equity derivatives, structured credit instruments for which fair value measurement includes, for instance, correlation or volatility inputs that are not directly benchmarkable with market data.

The transaction price is deemed to reflect the market value, any recognition of day one gain or loss is deferred.

The margin relating to these structured financial instruments is generally recognised through profit or loss over the period during which inputs are deemed unobservable. When market data become “observable”, the remaining margin to be deferred is immediately recognised in profit or loss.

Valuation methodologies and models used for financial instruments that are disclosed within Levels 2 and 3 incorporate all factors that market participants would consider in setting a price. They shall be beforehand validated by an independent control. Fair value measurement notably includes both liquidity risk and counterparty risk.

Offsetting of financial assets and financial liabilities

In accordance with IAS 32, Crédit Agricole Group nets a financial asset and a financial liability and reports the net amount when, and only when, it has a legally enforceable right to offset the amounts reported and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

The derivative instruments and the repurchase agreements handled with clearing houses that meet the two criteria required by IAS 32 have been offset on the balance sheet.

Net gains (losses) on financial instruments

Net gains (losses) on financial instruments at fair value through profit or loss

For financial instruments recognised at fair value through profit or loss, this item notably includes the following income statement elements:

- dividends and other revenues from equities and other variable income securities which are classified under financial assets at fair value through profit or loss;
- changes in fair value of financial assets or liabilities at fair value through profit or loss;
- gains and losses on disposals of financial assets at fair value through profit or loss;
- changes in fair value and gains and losses on disposal or termination of derivative instruments not included in a fair value hedge or cash flow hedge relationship.

This item also includes the ineffective portion of hedges.

Net gains (losses) on financial instruments at fair value through other comprehensive income

For financial assets recognised at fair value through equity, this item notably includes the following income statements elements:

- dividends from equity instruments classified as financial assets at fair value through non-recyclable equity;
- gains and losses on disposals and income associated with the termination of hedging relationships on debt instruments classified as financial assets at fair value through recyclable equity;
- net income on disposals or associated with the termination of fair value hedging instruments of financial assets at fair value through equity when the hedged item is disposed of.

Financing commitments and guarantees given

Financing commitments that are not designated as fair value through profit or loss or not treated as derivative instruments within the meaning of IFRS 9 are not recognised on the balance sheet. They are, however, covered by provisions for credit risk in accordance with the provisions of IFRS 9.

A financial guarantee contract is a contract under which the issuer must make specific payments to reimburse the holder for a loss incurred due to a specific debtor's failure to make a payment when due under the initial or amended terms of a debt instrument.

Financial guarantee contracts are recognised at fair value initially then subsequently at the higher of:

- the value adjustment amount for losses determined in accordance with the provisions of IFRS 9 in the “Impairment” section; or
- the amount originally recognised less, where applicable, the sum of income recognised in accordance with the principles of IFRS 15 “Revenue from Contracts with Customers”.

PROVISIONS (INCLUDING IAS 37)

The Crédit Agricole Group has identified all obligations (legal or constructive) resulting from a past event for which it is probable that an outflow of resources will be required to settle the obligation, and for which the due date or amount of the settlement is uncertain but can be reliably estimated. These estimates are discounted where applicable whenever there is a material impact.

For obligations other than those related to credit risk, the Crédit Agricole Group has set aside general provisions to cover:

- operational risks;
- employee benefits;
- financing commitment execution risks;
- claims and liability guarantees;
- tax risks (excluding income tax);
- risks related to home purchase savings schemes.

The latter provision is designed to cover the Group's obligations in the event of unfavourable moves impacting home purchase savings schemes. These obligations are: (i) to pay a fixed interest rate on the savings contract determined at inception for an undefined period of time; and (ii) to grant a loan to home purchase savings schemes and account savers at a rate fixed at inception of the contract. The provision is calculated for each generation of a home purchase savings scheme and for all home purchase savings accounts, with no netting of obligations between generations.

The amount of these obligations is calculated taking account notably of:

- subscriber behaviour models, based on assumptions regarding subscriber behaviour drawn from historical experience, which may not necessarily reflect actual trends in future behaviour;
- an estimate of the amount and term of the loans that will be granted in the future, based on historical experience over an extended period of time;
- the yield curve for market rates and reasonably foreseeable trends.

Certain estimates may be made to determine the amount of the following provisions:

- the provision for operational risks for which the identification of proven risks and an assessment by Management of incident frequency and the potential financial impact are taken into account;
- the provision for legal risks, which is based on Management's best estimate in light of the information in its possession at the end of the reporting period.

Detailed information is provided in Note 6.15 “Provisions”.

EMPLOYEE BENEFITS (IAS 19)

In accordance with IAS 19, employee benefits are recorded in four categories:

- short-term employee benefits;
- post-employment benefits falling into two categories: defined-benefit schemes and defined-contribution schemes;
- other long-term benefits (long-service awards, bonuses and compensation payable 12 months or more after the end of the financial year);
- severance payments.

Short-term benefits

Short-term benefits are those granted to employees during their working lives, and which would be expected to be paid in full within the 12 months following the financial year in which the services were rendered. These include salaries, premiums, paid annual leave, related social security costs and tax charges, and employee profit-sharing and incentive plans. These benefits are recognised as expenses for the financial year in which the services were provided by employees.

Post-employment benefits

Defined-benefit schemes

At each reporting date, the Crédit Agricole Group sets aside reserves to cover its liabilities for retirement and similar benefits and all other employee benefits falling in the category of defined-benefit schemes.

In keeping with IAS 19, these commitments are stated based on a set of actuarial, financial and demographic assumptions, and in accordance with the Projected Credit Units method. Under this method, for each year of service, a charge is booked in an amount corresponding to the employee's vested benefits for the financial year. The charge is calculated based on the discounted future benefit.

Calculations of liabilities for retirement and other future employee benefits are based on assumptions made by Management with respect to the discount rate, staff turnover rate and probable increases in salary and social security costs. (See Note 7.4 "Post-employment benefits, defined-benefit schemes").

Discount rates are determined based on the average term of the commitment, that is, the arithmetical average of the terms calculated between the valuation date and the payment date weighted by employee turnover assumptions. The underlying used is the discount rate by reference to the iBoxx AA.

In accordance with IAS 19, the Crédit Agricole Group recorded all actuarial gains and losses that were recognised in other comprehensive income that cannot be reclassified. Actuarial gains and losses consist of experience adjustments (difference between what has been estimated and what has occurred) and the effect of changes in actuarial assumptions.

The expected return on plan assets is determined using discount rates applied to measure the defined benefit obligation. The difference between the expected and actual return on plan assets is recognised in other comprehensive income that cannot be reclassified.

The cost of past services, incurred when a plan is amended or curtailed, is immediately recognised in profit or loss when the plan is amended or curtailed.

The amount of the provision is equal to:

- the present value of the obligation to provide the defined benefits at the end of the reporting period, calculated in accordance with the actuarial method recommended by IAS 19;

- if necessary, reduced by the fair value of the assets allocated to covering these commitments. These may be represented by an eligible insurance policy. In the event that 100% of the obligation is covered by an insurance policy that meets exactly the expense amount payable over the period for all or part of a defined-benefit plan, the fair value of the policy is deemed to be the value of the corresponding obligation, (i.e. the amount of the corresponding actuarial liability).

For such obligations that are not covered, a provision for termination payments is recognised under "Provisions" on the liabilities side of the balance sheet. This provision is equal to the Crédit Agricole Group's liabilities towards employees in service at financial year-end, governed by the Crédit Agricole Group's Collective Agreement that came into effect on 1 January 2005.

A provision to cover the cost of early retirement commitments is also listed under "Provisions". This provision covers the additional discounted cost of the various early retirement agreements signed by the Crédit Agricole Group entities under which employees of eligible age may take early retirement.

Lastly, certain Group companies are liable to pay supplementary retirement benefits. A provision is calculated on the basis of the Company's actuarial liability for these benefits. These provisions are also shown on the liabilities side of the balance sheet under "Provisions".

Defined-contribution schemes

"Employers" contribute to a variety of compulsory pension schemes. Plan assets are managed by independent organisations and the contributing companies have no legal or implied obligation to pay additional contributions if the funds do not have sufficient assets to cover all benefits corresponding to services rendered by employees during the financial year and during prior years. Consequently, the Crédit Agricole Group has no liabilities in this respect other than its contributions due for the financial year ended which constitute financial year expenses.

Other long-term benefits

Other long-term benefits are employee benefits other than post-employment benefits or termination benefits but not fully due to employees within 12 months after the end of the financial year in which the related services have been rendered.

These include, in particular, bonuses and other deferred compensation payable 12 or more months after the end of the financial year in which they vest, but which are not share-based.

The measurement method is similar to the one used by the Group for post-employment benefits with defined-benefit schemes.

Severance payments

"Severance payments" arise either from the decision of Crédit Agricole Group to terminate the employee's employment before the standard retirement age, or a decision by the latter to accept the indemnities offered by the entity in exchange for termination of their employment (offer made to employees intended to encourage voluntary redundancies).

SHARE-BASED PAYMENTS (IFRS 2)

IFRS 2 "Share-based Payment" requires valuation of share-based payment transactions in the enterprise's income statement and balance sheet. This standard applies to transactions with employees and more specifically to:

- share-based payment transactions settled in equity instruments;
- share-based payment transactions settled in cash.

Share-based payment plans initiated by Crédit Agricole Group that are eligible for IFRS 2 are mainly transactions settled in equity instruments (stock options, free share allocation plans, variable compensation settled in indexed cash or in shares etc.).

Options granted are measured at their fair value at the date of grant primarily using the Black & Scholes model. These options are recognised as a charge under "Employee expenses", with a corresponding adjustment to equity, spread over the vesting period.

Employee share issues offered to employees as part of the employee savings schemes are also subject to the IFRS 2 standard. Shares may be offered to employees with a discount. These plans have no vesting period but the shares are subject to a lock-up period of five years. The benefit granted to employees is measured as the difference between the fair value per share acquired at the date of granting and the purchase price paid by the employee on the subscription date multiplied by the number of shares subscribed. If there is no vesting period, the expense is recognised immediately. This benefit does not take into account the lock-up discount.

A more detailed description of the method, existing plans and valuation methods is provided in Note 7.6 "Share-based payments".

The cost of share-based payments settled in Crédit Agricole Group equity instruments and the cost of share subscriptions are recognised in the financial statements of the entities that employ the plan beneficiaries. The impact is recorded under Employee expenses, with a corresponding increase in "Consolidated reserves-Group share".

The cost of share-based payments settled in cash is recognised in the financial statements of entities that employ the plan beneficiaries in compensation expenses and spread on a straight-line basis over the vesting period, with a liability recorded in employee expenses. This liability is subject to periodical revaluation through profit or loss until the settlement date. This recognition principle applies in particular to variable compensation plans settled in cash indexed to the share price.

INCOME TAX CHARGE (IAS 12)

In accordance with IAS 12, the income tax charge includes all income taxes, whether current or deferred.

As a reminder, IAS 12 states that current and deferred tax assets and liabilities shall be valued using enacted or substantively enacted tax rates. In France, a text is substantively enacted after receiving the favourable vote of the National Assembly and the Senate and after approval by the Constitutional Council or once the deadline for referral to the Constitutional Council has expired.

It is thus appropriate to consider the corporate tax rate in France as remaining at 25.83% for the valuation of deferred tax assets and liabilities at 31 December 2025.

Current tax liability

IAS 12 defines current tax liability as "the amount of income tax payable (recoverable) in respect of the taxable profit (tax loss) for a period". Taxable income is the profit (or loss) for a given financial year determined in accordance with the rules established by the tax authorities and on the basis of which income tax must be paid (recovered).

The applicable rates and rules used to measure the current tax liability are those in effect in each country where the Group's companies are established.

The current tax liability includes all taxes on income, payable or recoverable, for which payment is not subordinated to the completion of future transactions, even if payment is spread over several financial years.

The current tax liability must be recognised as a liability until it is paid. If the amount that has already been paid for the current financial year and previous years exceeds the amount due for these years, the surplus must be recognised under assets.

When tax credits on revenues from securities portfolios and amounts receivable are effectively used to pay corporate income tax due for the financial year, they are recognised under the same heading as the income with which they are associated. The corresponding tax charge continues to be recognised under the "Income tax" charge heading in the income statement.

Deferred tax

Certain transactions carried out by the Crédit Agricole Group may generate income taxes that are payable or recoverable in future periods. IAS 12 defines a difference between the carrying amount of an asset or liability and its tax base as a temporary difference.

This standard requires that deferred taxes be recognised in the following cases:

- a deferred tax liability should be recognised for any taxable temporary differences between the carrying amount of an asset or liability on the balance sheet and its tax base, unless the deferred tax liability arises from:
 - initial recognition of goodwill,
 - the initial recognition of an asset or a liability in a transaction that is not a business combination and that does not affect either the accounting or the taxable profit (taxable loss) at the transaction date;
- a deferred tax asset should be recognised for any deductible temporary differences between the carrying amount of an asset or liability on the balance sheet and its tax base, insofar as it is deemed probable that a future taxable profit will be available against which such deductible temporary differences can be allocated;
- a deferred tax asset should also be recognised for carrying forward unused tax losses and tax credits insofar as it is probable that a future taxable profit will be available against which the unused tax losses and tax credits can be allocated.

Deferred taxes are calculated based on the tax rates applicable in each country and must not be discounted.

Deferred tax assets and liabilities are offset against each other if, and only if:

- the Crédit Agricole Group has a legally enforceable right to offset current tax assets against current tax liabilities; and
- the deferred tax assets and liabilities relate to income taxes levied by the same tax authority, either on the same taxable entity or on different taxable entities that intend either to settle current tax assets and liabilities on a net basis or to realise the assets and settle the liabilities simultaneously in each future financial year in which significant amounts of deferred tax assets or liabilities are expected to be settled or recovered.

Current and deferred tax liability is recognised in net income for the financial year, unless the tax arises from:

- either a transaction or event that is recognised directly through equity, during the same financial year or during another financial year, in which case it is directly debited or credited to equity;
- or a business combination.

Capital gains on securities

Taxable unrealised gains on securities do not generate any taxable temporary differences between the carrying amount of the asset and the tax base. As a result, deferred tax is not recognised on these gains. When the relevant securities are classified financial assets at fair value through other comprehensive income, unrealised gains and losses are recognised directly through offsetting in equity. Similarly, the Crédit Agricole Group's tax charge or actual tax savings arising from these unrealised gains or losses are reclassified as a deduction from equity.

In France long-term capital gains on the sale of equity investments, as defined by the French General Tax Code, are exempt from corporate income tax; with the exception of a share of costs, taxed at the normally applicable rate. In addition, unrealised gains recognised at the end of the financial year generate a temporary difference requiring the recognition of deferred tax on this share of costs.

Leases (IFRS 16)

Under IFRS 16 "Leases", a deferred tax liability is recognised on the right of use and a deferred tax asset on the rental debt for leases for which the Group is a lessee.

Tax risks

Tax risks relating to income tax result in the recognition of a tax receivable or liability when the probability of receiving the asset or paying the liability is considered more likely than not. These risks are also taken into account in the valuation of current and deferred tax assets and liabilities.

IFRIC 23 on measuring uncertain tax positions applies when an entity has identified one or more uncertainties about the income tax positions they have adopted. It also provides details of how to estimate them:

- the analysis must be based on a full assessment by the tax authorities;
- the tax risk must be recognised as a liability as soon as it is more likely than unlikely that the tax authorities will question the treatment adopted, for an amount reflecting Management's best estimate;
- in the event that the probability of a refund by the tax authorities is greater than 50%, a receivable must be recognised.

TREATMENT OF FIXED ASSETS (IAS 16, 36, 38 AND 40)

The Crédit Agricole Group applies component accounting for all of its property, plant & equipment. In accordance with the provisions of IAS 16, the depreciable amount takes account of the potential residual value of property, plant and equipment.

Land is measured at acquisition cost less any impairment losses.

Operating buildings, investment property and equipment are measured at their acquisition cost less accumulated depreciation and impairment losses since the time they were placed in service.

Purchased software is measured at acquisition cost less accumulated depreciation and impairment losses since acquisition.

Proprietary software is measured at cost less accumulated depreciation and impairment losses since completion.

Apart from software, intangible assets are mainly assets acquired during a business combination resulting from contractual rights (e.g. distribution agreement). These were valued on the basis of corresponding future economic benefits or expected service potential.

Fixed assets are depreciated over their estimated useful lives.

The Crédit Agricole Group applies component accounting for property, plant & equipment. The components and depreciation periods are adjusted according to the type of asset and location, and are defined as follows:

Component	Depreciation period
Land	Not depreciable
Structural works	30 to 80 years
Non-structural works	8 to 40 years
Plant and equipment	5 to 25 years
Fixtures and fittings	5 to 15 years
Computer equipment	4 to 7 years
Special equipment	4 to 5 years

In the same way, for example, the following periods generally applied for the different types of intangible assets are used:

Intangible asset class	Depreciation period
Patents, licences	5 years
Software	3 to 5 years

FOREIGN CURRENCY TRANSACTIONS (IAS 21)

At the end of the reporting period, assets and liabilities denominated in foreign currencies are translated to euros, the Crédit Agricole Group's functional currency.

In accordance with IAS 21, a distinction is made between monetary (e.g. debt instruments) and non-monetary items (e.g. equity instruments).

Foreign-currency denominated monetary assets and liabilities are translated at the closing foreign exchange rate. The resulting foreign exchange impact is recorded in the income statement. There are three exceptions to this rule:

- for debt instruments at fair value through recyclable equity, only the translation adjustments calculated on amortised cost are taken to the income statement; the balance is recorded in recyclable equity;
- foreign exchange impact on elements designated as cash flow hedges or forming part of a net investment in a foreign entity is recognised in recyclable equity for the effective portion;
- for financial liabilities designated at fair value through profit or loss, foreign exchange impact related to value changes attributable to own credit risk are recognised in non-recyclable equity.

Non-monetary items are treated differently depending on the type of items before translation:

- items at historical cost are measured at the foreign exchange rate on the transaction date (historical rate);
- items at fair value are measured at the foreign exchange rate at the end of the reporting period.

Foreign exchange impact on non-monetary items is recognised:

- in the income statement if the gain or loss on the non-monetary item is recorded in the income statement;
- in non-recyclable equity if the gain or loss on the non-monetary item is recorded in non-recyclable equity.

REVENUES FROM CONTRACTS WITH CUSTOMERS (IFRS 15)

Fee and commission income and expenses are recognised in income based on the nature of services with which they are associated.

Fees and commissions that form an integral part of the yield on a financial instrument are recognised as an adjustment to the compensation on the instrument and included in its effective interest rate (in accordance with IFRS 9).

The recognition of other types of fees and commissions on the income statement must reflect the rate of transfer to the customer of control of the goods or services sold:

The net income from a transaction associated with the provision of services is recognised under "Fee and commission income" at the time of transfer of control of the service to the customer, if this can be reliably estimated. This transfer may take place as the service is provided (ongoing service) or on a specific date (one-off service).

- a) Fee and commission income from ongoing services (fee and commission income on payment instruments, for example) is recognised in income according to the degree of progress of the service provided.
- b) Fee and commission income paid or received as compensation for one-off services is recognised in income, in its entirety, when the service is provided.

Fee and commission income payable or receivable and contingent upon the achievement of a performance target is recognised for the amount at which it is highly probable that the income thus recognised will not later be subject to a significant downward adjustment upon resolution of the contingency. These estimates are updated at the end of each reporting period. In practice, this condition can result in the deferred recognition of certain items of performance-related fee and commission income until the expiry of the performance assessment period and until such income has been definitively acquired.

INSURANCE CONTRACTS

Definition and classification of contracts

Contracts issued by the Group fall into the following categories:

- insurance contracts (including reinsurance contracts) issued, which fall within the scope of IFRS 17; and
- investment contracts, which are subject to either IFRS 17 or IFRS 9 depending on whether or not they include discretionary participation features.

Reinsurance contracts held by the Group are also subject to IFRS 17.

Any reference below to insurance contracts also includes investment contracts with discretionary participation features and reinsurance contracts held, except where these are explicitly mentioned.

Insurance contracts

An insurance contract is a contract under which one party (the issuer) accepts a significant insurance risk for another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder.

In the Group, for each portfolio of similar contracts, the insurance risk is analysed on the basis of a representative individual contract.

The existence of a scenario (of commercial substance) in which the insurer would be required to indemnify the holder for a significant amount, i.e. for an amount that would significantly exceed the amount that would be paid if no insured event occurred, represents a significant insurance risk for all contracts in the portfolio, regardless of the probability of this scenario occurring. The Group has adopted a significance level of 5%. Insurance risk can therefore be significant, while the principle of risk pooling within a portfolio limits the likelihood of a significant loss compared to the result of the portfolio as a whole.

The main insurance risks relate to mortality (guarantees in the event of death), longevity (guarantees in the event of survival, e.g. life annuities), morbidity (guarantees in the event of disability), incapacity, health (medical cover) or unemployment of individuals, as well as civil liability and property damage.

In application of the principles of IFRS 17, insurance contracts may be insurance contracts with direct participation features or insurance contracts without direct participation features.

Insurance contracts with direct participation features are insurance contracts that are, in substance, investment-related service contracts under which the entity promises a return based on underlying items. They are defined as insurance contracts for which, at inception:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the entity expects to pay to the policyholder an amount equal to a substantial share of the fair value returns on the underlying items; and
- the entity expects a substantial proportion of any change in the amounts to be paid to the policyholder to vary with the change in fair value of the underlying items.

Compliance with these three conditions is assessed at inception of the contract and is not reassessed subsequently, unless the contract is modified substantially.

Other insurance contracts issued and all reinsurance contracts (issued as well as held) constitute insurance contracts without direct participation features.

Investment contracts

Contracts that do not expose the insurer to significant insurance risk are known as investment contracts. They include investment contracts with discretionary participation features and investment contracts without discretionary participation features.

An investment contract with discretionary participation features is defined as a financial instrument that confers on a given investor the contractual right to receive additional sums over and above a sum that is not at the discretion of the issuer:

- which are likely to represent a significant portion of the total contractual benefits;
- the timing or amount of which is contractually at the issuer's discretion; and
- which are contractually based on:
 - returns from a specified pool of contracts or a specified type of contract,
 - realised and/or unrealised investment returns on a specified pool of assets held by the issuer, or
 - the profit or loss of the entity or fund that issues the contract.

Investment contracts with discretionary participation features mainly cover savings contracts in euros. In the case of a multi-support contract, where the policyholder has the option to transfer all or part of its savings to a euro fund with discretionary profit sharing at any time (under conditions that do not hinder such transfers), the Group considers that, in the absence of a minimum guarantee transferring a significant insurance risk, the contract as a whole is a contract with discretionary participation features, whether or not this option has been exercised by the policyholder. In the case of a minimum guarantee transferring a significant insurance risk, the contract constitutes an insurance contract with discretionary participation features.

Investment contracts that do not meet the above definition are investment contracts without discretionary participation features and fall within the scope of IFRS 9.

Recognition of insurance contracts

Separation of the components of an insurance contract

At inception, the Group separates embedded derivatives, distinct investment components and any promise to provide the policyholder with distinct goods or services other than insurance contract services, and accounts for them as stand-alone components in accordance with the applicable IFRS standards.

Once the distinct stand-alone components have been separated where appropriate, the Group applies IFRS 17 to account for all the remaining components of the insurance contract.

Level of aggregation of insurance contracts

Based on the requirements of the standard regarding the level of aggregation, contracts must be grouped into portfolios of contracts, which are then divided into three groups and must not contain contracts issued more than one year apart (annual cohort principle).

A portfolio of insurance contracts comprises insurance contracts subject to similar risks and managed together.

Each portfolio must be divided into at least the following three groups according to the expected profitability of the contracts at the time of initial recognition:

- onerous contracts;
- contracts that have no significant possibility of becoming onerous subsequently; and
- remaining contracts.

These groups represent the level of aggregation at which insurance contracts are initially measured and recognised.

In order to apply the general principles of the standard concerning the identification of portfolios, the Group carried out various analyses based on the guarantees identified and the way in which the contracts are managed (for example, according to the financial portfolios to which they relate for retirement savings products, according to the grid used for the prospective assessment of risks and solvency for risk products, or according to business lines for property and casualty insurance products). The splitting of these portfolios into groups based on the expected profitability of the contracts has been done on the basis of different information such as contract pricing, past profitability of similar contracts, or forward-looking plans.

As permitted by Article 2 of European Commission Regulation (EU) 2021-2036 of 19 November 2021, Crédit Agricole Group intends to use the exemption from the standard's annual cohort requirement for intergenerationally mutualised contracts. This accounting policy choice is applied to the portfolios relating to the Group's savings and retirement activities eligible for exemption.

The Group does not apply the provisions of the standard which allow these contracts to be classified in the same group if contracts in the same portfolio fall into different groups solely because legal or regulatory provisions limit the entity's practical ability to set a price or benefit level that differs according to the characteristics of the policyholders.

Recognition date for insurance contracts

A group of insurance contracts issued must be recognised from the earliest of the following dates:

- the start date of the coverage period of the group of contracts;
- the date when the first payment from a policyholder becomes due or, if there is no due date, the date when that first payment is received; and
- for a group of onerous contracts, the date when the group becomes onerous.

Insurance acquisition cash flows

Insurance acquisition cost cash flows are cash flows arising from the costs of selling, underwriting and starting a group of insurance contracts (issued or expected to be issued) that are directly attributable to the portfolio of insurance contracts to which the group belongs. These cash flows are allocated to the groups of contracts in a systematic and rational manner.

With the exception of certain groups of contracts measured using the premium-allocation approach, where the decision has been made to recognise them directly as expenses, insurance acquisition cost cash flows paid prior to the recognition of the corresponding group of insurance contracts are recognised as an asset. This insurance acquisition cost cash flows asset is derecognised, in whole or in part, when the insurance acquisition cost cash flows are included in the measurement of the corresponding group of insurance contracts.

At the end of each reporting period, the Group assesses whether an insurance acquisition cost cash flow asset is recoverable if facts and circumstances indicate that the asset may be impaired. At 31 December 2025, the insurance acquisition cost cash flow assets identified by the Group were fully impaired and their carrying amount was therefore zero.

Measurement of insurance contracts

Contracts falling within the scope of application of IFRS 17 can be measured using three models:

- the general model, or BBA (Building Block Approach) model, which is the default valuation model;
- the VFA (Variable Fee Approach) model, which is mandatory for insurance contracts with direct participation features;
- the PAA (Premium Allocation Approach) model, a simplified model that is optional when certain criteria are met.

The Group measures its contracts using these three models.

The general model is mainly used for the Group's borrower, long-term care, death & disability, sick leave, term life and certain healthcare activities.

The Group analysed compliance with the three conditions needing to be met in order to be classified as an insurance contract with direct participation features (see section on contract classification above), in order to determine which of its contracts met these criteria. Therefore, the Group's savings, retirement and funeral business activities are valued using the VFA model.

The Group chose to apply the PAA model to its property and casualty insurance activities (insurance contracts issued and reinsurance contracts held).

Measurement of contracts using the standard model and the VFA model

Initial recognition

On initial recognition, the Group measures a group of insurance contracts at the total of:

- the fulfilment cash flows, which comprise:
 - estimates of future cash flows,
 - an adjustment to reflect the time value of money and the financial risks related to the future cash flows, to the extent that the financial risks are not included in the estimates of the future cash flows,
 - an adjustment for non-financial risk;
- the Contractual Service Margin (CSM).

Estimation of future cash flows

The purpose of estimating future cash flows is to determine the expected value of a set of scenarios that reflects the full range of possible outcomes. The cash flows of each scenario are discounted and weighted by the estimated probability of the corresponding outcome to obtain the expected present value.

The estimates of future cash flows incorporate, in an unbiased way, all reasonable and supportable information available without undue cost or effort about the amount, timing and uncertainty of those future cash flows at the end of the reporting period. This information includes historical internal and external data on claims and other features of insurance contracts, updated to reflect conditions prevailing at the valuation date, including assumptions at that date about the future.

The estimates of future cash flows reflect the Group's view of current conditions at the end of the reporting period, provided that the estimates of the relevant market variables are consistent with observable market prices. The estimation of market variables is determined by maximising the use of observable market parameters.

In life insurance, the projection of future cash flows incorporates assumptions about policyholder behaviour and management decisions. These assumptions relate in particular to surrenders, the policyholders' profit-sharing policy and the asset allocation policy.

The estimation of the expected present value includes the impact of financial options and guarantees where these are material. Stochastic simulation methods are used for this estimation. Stochastic modelling involves projecting future cash flows under a large number of possible economic scenarios for market variables such as interest rates and equity returns.

The main options valued by the Group are the surrender option in savings or retirement contracts, guaranteed minimum rates and technical rates, contractual profit-sharing clauses and the minimum guaranteed benefit in respect of unit-linked contracts.

Modelled policyholders' profit sharing complies with local and contractual regulatory constraints and is subject to strategic assumptions reviewed by the entities' management.

Where contracts include a significant mortality (or longevity) risk, projections are also estimated by reference to regulatory mortality tables or experience tables, as applicable.

Where a minimum guaranteed benefit in the event of death is included in a unit-linked contract, in order to ensure that the beneficiary of the contract receives at least the initial capital invested irrespective of changes in the value of the units of account, this is determined using an economic method (stochastic scenarios).

In non-life insurance, the Group estimates the ultimate cost of settling claims incurred but unpaid at the end of the reporting period and the value of expected recoveries by reviewing individual claims reported and making allowance for claims incurred but not yet reported. They are determined by applying deterministic statistical methods based on historical data and by using actuarial assumptions based on expert judgement to estimate the ultimate cost. Changes in the parameters used are likely to have a significant impact on the value of these estimates at the end of the reporting period, particularly for long-tail liability claims across insurance lines, where the uncertainty inherent in the realisation of forecasts is generally greater. These parameters relate in particular to the uncertainty surrounding the classification and quantification of losses, the scales (table and rates) that will be applied at the time of compensation and the probability of annuitisation of bodily injury claims. For the Group, the insurance lines concerned are motor liability, general liability, personal accident cover and professional medical liability.

Contract boundary

The measurement of a group of contracts includes all future cash flows included in the scope (the "boundary") of each of the group's contracts, i.e. all future cash flows that arise from substantive rights and obligations that exist during the reporting period in which the Group can compel the policyholder to pay premiums or in which it has a substantive obligation to provide the policyholder with services under the insurance contract.

A substantive obligation of this kind ceases in particular when the Group has the practical ability to reassess the risks posed specifically by the policyholder and may therefore set a price or level of benefits that fully reflects these reassessed risks.

The determination of the contract boundary requires that judgement be exercised and that the Group's substantial rights and obligations under the contract be taken into account. To this end, the Group has conducted a detailed analysis of the characteristics of its contracts and, in particular, the possibility of revising their pricing. For example, it considered free or scheduled future payments of savings and retirement contracts, and the payment phase of retirement contracts with mandatory annuity drawdown, as being included in the contract boundary; however, renewals of non-life insurance contracts related to the automatic renewal clause are not included in the contract boundary.

Cash flows taken into account in measuring contracts

The cash flows within the insurance contract boundary are those that are directly linked to the performance of the contract. In particular, they include premiums paid by the policyholder, payments to the policyholder, insurance acquisition cost cash flows allocated to the portfolio to which the contract belongs, claims management costs, costs related to the provision of investment-related services and allocations of fixed or variable overheads that are directly attributable to the fulfilment of insurance contracts.

Cash flows are allocated by function (acquisition activities, other activities related to the performance of insurance contracts, and other activities) at the level of each legal entity using activity-based cost allocation methods.

Insurance acquisition and fulfilment cash flows are allocated to groups of contracts using systematic and rational methods applied uniformly to all costs with similar characteristics. They include both direct costs and an allocation of fixed and variable overheads.

The Group did not identify any insurance contracts without direct participation features that give it discretion over the cash flows it will pay to policyholders.

Accounting for premium receivables from intermediaries

In October 2023, the IFRIC published a decision concerning the measurement of premium receivables from intermediaries, in response to a question on the application by the insurer of the provisions of IFRS 17 and IFRS 9 to such receivables when the policyholder has paid the premiums to the intermediary (thus discharging the policyholder's obligation under the insurance contract) but the intermediary, acting on behalf of the insurer, has not yet paid the premiums to the insurer (the insurer being nevertheless obliged to provide insurance contract services to the policyholder). In its decision, the IFRIC observed among other things that IFRS 17 does not state at what moment cash flows within the boundary of an insurance contract are removed from the measurement of a group of insurance contracts. Therefore, an entity must establish an accounting policy in application of IAS 8 to determine when cash flows are removed from the measurement of a group of insurance contracts: either when the cash flows are recovered or settled in cash – in which case the IFRS 17 provisions in terms of measurement, presentation and disclosure requirements apply to premiums receivable from an intermediary (View 1), or when the policyholder's obligation under the insurance contract is discharged – in which case the provisions of IFRS 9 apply to those same premiums receivable (View 2). In application of this decision, the Group has opted for the accounting policy that treats premiums receivable from intermediaries in accordance with IFRS 9 in this case.

Discount rates

The Group adjusts the estimates of future cash flows to reflect the time value of money and the financial risks related to the future cash flows, to the extent that the financial risks were not included in the cash flow estimates.

The table below shows the yield curves used to discount the cash flows of insurance contracts:

	31/12/2025						31/12/2024					
	1 year	5 years	10 years	15 years	20 years	30 years	1 year	5 years	10 years	15 years	20 years	30 years

Risk adjustment for non-financial risk

The estimate of the present value of future cash flows is subject to an explicit adjustment for non-financial risk in order to reflect the compensation required by the Group for the uncertainty about the amount and timing of cash flows that arises from non-financial risk.

The Group makes use of the confidence level technique for determining the risk adjustment for all of its contracts. The Group's valuation metric is VaR (Value at Risk), with a quantile of 80% for life insurance activities and 85% for non-life insurance activities, and an ultimate term (approximated by the maturity of liabilities for life insurance activities). This adjustment reflects the benefits of risk diversification at the entity level, determined using a correlation matrix. Diversification between entities is also taken into account.

Contractual service margin

The CSM of a group of contracts represents the unearned profit that the Group will recognise as it provides insurance contract services in the future.

On initial recognition of a group of contracts, if the aggregate of the fulfilment cash flows measured at the date of initial recognition, any cash flows arising at that date, and any amount arising from the derecognition at that date of any asset or liability previously recognised in respect of the cash flows relating to that group (including any insurance acquisition cost cash flow asset) is a net cash inflow, then the group of contracts is profitable. In this case, the CSM is measured as the equal and opposite amount of this net cash inflow, with the result that there is no income or expense on initial recognition.

If the total calculated above is a net cash outflow, then the group of contracts is onerous. In this case, the net cash outflow is immediately recognised as a loss in profit or loss, such that the carrying amount of the liability relating to the group is equal to the fulfilment cash flows and the group's contractual service margin is therefore zero. A loss element of the liability for remaining coverage is then established to represent the losses thus recognised.

Subsequent measurement

The carrying amount of a group of contracts at the end of each reporting period is the sum of the Liability for Remaining Coverage (LRC) and the Liability for Incurred Claims (LIC).

The liability for remaining coverage comprises the fulfilment cash flows relating to future services allocated to the Group at that date and the Group's contractual service margin at that date.

The liability for incurred claims comprises the fulfilment cash flows for claims incurred and other related expenses that have not yet been paid, including claims incurred but not yet reported.

The fulfilment cash flows of groups of contracts are measured at the end of the reporting period using the discounted estimates of the value of future cash flows, current discount rates and the discounted estimates of the adjustment for non-financial risks. Changes in fulfilment cash flows are recognised as follows:

Changes relating to future service	Recognised against the CSM (or recognised as insurance service result if the group is onerous)
Changes relating to current or past services	Recognised in insurance service result
Effect of the time value of money, financial risk and changes therein on future cash flows	Recognised in insurance finance income or expenses

The CSM of each group of contracts is calculated at the end of each reporting period as follows, depending on whether the contracts are those without direct participation features (standard model) or those with direct participation features (VFA model).

Insurance contracts without direct participation features measured using the general model

For insurance contracts without direct participation features, the carrying amount of the contractual service margin of a group of contracts at the end of the reporting period equals the carrying amount at the start of the reporting period adjusted for:

- the effect of any new contracts added to the group during the period;

- interest accreted on the carrying amount of the contractual service margin during the reporting period, measured at the discount rates at initial recognition;
- the changes in fulfilment cash flows relating to future service, except to the extent that they relate to a loss component;
- the effect of any foreign exchange impact on the contractual service margin; and
- the amount recognised in insurance revenue as a result of the provision of insurance contract services during the period, determined after all the other adjustments described above (see "Recognition of the contractual services margin in profit or loss" below).

Changes in fulfilment cash flows that relate to future service and that adjust the CSM include:

- experience adjustments arising from premiums received in the period that relate to future service, and related cash flows such as insurance acquisition cost cash flows and premium-based taxes, measured at the discount rates determined at initial recognition;
- changes in estimates of the present value of the future cash flows in the liability for remaining coverage, measured using discount rates determined at initial recognition, except those resulting from the effects of the time value of money, financial risk and changes therein;
- differences between investment components and loans granted to policyholders;
- changes in the adjustment for non-financial risk that relate to future service, measured using discount rates determined at initial recognition.

Insurance contracts with direct participation features measured using the VFA model

The variable fee approach (VFA model) reflects the specific nature of the services rendered by insurance contracts with direct participation features (contracts under which the entity promises a return based on underlying items).

The underlying items are those that determine a portion of the amounts to be paid to policyholders. Within the Group, they mainly comprise financial asset portfolios and, in the case of French savings contracts denominated in euros, the technical result of these contracts. The Group's policy is to hold the underlying financial assets. The composition and fair value of these assets are detailed in Note 5.3.

Insurance contracts with direct participation features are contracts under which the Group's obligation to the policyholder is the net of:

- the obligation to pay the policyholder an amount equal to the fair value of the underlying items; and
- a variable fee in exchange for the future services provided by the insurance contract, which corresponds to the difference between the amount of the entity's share of the fair value of the underlying items and the fulfilment cash flows that do not vary based on the returns on the underlying items.

Changes in the obligation to pay the policyholder an amount equal to the fair value of the underlying items are not related to future service and therefore do not result in an adjustment to the CSM: they are recognised in profit or loss.

Changes in the amount equal to the entity's share of the fair value of the underlying items are related to future service and result in an adjustment to the CSM.

The carrying amount of the CSM of a group of insurance contracts with direct participation features at the end of the reporting period is therefore the carrying amount at the opening of the period, adjusted for the following items:

- the effect of any new contracts added to the group during the period;
- the change in the amount equal to the entity's share of the fair value of the underlying items and changes in fulfilment cash flows relating to future service, except to the extent that:
 - the risk mitigation option is applied to exclude changes in the effect of the time value of money and financial risk on the amount of its share of the underlying items or in fulfilment cash flows from the CSM (option not applied by the Group),

- the change in the amount equal to the entity's share of the fair value of the underlying items, or in fulfilment cash flows relating to future services, are related to a loss component; or
- the effect of any foreign exchange impact on the contractual service margin; and
- the amount recognised in insurance revenue as a result of the provision of insurance contract services during the period, determined after all the other adjustments described above (see "Recognition of the contractual services margin in profit or loss" below).

The changes in fulfilment cash flows relating to future service that adjust the CSM include the changes specified above for insurance contracts without direct participation features (valued at current discount rates) and changes in the effect of the time value of money and financial risks that do not result from the underlying items, for example, the effect of financial guarantees.

Loss component

For contracts measured using the standard model and the VFA model, the Group establishes a loss element of the liability for remaining coverage for onerous groups of contracts. It is on the basis of this loss element that the amounts subsequently presented in profit or loss as reversals of losses on onerous groups of contracts are determined, and which are consequently excluded from insurance revenue (see section on presentation below).

When fulfilment cash flows are incurred, they are allocated between the loss component and the liability for remaining coverage excluding the loss component on a systematic basis.

Any subsequent decrease in fulfilment cash flows relating to future service, and any subsequent increase in the amount of the Group share of the fair value of the underlying items, for contracts with direct participation features, are allocated solely to the loss component.

If the loss component is reduced to zero, then any excess over the amount allocated to the loss component constitutes a new CSM for the group of contracts in question.

Measurement of contracts using the PAA model

The premium allocation approach (PAA model) is an optional measurement model that makes it possible to measure the liability for remaining coverage of a group of insurance contracts in a simplified manner if one of the following two eligibility criteria is met at the date the group is established:

- the Group reasonably expects that the measurement of the liability for remaining coverage of the group obtained using this simplified method will not differ materially from that which would be obtained by applying the provisions of the standard model; or
- the coverage period of each of the contracts in the group of contracts does not exceed one year.

The Group opted to apply this approach to its property and casualty insurance activities (insurance contracts issued and reinsurance contracts held). Most of the relevant groups of contracts meet the second eligibility condition, i.e. the period of coverage of each contract in the group is less than or equal to one year.

On initial recognition of a group of insurance contracts, the carrying amount of the liability for remaining coverage is measured at the amount of premiums received at the date of initial recognition minus any insurance acquisition cost cash flows allocated to the group at that date and plus or minus any amount arising from the derecognition at that date of any asset or liability previously recognised for cash flows relating to the group of contracts (including any insurance acquisition cost cash flow asset).

For a group of contracts measured under the PAA, the Group may opt for the accounting policy whereby insurance acquisition cost cash flows, if any, are recognised as expenses at the time these costs are incurred, provided that the coverage period for each of the contracts in the group at initial recognition is no more than one year. The Group opted not to use this option for the measurement of groups of contracts measured using the PAA model.

Upon subsequent measurement, the carrying amount of the liability for remaining coverage is increased by premiums received in the period plus any amounts relating to the amortisation of insurance acquisition cost cash flows recognised as an expense, minus the amount recognised as insurance revenue for insurance services provided in that period and insurance acquisition cost cash flows paid in that period.

On initial recognition of each group of contracts, the Group expects that the time between the provision of the services and the due date of the related premium will not exceed one year. Accordingly, the Group opted not to adjust the carrying amount of the liability for remaining coverage to reflect the time value of money and the effect of financial risk.

If, at any time during the coverage period, facts and circumstances indicate that a group of insurance contracts measured using the PAA model is onerous, the Group recognises a loss in profit or loss and increases the liability for remaining coverage to the extent that current estimates of fulfilment cash flows relating to the remaining coverage of the group exceed the carrying amount of the liability for that coverage. The fulfilment cash flows for these groups of contracts are discounted (at current rates) to the extent that the liability for incurred claims is also discounted.

For contracts measured using the PAA model, the loss component arising in the event of an onerous group of contracts is allocated to the liability for remaining coverage; reversals of this loss component cannot result in a liability for remaining coverage that is less than that which would be determined in the absence of the loss component.

The Group measures the liability for incurred claims of a group of insurance contracts measured using the PAA model as the amount of fulfilment cash flows relating to incurred claims, in accordance with the applicable provisions of the standard model. However, it is not required to adjust future cash flows for the time value of money and the effect of financial risk if the payment or receipt of these cash flows is expected within a period not exceeding one year from the date of the claim. The Group did not make use of this option. Future cash flows are therefore discounted (at current rates).

Recognition of reinsurance contracts held

A reinsurance contract is an insurance contract issued by one entity (the reinsurer) to compensate another entity for claims arising from one or more insurance contracts issued by that other entity (underlying contracts).

No reinsurance contract within the Group has characteristics (such as the absence of risk transfer) that would lead to its qualification as a financial instrument under IFRS 9.

For the application of IFRS 17, reinsurance contracts cannot be insurance contracts with direct participation features and therefore cannot be measured using the VFA model.

Reinsurance contracts held are accounted for in accordance with the provisions applicable to insurance contracts without direct participation features presented above, modified to take account of their specific characteristics.

Level of aggregation

Portfolios of reinsurance contracts held are divided in accordance with the provisions of IFRS 17 applicable to insurance contracts issued. However, since reinsurance contracts held cannot be onerous, the Group considers, for the purposes of applying these provisions to reinsurance contracts held, that any reference to onerous contracts refers to reinsurance contracts held giving rise to a net gain on initial recognition.

Recognition date

A group of reinsurance contracts held is recognised at the beginning of the coverage period of the group. As an exception to this principle, for a group of reinsurance contracts held that provide proportional coverage, the Group defers the recognition date until the initial recognition date of any underlying insurance contract, if this date is later than the beginning of the coverage period of the group of reinsurance contracts held.

However, if the Group recognises an onerous group of underlying insurance contracts at an earlier date and the corresponding reinsurance contract was entered into on or before that earlier date, the group of reinsurance contracts held is recognised at that earlier date.

Contract boundary

The application of the contract boundary provisions set out above for insurance contracts issued to reinsurance contracts held implies that cash flows are included within the boundary of a group of reinsurance contracts held if they arise from substantive rights and obligations that exist during the reporting period in which the ceding company is obliged to pay amounts to the reinsurer or in which the ceding company has a substantive right to receive services from the reinsurer.

The cash flows within the boundary of the reinsurance contracts held are thus determined as those arising from the underlying contracts issued or expected to be issued and ceded by the Group under the reinsurance contract until the earliest possible termination date of the reinsurance contract.

Measurement

The Group measures estimates of the present value of future cash flows of a group of reinsurance contracts held using assumptions consistent with those used to measure estimates of the present value of future cash flows of the underlying group or groups of insurance contracts, with an adjustment to reflect the non-performance risk on the part of the reinsurer, including the effect of guarantees and losses arising from litigation.

The adjustment for non-financial risk corresponds to the amount of risk transferred by the ceding company to the reinsurer.

If the reinsurance contract held is entered into on or before the recognition of the onerous underlying contracts, when the Group recognises a loss on the initial recognition of an onerous group of underlying insurance contracts or on the addition of onerous underlying insurance contracts to an existing group, the Group adjusts the CSM of the group to which the onerous reinsurance contract belongs, and recognises income accordingly. This adjustment constitutes a loss-recovery component of the asset for remaining coverage for the group of reinsurance contracts held, depicting the recovery of losses on the onerous underlying insurance contracts. This component is adjusted to reflect changes in the loss element of the onerous group of underlying insurance contracts. The loss-recovery component determines the amounts that are presented in profit or loss as reversals of recoveries of losses from reinsurance contracts held and are consequently excluded from the allocation of premiums paid.

Derecognition and modification of contacts

The Group derecognises an insurance contract:

- when it is no longer in force, i.e. when the obligation specified therein expires, or is discharged, or cancelled;
- when it is transferred to a third party;
- if its terms are modified in a way that would have substantially changed the accounting for the contract if the new terms had always existed (e.g. different classification, or different measurement model), in which case a new contract based on the modified terms is recognised.

Effect of accounting estimates made in the interim financial statements

The Group prepares interim financial statements in accordance with IAS 34. It opted to modify the treatment of accounting estimates made in its previous interim financial statements when applying IFRS 17 in its subsequent interim financial statements and in its annual financial statements.

Presentation

Presentation in the balance sheet

The Group presents the carrying amount for the following items separately in the balance sheet:

- portfolios of insurance contracts issued that are assets;
- portfolios of insurance contracts issued that are liabilities;
- portfolios of reinsurance contracts held that are assets;
- portfolios of reinsurance contracts held that are liabilities.

Assets and liabilities recognised for cash flows arising prior to the recognition of the related group of contracts (including insurance acquisition cost cash flows) are included in the carrying amount of the related portfolios of contracts.

Presentation in the income statement and the statement of other comprehensive income

The Group recognises income and expenses relating to contracts within the scope of application of IFRS 17 under the following income statement items:

- insurance revenue related to insurance contracts issued;
- insurance service expenses related to insurance contracts issued;
- income and expenses relating to reinsurance contracts held;
- insurance finance income or expenses;
- insurance finance income or expense related to reinsurance contracts held.

Income and expenses relating to reinsurance contracts held are presented separately from income and expenses relating to insurance contracts issued.

The Group opted to present income and expenses from reinsurance contracts held, other than insurance finance income or expenses, as a single amount within insurance service result.

The Group chose to allocate changes in the adjustment for non-financial risk between insurance service result and insurance finance income or expenses for insurance contracts without direct participation features, and to include these changes in full in insurance service result for insurance contracts with direct participation features.

Insurance revenue and insurance service expenses exclude investment components.

Amounts recognised in comprehensive income

Insurance revenue – Contracts measured using the general model and the VFA model

Insurance revenue recognised in the period reflects the provision of services relating to a group of insurance contracts by an amount that reflects the consideration to which the Group expects to be entitled in exchange for these services.

This includes:

- amounts relating to changes in the liability for remaining coverage related to the provision of services in exchange for which the Group expects to receive consideration:
 - insurance service expenses incurred during the period (measured at the amounts expected at the beginning of the reporting period), excluding any amounts allocated to the loss element of the liability for remaining coverage, investment component reimbursements, amounts relating to transactional taxes collected on behalf of third parties, acquisition costs and the amount relating to the adjustment for non-financial risk,
 - changes in the adjustment for non-financial risk, excluding changes included in insurance finance income or expenses, changes related to future service, and amounts allocated to the loss component of the liability for remaining coverage,
 - the amount of the contractual service margin recognised in profit or loss as a result of the provision of insurance contract services during the period,
 - other amounts, where appropriate, for example experience adjustments arising from premium receipts other than those related to future service;
- the amount of the portion of premiums allocated to the recovery of insurance acquisition cost cash flows.

The Group allocates the portion of premiums allocated to the recovery of insurance acquisition cost cash flows to each period in a systematic manner that reflects the passage of time. The Group adopted a straight-line allocation method without taking into account the capitalisation of interest. The same amount is recognised as insurance service expenses.

Recognition of the contractual service margin in profit or loss

The amount of the contractual service margin for a group of insurance contracts, which is recognised in each period in insurance revenue to reflect the insurance contract services provided in respect of that group during the period, is determined by identifying the coverage units in the group, allocating the CSM at the reporting period (before recognition in profit or loss) equally to each coverage unit provided in the current period and expected to be provided in the future, and recognising in profit or loss the amount allocated to coverage units provided in the current period.

The number of coverage units in the group of contracts corresponds to the volume of insurance contract services provided by the contracts in the group, determined by taking into account, for each contract, the volume of benefits provided and the expected period of coverage. Coverage units are reviewed and updated at the end of each reporting period.

Insurance contract services include coverage in respect of an insured event (insurance coverage) as well as, in the case of insurance contracts with direct participation features, the management of the underlying items on behalf of the policyholder (investment-related services) and, in the case of insurance contracts without direct participation features, the generation of an investment return for the policyholder (investment-return services), where applicable.

The period over which the investment-return or investment-related services are provided ends no later than the date on which all amounts due to existing policyholders in respect of those services have been paid.

The Group's contracts measured using the general model do not include investment-return services.

For insurance contracts with direct participation features that include both types of services, the coverage units used reflect both insurance services and investment-related services.

The standard does not specify the appropriate indicator to be used to reflect the volume of services provided in the period, and judgement is therefore required in this regard. The methodology used by the Group to identify the coverage units and consequently the expected timing of recognition of the CSM in profit or loss is adapted to the characteristics of the relevant contracts.

For insurance contracts measured under the general model, the coverage units have been defined based on various indicators adapted to the type of guarantee (such as all-cause death benefit for term life insurance contracts, outstanding principal due on loan contracts in the event of death, capital equipment and the annual annuity at risk for long-term care contracts).

For insurance contracts measured under the VFA, the methodology used to allocate the CSM to profit or loss aims to reflect economically the asset management service provided by the insurer during each period; thus, in addition to the risk-neutral returns on assets projected in the actuarial models used to measure these types of contracts, it also takes into account the additional return corresponding to the actual performance of these assets. The coverage units used for this type of contract (average mathematical provisions) are thus adjusted in order to correct the impact of the difference between the risk-neutral projected returns of the underlying items and the expected returns when applying "real-world" assumptions, on the rate at which the CSM is recognised in the income statement (correction of the so-called bow-wave effect).

The "real-world" assumptions used are based on market data at the end of the reporting period for the starting point of the trajectory, on data reported by Crédit Agricole S.A.'s Economic Research Division in the context of budget financial years over the first five years and, beyond this horizon, over a long-term extrapolation beyond that (40-year horizon projection).

The main "real-world" assumptions used are presented below:

ASSUMPTIONS AT 31 DECEMBER 2025

	N+1	N+5
EUR 10-year swap rate	2.85%	3.00%
CAC 40 (incl. dividends)	7.10%	6.00%
S&P 500 (incl. dividends)	8.60%	9.00%
Real estate (incl. rents)	0.89%	2.16%

ASSUMPTIONS AT 31 DECEMBER 2024

	N+1	N+5
EUR 10-year swap rate	2.50%	2.75%
CAC 40 (incl. dividends)	5.02%	5.00%
S&P 500 (incl. dividends)	3.54%	5.00%
Real estate (incl. rents)	4.47%	5.35%

A breakdown of the expected pace at which the remaining CSM at the end of the reporting period will be recognised in profit or loss is provided in Note 5.3 below.

Insurance revenue – Contracts measured using the PAA model

For groups of contracts measured using the PAA model, insurance revenue for the period is the amount of expected premium receipts allocated to the period (excluding investment components).

The Group allocates the amount of these expected premium receipts to the insurance contract services periods on the basis of the passage of time for all its contracts measured using the PAA model.

Insurance service expenses

Insurance service expenses arising from insurance contracts issued are generally recognised in profit or loss as incurred. They exclude reimbursements of investment components and include the following items:

- claims expenses (excluding investment components) and other insurance service expenses incurred;
- amortisation of insurance acquisition cost cash flows;
- losses on onerous groups of contracts and reversals of such losses;
- changes in the liability for incurred claims that do not arise from the effects of the time value of money, financial risk and changes therein;
- impairment losses on insurance acquisition cost cash flow assets and reversals of such impairment losses.

Income and expenses related to reinsurance contracts held

Income and expenses related to reinsurance contracts held include:

- the allocation of premiums paid, which includes amounts relating to changes in the asset for remaining coverage related to the provision of services for which the Group expects to pay a consideration;
- amounts recovered from the reinsurer;
- the effect of changes in the non-fulfilment risk on the part of the issuer of reinsurance contracts held.

Insurance finance income or expenses

Insurance finance income or expenses consist of changes in the carrying amount of groups of insurance and reinsurance contracts resulting from the effects of the time value of money, financial risk and changes therein.

For groups of insurance contracts measured using the VFA model, these changes exclude changes allocated to the loss element (which are included in insurance service expenses) and include changes in the measurement of groups of contracts attributable to changes in the value of the underlying items (excluding additions and withdrawals).

Insurance financial income or expense for the period may be presented either in full in the income statement or broken down between the income statement and other comprehensive income ("OCI option").

For insurance contracts other than insurance contracts with direct participation features for which the entity holds the underlying items, the amount presented in profit or loss is determined by systematic allocation of the total expected insurance finance income or expense over the duration of the group of contracts:

- for groups of insurance contracts measured using the general model for which changes in financial risk assumptions do not have a material impact on the amounts paid to policyholders: using the discount rates determined at the date of initial recognition of the group of contracts;
- for groups of contracts measured using the PAA model: using the discount rates determined at the date of the occurrence of the claim.

For insurance contracts with direct participation features, for which the Group holds the underlying items, the amount recognised in profit or loss is the amount that eliminates accounting mismatches with the income or expenses included in profit or loss on the underlying items held. Under this option, the Group recognises income or expenses in profit or loss that correspond exactly to the income or expenses recognised in profit or loss for the underlying items, with the result that the sum of the items presented separately is zero.

For most of its insurance portfolios, the Group chose to apply the accounting method ("OCI option") which allows insurance finance income or expenses for the period to be allocated between profit and loss and other comprehensive income. For insurance contracts with direct participation features for which the entity holds the underlying items, application of this option results in the presentation in profit or loss of an amount that eliminates accounting mismatches with the income or expenses recognised in profit or loss on the underlying items held; for other contracts, the impact of changes in discount rates on the value of the contracts is presented in other comprehensive income.

Investment components

The provisions of the standard require the identification of investment components, which are defined as the amounts the Group must repay to the insured under all circumstances, whether or not the insured event occurs; they should not be recognised in insurance revenue or insurance service expenses.

The main investment components identified by the Group relate to savings and retirement contracts with an explicit surrender or transfer value.

Internal margin

IFRS 17 requires an estimate of future costs when measuring insurance liabilities on the balance sheet. The income statement shows the actual costs and the release of the estimated costs for the period.

Crédit Agricole's banking network markets insurance contracts issued and managed by the Group's insurance entities. These entities remunerate the banking network through fee and commission income.

The Group adjusts the insurance liabilities and the income statement for the amount of the internal margin contained in intragroup commissions. Overheads incurred by the banking network when distributing insurance contracts are shown as insurance service expenses. The affected items are:

- on the balance sheet: insurance liabilities for the VFA and BBA models;
- on the income statement: recognition of the CSM for the VFA and BBA models, and actual costs for all models.

The Group uses its banking networks' normalised management data to determine the margin on distributed insurance contracts.

These restatements are included in the Corporate Centre operating segment, Note 5.

LEASES (IFRS 16)

The Group may be the lessor or lessee of a lease.

Leases for which the Group is the lessor

Leases are classified either as a finance lease if the lease contract transfers almost all of the risks and benefits inherent in ownership of the underlying asset or as an operating lease if most of the risks and benefits of the leased asset are not transferred to the lessee.

- In the case of finance leases, they are considered equivalent to a fixed asset sale to the lessee financed by a credit granted to the latter by the lessor. The lessor thus records a financial debt for the lessee under "financial assets at amortised cost" for a value equal to the present value at the contract's implicit rate of the lease payments due, plus any non-guaranteed residual value owed to the lessor.

The lease payments received break down between the interest recorded in the income statement under "Interest and similar income" and the capital amortisation, so that the net income represents a constant rate of return on the residual outstanding amount.

For finance leases, the Crédit Agricole Group applies the general approach for the impairment of financial assets at amortised cost under IFRS 9.

- In the case of operating leases, the lessor recognises the leased assets under "Property, plant & equipment" on the assets side of its balance sheet and depreciates them on a straight-line basis over their useful life excluding the residual value. Lease payments received are also recognised in profit or loss on a linear basis over the length of the leases.

Lease income and depreciation amortisation are recognised in the income statement under "income from other activities" and "expenses on other activities".

Leases for which the Group is the lessee

Leases are recognised in the balance sheet on the date on which the leased asset is made available. The lessee records an asset representing the right of use of the leased asset under "property, plant & equipment" over the estimated term of the contract and a liability representing the rental payment obligation under "miscellaneous liabilities" over the same term.

The lease period of a contract corresponds to the non-cancellable term of the lease adjusted for the contract extension options that the lessee is reasonably certain to exercise and the termination option that the lessee is reasonably certain not to exercise.

In France, the Group principle applicable to open-ended or automatically renewable contracts is to use the first exit option after five years.

For "3/6/9" commercial leases, the Group principle will be applied to French commercial leases on the lease commencement date and the initial term will therefore generally be estimated at six years, except in specific situations (for example, when the lessee is reasonably certain that it will exercise the exit option after three years). The main exception will be in the case of a lease where intermediate exit options have been waived (for example, in return for a rent reduction); in this case, an initial lease term of nine years will be used in application of the Group principle.

The lease liability is recognised for an amount equal to the present value of the rental payments over the term of the contract. Rental payments include fixed rents, variable rents based on a rate or index, and payments that the lessee expects to pay as residual value guarantees, purchase options or early termination penalties. Variable rents that are not based on an index or rate and the non-deductible VAT on rents are excluded when calculating the debt and are recognised under “operating expenses”.

The discount rate applicable to the calculation of the right-of-use asset and the lease liability is, by default, the lessee’s marginal rate of indebtedness over the term of the agreement at the date of signature of the agreement, when the implicit rate cannot easily be established. The marginal indebtedness rate takes account of the rent payment structure. It reflects the terms of the lease (duration, guarantee, economic environment etc.).

The lease expense is broken down into interest and amortisation of capital.

The right of use of the asset is valued at the initial value of the lease liability plus the initial direct costs, advance payments and restoration costs, reduced by the lease inducements. It is amortised over the estimated term of the lease.

The lease liability and the right of use may be adjusted in the event of amendment to the lease, re-estimation of the lease period or rent review related to the application of indexes or rates.

Deferred taxes are recognised as temporary differences in right-of-use and rental liabilities by the lessee.

In accordance with the exception set out in the standard, short-term leases (initial term of less than 12 months) and leases for which the new value of the leased asset is low are not recognised on the balance sheet. The corresponding leasing expenses are recorded on a straight-line basis in the income statement under “operating expenses”.

In accordance with the standard, the Group does not apply IFRS 16 to leases of intangible assets.

NON-CURRENT ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS (IFRS 5)

A non-current asset (or a disposal group) is classified as held-for-sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use.

For this to be the case, the asset (or disposal group) must be available for immediate sale in its present condition and its sale must be highly probable.

The relevant assets and liabilities are shown separately on the balance sheet under “Non-current assets held for sale and discontinued operations” and “Debt associated with non-current assets held for sale and discontinued operations”.

A non-current asset (or group of assets) classified as held for sale is measured at the lower of its carrying amount and fair value less costs to sell. In case of unrealised losses, impairment is recognised in the income statement. Moreover, non-current assets corresponding to depreciable fixed assets are no longer depreciated after they are declassified.

For equity-accounted investments, the share of earnings equal to the percentage held for sale is no longer booked.

If the fair value of a group of assets held for sale less its costs to sell is less than its carrying amount after impairment of non-current assets, the difference is allocated to the other assets in the group of assets held for sale including the financial assets.

A discontinued operation is a component that the Group has either disposed of, or that is classified as held for sale, according to the following situations:

- it represents a separate major business line or geographical area of operations;
- it is part of a single coordinated plan to dispose of a separate major business line or geographical area of operations; or
- it is a subsidiary acquired exclusively with a view to resale.

The following are disclosed on a separate line of the income statement:

- net income from discontinued operations;
- the gain or loss recognised on the disposal or on measurement to fair value less costs to sell the assets and liabilities constituting the discontinued operations, net of tax.

1.3 CONSOLIDATION PRINCIPLES AND METHODS (IFRS 10, IFRS 11 AND IAS 28)

SCOPE OF CONSOLIDATION

The consolidated financial statements include the financial statements of Crédit Agricole Group and those of all companies over which, in compliance with IFRS 10, IFRS 11 and IAS 28, Crédit Agricole Group exercises control, joint control or significant influence, except for those that are not material in relation to all the companies included in the scope of consolidation.

The consolidated financial statements of the Crédit Agricole Group include:

- the financial statements of Crédit Agricole S.A. as the Central Body;
- the financial statements of institutions affiliated with the Central Body under Directive 86/635/EEC on the financial statements of European credit institutions, which together with Crédit Agricole S.A., the Regional Banks and the Local Banks make up the “reporting entity”; and

- the financial statements of all companies over which Crédit Agricole S.A., the Regional Banks and the Local Banks exercise control, joint control or significant influence, in accordance with the provisions of IFRS 10, IFRS 11 and IAS 28.

Definitions of control

In compliance with IFRS, all entities under control, under joint control or under significant influence are consolidated, provided that they are not covered by the exclusions below.

Control over an entity is deemed to exist if the Crédit Agricole Group is exposed to or entitled to receive variable returns as a result of its involvement with the entity and if the power it holds over this entity allows it to influence these returns. Power in this context means substantive (voting or contractual) rights. Rights are considered substantive if the holder of the rights can in practice exercise them when decisions about the Company’s relevant activities are made.

The Crédit Agricole Group is deemed to control a subsidiary through voting rights when its rights give it the practical ability to direct the subsidiary's relevant activities. Crédit Agricole Group is generally considered to control a subsidiary when it holds more than half the existing or potential voting rights in an entity, whether directly or indirectly through subsidiaries, except when it can be clearly demonstrated that such ownership does not give it the power to direct its relevant activities. Control is also deemed to exist where Crédit Agricole Group holds half or less than half of the voting rights, including potential rights, in an entity but is able in practice to direct its relevant activities at its sole discretion, notably because of the existence of contractual arrangements, the size of its stake in the voting rights compared to those of other investors, or other reasons.

Control of a structured entity is not assessed solely on the basis of the percentage of voting rights which, by their nature, have no impact on the entity's returns. The analysis of control takes into account contractual arrangements and risks incurred by Crédit Agricole Group, as well as Crédit Agricole Group's involvement and decisions at the time of the entity's creation, any rights under agreements that give the investor the power to direct relevant activities only in specific circumstances, and any other facts or circumstances that indicate that the investor can direct the entity's relevant activities. Where there is a management agreement, the extent of decision-making powers granted to the delegated manager and the compensation accorded by such contractual arrangements are examined to establish whether the manager is in practice acting as an agent (with delegated powers) or as a principal (on their own account).

Furthermore, when decisions on the entity's relevant activities are taken, the indicators used to assess whether an entity is acting as agent or principal are as follows: the extent of the decision-making powers compared to the powers over the entity delegated to the manager, the compensation provided for under the contractual arrangements, any substantive rights that may affect the decision-making capacity of other parties involved in the entity and the exposure to variable returns of other interests in the entity.

Joint control is deemed to exist when there is a contractual division of control over an economic activity. Decisions affecting the entity's relevant activities require unanimous agreement of the joint controllers.

In traditional entities, significant influence is defined as the power to influence but not control a corporate's financial and operational policies, whether this control is exclusive or joint. The Crédit Agricole Group is presumed to exercise significant influence if it owns 20% or more of the voting rights in an entity, whether directly or indirectly through subsidiaries.

CONSOLIDATION METHODS

The consolidation methods are defined by IFRS 10, IFRS 11 and IAS 28. They depend on the type of control exercised by the Crédit Agricole Group over the entities that can be consolidated, regardless of activity or whether or not they have legal entity status:

- full consolidation, for controlled entities, including entities with different financial statement structures, even if their business is not an extension of that of Crédit Agricole Group;
- the equity accounting method, for entities over which Crédit Agricole S.A. exercises significant influence and joint ventures (excluding joint activities).

Full consolidation consists in substituting for the value of the shares each of the assets and liabilities carried by each subsidiary. The equity and income attributable to non-controlling interests is presented separately in the consolidated balance sheet and income statement.

Non-controlling interests are as defined by IFRS 10 and incorporate instruments representing current ownership interests and that give right to a proportional share of the net assets in the event of liquidation and the other equity instruments issued by the subsidiary and not held by the Group.

Investments in associates or jointly controlled corporates are recognised as a separate item on the balance sheet under "Investments in equity-accounted entities". The equity accounting method consists of substituting, for the value of shares, the Group's proportional share of the equity and income of the companies concerned.

In the event of incremental share purchases or partial disposals with continued joint control or significant influence, the Crédit Agricole Group recognises:

- in the case of an increase in the percentage of interest, additional goodwill;
- in the case of a reduction in the percentage of interest, a gain or loss on disposal/dilution in profit or loss.

RESTATEMENTS AND ELIMINATIONS

In accordance with IFRS 10, financial statements are restated by the Crédit Agricole Group to harmonise the valuation methods applied to consolidated companies.

The impact of Group internal transactions on the consolidated balance sheet and income statement is eliminated for fully consolidated entities.

In the consolidating entity's financial statements, gains or losses arising from intra-group asset disposals are eliminated; the presence of any losses for the transferor may result in recognition of an impairment of the asset transferred in this internal disposal.

TRANSLATION OF THE FINANCIAL STATEMENTS OF FOREIGN OPERATIONS (IAS 21)

The financial statements of entities representing a "foreign operation" (subsidiary, branch, associate or joint venture) are translated to euros in two steps:

- the local currency in which the financial statements are prepared is converted into the functional currency (currency of the main business environment of the entity): the conversion is carried out as if the information had been recognised initially in the functional currency (same conversion principles as for the aforementioned foreign currency transactions);
- the functional currency is converted into euros, the currency in which the Group's consolidated financial statements are presented: assets and liabilities, including goodwill, are converted at the closing exchange rate. Equity items, such as share capital or reserves, are converted at the historical foreign exchange rates. Income and expenses included in the income statement are converted at the average exchange rate for the period. Foreign exchange impacts resulting from this conversion are recognised as a separate component of shareholders' equity. In the event of exit from the foreign operation (disposal, repayment of capital, liquidation, discontinuation of activity) or in the event of deconsolidation due to a loss of control (even without disposal), these translation adjustments are recognised in the income statement when the result of exit or loss of control is recognised.

BUSINESS COMBINATIONS

Business combinations are accounted for using the acquisition method in accordance with IFRS 3, except for business combinations under common control, which are excluded from the scope of application of IFRS 3.

At the date of acquisition, the identifiable assets, liabilities and contingent liabilities of the acquired entity which satisfy the conditions for recognition set out in IFRS 3 are recognised at fair value.

The transferred consideration at the time of a business combination (the acquisition cost) is measured as the total of fair values transferred by the acquirer, at the date of acquisition in exchange for control of the acquired entity (for example: cash, equity instruments etc.).

The costs directly attributable to the business combination shall be recognised as expenses, separately from the business combination. If the transaction is highly probable, they are recognised under “Net gains (losses) on other assets”, otherwise they are recognised under “Operating expenses”.

The non-controlling interests that are shares of current interests giving rights to a share of the net assets in the event of liquidation may be measured, at acquirer's choice, in two ways:

- at fair value on the date of acquisition (“full goodwill” method);
- at the share of the identifiable assets and liabilities of the acquired company revalued at fair value (“partial goodwill” method).

The option may be exercised at each acquisition.

The initial assessment of assets, liabilities and contingent liabilities may be revised within a maximum period of 12 months after the date of acquisition.

Goodwill

Valuation and recognition of goodwill

The difference between the sum of the transferred consideration and non-controlling interests and the net balance at the date of acquisition of acquired identifiable assets and liabilities assumed, valued at their fair value, is recognised, when it is positive, in the assets side of the consolidated balance sheet, under “Goodwill”. Any badwill is recognised immediately through profit or loss.

Goodwill is carried in the balance sheet at its initial amount in the currency of the acquired entity and converted at the closing foreign exchange rate at the end of the reporting period.

When control is taken by stages, goodwill is calculated once on the entire interest held after taking control, using the fair value at the date of acquisition of the acquired assets and liabilities taken over.

When there is a loss of control, the proceeds from the disposal are calculated on the entirety of the entity sold and any investment share kept is recognised in the balance sheet at its fair value on the date control was lost.

Impairment of goodwill

Goodwill is tested for impairment whenever there is objective evidence of a loss of value and at least once a year.

The choices and assumptions used in assessing non-controlling interests at the date of acquisition may influence the amount of initial goodwill and any impairment resulting from a loss of value.

For the purpose of impairment tests, goodwill is allocated to the Group Cash Generating Units (CGUs) that are expected to benefit from the business combination. The CGUs have been defined within the Group's business lines as the smallest identifiable group of assets and liabilities functioning in a single business model. Impairment testing consists of comparing the carrying amount of each CGU, including any goodwill allocated to it, with its recoverable amount.

The recoverable amount of the CGU is defined as the higher of fair value less costs to sell and value in use. The value in use is the present value of the future cash flows of the CGU, as set out in medium-term business plans prepared by the Group for management purposes.

When the recoverable amount is lower than the carrying amount, a corresponding impairment loss is recognised for the goodwill allocated to the CGU. This impairment is irreversible.

Changes to the post-acquisition percentage ownership interest and goodwill

In the event of an increase or decrease in Crédit Agricole Group's percentage ownership interest in an entity that is already controlled and where there is no loss of control, there is no impact on the amount of goodwill recognised at the start of the business combination.

In the case of an increase in the percentage ownership interest of Crédit Agricole Group in an entity that is already controlled, the difference between the acquisition cost and the share of net assets acquired is recognised under “Consolidated reserves Group share”.

In the event that Crédit Agricole Group's percentage ownership interest in an entity that remains under its control declines, the difference between the disposal price and the carrying amount of the share of net assets sold is also recognised directly under “Consolidated reserves Group share”. Expenses arising from these transactions are recognised in equity.

Sale options granted to minority shareholders

The accounting treatment of sale options granted to minority shareholders is as follows:

- when a sale option is granted to the minority shareholders of a fully consolidated subsidiary, a liability is recognised in the balance sheet; on initial recognition, the liability is measured at the estimated present value of the financial year price of the options granted to the minority shareholders. Against this liability, the share of net assets belonging to the minority shareholders concerned is reduced to zero and the remainder is deducted from equity;
- subsequent changes in the estimated value of the financial year price will affect the amount of the liability, offset by an equity adjustment. Symmetrically, subsequent changes in the share of net assets due to minority shareholders are cancelled, offset in equity.

Business combinations under common control

In the absence of an IFRS standard or interpretation specifically applicable to a transaction, IAS 8 “Accounting principles, changes in accounting estimates and errors” leaves open the possibility of referring to the official positions of other normalisation bodies. Accordingly, the Group has elected to apply US standard ASC 805-50, which seems to comply with the IFRS general principles, for entering business combinations under common control at carrying amount using the pooled interests method.

NOTE 2

MAJOR STRUCTURAL TRANSACTIONS AND MATERIAL EVENTS DURING THE PERIOD

2.1 MAJOR STRUCTURAL TRANSACTIONS

2.1.1 CRÉDIT AGRICOLE S.A. COMPLETES THE ACQUISITION OF SANTANDER'S 30.5% STAKE IN CACEIS AND NOW BRINGS ITS OWNERSHIP TO 100%

Following the agreement announced on 19 December 2024, and after receiving all required authorisations, Crédit Agricole S.A. announced on 4 July 2025 that it had completed the acquisition of Santander's 30.5% stake in CACEIS, its asset servicing subsidiary. Following this transaction, Crédit Agricole S.A. now controls 100% of the share capital of CACEIS.

2.1.2 AMUNDI AND VICTORY CAPITAL BECOME STRATEGIC PARTNERS

In accordance with the memorandum of understanding announced on 16 April 2024 and after signing a definitive agreement with Victory Capital on 9 July 2024, Amundi announced the closing of the transaction on 1 April 2025: Amundi's activities in the United States have been merged with Victory Capital.

In exchange, Amundi has become a strategic shareholder of Victory Capital, and reciprocal distribution and services agreements have been set up for a period of 15 years. Following the post-closing adjustments, Amundi's stake in Victory Capital reached 26% ⁽¹⁾.

In the financial statements at 31 December 2025, a gain on disposal of €449.0 million, or €307.0 million in net income Group share, has been recognised, corresponding to the impact of the disposal of Amundi's assets and liabilities in the United States to Victory Capital.

Victory Capital is consolidated using the equity method. At 31 December 2025, its share of income from equity-accounted entities was €66.1 million and its equity-accounted value on the Group's balance sheet was €1,037 million.

2.1.3 FIRST CONSOLIDATION USING THE EQUITY METHOD OF BANCO BPM S.P.A. ("BANCO BPM")

On 3 April 2025, after obtaining the authorisation of the European Central Bank ("ECB"), Crédit Agricole S.A. crossed the threshold of 10% of the capital of Banco BPM by exercising its right to physical delivery of all Banco BPM shares underlying the position in derivatives entered into in the fourth quarter of 2024 and the first quarter of 2025. Crédit Agricole S.A. thus increased its stake in Banco BPM from 9.9% at 31 December 2024 to 19.8% at 30 June 2025.

On 30 July 2025, Crédit Agricole S.A. entered into a derivative position on an additional 0.3% of Banco BPM.

In the second half of 2025, Crédit Agricole S.A. requested authorisation from the European Central Bank to cross the threshold of 20% of the capital of Banco BPM. After completing its investigation of the case, the Bank of Italy, which is responsible for assessing the compliance of the transaction with Italian and European legislation, approved the transaction and forwarded its findings to the ECB on 11 December 2025. No notice of objection to the Bank of Italy's decision was received by Crédit Agricole S.A. before 31 December 2025.

On 9 January 2026, the ECB notified Crédit Agricole S.A. of its authorisation to cross the threshold of 20% of the capital of Banco BPM, thus confirming the position of the Bank of Italy. Crédit Agricole S.A. then exercised its right to physical delivery of Banco BPM shares, increasing its aggregate position in Banco BPM to 20.1%.

At 31 December 2025, Banco BPM was equity-accounted, applying the cost method. An initial consolidation effect resulted, recorded under "Share of income from equity-accounted entities" for -€607 million.

It comprises:

- the cancellation of historical fair value revaluations of Banco BPM securities and derivative instruments since their acquisition, amounting to -€1,971 million;
- badwill of €995 million. In application of IFRS, Crédit Agricole S.A. must finalise the initial allocation of the purchase price within a period of 12 months maximum from the acquisition date;
- and the catching-up through profit or loss of the share of net assets since the first acquisition of Banco BPM securities for €369 million.

The initial equity-accounted value in the Group's balance sheet was €3 billion and Banco BPM's share of income since the first consolidation is €21 million.

Banco BPM is a listed company that publishes its financial statements after those of the Crédit Agricole Group. Therefore, given the unavailability of financial information during the preparation of Crédit Agricole S.A.'s financial statements, the share of quarterly income recognised in the equity-accounted value for Banco BPM corresponds to an estimate based on the last quarter published by the latter, i.e. the income for the previous quarter.

2.1.4 CRÉDIT AGRICOLE PERSONAL FINANCE & MOBILITY ACQUIRES A STAKE IN GAC LEASING

On 27 January 2025, Crédit Agricole Personal Finance & Mobility announced that it had completed the acquisition of 50% of the securities of GAC Finance Leasing Co. Ltd (GAC Leasing), now Guangzhou GAC-Sofinco Finance Leasing Co Ltd. This transaction consolidates the partnership that has existed since 2009 between CA Personal Finance & Mobility and the GAC Group.

The new joint venture offers financial and operating leasing solutions in the Chinese market, promoting the roll-out of electric vehicles in China. It operates alongside GAC-Sofinco AFC, a long-standing joint venture that offers automotive financing and services throughout China.

GAC-Sofinco Finance Leasing is consolidated using the equity method. At 31 December 2025, its share of income from equity-accounted entities was -€5.4 million and its equity-accounted value on the Group's balance sheet was €258 million.

(1) 4.8% of voting rights.

2.1.5 INDOSUEZ WEALTH MANAGEMENT FINALISES THE ACQUISITION OF BANQUE THALER

Following approval from the relevant authorities, Indosuez Wealth Management, the wealth management subsidiary of the Crédit Agricole Group, announced on 1 September 2025 that it had finalised the acquisition of Thaler Bank, of which it now controls 100% of the capital.

The Bank was consolidated on 31 December 2025 using the full consolidation method. This acquisition led to the recognition of goodwill in the amount of €100 million at 31 December 2025. In application of IFRS 3, the acquirer must finalise the recognition of goodwill within a period of 12 months maximum from the acquisition date.

Thaler Bank was merged with CA Indosuez (Suisse) S.A. on 15 December 2025 with retroactive effect to 31 August 2025.

2.1.6 FIRST CONSOLIDATION OF THE ENTITIES PIÙVERA ASSICURAZIONI AND PIÙVERA PROTEZIONE

Following their acquisition in December 2023 by Crédit Agricole Assurances, the entities PiùVera Assicurazioni and PiùVera Protezione are consolidated in the financial statements at 31 December 2025 according to the full consolidation method. This acquisition led to the recognition of goodwill in the amount of €72 million.

2.2 CRÉDIT AGRICOLE S.A. SHARE PURCHASE TRANSACTIONS BY SAS RUE LA BOÉTIE

On 5 February 2025, SAS Rue La Boétie announced its intention to buy up to €500 million of Crédit Agricole S.A. shares by the end of the third quarter of 2025, without intending to exceed a 65% stake in Crédit Agricole S.A.

The transaction, which was finalised on 22 May 2025, resulted in the acquisition of €355 million in Crédit Agricole S.A. shares (including

€1.4 million in acquisition costs). At 31 December 2025, SAS Rue La Boétie held a 63.49% stake in Crédit Agricole S.A.

The scope of consolidation and changes to the scope of consolidation at 31 December 2025 are presented in detail at the end of the notes to the financial statements in Note 12 "Scope of consolidation at 31 December 2025".

NOTE 3

FINANCIAL MANAGEMENT, RISK EXPOSURE AND HEDGING POLICY

Crédit Agricole S.A.'s Financial Management department is responsible for organising financial flows within Crédit Agricole Group, defining and implementing refinancing rules, asset and liability management, and managing regulatory prudential ratios. It sets out the principles and ensures a cohesive financial management system throughout the Group.

The Group's management of banking risks is handled by the Group Risk Management and Permanent Controls department. This department reports to the Deputy Chief Executive Officer of Crédit Agricole S.A. and its task is to control credit, financial and operational risks.

A description of these processes and commentary now appear in the chapter on "Risk Management" in the management report, as allowed by IFRS 7 "Financial instruments: disclosures". The accounting breakdowns are presented in the financial statements.

3.1 CREDIT RISK

(See Chapter "Risk factors and risk management – Risk management – Credit risk")

CREDIT RISK MEASUREMENT

In the context of economic and geopolitical uncertainties, the Group continues to regularly review its forward-looking macroeconomic forecasts to determine the estimate of credit risk.

Information on the macroeconomic scenarios used at 31 December 2025

The Group used four scenarios for calculating IFRS 9 provisioning parameters in production on December 2025 with projections going up to 2028.

These scenarios, which were created in October 2025, are based on various assumptions about changes in the international environment. These include changes in inflation rates, prompting separate monetary

policy responses from central banks, and contrasting impacts on economic growth projections.

Weightings are assigned to each of these scenarios. A weighting of more than 50% is assigned to the central scenario, reflecting its robustness, but always significant risks and uncertainties have resulted in a relatively high weighting being assigned to the adverse scenarios.

First scenario: "Central" scenario (weighted at 55%)

Resilience of growth

In an international environment that is always unstable, there are still many uncertainties. We can nevertheless assume that the uncertainties caused by US economic policy are waning, and that tariffs are at least stabilising.

For the United States, the main lines of the scenario are based on a slowdown in 2025, due to the aggressive increase in customs duties, the anti-immigration policy and persisting inflation, followed by a slight upturn, thanks to the support for budgetary policy provided by the One Big Beautiful Bill Act, and also to deregulation. Average annual growth of 1.7% is therefore projected for 2025, down significantly from the 2.8% recorded in 2024, followed by an acceleration to around 2%. The current deceleration is accompanied by a weakening of the labour market, with a moderate increase in unemployment. The customs duties, at their point of maximum impact, would add nearly 0.8 points to the increase in prices over a year. This effect would be largely temporary, but would take inflation to around 3% at the end of 2025, before gradually falling in 2026 but remaining above the Fed's (Federal Reserve Bank) target.

In the eurozone, despite sluggish consumption and a weaker external environment, the recovery continues. The impact of tariffs is currently less significant than anticipated, and the trade agreement between the EU and the US, entered into in July 2025, offers more visibility. The growth achieved in early 2025 makes it possible to expect a GDP increase of around 1.3% in 2025 and 2026. The resilience of the economy is driven by domestic demand: this has weakened, but remains at a level slightly higher than its long-term trend, and investment in particular has withstood uncertainty. Our scenario is based, above all, on investment, driven by European funds, defence spending and the German recovery plan.

Monetary policies: a long pause

In the US, the resilience of inflation does not favour rapid, large-scale monetary easing: a final decrease in 2025 reduced the upper bound of the Fed funds rate to 4%, followed by a long pause. In the eurozone, inflation around target and a recovery – albeit modest – in the economy also suggest stable central bank policy rates, followed by a tightening, but not before 2027.

Long-term interest rates: upward pressure

Interest rates would experience moderate upward pressure. In the United States, the possible resurgence of inflationary concerns, combined with less monetary easing than anticipated, could result in a slight rise in interest rates coupled with a flattening of the curve.

This movement would spread to the eurozone, driven by European growth that is more resilient than expected, and then supported by fiscal expansion in Germany. The reorganisation of the hierarchy among eurozone sovereign issuers is expected to continue.

Second scenario: “Moderate adverse” scenario (weighted at 25%)

Sudden materialisation of several risks

This scenario involves a reappraisal of risk. In the United States, in the wake of the events of Liberation Day, with a rise in 10-year Treasury yields and a widening of the swap spread, as well as lower demand for the dollar. Moreover, the uncertain nature of the environment creates a crisis of confidence; risk aversion specifically affects the equity markets, as well as the less robust sovereign rates in the eurozone, particularly French rates. International tensions and another increase in gas prices adversely affect the European Union. France is also experiencing a stalemate in its political situation, depriving it of all credibility in terms of its trajectory of reducing imbalances in public finances.

The area is experiencing a resurgence of inflation, especially in countries that are highly exposed to gas (Italy and Germany). The GDP declines in 2026 in the eurozone as a whole, as well as in the major countries of the area. In France, by comparison with the central scenario, inflation is 0.3 percentage points higher in 2026, while growth is 1.5 percentage points lower. There is some normalisation thereafter, thanks in particular to a significant drop in inflation, but growth remains lower in 2027 than expected in the central scenario.

Response from central banks and long-term rates

This scenario assumes that the central banks do not react. They do not ease monetary policy in response to the wave of risk aversion in 2026 due to concerns about inflation, and as such central bank policy rates remain stable throughout the period. In the interbank market, indiscriminate mistrust creates tensions over rates (rise in Euribor).

With regard to long-term risk-free rates (eurozone swap rates), this scenario assumes that the markets will anticipate a rapid return to “normal”, with risk linked to the US economy dissipating and confidence recovering, as well as a recovery in the equity markets after the major shock of 2026. The markets tend to underestimate the magnitude and duration of the downward impact on growth and focus on the risk of inflation. Tensions are concentrated on the short end (two-year rates) in 2026. In contrast, rates on long-term maturities are lower than in the central scenario, with the curve inverted. In addition, spreads vis-a-vis the 10-year swap widen markedly in 2026.

Third scenario: “Favourable” scenario (weighted at 5%)

A boost in growth thanks to the German “bazooka”

This scenario assumes that the German investment plan will be implemented more quickly and efficiently. The Bundestag very quickly approves the recovery plan and the KfW (German public investment bank) is actively mobilised. The plan provides for €500 billion of investment over 12 years, or 1% of GDP per year, dedicated to energy, transport, education and digital infrastructure. The debt brake is relaxed, excluding spending related to Ukraine and defence. The German regions can borrow up to 0.35% of their GDP to invest in infrastructure renovation and security.

The fiscal stimulus provided by the German plan and these fiscal easements stimulate many industrial sectors in Germany but also in Europe; the ripple effect on European Union members is significant.

With the proliferation of investment projects, particularly in Germany, Italy and France, European industry experiences a significant turnaround. Investment is dynamic and the business climate and consumer confidence strengthen; the growth outlook is clearly improving. The growth surplus for the eurozone as a whole is 0.4 percentage points per year on average in the period 2025–2028.

The public deficits in Germany, Italy and France increase but there is no large-scale deterioration in public debt-to-GDP ratios.

Slight monetary tightening and a narrowing of spreads

As growth is driven more by investment spending than by consumption, the rise in inflation is marginal (+0.1 point on average per year). As a result, the ECB raises its interest rates a little more than in the central scenario, leading to higher long-term rates. In the meantime, French and Italian spreads tighten.

Fourth scenario: “Severe adverse” scenario (weighted at 15%)

Worsening of trade and geopolitical tensions

The hypothesis of a further increase in customs tariffs initiated by the American government is being considered. Following a ruling of the US Court of International Trade, the US government favours a significant increase in tariffs on key sectors, including steel, aluminium, automobiles, pharmaceuticals, semiconductors and chips. He also has Congress approve a universal tariff (NB: he can make use of a legislative text that has never been applied, namely Section 122 of the Trade Act of 1974, which allows temporary tariffs of up to 15% on all imports to cover external deficits). The tariff applied is around 20%.

The main partners respond by controlling their exports (retention of strategic exports from China) or by imposing tariffs in turn (China and the EU). The EU refuses to commit to importing more LNG from the US, to which the US government responds by imposing a limit on volumes of LNG exported.

Due to the higher volumes in play, the total blockade of US LNG exports would result in an increase in natural gas prices well above that of 2022. Here we assume a partial embargo that leads to a doubling of the gas price for half a year (H1 2026), the time needed to negotiate.

The trade and geopolitical tensions lead to a partial blockage of certain key shipping routes (Panama, Malacca Strait, Suez Canal), resulting in increased delivery times and occasional disruptions of supply chains.

The shocks related to the trade tension, the resurgence of inflation and the rise in financing costs lead to a crisis of confidence, resulting in an increase in savings and a decrease in investment. Growth is seriously affected.

High inflation and monetary tightening

Inflation rises rapidly. Fears of second-round effects are very present, due in particular to the relatively good performance of the labour markets when the shock occurs, despite the anticipated deceleration of growth.

In response to this inflation and these risks, the Fed and the ECB implement rapid and significant monetary tightening. Ten-year swap rates rise, as do sovereign rates, affected by fears over the fiscal situations. However, the curve is inverted.

The equity markets fall sharply.

FOCUS ON THE CHANGES IN THE MAIN MACROECONOMIC VARIABLES IN THE FOUR SCENARIOS

	Ref.	Central scenario					Moderate adverse				Favourable				Severe adverse

SENSITIVITY ANALYSIS OF THE MACROECONOMIC SCENARIOS IN THE CALCULATION OF IFRS 9 PROVISIONS (ECL STAGES 1 AND 2) ON THE BASIS OF THE CENTRAL PARAMETERS

Variation of ECL in passage to 100% of the scenario (scope is Crédit Agricole Group)

Central scenario	Moderate adverse	Severe adverse	Favourable scenario
-9.6%	+4.2%	+33.4%	-12.7%

This sensitivity on the ECLs defined under the central parameters may be subject to adjustments for local forward-looking projects which, as the case may be, could reduce it or increase it.

Regarding all scenarios

To take account of specific local situations (related to geography or certain business lines), some Group entities supplement the macroeconomic scenarios defined at the central level with specific assumptions (local forward looking).

At the end of December 2025, taking into account local economic assumptions, provisions for performing and impaired loans (Stage 1/Stage 2) account for 41% of the total provisions of the Group, while provisions for default (Stage 3) account for 59%.

The share of the cost of risk attributable to Stage 1 and Stage 2 exposures was 2%, while that relating to Stage 3 (including risks & charges) was 98%.

3.1.1 CHANGE IN CARRYING AMOUNTS AND VALUE CORRECTIONS FOR LOSSES OVER THE PERIOD

Value adjustments for losses correspond to the impairment of assets and to provisions for off-balance sheet commitments recognised in net income (cost of risk) relating to credit risk.

The following tables present a reconciliation of the opening and closing balances of value adjustments for losses recognised under “Cost of risk” and associated carrying amounts, by accounting category and type of instrument.

Financial assets at amortised cost: debt securities

	Performing assets

3.1.2 MAXIMUM EXPOSURE TO CREDIT RISK

The maximum exposure to credit risk represents the carrying amount, net of any impairment loss recognised and without taking account of any collateral held or other credit enhancements (e.g. netting contracts that do not qualify for offset in accordance with IAS 32).

The tables below show the maximum exposures as well as the amount of collateral held and other credit enhancements allowing this exposure to be reduced.

Impaired assets at the end of the reporting period constitute the impaired assets (Stage 3).

Financial assets not subject to impairment requirements (accounted at fair value through profit or loss)

	31/12/2025					
	Maximum exposure to credit risk	Financial instruments provided as collateral	Credit risk mitigation			
			Collateral held as security		Other credit enhancement	
			Mortgages	Pledged securities	Financial guarantees	Credit derivatives
(in millions of euros)

A description of the assets held as collateral is provided in Note 9 "Financing and guarantee commitments and other guarantees".

3.1.3 MODIFIED FINANCIAL ASSETS

Modified financial assets are those assets that have been restructured due to financial difficulties. Loans for which the Crédit Agricole Group changed the initial financial terms (interest rate, term) for economic or legal reasons connected with the borrower's financial difficulties, in a manner that would not have been considered under other circumstances. They thus consist of loans

classified as in default and performing loans at the date they are restructured. (A more detailed definition of restructured loans and their accounting treatment can be found in Note 1.2 "Accounting policies and principles", chapter entitled "Financial instruments – Credit risk").

For assets restructured during the period, the carrying amount following restructuring consists of:

	Performing assets		Credit-impaired assets (Stage 3)
	Assets subject to 12-month ECL (Stage 1)	Assets subject to lifetime ECL (Stage 2)	
<i>(in millions of euros)</i>			
Loans and receivables due from credit institutions	-	-	-
Gross carrying amount	-	-	-
Net gains (losses) resulting from the modification	-	-	-
Loans and receivables due from customers	1	1,294	1,129
Gross carrying amount	2	1,305	1,142
Net gains (losses) resulting from the modification	(1)	(11)	(13)
Debt securities	-	-	-
Gross carrying amount	-	-	-
Net gains (losses) resulting from the modification	-	-	-

In accordance with the principles set out in Note 1.2 "Accounting policies and principles", chapter entitled "Financial instruments – Credit risk", restructured assets at a stage of impairment corresponding to that of Stage 2 (performing assets) or Stage 3 (impaired assets) may go back into Stage 1 (performing assets). The carrying amount of modified assets affected by this reclassification during the period is:

	Gross carrying amount
<i>(in millions of euros)</i>	
Restructured assets previously classified in Stage 2 or Stage 3 and reclassified in Stage 1 during the period	
Loans and receivables due from credit institutions	-
Loans and receivables due from customers	7
Debt securities	-
TOTAL	7

3.1.4 CREDIT RISK CONCENTRATIONS

The carrying amounts and commitments are presented net of impairment and provisions.

Exposure to credit risk by category of credit risk

The credit risk categories are presented by probability of default intervals. The correspondence between internal ratings and probability of default intervals is discussed in the Chapter 5 "Risks factors and risk management".

Given the credit risk management practices of the Crédit Agricole Group, the one-year default probability threshold for retail customers decreased from 20% to 15% at 31 December 2025.

3.2 EXPOSURE TO SOVEREIGN RISK

The scope of sovereign exposures recorded covers exposures to Governments, but does not include local authorities. Tax debt is excluded from these amounts.

Exposure to sovereign debt corresponds to an exposure net of impairment for financial assets not measured at fair value through profit or loss (carrying amount) presented both gross and net of hedging.

Crédit Agricole Group's exposure to sovereign risk is as follows:

BANKING ACTIVITY

31/12/2025 (in millions of euros)	Exposures Banking activity net of impairment						
	Other financial instruments at fair value through profit or loss		Financial assets at fair value through other comprehensive income that may be reclassified to profit or loss		Total banking activity before hedging		Total banking activity after hedging

INSURANCE ACTIVITY

For the insurance activity, exposure to sovereign debt is presented as net of impairment, before hedging, and corresponds to an exposure before application of sharing mechanisms between insurer and policyholder specific to life insurance.

FINANCIAL GUARANTEES AT RISK GIVEN BY EXPECTED MATURITY

The amounts presented correspond to the expected amount of the call of financial guarantees at risk, i.e. guarantees that have been impaired or are on a watch list.

	31/12/2025					
(in millions of euros)	≤ 3 months	> 3 months to ≤ 1 year	> 1 year to ≤ 5 years	> 5 years	Indefinite	Total
Financial guarantees given	86	173	-	-	-	258

	31/12/2024					
(in millions of euros)	≤ 3 months	> 3 months to ≤ 1 year	> 1 year to ≤ 5 years	> 5 years	Indefinite	Total
Financial guarantees given	123	112	-	-	-	235

Contractual maturities of derivative instruments are given in Note 3.3 "Market risk".

3.5 HEDGE ACCOUNTING

(See Note 3.3 “Market risk” and the chapter “Risk factors and risk management – Risk management – Balance sheet management”)

FAIR VALUE HEDGES

A fair value hedge modifies the risk caused by changes in the fair value of a fixed-rate financial instrument as a result of changes in interest rates. Fair value hedges transform fixed-rate assets or liabilities into floating-rate assets or liabilities.

Items hedged are principally fixed-rate loans, securities, deposits and subordinated debt.

CASH FLOW HEDGES

A cash flow hedge modifies the risk related to variability in cash flows arising from floating-rate financial instruments.

Cash flow hedges notably include the floating rate hedges of loans and deposits.

HEDGE OF NET INVESTMENT IN FOREIGN CURRENCY

A hedge of a net investment in foreign currency modifies the risk inherent in exchange rate fluctuations connected with foreign currency investments in subsidiaries.

HEDGING DERIVATIVES

	31/12/2025			31/12/2024		
	Market value		Notional amount	Market value		Notional amount
	positive	negative		positive	negative	
<i>(in millions of euros)</i>						
Fair value hedges	22,611	23,997	1,246,150	25,382	29,203	1,287,755
Cash flow hedges	2,334	2,491	167,082	2,177	2,728	136,885
Hedges of net investments in foreign operations	128	87	6,738	73	148	6,560
TOTAL HEDGING DERIVATIVE INSTRUMENTS	25,072	26,575	1,419,971	27,632	32,079	1,431,200

The Group applies, in accordance with its Accounting Policies and Principles relating to fair value hedges of interest rate portfolios, financial assets or financial liabilities portfolios, IAS 39 as adopted by the European Union (carve-out version). The standard allows the inclusion of low- or non-interest-bearing demand deposits in such hedges.

The Crédit Agricole Group has not recorded any material disqualification in the 2025 financial year in relation to the rising rates market environment.

HEDGING DERIVATIVES: ANALYSIS BY RESIDUAL MATURITY (NOTIONALS)

The breakdown of notional values of derivative instruments is shown by remaining contractual maturity.

	31/12/2025			
	Exchange-traded transactions and over the counter transactions			Total notional
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	
<i>(in millions of euros)</i>

3.6 OPERATIONAL RISKS

(See Chapter “Risk factors and risk management – Risk management – Operational risks”.)

3.7 CAPITAL MANAGEMENT AND REGULATORY RATIOS

The Crédit Agricole S.A. Finance Department is tasked with ensuring the adequacy of liquidity and capital between the requirements generated by the Group’s global operations and its liquidity and capital financial resources. It is responsible for monitoring the prudential and regulatory ratios (solvency, liquidity, leverage, resolution) of Crédit Agricole Group and of Crédit Agricole S.A. To this end, it sets out the principles and ensures a cohesive financial management system throughout the Group.

Information on capital management and compliance with the regulatory ratios required by IAS 1 is presented in the chapter “Risks factors and risk management”.

The Group’s management of banking risks is handled by the Group Risk Management and Permanent Controls department. This department reports to the sole Deputy Chief Executive Officer in charge of Steering and Control of Crédit Agricole S.A. and its task is to control credit, financial and operational risks on a permanent basis.

A description of these processes and commentary appear in the chapter on “Risk factors and risk management” in the management report, as allowed by IFRS 7. Nonetheless, the accounting breakdowns are still presented in the financial statements.

NOTE 4 NOTES ON OTHER COMPREHENSIVE INCOME**4.1 INTEREST INCOME AND EXPENSES***(in millions of euros)*

	31/12/2025	31/12/2024
On financial assets at amortised cost	51,402	55,272
Interbank transactions	8,637	11,876
Customer transactions	37,073	38,149
Finance leases	2,662	2,465
Debt securities	3,030	2,782
On financial assets recognised at fair value through other comprehensive income	6,138	5,326
Interbank transactions	-	-
Customer transactions	-	-
Debt securities	6,137	5,326
Accrued interest receivable on hedging instruments	3,729	8,710
Other interest income	126	102
INTEREST AND SIMILAR INCOME ^{(1) (2)}	61,395	69,410
On financial liabilities at amortised cost	(36,624)	(44,136)
Interbank transactions	(4,384)	(5,380)
Customer transactions	(21,457)	(27,056)
Finance leases	(703)	(562)
Debt securities	(9,766)	(10,746)
Subordinated debt	(312)	(392)
Accrued interest receivable on hedging instruments	(3,603)	(5,214)
Other interest expenses	(125)	(116)
INTEREST AND SIMILAR EXPENSES	(40,352)	(49,466)

(1) Includes €416 million for impaired loans (Stage 3) at 31 December 2025 versus €1.4 billion at 31 December 2024.

(2) At 31 December 2024, income of €321 million should have been classified as "Interest and similar income". These were recorded under fee and commission income and expenses (see Note 4.2 of these consolidated financial statements). This change in presentation has no effect on the revenues recognised at 31 December 2024.

4.2 FEE AND COMMISSION INCOME AND EXPENSES

	31/12/2025			31/12/2024		
<i>(in millions of euros)</i>	Income	Expense	Net	Income	Expense	Net
Interbank transactions	67	(114)	(46)	407	(114)	293
Customer transactions	2,428	(537)	1,892	2,128	(443)	1,685
Securities transactions	91	(312)	(221)	52	(230)	(179)
Foreign exchange transactions	62	(38)	24	62	(42)	20
Derivative instruments and other off-balance sheet items	398	(196)	202	353	(218)	135
Payment instruments and other banking and financial services	8,355	(2,465)	5,890	7,929	(2,031)	5,898
UCITS, fiduciary and similar operations management	6,877	(1,757)	5,120	6,764	(1,827)	4,938
TOTAL FEES AND COMMISSIONS INCOME AND EXPENSE ⁽¹⁾	18,279	(5,421)	12,859	17,695	(4,905)	12,790

(1) At 31 December 2024, fee and commission income included income of €321 million for the collection margin, which should have been classified respectively as "Income and similar income" and "Interest and similar expenses". This change in presentation has no effect on the revenues recognised at 31 December 2024.

Asset Gathering is the main contributor of the fee and commission income from customer transactions and transactions involving payment instruments and other banking and financial services, as well as managing UCIs, trusts and similar activities.

4.3 NET GAINS (LOSSES) ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH PROFIT OR LOSS

(in millions of euros)	31/12/2025	31/12/2024

COST OF RISK	(3,452)	(3,191)

4.10 NET GAINS (LOSSES) ON OTHER ASSETS

(in millions of euros)

	31/12/2025	31/12/2024
Property, plant & equipment and intangible assets used in operations	(7)	(15)
Gains on disposals	27	41
Losses on disposals	(35)	(56)
Gains or losses on disposals of consolidated equity investments	449	(1)
Gains on disposals	449	-
Losses on disposals	-	(1)
Net income (expense) on combinations transactions	(5)	(24)
NET GAINS (LOSSES) ON OTHER ASSETS	437	(40)

4.11 TAX

TAX CHARGE

(in millions of euros)	31/12/2025	31/12/2024
Current tax charge ^{(1) (2)}	(2,438)	(2,284)
Deferred tax charge	(579)	(604)
TOTAL TAX CHARGE	(3,017)	(2,888)

(1) The amount estimated related to the additional tax under Pillar 2-GLoBE is not material in 2025.

(2) Including €386 million as an exceptional contribution under the 2025 Finance Act (this amount includes the allocation methods within the Group in accordance with the group tax regime agreement).

Pursuant to the 2025 Finance Act, an exceptional contribution on the profits of large corporates was introduced. With a number of different thresholds, this applies to corporates whose 2024 or 2025 revenues exceeded €1 billion or €3 billion.

For the relevant taxpayers whose revenues were between €1 billion and €3 billion, the exceptional contribution rate is set at 20.6%; for those with revenues over €3 billion, the exceptional contribution rate is set at 41.2%. Taxpayers with revenues of less than €1 billion are not subject to this contribution.

There is also a specific basis for calculating this exceptional contribution, which is to find the average corporate income tax due (excluding the 3.3% social contribution on profits) for the financial year in which the contribution is due (2025) and the previous financial year (2024).

In addition, a tax group scheme agreement lays down the rules for the allocation and payment of this exceptional contribution.

The exceptional contribution recognised at 31 December 2025 amounted to €280 million, including €167 million for the 2024 financial year.

RECONCILIATION OF THE THEORETICAL TAX RATE AND THE EFFECTIVE TAX RATE

At 31 December 2025

(in millions of euros)	Base	Tax rate	Tax
Pre-tax income, goodwill impairment, discontinued operations and share of net income of equity-accounted entities	12,975	25.83%	(3,351)
Impact of permanent differences		(1.84%)	239
Impact of different tax rates on foreign subsidiaries		0.74%	(96)
Impact of losses for the year, utilisation of tax loss carryforwards and temporary differences		0.08%	(10)
Impact of reduced tax rate		(2.24%)	290
Impact of tax rate change		(0.01%)	1
Impact of other items		0.69%	(90)
EFFECTIVE TAX RATE AND TAX CHARGE		23.25%	(3,017)

The theoretical tax rate is the standard tax rate for taxable profits in France at 31 December 2025 (including the additional social contribution). The entire exceptional contribution (along with the effects of the associated group tax regime agreement) has been recognised on the "Effect of other items" line.

At 31 December 2024

(in millions of euros)	Base	Tax rate	Tax
Pre-tax income, goodwill impairment, discontinued operations and share of net income of equity-accounted entities	12,101	25.83%	(3,126)
Impact of permanent differences		(0.87%)	106
Impact of different tax rates on foreign subsidiaries		1.07%	(130)
Impact of losses for the year, utilisation of tax loss carryforwards and temporary differences		0.08%	(10)
Impact of reduced tax rate		(1.04%)	125
Impact of tax rate change		-	1
Impact of other items		(1.21%)	146
EFFECTIVE TAX RATE AND TAX CHARGE		23.87%	(2,888)

The theoretical tax rate is the standard tax rate (including the additional social contribution) on taxable profits in France at 31 December 2024.

4.12 CHANGES IN OTHER COMPREHENSIVE INCOME

NOTE 5 SEGMENT INFORMATION

DEFINITION OF OPERATING SEGMENTS

According to IFRS 8, information disclosed is based on the internal reporting that is used by the Executive Committee to manage Crédit Agricole Group., to assess performance, and to make decisions about resources to be allocated to the identified operating segments.

Operating segments according to the internal reporting consist of the business lines of the Group.

At 31 December 2025, Crédit Agricole Group's business activities were organised into seven operating segments:

1. the following six business lines:
 - French Retail Banking – Local Banks,
 - French Retail Banking – LCL,
 - International Retail Banking,
 - Asset Gathering,
 - Large Customers,
 - Specialised Financial Services;
2. as well as the “Corporate Centre”.

PRESENTATION OF BUSINESS LINES

French Retail Banking – Regional Banks

This business line encompasses Regional Banks and their subsidiaries.

Regional Banks, which serve individual customers, farmers, small businesses, corporates and local authorities, are firmly anchored in the community.

Crédit Agricole Regional Banks market a full range of banking and financial products and services: savings products (cash, bonds, securities and funds), financing (notably home loans and consumer finance), insurance products (life, death and disability, and property and casualty insurance) as well as payment instrument, personal service, banking-related service and wealth management offerings.

French Retail Banking – LCL

LCL is a French Retail Banking network with a strong presence in urban areas. It is organised into four corporate lines: retail banking for individual customers, retail banking for small corporates, private banking and corporate banking.

LCL offers a full range of banking products and services, together with asset management, insurance and wealth management products.

International Retail Banking

This business line encompasses international subsidiaries that are mainly involved in retail banking.

These subsidiaries are primarily located in Europe: Crédit Agricole Italia in Italy, Crédit Agricole Polska in Poland, as well as in Ukraine, but also in the Mediterranean region with Crédit Agricole Egypt.

The international consumer finance, leasing and factoring subsidiaries (subsidiaries of Crédit Agricole Personal Finance & Mobility, Crédit Agricole Leasing & Factoring and EFL in Poland etc.) are not included in this segment, but in “Specialised Financial Services”, except Calit in Italy, which is part of International Retail Banking.

Asset Gathering

This business line brings together:

- the insurance activities of Crédit Agricole Assurance Group companies to support customers at every stage of their lives and cover all their property & casualty and life insurance needs in France and abroad, via the following three business lines:
 - savings and retirement,
 - death & disability/creditor/group insurance,
 - property and casualty insurance;
- the asset management activities of Amundi Investment Solutions, offering a full range of savings and investment solutions in Europe, Asia and the Americas, through active and passive management of traditional or real assets for individual customers. This offering is complemented by technology services and tools covering the entire savings value chain;
- as well as wealth management activities conducted mainly by subsidiaries of the Indosuez Wealth Management group (CA Indosuez (Switzerland) S.A., CA Indosuez Wealth (Europe), CFM Indosuez and Degroof Petercam).

Specialised Financial Services

Specialised Financial Services comprises the Group entities that provide financial products and services to individual customers, corporates, farmers and local authorities in France and abroad. These are:

- companies offering consumer finance, car rental and mobility solutions around Crédit Agricole Personal Finance & Mobility in France (Sofinco, as well as the management of the consumer finance activity on behalf of the Banks and LCL), through its international subsidiaries or partnerships (Agos, Creditplus Bank, Credibom, Sofinco Spain, GAC Sofinco Finance, GAC Sofinco Leasing, Wafasalaf) and a pan-European establishment of entities dedicated to Mobility: CAAB and Leasys (long-term leasing joint venture with Stellantis);
- specialised financial services for corporates, such as factoring and lease finance (Crédit Agricole Leasing & Factoring Group, EFL) and financing specifically for energy and the regions, for corporates, local authorities and farmers, who are actors in the energy transition.

Large Customers

The Large Customers division includes corporate and investment banking, which itself consists of two main lines of business most of which are carried out by Crédit Agricole CIB, and asset servicing for institutions and issuers carried out by CACEIS:

- financing activities, which include corporate banking and structured finance in France and internationally. Structured finance consists of originating, structuring and financing investment transactions often collateralised by physical assets (planes, boats, office buildings, commodities etc.) and complex and structured credit instruments;
- capital markets and investment banking activities bring together capital market activities (treasury, foreign exchange, interest rate derivatives, bond markets), and investment banking activities (mergers and acquisitions consulting and primary equity advisory);
- asset servicing for institutional investors and issuers: CACEIS Bank for custody and depositary services, CACEIS Fund Administration for fund administration services and Uptevia for issuer services.

Corporate Centre

This segment encompasses four types of activity:

- Crédit Agricole S.A.'s Central Body function, asset and liability management and management of debt connected with acquisitions of subsidiaries or equity investments and the net impact of tax consolidation for Crédit Agricole S.A.;
- the results of the private equity business and results of various other Crédit Agricole Group companies (notably CA Immobilier, Uni-médias, Foncaris, BForBank etc.);

- the results from services companies including IT and payment companies (CA-GIP and CAPS) and real-estate companies;
- the provision of energy transition advisory services, which is structured around the production and supply of decarbonised electricity through direct distribution, as well as energy transition advice and solutions (Crédit Agricole Transitions & Énergies [Transitions & Énergies]).

The division also includes the technical and volatile impacts related to intragroup transactions.

5.1 OPERATING SEGMENT INFORMATION

Transactions between operating segments are effected at arm's length.

Segment assets are determined based on balance sheet elements for each operating segment.

Derivative instruments and separated embedded derivatives	319	470
Investments in associates and joint ventures	-	-
TOTAL UNDERLYING ITEMS FOR INSURANCE CONTRACTS WITH DIRECT PARTICIPATION FEATURES	409,419	383,104

INSURANCE AND REINSURANCE CONTRACTS

The carrying amount of the portfolios of insurance contracts issued and reinsurance contracts held, broken down by their position on the balance sheet and detailed according to their components, are presented in the following table.

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
INSURANCE CONTRACTS ISSUED	392,096	366,436
Insurance contracts issued that are assets	(49)	(15)
Remaining coverage	(56)	(494)
Incurred claims	7	479
Assets for insurance acquisition cash flows	-	-
Insurance contracts issued that are liabilities	392,145	366,451
Remaining coverage	379,896	355,345
Incurred claims	12,249	11,106
Assets for insurance acquisition cash flows	-	-
REINSURANCE CONTRACTS HELD	(1,063)	(951)
Reinsurance contracts held that are assets	(1,171)	(1,021)
Remaining coverage	(447)	(226)
Incurred claims	(724)	(795)
Reinsurance contracts held that are liabilities	108	70
Remaining coverage	107	71
Incurred claims	1	(1)
INVESTMENT CONTRACTS WITHOUT DISCRETIONARY PARTICIPATION FEATURES	2,957	3,170

(1) Investment contracts without discretionary participation features are classified under liabilities at fair value through profit or loss.

Reconciliations of the opening and closing balances of the contracts that enter into the scope of application of IFRS 17 are presented below.

These reconciliations show how the net carrying amounts of the insurance contracts issued and reinsurance contracts held, respectively, varied over the period due to cash flows as well as income and expenses recognised in profit or loss and in OCI.

An initial reconciliation (by type of liability) separately analyses the changes in the liability for remaining coverage and changes in the liability for incurred claims and reconciles these changes with the items of the income statement and statement of net income and other comprehensive income recognised directly in equity.

A second reconciliation (by measurement component of the contracts) analyses separately, for contracts that are not measured using the PAA model, the changes in estimates of the present value of future expected cash flow, adjustment for non-financial risk, and a contractual service margin.

Effect of discounting								(781)
Effect of the risk adjustment for non-financial risk								166
LIABILITIES FOR INCURRED CLAIMS, NET								6,563

Under the transition requirements of the standard, the Group does not present previously non-reported information on the development of claims incurred more than six years before the end of the annual reporting period for which it applies IFRS 17 for the first time (i.e. claims incurred before 2019).

INSURANCE CONTRACTS – TRANSITIONAL AMOUNTS

Under the transition requirements of IFRS 17, the changes in accounting policies resulting from the application of IFRS 17 must be applied using a full retrospective approach at the date of transition, where practicable. Under the full retrospective approach, the Group must, at the transition date (1 January 2022):

- identify, recognise and measure each group of insurance contracts as if it had always applied IFRS 17;
- identify, recognise and measure assets for insurance acquisition cost cash flows, if any, as if it had always applied IFRS 17 (but without being required to make an assessment of their recoverability before the date of transition);
- derecognise balances that would not exist if it had always applied IFRS 17;
- recognise any remaining net difference in equity.

If and only if the retrospective application of the standard is impracticable for the measurement of a group of insurance contracts or an asset for insurance acquisition cost cash flows, the Group may choose either of the two alternative approaches provided by the transition provisions of the standard (modified retrospective approach or fair value approach).

At the transition date, i.e. 1 January 2022, the Group applied the full retrospective approach to measure the most recent property and casualty insurance contracts (measured according to the PAA model), as well as the retirement insurance contracts of the Crédit Agricole Assurances Retraite (Retirement Insurance) general fund.

The Group used the modified retrospective approach to measure the groups of insurance contracts recognised at the date of transition. The Group has not used the fair value approach. The Group determined that the full retrospective approach was impracticable for the relevant groups of contracts due to the unavailability of all the information necessary for a full retrospective application of the standard (not only in terms of data collected, but also in terms of assumptions or estimates made in prior accounting periods).

The aim of the modified retrospective approach (MRA) is to achieve the closest outcome to full retrospective application possible using reasonable and supportable information available without undue cost or effort.

To that end, this approach includes a list of modifications in several areas; each of these modifications may be used only to the extent that reasonable and supportable information necessary to apply a full retrospective approach is not available.

The main changes to the modified retrospective approach that the Group has used for the measurement of certain groups of contracts at the transition date are as follows:

- the identification of groups of insurance contracts and determination of which contracts qualify as insurance contracts with direct participation features based on the information available at the date of transition;
- the exemption from the requirement to form groups in such a way that they do not include contracts issued more than one year apart;

- the determination of the CSM (or of the loss component, where applicable) for groups of insurance contracts without direct participation features at the transition date, notably:
 - the estimate of the future cash flows at the date of initial recognition as the amount of the future cash flows at the transition date, adjusted by the cash flows that are known to have occurred between the date of initial recognition and the transition date,
 - the determination of the discount rates that applied at the date of initial recognition using an estimated yield curve at the date corresponding to the average age of the contracts in the group,
 - the determination of the adjustment for non-financial risk at the date of initial recognition by adjusting the adjustment for non-financial risk at the transition date by the expected release of risk before the transition date,
 - the use of the discount rates at the date of initial recognition as determined above to accrete interest on the CSM,
 - the determination of the amount of the CSM recognised in profit or loss because of the transfer of services before the transition date, by comparing the remaining coverage units at that date with the coverage units provided under the group of contracts before the transition date;
- the determination of the CSM (or of the loss component, where applicable) for groups of insurance contracts with direct participation features at the transition date, by calculating a proxy for the total CSM for all services to be provided under the group of contracts (fair value of the underlying items minus fulfilment cash flows at that date, and adjusted for amounts charged to the policyholders before that date, amounts paid before that date that would not have varied based on the underlying items, the change in the adjustment for non-financial risk caused by the release from risk before that date, and insurance acquisition cost cash flows incurred before the transition date that are allocated to the group), and by deducting from the latter the amount of the CSM that relates to services provided before that date;
- the determination, in the event that the OCI option is applied, of the cumulative amount of insurance finance income or expenses recognised in equity at the date of transition:
 - for groups of insurance contracts without direct participation features: either by using the discount rates at the date of initial recognition as determined above, or by considering it as nil,
 - for groups of insurance contracts with direct participation features for which the entity holds the underlying items: by considering it as equal to the cumulative amount recognised in equity on the underlying items.

At the transition date, the Group did not apply the modified retrospective approach or the approach based on fair value to identify and measure assets for insurance acquisition cost cash flows.

Reconciliation of the opening and closing balances of the contractual service margin – insurance contracts issued

A reconciliation of the opening and closing balances of the contractual service margin of insurance contracts issued under the measurement approach used at the transition date is presented in the following table:

	31/12/2025					31/12/2024				
	Insurance contracts recognised at the transition date					Insurance contracts recognised at the transition date				
	Insurance contracts to which the full retrospective approach has been applied	Insurance contracts to which the modified retrospective approach has been applied	Insurance contracts to which the fair value approach has been applied	Insurance contracts recognised after the transition date	Total	Insurance contracts to which the full retrospective approach has been applied	Insurance contracts to which the modified retrospective approach has been applied	Insurance contracts to which the fair value approach has been applied	Insurance contracts recognised after the transition date	Total

Reconciliation of the cumulative amounts presented in OCI for financial assets measured at FVOCI

At the time of the transition to IFRS 17, the Group determined the cumulative amount of insurance finance income or expenses recognised in OCI at 1 January 2022 by applying the modified retrospective approach for certain groups of contracts.

The reconciliation of the cumulative amount recognised in OCI for financial assets measured at fair value through equity that are linked to these groups of contracts is presented in the following table:

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
OPENING BALANCE OF THE CUMULATIVE AMOUNTS INCLUDED IN OTHER COMPREHENSIVE INCOME	(9,515)	(9,745)
Changes in the period	28	230
CLOSING BALANCE OF THE CUMULATIVE AMOUNTS INCLUDED IN OTHER COMPREHENSIVE INCOME	(9,487)	(9,515)

RISKS ARISING FROM FINANCIAL INSTRUMENTS AND INSURANCE CONTRACTS

Risk management is an integral part of the Group's economic model. The Group has developed and implemented governance and a risk management system designed to identify, assess, control and monitor the risks associated with its activity. By relying on this governance and framework, the Group aims to meet its obligations toward its policyholders, customers and creditors, to manage its capital effectively and to comply with applicable laws and regulations.

The general risk management framework within Crédit Agricole Group is presented in Section 5 "Risk management" of the Universal Registration Document.

Information on the nature and extent of risks arising from financial instruments that fall within the scope of application of IFRS 7 and risks arising from contracts that fall within the scope of application of IFRS 17, as well as information on how these risks are managed, is provided in this note.

Sensitivity analyses of changes in risk variables arising from financial instruments and insurance contracts are also presented in this note.

The Group issues insurance contracts and investment contracts (see Note 1 "Accounting policies and principles" and Note 5.3, section on "Insurance and reinsurance contracts" below). The nature and extent of underwriting risks and financial risks arising from these contracts are determined by the characteristics of the individual contracts. Risks are assessed for risk management purposes in relation to risks mitigated by associated reinsurance contracts and risks arising from financial assets held to fund the settlement of insurance liabilities. The extent to which earnings and equity in a given period are sensitive to financial risks depends on the extent to which they are economically hedged or borne by the policyholders and the extent of any accounting differences inherent in the accounting policies adopted by the Group.

Given the diversity of the Group's insurance activities, the Group is exposed to the following risks arising from its various contracts:

- Underwriting risks:
 - Insurance risks (such as mortality risk, morbidity risk, longevity risk, risk of drift in claims in property and casualty insurance),
 - Expense risk,
 - Risk related to policyholder behaviour (including risk of withdrawal);
- Financial risks:
 - Market risk, including three types of risk:
 - Interest rate risk,
 - Price risk,
 - Foreign exchange risk,
 - Credit risk,
 - Liquidity risk.

Underwriting risk

The Crédit Agricole Group operates, through its subsidiaries in France and internationally, in the savings/retirement, death & disability/creditor/group insurance and property and casualty insurance activities.

These activities expose the Group to underwriting risks, which include:

- insurance risk: the risk, other than financial risk, transferred from policyholders to the Group, which arises from the coverage of uncertain future events and the inherent uncertainty regarding the occurrence, amount and timing of resulting claims;
- the risk related to policyholder behaviour: including the risk of withdrawal;
- expense risk: the risk of unexpected increases in administrative costs relating to the management of contracts, rather than costs relating to insured events.

The accounting principles for provisioning the Group's commitments in accordance with IFRS 17 are detailed in the "Insurance contracts" section of Note 1.2 "Accounting policies and principles" above.

The underwriting risk management targets, policies and processes implemented by the Group are as follows.

The Group's aim is to have sufficient resources to be able to cover the liabilities relating to the insurance and reinsurance contracts that it issues. Risk exposure is mitigated both by diversification of insurance activities and by rigorous underwriting according to guidelines defined in the Group's underwriting strategy. Risk management also takes into account ways of mitigating underwriting risks, such as ceded reinsurance.

For savings activities, the main underwriting risk is the risk of withdrawal. Against a backdrop of significantly higher interest rates, this is reflected in the realisation of losses on the disposal of bond assets at a loss, when cash is insufficient. The proportion of assets with reduced liquidity is monitored in the same way as withdrawals.

The withdrawal risk is controlled by monitoring policyholder behaviour, by a competitive policyholder profit-sharing policy designed to build policyholder loyalty; by a prudent financial policy, particularly in the management of reserves; and to a lesser extent by the use of withdrawal penalties where appropriate (subject to the option being included in the information leaflets).

In particular, since 2022, the withdrawal rate has been monitored more closely at several levels:

- entities concerned: the amounts and withdrawal rates are monitored regularly and reported to the entity's governing bodies by the entities concerned in order to detect cyclical or structural deviations;
- quarterly monitoring is used to compare the rates of withdrawal with those in the market.

Since 2023, as part of the monitoring of unit-linked contracts (performance, property funds, assets with reduced liquidity, general asset carrying etc.) and the context of the property markets, a report is provided on a monthly basis.

Savings activities are also exposed to insurance risk, and more particularly to mortality risk (risk of the policyholder dying earlier than anticipated). In fact, certain multi-support contracts include a guarantee by the insurer to pay, in the event of the death of the policyholder, a minimum capital amount to the beneficiaries (i.e. a minimum guarantee).

For retirement activities, the main insurance risk is longevity risk (risk of the policyholder dying later than anticipated), which arises from the annuity phase.

For death & disability and creditor insurance activities, the Group is mainly exposed to biometric insurance risks (notably mortality, longevity, morbidity, incapacity and disability).

For property and casualty insurance activities, the main risks to which the Group is exposed are uncertainties about the frequency and severity of claims. These risks are influenced by the nature of the assets covered and the geographical location in which the risks are underwritten.

Two types of claims can have critical consequences: claims resulting from extreme weather events (floods, droughts, fires, storms, earthquakes etc.) and large individual claims ("major" claims).

The heightened climate risk could introduce significant uncertainty into the assumptions of models, potentially leading to a greater number of more significant claims than projected as well as to inadequate pricing. This risk and the drift in claims are mitigated by reinsurance programmes and even insurance-linked securities (ILS, such as CAT bonds), which aim to protect shareholders' equity and contain earnings volatility.

Monitoring the consumption of a weather claims budget and a major claims budget is one of the ways in which insurance risks are managed for property and casualty and group death & disability portfolios.

For all activities, underwriting risks are managed, on the one hand, by a diversified underwriting policy and, on the other hand, by recourse to reinsurance in order to limit the financial consequences of major risk events (storms, hailstorms, natural disasters etc.), with the reinsurance policy taking this dimension into account.

To maintain these risks within its appetite framework, the Crédit Agricole Group ensures that it has:

- an appropriate underwriting (and pricing) policy;
- banking networks and financial partners that coordinate the underwriting policy;
- a claims management policy carried out by dedicated claims management units or French or multi-country structures, or delegated to local service providers.

With regard to Group activities, the underwriting policy specifies the risks covered, the underwriting conditions (target customers, exclusions), and the pricing standards (notably the statistical tables used, based on national and international data or experience).

With regard to distribution partners, the underwriting policy defines the risk acceptance framework (with the aim of ensuring appropriate risk selection and pooling within the contract portfolio to optimise technical margins while respecting the Group's appetite framework). Pricing rules and procedures are also formalised.

In addition to the underwriting policy, each entity applies a provisioning policy to ensure effective control of the related risk.

The ratio between the cost of claims (paid and provisioned) and earned premiums is the key indicator for monitoring underwriting risk in the property & casualty and death & disability/creditor portfolios. For each entity, a warning threshold is set and compared with the target ratio based on a central scenario.

Finally, the Group is exposed for all of its activities to the risk of charges, that is to say the risk of unexpected increases in administrative costs relating to the management of the contracts (such as operating expenses and commissions paid to distributors). This risk is managed through budgetary exercises and regular cost assessments.

In terms of the geographic concentration of the underwriting risk, the Group is mainly exposed to the French and Italian markets, which represented 85.3% and 9.9% of premium income (gross premiums issued) and 89.6% and 6.6% of the carrying amount of insurance contracts, respectively, at 31 December 2025.

With regard to activities, savings and retirement activities represented 76% of revenues at 31 December 2025. The property and casualty insurance and death & disability/creditor/group insurance activities represented 13% and 11% of premium income, respectively, at 31 December 2025.

In non-life insurance, concentrations of risk, resulting in an aggregation of liabilities to be paid in the event of a single claim, may arise from:

- underwriting concentration in which insurance policies are underwritten by one or more Group entities on the same risk;
- claim concentration, where contracts are underwritten by one or more Group entities for different risks likely to be affected by claims resulting from the same damaging event or the same root cause.

This risk is covered by the underwriting policy and the use of reinsurance, as detailed above.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in the main insurance risk variables at the end of the reporting period (i.e. mortality risk and drift in claims in property and casualty insurance). This analysis presents sensitivities before and after risk mitigation by reinsurance contracts held and assumes that all other variables remain constant.

In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

Sensitivities are based on the assumption of a 10% increase/decrease in mortality risk and a 5% increase/decrease in claims (best estimate).

The impacts on net income and equity are presented net of deferred tax.

		31/12/2025					
		Impact on CSM		Impact on profit or loss		Impact on equity	
		Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance
<i>(in millions of euros)</i>							
Mortality	10% increase	(507)	(546)	(4)	(7)	4	1
	10% decrease	517	565	2	6	(6)	(2)
Claims experience drift	5% increase			(242)	(213)	(237)	(209)
	5% decrease			242	213	237	209

		31/12/2024					
		Impact on CSM		Impact on profit or loss		Impact on equity	
		Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance	Gross of reinsurance	Net of reinsurance
<i>(in millions of euros)</i>							
Mortality	10% increase	(427)	(468)	4	(23)	12	(14)
	10% decrease	461	510	21	3	10	(8)
Claims experience drift	5% increase			(242)	(211)	(236)	(207)
	5% decrease			235	204	229	200

Market risk

Market risk is the risk that changes in market prices (e.g. interest rates, exchange rates, share prices) will affect the fulfilment cash flows of insurance and reinsurance contracts and the fair value or future cash flows of financial instruments. It includes three types of risk: interest rate risk, foreign exchange risk and price risk.

This risk arises from the variability of the fair values of financial instruments or associated future cash flows, as well as from the variability of the fulfilment cash flows of insurance contracts due to changes in market risk variables.

Given the preponderance of savings/retirement activities in France and abroad (mainly Italy), and therefore the very large volume of financial assets representing commitments to policyholders, the Crédit Agricole Group, via its subsidiary Crédit Agricole Assurances, is particularly concerned by market risk.

The Crédit Agricole Assurances Group is mainly exposed to interest rate risk and the price risk on equities and so-called “diversification” assets. It is only marginally exposed to foreign exchange risk.

Market risk arises mainly from the Group’s investments in equity instruments, interest-bearing financial assets and liabilities, and financial assets and liabilities denominated in foreign currencies, but these exposures are largely offset by similar exposures on insurance and reinsurance contracts.

For insurance contracts with direct participation features (corresponding mainly to the Group’s saving/retirement business), changes in the fair value of the underlying items due to changes in market variables are reflected in the value of the corresponding insurance contracts; the Group is therefore exposed mainly to market risk in respect of changes in its share of the fair value of the underlying items.

In the case of unit-linked commitments (representing €115,598 million at 31 December 2025), market risk is largely borne by policyholders, who directly bear the risk of fluctuations in the value of the underlying assets; the insurer is nevertheless exposed to this risk because of its impact on the basis for deducting fees from outstandings.

The market risk management targets, policies and processes implemented by the Group are set out below.

The objective of market risk management is to maintain exposures to market risk within acceptable limits while optimising the return on this risk.

The Group manages its assets and liabilities as part of an asset and liability management approach aimed at matching the cash flows from its financial investments with the cash flows from its insurance contracts, while optimising the long-term return on its investments for an acceptable level of risk.

The Crédit Agricole Assurances Group’s financial policy includes an asset-liability framework designed to reconcile the search for returns for policyholders, the preservation of asset-liability balances and the management of earnings for shareholders. This framework is based on “return/risk” studies, “stress scenarios” and “risk factor sensitivity analyses”, to identify the characteristics of the amounts to be invested, the constraints and targets over the short, medium and long term, and a market diagnosis, accompanied by economic scenarios, to identify opportunities and constraints in terms of the environment and the markets.

The Crédit Agricole Assurances Group manages its investments prudently. The Group relies both on analyses performed by the Investment Department, which take into account the appetite framework set by the Group, and on information provided by external sources (financial institutions, asset managers, rating agencies).

The Investment department of Crédit Agricole Assurances Group is involved in developing and monitoring the implementation of the investment policies of the Group and of the subsidiaries (taking into account individual ALM limitations and financial targets), which are submitted to their respective Board of Directors for approval. In this capacity, it supervises the investment management services delegated to Amundi (management mandates entrusted by the companies). Moreover, it makes investments directly (without a mandate) on behalf of the Crédit Agricole Assurances Group companies (in property and real estate, in particular), as part of the policy of diversification.

Information on the market risk arising from financial instruments and insurance contracts is provided below for each type of market risk.

In addition, with regard to market risk relating to financial instruments, qualitative information on the measurement of the carrying amount and fair value of financial instruments is provided in the “Financial instruments” section of Note 1 “Accounting policies and principles” above. Quantitative information on the carrying amount of financial instruments is provided in the above Note 5.3 “Specific characteristics of insurance” to the financial statements. Quantitative information on the fair value of financial instruments is included in Note 11.1 “Fair value of financial assets recognised in the balance sheet at amortised cost” and Note 11.2 “Information on financial instruments measured at fair value” to the financial statements below.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in the market interest rates.

The Group’s exposure to interest rate risk relates to debt instruments and all insurance contracts. The Group’s exposure to debt instruments is presented in this note, in the “Insurance finance income or expenses” section.

The Group’s exposure to insurance contracts is presented in the “Insurance and reinsurance contracts” section of this note.

The Group is exposed to interest rate risk arising from the sensitivity of its investments in debt instruments to changes in interest rates relative to the value of the insurance contracts backing these investments.

The sensitivity associated with insurance contracts arises from the effects below.

For insurance contracts with no direct participation features (corresponding mainly to the death & disability, creditor and property and casualty insurance businesses), fulfilment cash flows are discounted using a discount rate curve that depends on the prevailing interest rates at the end of the reporting period. The risk mainly concerns the extent to which the return on the investments matches the finance income or finance expenses from the insurance.

For insurance contracts with direct participation features (corresponding mainly to savings/retirement activities), changes in the value of the insurance contracts reflect changes in the value of the underlying financial assets. The risk mainly concerns changes in the insurer’s share of the fair value of the underlying financial assets.

In the case of unit-linked commitments, the interest rate risk is largely borne by policyholders. On the other hand, in the case of euro-denominated contracts, the existence of guaranteed minimum rates paid to policyholders heightens this risk.

The Group manages interest rate risk as part of an overall asset and liability management approach aimed at matching the duration of the investment portfolio with that of the insurance contracts. This approach combines several aspects: financial strategy, commercial policy, accounting considerations and financial performance, while taking into account the Group’s risk appetite and local regulatory constraints.

The Group has established an interest rate risk management system that includes risk limits and associated governance (“Asset-Liability Management Committee”, presentation of stress scenarios to the Board of Directors etc.).

The Crédit Agricole Assurances Group has a number of levers at its disposal to deal with the various downward and upward movements in interest rates:

- a prudent policy of profit-sharing distribution among policyholders and building up reserves;
- hedging programmes using derivatives (spread caps to hedge against rising interest rates, swaps and options on swaps to reduce the risk of falling interest rates);
- an appropriate marketing policy (guaranteed minimum rate (GMR) contracts have not been marketed since 2000);
- adjustment of duration according to the forecast run-off of liabilities;
- managing cash and bond assets that can be sold with little impact in terms of losses.

The Crédit Agricole Assurances Group and each of its companies have established indicators and bodies to monitor these levers.

In terms of investments, risk concentrations are controlled by different sets of limits calibrated according to the nature of the counterparty:

- for sovereigns and similar, limits take into account country GDP and internal rating;
- for financial and industrial corporates, the Group modulates the limits based on the rating and supplements them using a Group issuer approach;
- for the Crédit Agricole Group, the prudent measurement of exposure includes a proportion of unit-linked bonds, in order to take account of the potential carry risk that could arise from a wave of redemptions.

The using of these limits is monitored on a monthly basis, so that the appropriate management level can be informed of any corrective measures to be taken if these limits are exceeded.

Given the concentration limits governing exposure to the debt instruments mentioned above, the Group has no significant concentration of interest rate risk. With regard to concentrations of spread risk, please refer to the “Credit risk” section below.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in interest rates and spreads on corporate and sovereign bonds at the end of the reporting period. This analysis shows the impact on the valuation of insurance and reinsurance contracts and financial investments, assuming that all other variables remain constant. In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

Sensitivities are based on the assumption of an increase/decrease in interest rates of 100 basis points, as well as an increase of 100 basis points in spreads on corporate and sovereign bonds.

For insurance and reinsurance contracts, sensitivities are based on the “risk-neutral” yield curve for the impact on CSM, and on the “real-world” yield curve for the impact on net income and shareholders’ equity.

The impacts on net income and equity are presented net of deferred tax.

INTEREST RATE

		31/12/2025		
(in millions of euros)		Impact on CSM	Impact on profit or loss	Impact on equity
100 bps increase in risk-free rates	Insurance and reinsurance contracts	(1,212)	2,334	11,525
	Financial investments		(2,392)	(12,112)
	Net impact	(1,212)	(58)	(587)
100 bps decrease in risk-free rates	Insurance and reinsurance contracts	481	(2,496)	(13,360)
	Financial investments		2,502	13,986
	Net impact	481	6	626

		31/12/2024		
(in millions of euros)		Impact on CSM	Impact on profit or loss	Impact on equity
100 bps increase in risk-free rates	Insurance and reinsurance contracts	(182)	2,406	11,097
	Financial investments		(2,400)	(11,667)
	Net impact	(182)	6	(570)
100 bps decrease in risk-free rates	Insurance and reinsurance contracts	(835)	(2,449)	(12,451)

	Financial investments		(242)	(6,850)
	Net impact	(877)	(53)	(360)
100 bps increase in corporate spread	Insurance and reinsurance contracts	(22)	2,384	5,856
	Financial investments		(2,396)	(6,215)
	Net impact	(22)	(12)	(359)

Price risk

Price risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in market prices (other than those arising from interest rate risk or foreign exchange risk), whether those changes are caused by factors specific to the instrument or contract in question or to its issuer, or by factors affecting all similar financial instruments traded in the market or all similar contracts.

The Group's exposure to price risk relates to financial assets and liabilities whose values fluctuate due to changes in market prices, i.e. financial assets measured at fair value and insurance contracts with direct participation features.

The Group's exposure to equity instruments and debt instruments measured at fair value (through profit or loss or equity) is presented in this note, in the "Insurance finance income or expenses" section.

The Group's exposure to insurance contracts is presented in the "Insurance and reinsurance contracts" section of this note above.

Group entities may hold equities or other so-called “diversification” financial assets (private equity and listed or unlisted structured products, property and hedge funds) in order to diversify their asset portfolios and benefit from the expected return on these markets over the long term. With regard to insurance contracts, the Group is exposed to the risk stemming from fluctuations in the prices of these assets only in respect of insurance contracts with direct participation features (corresponding mainly to savings/retirement business), owing to the impact that these fluctuations could have on the change in the insurer’s share of the fair value of the underlying financial assets. In respect of unit-linked commitments, this risk is significantly mitigated because it is largely transferred to policyholders.

In order to control this risk, asset allocation studies are carried out to determine a limit on the proportion of the diversification assets, and a maximum level of price volatility.

Limits are set globally for diversification investments and individually for each asset class (equities, property, private equity and structured products, hedge funds).

While these assets are likely to generate higher returns and provide decorrelation with fixed-income portfolios, they also entail a valuation risk. They are therefore constrained both in terms of their share in the total portfolio and in terms of their volatility.

Investments in diversification assets also comply with unit and category concentration rules (weighting of the top ten exposures for physical property, on the one hand, and for equities, whether listed or unlisted, on the other).

As a result of the concentration limits on exposure to equities and diversification assets mentioned above, the Group has no significant concentration of price risk.

Sensitivity analysis

The table below presents the impact on CSM, profit or loss and equity of reasonably possible changes in the value of shares and real estate at the end of the reporting period. This analysis shows the impact on the valuation of insurance and reinsurance contracts and financial investments, assuming that all other variables remain constant. In practice, the correlation of the variables will have a significant effect on determining the ultimate impacts, but in order to demonstrate the impact associated with changes in each variable, the variables must be changed individually.

The sensitivities below have been calculated for equity risk and real estate risk, assuming a 10% increase/decrease in the value of equities and real estate.

The impacts on net income and equity are presented net of deferred tax.

EQUITIES

		31/12/2025		
(in millions of euros)		Impact on CSM	Impact on profit or loss	Impact on equity
10% increase in equity prices	Insurance and reinsurance contracts	738	(6,330)	(6,407)
	Financial investments		6,380	6,473
	Net impact	738	49	66
10% decrease in equity prices	Insurance and reinsurance contracts	(730)	6,306	6,382
	Financial investments		(6,348)	(6,440)
	Net impact	(730)	(42)	(58)
		31/12/2024		
(in millions of euros)		Impact on CSM	Impact on profit or loss	Impact on equity
10% increase in equity prices	Insurance and reinsurance contracts	737	(5,658)	(5,733)
	Financial investments		5,725	5,816
	Net impact	737	67	83
10% decrease in equity prices	Insurance and reinsurance contracts	(746)	5,655	5,730
	Financial investments		(5,725)	(5,816)
	Net impact	(746)	(70)	(86)

PROPERTY/REAL ESTATE

		31/12/2025		
(in millions of euros)		Impact on CSM	Impact on profit or loss	Impact on equity
10% increase in real estate prices	Insurance and reinsurance contracts	403	(1,660)	(1,748)
	Financial investments		1,725	1,743
	Net impact	403	65	(5)
10% decrease in real estate prices	Insurance and reinsurance contracts	(410)	1,655	1,744

	Financial investments		1,577	1,600
	Net impact	378	85	72
10% decrease in real estate prices	Insurance and reinsurance contracts	(392)	1,489	1,524
	Financial investments		(1,577)	(1,600)
	Net impact	(392)	(88)	(76)

Foreign exchange risk

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument, or the fulfilment cash flows of an insurance or reinsurance contract, will fluctuate due to changes in foreign exchange rates.

The Group's exposure to foreign exchange risk is marginal.

Most of the Group's transactions are carried out in euros.

Its exposure to foreign exchange risk arises partly from consolidated entities whose functional currency is not the euro, and partly from transactions carried out by entities in currencies other than their functional currency. At Group level, such transactions are marginal. Furthermore, the Group's financial assets are almost exclusively denominated in the same currencies as its insurance liabilities.

This exposure is managed by applying a foreign exchange risk hedging strategy, whether for subsidiaries whose functional currency is different from that of the Group, or for financial instruments and insurance contracts denominated in currencies other than the functional currencies of the entities.

The Crédit Agricole Assurances Group is exposed to two types of foreign exchange risk:

- a limited structural exposure to the yen on its Japanese subsidiary CA Life Japan, and to the zloty on its Polish subsidiaries CA Zycie and CATU. The associated foreign exchange risk is managed by hedging the net assets and liabilities of these subsidiaries using foreign currency borrowings (NIH hedges: hedges of net investments in foreign operations); the hedging ratio was 94% for CA Life Japan (unhedged net exposure of €6.5 million), 86% for CA Zycie (unhedged net exposure of €3.8 million) and 95% for CATU (unhedged net exposure of €1.4 million) at 31 December 2025;
- an operational exposure resulting from the mismatch between the currencies of financial assets and insurance liabilities. The global portfolio of the Crédit Agricole Assurances Group, representing commitments in euros, is mainly invested in financial instruments denominated in euros. Nevertheless, in order to

optimise the risk/return trade-off and achieve diversification in dedicated funds and fixed-income positions, it will seek to benefit from anticipated growth lags and interest-rate differentials between major geographic areas. The foreign exchange risk hedging strategy consists of not hedging emerging country currencies, regardless of the asset class, and instead hedging developed country currencies, with the option of limited tactical exposure to a single currency, the US dollar. Exposure to the US dollar in fixed income positions is systematically hedged by cross-currency swaps. Overall, foreign exchange exposure at Crédit Agricole Assurances Group is constrained by a market value limit in relation to the total portfolio and two sub-limits for emerging currencies and the US dollar.

As the Group is only marginally exposed to this risk, it has no significant concentration of foreign exchange risk.

As a result, reasonably possible changes in exchange rates at the end of the reporting period do not have a material impact on the CSM, profit or loss or equity.

Credit risk

Credit risk is the risk that one party to a financial instrument, an insurance contract issued and recognised as an asset, or a reinsurance contract held, will default on an obligation and cause the other party to incur a financial loss.

For the Group, credit risk corresponds mainly to the risk of default by the following counterparties:

- the issuers of securities for investments in debt instruments;

and, to a lesser extent:

- financial counterparties on forward financial instruments (failure of the counterparty to honour its commitments) used for over-the-counter market transactions (derivatives) or on bank deposits/liquidity (failure of the bank managing the deposit account to honour its commitments);
- reinsurers for reinsurance disposal transactions (default of a reinsurer that would no longer allow it to pay its share of the claims).

The Group's exposure to debt instruments is presented in this note, in the "Insurance finance income or expenses" section above. Exposure to credit risk of financial assets is presented in Notes 3.1.2 "Maximum exposure to credit risk" and 3.1.4 "Credit risk concentrations – Exposure to credit risk by category of credit risk" above.

The Group's exposure to reinsurance contracts held is presented in the table below.

The Group's credit risk management targets, policies and processes are set out below.

Financial instruments

Analysis of counterparty risk for issuers and for over-the-counter market transactions (derivatives) is carried out by Amundi's Risk teams, as part of the management mandates entrusted to Amundi by the companies.

The bond portfolio ⁽¹⁾ by credit rating breaks down as follows:

Issuer risk is analysed and closely monitored by Amundi's Risk teams (to whom portfolio management is delegated). Quarterly portfolio reviews examine issuers individually and also address sector, country or economic themes, as well as any areas of concern identified. These portfolio reviews allow for active management of this risk: if necessary, an issuer may be placed on a watch list (a list of issuers in which investment is prohibited) or be subject to a risk disposal programme.

Concentration in a single issuer (equities and fixed-income instruments) may not exceed a percentage of the global portfolio set according to the nature and quality of the issuer.

Concentrations of sovereign and similar debt are subject to individual limits calibrated according to the weight of the countries measured by their GDP and the internal rating of the sovereigns.

Exposure to the sovereign debt of Italy, Spain and Portugal is authorised by Crédit Agricole S.A.'s Group Risk Committee. Holdings of Italian sovereign debt are concentrated in Crédit Agricole Assurances Group's Italian subsidiary. Debt issued by Greek issuers remains unavailable for purchase.

Cash is generally not held in current accounts, but rather invested in money market or long-term Treasury UCIs.

Over-the-counter derivatives are used to prudently hedge interest rate risk, both upwards (portfolio of spread caps) and downwards

Counterparty risk is controlled, both at the level of the Crédit Agricole Assurances Group as a whole and at the level of the portfolios of each entity, through limits on ratings, issuer concentration and sector concentration.

Limits are therefore set for the distribution of issues across the different rating bands. The rating used is the so-called "Solvency 2" rating, corresponding to the second best of the three Standard & Poor's, Moody's and Fitch ratings. The share of "high-yield" issues held directly or indirectly via funds is subject to strict limits. Only issues with a minimum BB rating are authorised for purchase in mandates. To complete the system, Predica sets a minimum spread when a corporate bond is purchased, by rating and maturity, which offsets the loss given default and the capital cost of purchasing the bond. Issuers that have not been rated by an external agency but have an internal Crédit Agricole S.A. rating are selected according to a rigorous process.

(swaps, swap options etc.), with counterparties selected for their credit quality. As these transactions are backed by collateral contracts with daily margin calls, the residual counterparty risk is marginal.

In accordance with the principles of IFRS 9, debt instruments measured at amortised cost or fair value through recyclable equity are provisioned for credit risk by recognising loss allowances for expected credit losses.

Qualitative information on recognising and measuring expected credit losses is provided in the "Financial instruments" section of Note 1 "Accounting policies and principles" above. Quantitative information on changes in value corrections for losses is provided in Note 3.1.1 "Credit risk – Change in carrying amounts and loss allowances over the period" above.

With regard to risk concentrations, the breakdown of the bond portfolio by type of issuer, rating and geographic area is presented in Note 3.1.4 "Credit risk concentrations" above; exposure to sovereign debt is presented in Note 3.2 "Exposure to sovereign risk" above.

The transactions in the Crédit Agricole Assurances Group's derivatives portfolio at the end of 2025 had been carried out with around twenty counterparties.

(1) Bonds held by the Crédit Agricole Assurances group at market value, with a look-through approach to fixed income and equity funds, excluding repurchase and reverse repurchase agreements.

Insurance contracts

With regard to the credit risk arising from contracts that fall within the scope of application of IFRS 17, the credit risk associated with future premium receipts from insurance contracts issued is mitigated by the Group's ability to terminate insurance contract services when policyholders default on their premium payment obligations, resulting in insignificant credit risk exposures for these contracts.

The credit risk therefore relates mainly to reinsurance contracts held (risk of a reinsurer defaulting and no longer being able to pay its share of the claims).

Amounts recoverable from reinsurers are estimated so as to be consistent with the liabilities of the underlying insurance contracts and in line with the reinsurance contracts (see Note 1 "Accounting policies and principles" above). The Group's entry into reinsurance programmes does not release it from its direct obligations to policyholders, and it is therefore exposed to a credit risk in respect of business ceded to reinsurance, to the extent that the reinsurer may not be able to meet its obligations under the reinsurance contract.

Each entity establishes its own reinsurance policy, which incorporates risk management principles that are standardised across the Crédit Agricole Assurances Group.

Managing the risk of default by reinsurers is based on the Group's internal standards:

- firstly, by contracting with reinsurers meeting a minimum financial strength criterion (A-), with compliance monitored throughout the relationship;
- rules on the dispersion of reinsurers (by treaty) and concentration limits on the premiums ceded to a single reinsurer defined by each entity that monitors them; the Group monitors the concentration of the overall premiums ceded, by reinsurer;
- measures to secure the provisions ceded through standard collateral clauses.

In addition, reinsurance programmes are reviewed annually by the Board of Directors of each entity.

74% of reinsurance counterparty risk, excluding internal reinsurance, is concentrated with Caisse Centrale de Réassurance SA (CCR), a 100% state-owned, A+-rated reinsurer authorised to provide coverage for Cat Nat risks in France, the country's main natural catastrophe compensation scheme. At the end of 2025, more than 87% of counterparty risk was borne by reinsurers with a rating of more than A.

Maximum exposure to credit risk

The amount that best represents the Group's maximum exposure to credit risk at the end of the reporting period, for insurance contracts written, is the amount of receivable premiums: this was €2,716 million at 31 December 2025 (vs €2,469 million at 31 December 2024).

CREDIT QUALITY OF REINSURANCE CONTRACTS HELD

Information about the credit quality of reinsurance contracts held that are assets is given in the table below:

	31/12/2025										
(in millions of euros)	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	NR	Total
Reinsurance contracts held that are assets	16	28	75	711	158	148	6	1	2	26	1,171

	31/12/2024										
(in millions of euros)	AAA	AA+	AA	AA-	A+	A	A-	BBB+	BBB	NR	Total
Reinsurance contracts held that are assets	-	38	30	700	148	95	9	1	-	-	1,021

Liquidity risk

Liquidity risk is the risk that the Group might struggle to honour commitments related to insurance policies and financial liabilities to be settled through the use of cash or another financial asset.

As regards the liquidity risk arising from policies that fall within the scope of application of IFRS 17, this concerns the risk that the Group might not be able to meet its obligations upon maturity due to payouts to insured parties (particularly savings/retirement, surrenders and deaths), cash requirements related to contractual commitments or other cash outflows. Such outflows would exhaust the cash resources available for insurance and investment activities. In certain circumstances, the lack of liquidity could result in sales of assets at a loss, or potentially an inability to honour commitments to insured parties. The risk that the Group might be unable to honour its commitments to insured parties is inherent to all insurance operations and may be affected by an entire range of factors specific to the Group and to the market in general, including but not limited to credit events, systemic shocks and natural disasters.

The liquidity risk management targets, policies and processes put in place by the Group are as follows.

The Group's target in managing liquidity risk is to ensure, as far as possible, that it will have sufficient liquidity to honour its commitments upon maturity, whether under normal or stress conditions, without suffering unacceptable losses or risking damaging the Group's reputation.

The Group entities combine several approaches to their liquidity risk management.

On the one hand, liquidity is taken into account when selecting investments: majority of securities listed on regulated markets, limitation of less-liquid assets such as real estate, private equity, non-investment-grade bonds, equity investments and alternative asset management.

On the other hand, liquidity management mechanisms standardised at group level are defined by the entities in the context of their Asset and Liability Management, with indicators adapted to different horizons (short term, medium term, long term). For the life insurance entities, liquidity risk is controlled and structured using three mechanisms:

- long-term liquidity: monitoring and limitation of annual cash gaps, estimated on the portfolio in run-off, so as to ensure that the maturities of assets and liabilities are aligned, both in normal times and in stress conditions (wave of surrenders/deaths);
- medium-term liquidity: calculation of an indicator known as the “two-year reactivity rate”, which measures the capacity to mobilise short-term or variable-rate assets whilst limiting the impact in terms of capital losses. This indicator is compared to a minimum threshold defined by each of the entities so as to be able to absorb a wave of surrenders. Faced with the risk of mass withdrawals in the event of a sharp rise in interest rates, the Crédit Agricole Assurances group also uses a liquidity monitoring indicator (LMI): this measures liquidity under stress over a one-year period, with assumptions on assets, which are those of a systemic and global crisis scenario, and on liabilities, which correspond to the parameters defined by the Solvency 2 standard model (Pillar 1) and used by the Crédit Agricole Assurances group in its ORSA scenarios (Pillar 2). Lastly, ALM has introduced an indicator measuring the level of liquidity that can be mobilised quickly, without generating significant losses and taking account of backing constraints;
- short-term liquidity: in the event of uncertainty about net inflows, setting minimum one-week and one-month liquidity amounts, with daily monitoring of surrenders. The Crédit Agricole Assurances Group also has a surrender crisis management plan.

Temporary liquidity management mechanisms are in place in the event of an exceptional situation in which the markets would be unavailable (reserve liquidation with the possibility of securities undergoing repurchase agreements involving the ECB via Crédit Agricole S.A.).

The life insurance entities analyse their cash gaps in order to identify any maturities to prioritise or, on the other hand, any to avoid (excessive falls, with interest rate risk upon reuse). They monitor, via their dashboard, their reactivity ratio and their liquidity monitoring indicator, compared to the thresholds they have set themselves. They also regularly monitor surrender rates and arbitrage between the euro fund and the unit-linked contracts, so that they can put very-high-frequency monitoring in place in the event of stress situations.

The non-life entities maintain sufficient liquidity to be able to respond to the increase in the claims ratio, taking their reinsurance programme into account.

The Group has no significant risk concentration in terms of liquidity risk.

Breakdown of financial liabilities by contractual maturity

Note 6.18 “Breakdown of financial assets by contractual maturity” below provides information about the estimated schedule of the Group’s financial liabilities showing the remaining contractual maturities.

BREAKDOWN OF MATURITIES OF INSURANCE LIABILITIES

For insurance and reinsurance contracts that are liabilities a breakdown of contracts by scheduled maturity of the estimates of the present value of future cash flows is presented in the following table:

	31/12/2025						
(in millions of euros)	≤ 1 year	> 1 year to ≤ 2 years	> 2 years to ≤ 3 years	> 3 years to ≤ 4 years	> 4 years to ≤ 5 years	> 5 years	Total
Insurance contracts issued that are liabilities	6,091	15,676	15,167	14,503	14,049	283,253	348,739
Reinsurance contracts held that are liabilities	695	(22)	(23)	(22)	(22)	(342)	264
TOTAL INSURANCE AND REINSURANCE CONTRACTS LIABILITIES	6,786	15,654	15,144	14,481	14,027	282,911	349,003

	31/12/2024						
(in millions of euros)	≤ 1 year	> 1 year to ≤ 2 years	> 2 years to ≤ 3 years	> 3 years to ≤ 4 years	> 4 years to ≤ 5 years	> 5 years	Total
Insurance contracts issued that are liabilities	5,379	3,831	5,138	6,812	7,805	297,029	325,994
Reinsurance contracts held that are liabilities	671	(16)	(12)	(31)	(1)	(354)	257
TOTAL INSURANCE AND REINSURANCE CONTRACTS LIABILITIES	6,050	3,815	5,125	6,781	7,804	296,675	326,251

This analysis does not include the remaining hedging liability on contracts valued using the PAA model.

Amounts payable on demand

A breakdown of the amounts payable at sight and of the carrying amount of the related contracts is presented in the following table:

	31/12/2025		31/12/2024	
(in millions of euros)	Amounts payable on demand	Carrying amount	Amounts payable on demand	Carrying amount
TOTAL INSURANCE CONTRACTS LIABILITIES	347,295	392,145	310,064	366,451

Amounts payable on demand correspond to the surrender value of the contracts concerned (presented gross of penalties) at the end of the reporting period.

NOTE 6 NOTES TO THE BALANCE SHEET

6.1 CASH, CENTRAL BANKS

(in millions of euros)	31/12/2025		31/12/2024	
	Assets	Liabilities	Assets	Liabilities

6.2 FINANCIAL ASSETS AND LIABILITIES AT FAIR VALUE THROUGH PROFIT OR LOSS

FINANCIAL ASSETS AT FAIR VALUE THROUGH PROFIT OR LOSS

(in millions of euros)	31/12/2025	31/12/2024
Held for trading financial assets	392,039	365,845
Other financial instruments at fair value through profit or loss	262,325	241,673
Equity instruments	40,595	40,827
Debt instruments that do not meet the conditions of the "SPPI" test ⁽¹⁾	100,222	90,955
Other debt instruments measured by definition at fair value through profit or loss	5,730	6,495
Assets backing unit-linked contracts	115,598	103,304
Financial assets designated at fair value through profit or loss	180	92
CARRYING AMOUNT	654,364	607,518
Of which lent securities	7	23

(1) Including €88,877 million in UCIs at 31 December 2025 versus €78,946 million at 31 December 2024.

FINANCIAL LIABILITIES AT FAIR VALUE THROUGH PROFIT OR LOSS

(in millions of euros)	31/12/2025	31/12/2024
Held for trading financial liabilities	314,911	306,142
Financial liabilities designated at fair value through profit or loss	104,855	101,629
CARRYING AMOUNT	419,766	407,771

Detailed information on trading derivatives is provided in Note 3.3 on market risk, including interest rates.

FINANCIAL LIABILITIES DESIGNATED AT FAIR VALUE THROUGH PROFIT OR LOSS

Financial liabilities for which changes in issuer spread are recognised in non-recyclable equity

(in millions of euros)	31/12/2025				
	Carrying amount	Difference between carrying amount and amount contractually required to pay at maturity	Accumulated amount of change in fair value attributable to changes in own credit risk	Amount of change in fair value during the period attributable to changes in own credit risk	Amount realised at derecognition ⁽¹⁾
Deposits and subordinated liabilities	12,534	310	-	-	-
Deposits	12,534	310	-	-	-
Subordinated liabilities	-	-	-	-	-
Debt securities	79,093	(700)	457	212	22
Other financial liabilities	-	-	-	-	-
TOTAL	91,627	(390)	457	212	22

(1) The amount realised during derecognition is transferred to consolidated reserves when the instrument in question is derecognised.

31/12/2024

(in millions of euros)	Carrying amount	Difference between carrying amount and amount contractually required to pay at maturity	Accumulated amount of change in fair value attributable to changes in own credit risk	Amount of change in fair value during the period attributable to changes in own credit risk	Amount realised at derecognition 1
Deposits and subordinated liabilities	14,079	392	-	-	-
Deposits	14,079	392	-	-	-
Subordinated liabilities	-	-	-	-	-
Debt securities	72,305	(1,997)	233	350	15
Other financial liabilities	-	-	-	-	-
TOTAL	86,383	(1,605)	233	350	15

(1) The amount realised during derecognition is transferred to consolidated reserves when the instrument in question is derecognised.

Pursuant to IFRS 9, Crédit Agricole Group calculates changes in fair value attributable to changes in own credit risk using a methodology that allows for them to be separated from changes in value attributable to changes in market conditions.

Basis for calculating own credit risk

The source taken into account for the calculation of own credit risk may vary from one issuer to another. Within Crédit Agricole Group, the source used is the change in its cost of market refinancing based on the type of issuance.

Calculation of unrealised gains/losses on own credit adjustment (recognised in other comprehensive income)

Crédit Agricole Group's preferred approach is based on the liquidity component of issues. All issues are replicated by a group of vanilla

loans/borrowings. Changes in fair value attributable to changes in own credit risk of all issues therefore correspond to those of said loans. These are equal to the changes in fair value of the loan book caused by changes in the cost of refinancing.

Calculation of realised gains/losses on own credit risk (recognised in consolidated reserves)

Crédit Agricole Group has elected to transfer fair value changes attributable to changes in own credit risk upon unwinding to consolidated reserves. Accordingly, when there is a total or partial early redemption, a sensitivity-based calculation is done. This consists of measuring the change in fair value attributable to the changes in own credit risk of a given issuance as being the sum of the credit spread sensitivities multiplied by the change in this spread between the issuance date and the redemption date.

FINANCIAL LIABILITIES FOR WHICH CHANGES IN ISSUER SPREAD ARE RECOGNISED IN NET INCOME

31/12/2025

(in millions of euros)	Carrying amount	Difference between carrying amount and due on maturity	Accumulated amount of change in fair value attributable to changes in own credit risk	Amount of change in fair value during the period attributable to changes in own credit risk

(1) Of which securities lending without cash collateral.

(2) In the event that the "guarantee of the other party or parties to the agreement giving rise to the associated liabilities is limited to the transferred assets" (IFRS 7.42D.(d)).

Securitisations

Consolidated securitisations with external investors are a transfer of assets within the meaning of IFRS 7. The Group effectively has an indirect contractual obligation to deliver to external investors the cash flows from assets sold to the securitisation fund (although these assets are recorded in the Group balance sheet through the consolidation of the fund). Receivables assigned to the securitisation fund are used as collateral for investors.

Fully self-subscribed consolidated securitisations do not constitute a transfer of assets within the meaning of IFRS 7.

Crédit Agricole Consumer Finance Securitisations

At 31 December 2025, Crédit Agricole Consumer Finance managed 29 consolidated securitisation vehicles for retail consumer loans and car dealer financing in Europe. Securitisation transactions carried out within Crédit Agricole Consumer Finance Group are not considered to form part of a deconsolidation transaction under IFRS and have therefore been reinstated in the Crédit Agricole Group consolidated financial statements.

The carrying amounts of the relevant assets (net of related liabilities) amounted to €7,729 million at 31 December 2025. They include, in particular, outstanding customer loans with a net carrying amount of €4,795 million. The amount of securities mobilised on the market stood at €4,795 million. The value of securities still available to be mobilised stood at €14,272 million.

Crédit Agricole Italia securitisations

At 31 December 2025, Crédit Agricole Italia managed one home loan securitisation vehicle. This securitisation transaction is not considered to form part of a deconsolidation transaction under IFRS and was therefore reintegrated into the Crédit Agricole S.A. consolidated financial statements.

The carrying amounts of the relevant assets amounted to €16,522 million at 31 December 2025.

FCT Crédit Agricole Habitat 2020, 2022, 2024 and 2025 securitisation

At 31 December 2025, the Regional Banks managed five home loan securitisation vehicles. These securitisation transactions are not considered to form part of a deconsolidation transaction under IFRS and were therefore reintegrated into the Crédit Agricole Group consolidated financial statements. The carrying amounts of the relevant assets amounted to €5,225 million at 31 December 2025.

For this financial year, the Crédit Agricole Group did not recognise any commitments incurred in relation to transferred assets that were fully derecognised.

6.7 FINANCIAL LIABILITIES AT AMORTISED COST

(in millions of euros)

“Green bond” issues included in the item “Debt securities” totalled €18 billion at 31 December 2025 compared with €14 billion in 2024.

“Social bond” issues included in the item “Debt securities” totalled €10.9 billion at 31 December 2025 compared with €7.9 billion in 2024.

SENIOR NON-PREFERRED DEBT ISSUES

With the law on transparency, the fight against corruption and the modernisation of the economy (also referred to as the “Sapin II Law”) of 9 December 2016, France has a new category of senior debt – senior non-preferred debt – meeting certain eligibility criteria (as currently defined) of the TLAC and MREL ratios (codified in Articles L. 613-30-3-I-4° and R. 613-28 of the French

Monetary and Financial Code). This category of debt is also referred to in the BRRD.

Senior non-preferred debt differs from senior preferred debt by virtue of its ranking in liquidation contractually defined by reference to the aforementioned Articles L. 613-30-3-I-4° and R. 613-28 of the French Monetary and Financial Code (senior non-preferred debt is junior to senior preferred debt and senior to subordinated notes (including deeply subordinated notes [TSS] and dated subordinated notes [TSR]).

The Crédit Agricole Group’s outstanding senior non-preferred debt amounted to €39.3 billion at 31 December 2025, compared with €36.6 billion at 31 December 2024.

6.8 INFORMATION ON THE OFFSETTING OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES

OFFSETTING – FINANCIAL ASSETS

	31/12/2025					
	Offsetting effects on financial assets covered by master netting agreements and similar agreements					
	Other amounts that can be offset under given conditions					
Type of financial instrument (in millions of euros)	Gross amounts of recognised financial assets before offsetting	Gross amounts of recognised financial liabilities set off in the financial statements	Net amounts of financial liabilities presented in the financial statements ⁽³⁾	Gross amounts of financial liabilities covered by master netting agreements	Amounts of other financial instruments received as collateral, including security deposits	Net amount after all offsetting effects
Derivatives ^{(1) (2)}	156,035	-	156,035	99,479	25,390	31,166
Reverse repurchase agreements ⁽⁴⁾	384,178	199,911	184,267	9,743	174,337	187
Other financial instruments	-	-	-	-	-	-
TOTAL FINANCIAL ASSETS SUBJECT TO OFFSETTING	540,214	199,911	340,303	109,222	199,728	31,353

(1) Including margin calls but before any XVA impact.

(2) The amount of derivatives subject to clearing represents 80% of derivatives in assets at the closing date.

(3) The net amount of financial assets presented in the summary statements is equal to the amount shown under assets in the balance sheet.

(4) The amount of reverse repurchase agreements for securities subject to clearing represents 100% of reverse repurchase agreements for securities in assets at the closing date.

At 31 December 2025, derivative instruments were not subject to accounting clearing within the meaning of IAS 32R, but daily settlement (application of the so-called “settlement to market” mechanism).

	31/12/2024					
	Offsetting effects on financial assets covered by master netting agreements and similar agreements					
	Other amounts that can be offset under given conditions					
Type of financial instrument (in millions of euros)	Gross amounts of recognised financial assets before offsetting	Gross amounts of recognised financial liabilities set off in the financial statements	Net amounts of financial assets presented in the financial statements ⁽³⁾	Gross amounts of financial liabilities covered by master netting agreements	Amounts of other financial instruments received as collateral, including security deposits	Net amount after all offsetting effects

(1) Including margin calls but before any XVA impact.

(2) The amount of derivatives subject to clearing represents 88% of derivatives in liabilities at the closing date.

(3) The net amount of financial liabilities presented in the summary statements is equal to the amount shown under liabilities in the balance sheet.

(4) The amount of repurchase agreements for securities subject to clearing represents 99% of repurchase agreements for securities in liabilities at the closing date.

At 31 December 2024, derivative instruments were not subject to accounting clearing within the meaning of IAS 32R, but daily settlement (application of the so-called “settlement to market” mechanism).

6.9 CURRENT AND DEFERRED TAX ASSETS AND LIABILITIES

(in millions of euros)

	31/12/2025	31/12/2024
Current tax	2,482	2,139
Deferred tax	5,135	5,455
TOTAL CURRENT AND DEFERRED TAX ASSETS	7,617	7,594
Current tax	1,769	1,843
Deferred tax	1,391	1,094
TOTAL CURRENT AND DEFERRED TAX LIABILITIES	3,160	2,937

Net deferred tax assets and liabilities break down as follows:

(in millions of euros)

	31/12/2025	31/12/2024
Temporary timing differences – tax	4,208	4,565
Non-deductible accrued expenses	717	603
Non-deductible provisions for liabilities and charges	3,689	3,570
Other temporary differences ⁽¹⁾	(197)	392
Deferred tax on reserves for unrealised gains or losses	578	557
Financial assets at fair value through other comprehensive income	4,517	4,081
Cash flow hedges	292	268
Gains and losses/Actuarial differences	32	50
Other comprehensive income attributable to changes in own credit risk	118	57
Reclassification of net gains (losses) of designated financial assets applying the overlay approach	(4,381)	(3,900)
Deferred tax on income and reserves	(1,043)	(760)
TOTAL DEFERRED TAX	3,744	4,361

(1) The portion of deferred tax related to tax loss carryforwards was €258 million for 2025, compared with €302 million in 2024.

Deferred tax assets are netted on the balance sheet by tax consolidation level.

In order to assess the level of deferred tax assets to be recognised, the Crédit Agricole Group takes into account, for each company or tax group concerned, the dedicated tax status and the earnings projections established during the budgetary process.

TAX AUDITS

CLSA liability guarantee

In 2013, Crédit Agricole Group sold the CLSA entities to the Chinese group CITICS.

Following tax adjustments made on some CLSA entities in India and the Philippines, CITICS invoked the liability guarantee against Crédit Agricole Group. The adjustments have been challenged with stated arguments. A provision has been recognised to cover the estimated risk.

Crédit Agricole Consumer Finance tax audit

Crédit Agricole Consumer Finance was audited in 2018 and 2019 for the periods 2014-2015 and 2016-2017 respectively, with arrears collected for those periods. In 2021, Crédit Agricole Consumer Finance filed claims with the tax authorities disputing some of those arrears. Litigation proceedings are ongoing.

Pacifica tax audit

Pacifica was the subject of an audit of accounts in 2024 and 2025 covering the 2021, 2022 and 2023 financial years. All audits of accounts had been completed at the end of 2025. Pacifica has contested certain adjustment points with a statement. A provision has been recognised to cover the estimated risk.

6.10 ACCRUALS, PREPAYMENTS AND SUNDRY ASSETS AND LIABILITIES

ACCRUALS, PREPAYMENTS AND SUNDRY ASSETS

(in millions of euros)	31/12/2025	31/12/2024

INVESTMENT PROPERTY MEASURED AT FAIR VALUE	9,972	-	505	(715)	-	(200)	(49)	9,513

FAIR VALUE OF INVESTMENT PROPERTIES

The Crédit Agricole Group's investment properties are valued by qualified experts. These independent property experts use a combination of several valuation methods to establish a market value. The weighting of each of these methods against another requires a certain amount of judgement and evolves depending on the market characteristics of each property (location, property type, i.e. residential, commercial or offices etc.).

The main valuation methods and the related key hypotheses are as follows:

- the capitalisation method, which involves capitalising the revenues that the property is likely to generate by applying a capitalisation rate to an assigned rental income, which is generally determined in comparison with the rents charged for properties of the same type located in the same geographical area as the property. The other key hypotheses used are the indexation rate for rent in future years and the average length of time for which vacant properties are on the market;

- the comparison method, which consists of determining a metric market value to be used for a comparison relating to sales of identical or similar properties;
- the discounted cash flow (DCF) method, which consists of discounting gross or net expected cash flows over a given period. This method rests on two main hypotheses: the cash flows that will be generated, as well as the indexation rate for rent in future years, and the discount rate used.

The valuation of investment properties takes into account any planned investments that will need to be made in order to meet regulatory requirements related to climate change, such as the tertiary decree for commercial and office property, and the new rules on energy diagnostics for residential properties.

(in millions of euros)		31/12/2025	31/12/2024
Quoted prices in active markets for identical instruments	Level 1	89	7
Valuation based on observable data	Level 2	12,007	12,558

(1) Decrease in goodwill for the asset management business in the amount of €67 million following the disposal of the Amundi US entities.

(2) Increase in goodwill for the insurance business in the amount of €114 million in connection with the entry into the scope of consolidation of Abanca and Più Véra entities.

(3) Increase in goodwill for the private banking business in the amount of €101 million as part of the acquisition of Banque Thaler.

(4) Transfer of Degroof Petercam assets to CACEIS involving a transfer of goodwill in the amount of €26 million.

(5) Increase in goodwill for CAL&F in the amount of €11 million as part of the acquisition of Merca Leasing.

(6) The Group share of goodwill increased following the purchase of Santander's stake in CACEIS.

DETERMINING THE VALUE IN USE OF THE CGUS

Goodwill was subject to impairment tests based on the assessment of the value in use of the Cash Generating Units (CGU) with which it is associated. Determining the value in use was based on discounting the CGUs' estimated future cash flows calculated from activities forecasts over a period over three years (2026-2028) in the context of the MTP 2028, extrapolated over a fourth and fifth year in order to merge towards a standardised final year. The projected financial trajectories are based on an economic scenario taking into account expected changes in interest rates and inflation in particular.

In 2025, despite the unstable international environment, the global economy resisted well. In the United States, growth resisted well in 2025 (2.1%) and is expected to accelerate slightly in 2026 (2.3%): economic fundamentals expected to remain healthy, labour market slowdown without a significant recovery in unemployment, continued investment in AI at a slower pace and fiscal support for wealthy businesses and households. On the other hand, inflation is

expected to remain above the 2% target in 2026. In the eurozone, despite foreign trade impacted by tariffs, the strength of the euro and Asian competition, growth accelerated in 2025. In 2026, the good health of private agents, still favourable financial terms and a slightly expansionary fiscal policy are expected to absorb the confidence shock associated with the trade war and geopolitical uncertainty. The scenario retains growth in line with its potential pace, supported by the acceleration of investment. Growth could thus be around 1.2% in 2026, after 1.4% in 2025. Both total and underlying inflation rates are expected to fall below the 2% target by the end of 2026. On the monetary front, the scenario opts for the Fed's "hard line" and assumes a stable Fed funds rate in 2026, followed by an easing in 2027. In the eurozone, the anticipated resilience of growth should encourage the ECB not to further relax its monetary policy in 2026. The stability of central bank policy rates projected for 2026 would be followed by tightening, bringing the deposit rate to 2.50% in 2027.

For the purposes of the impairment tests carried out at 31 December 2025, perpetual growth rates, discount rates and equity allocated rates as a proportion of risk-weighted assets were distributed by business line as shown in the table below:

In 2025 (for Crédit Agricole Group fully consolidated entities)	Perpetual growth rates	Discount rate	Capital allocated
French Retail Banking – LCL	2.0%	7.6%	11% à 12%
International Retail Banking – Italy	2.0%	9.3%	14% à 15%
International Retail Banking – Others	4.0%	20.2%	12% à 13%
Specialised Financial Services	2.0%	7,6% à 9,8%	11% à 12%
Asset Gathering	2.0%	7,6% à 8,5%	11% à 15% 80% of solvability margin (Insurance)
Large Customers	2.0%	8,1% à 9,4%	11% à 15%

Discount rates are determined based on a rolling monthly average over 15 years. At the end of 2025, the discount rate level was slightly lower, by 5 to 15 basis points, compared to the prior financial year.

Perpetual growth rates at 31 December 2025 remain unchanged from those used at 31 December 2024.

SENSITIVITY OF THE VALUATION OF CGUS TO THE MAIN VALUATION PARAMETERS

The sensitivity of the value in use of the CGUs comprising each of the major business segments to the variation of certain valuation parameters, applied on a uniform basis to all CGUs, is presented in the following table:

In 2025	Sensitivity to capital allocated	Sensitivity to discount rates		Sensitivity to cost of risk in the final year		Sensitivity to the cost/income ratio in the final year	
	+100 bp	-50 bp	+50 bp	-10%	+10%	-100 bp	+100 bp
French Retail Banking – LCL	(2.4%)	+9.1%	(7.6%)	+1.9%	(1.9%)	+2.8%	(2.8%)
International Retail Banking – Italy	(3.7%)	+6.1%	(5.3%)	+2.0%	(2.0%)	+2.0%	(2.0%)
International Retail Banking – Others	(3.0%)	+2.2%	(2.1%)	+0.8%	(0.8%)	+0.9%	(0.9%)
Specialised Financial Services	(4.4%)	+7.9%	(6.7%)	+5.4%	(5.4%)	+2.6%	(2.6%)
Asset Gathering	(0.6%)	+9.8%	(8.2%)	+0.1%	(0.1%)	+1.5%	(1.5%)
Large Customers	(1.2%)	+8.0%	(6.9%)	+0.5%	(0.5%)	+2.3%	(2.3%)

The French Retail Banking – LCL CGU and the Consumer finance (excluding Agos) CGU, however, do remain sensitive to changes in certain parameters.

With regard to financial parameters:

- a 50-basis point increase in the discount rate would not result in a negative difference between value in use and consolidated value for any of the CGUs.
On the assumption of a significant increase of 100 basis points in discount rates, the difference would remain positive across all CGUs;
- a 100-basis point increase in the level of CET1 equity allocated to the CGUs would still result in a positive difference for all CGUs.

With regard to operational parameters:

- the simulated deterioration assumptions, namely a scenario of a 10% increase in the cost of risk in the last year of the projection combined with a +100 basis point change in the cost/income ratio for the same year, would not result in a negative difference between value in use and the consolidated carrying amount for all CGUs.

6.15 PROVISIONS

<i>(in millions of euros)</i>	31/12/2024	Changes in scope	Additions	Reversals, amounts used	Reversals, amounts not used	Translation adjustments	Other movements	31/12/2025
Home purchase schemes risks	197	-	33	-	(38)	-	-	192
Execution risks of commitments by signature	2,099	-	2,804	(13)	(2,941)	(40)	(3)	1,907
Operational risks	390	-	131	(24)	(83)	(1)	9	421

Litigation	513	-	83	(34)	(126)	1	47	483
Equity investments	9	-	3	(1)	(2)	-	-	9
Restructuring	5	-	7	(1)	-	-	-	10
Other risks	912	6	567	(157)	(231)	(1)	(16)	1,082
TOTAL	5,508	17	4,068	(386)	(3,444)	20	(41)	5,742

(1) Of which €968 million for post-employment benefits under defined-benefit schemes, including €170 million for the provision for long-service awards.

INVESTIGATIONS, INFORMATION REQUESTS AND LITIGATION PROCEEDINGS

In the normal course of business, Crédit Agricole S.A. is regularly subject to litigation proceedings, as well as requests for information, investigations, controls and other regulatory or judicial procedures from various institutions in France and abroad. The provisions recognised reflect the management's best judgement, considering the information in its possession at the closing date of the accounts.

Office of Foreign Assets Control (OFAC)

In October 2015, Crédit Agricole S.A. and its subsidiary Crédit Agricole Corporate and Investment Bank (Crédit Agricole CIB) reached agreements with the US and New York authorities that had been conducting investigations regarding US dollar transactions with countries subject to US economic sanctions. The events covered by this agreement took place between 2003 and 2008.

Crédit Agricole CIB and Crédit Agricole S.A., which cooperated with the US and New York authorities in connection with their investigations, have agreed to pay a total penalty amount of US\$787.3 million (i.e. €692.7 million). The payment of this penalty has been allocated to the pre-existing reserve that had already been taken and, therefore, has not affected the accounts for the second half of 2015.

The agreements with the Board of Governors of the Federal Reserve System (Fed) and the New York State Department of Financial Services (NYDFS) are with CASA and Crédit Agricole CIB. The agreement with the Office of Foreign Assets Control (OFAC) of the US Department of the Treasury is with Crédit Agricole CIB. Crédit Agricole CIB also entered into separate deferred prosecution agreements (DPAs) with the United States Attorney's Office for the District of Columbia (USAO) and the District Attorney of the County of New York (DANY), the terms of which are three years. On 19 October 2018 the two deferred prosecution agreements with USAO and DANY ended at the end of the three-year period, Crédit Agricole CIB having complied with all its obligations under the DPAs.

Crédit Agricole continues to strengthen its internal procedures and its compliance programmes regarding laws on international sanctions and will continue to cooperate fully with the US and New York authorities with its home regulators, the European Central Bank and the French Regulatory and Resolution Supervisory Authority (ACPR), and with the other regulators across its worldwide network.

Pursuant to the agreements with NYDFS and the US Federal Reserve, Crédit Agricole's compliance programme is subject to regular reviews to evaluate its effectiveness, including a review by an independent consultant appointed by NYDFS for a term of one year and annual reviews by an independent consultant approved by the Federal Reserve.

Euribor/Libor and other indexes

Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB, in their capacity as contributors to a number of interbank rates, have received requests for information from a number of authorities as part of investigations into: (i) the calculation of the Libor (London Interbank Offered Rates) in a number of currencies, the Euribor (Euro Interbank Offered Rate) and certain other market indexes; and (ii) transactions connected with these rates and indexes. These demands covered several periods from 2005 to 2012.

As part of its cooperation with the authorities, Crédit Agricole S.A. and its subsidiary Crédit Agricole CIB carried out investigations in order to gather the information requested by the various authorities and in particular the American authorities – the DOJ (Department of Justice) and CFTC (Commodity Future Trading Commission) – with which they were in discussions. Since then, these authorities have not come forward to Crédit Agricole S.A. or Crédit Agricole CIB.

Furthermore, Crédit Agricole CIB is currently under investigation opened by the Attorney General of the State of Florida on both the Libor and the Euribor. This authority has not come forward to Crédit Agricole CIB since then.

Following its investigation and an unsuccessful settlement procedure, on 21 May 2014, the European Commission sent a statement of objection to Crédit Agricole S.A. and to Crédit Agricole CIB pertaining to agreements or concerted practices for the purpose and/or effect of preventing, restricting or distorting competition in derivatives related to the Euribor.

In a decision dated 7 December 2016, the European Commission jointly fined Crédit Agricole S.A. and Crédit Agricole CIB €114,654,000 for participating in a cartel in euro interest rate derivatives. Crédit Agricole S.A. and Crédit Agricole CIB are challenging this decision and have asked the General Court of the European Union to overturn it. On 20 December 2023, the Court handed down its decision, reducing the fine to €110,000,000 and dismissing certain conduct attributed to Crédit Agricole S.A. and Crédit Agricole CIB, but rebutting most of the arguments raised by Crédit Agricole S.A. and Crédit Agricole CIB. Crédit Agricole S.A. and Crédit Agricole CIB filed an appeal against this decision before the EU Court of Justice on 19 March 2024. The European Commission filed a cross-appeal also requesting the annulment of the decision of the General Court of the European Union.

O'Sullivan and Tavera

On 9 November 2017, a group of individuals (or their families or estates), who claimed to have been injured or killed in attacks in Iraq filed a complaint ("O'Sullivan I") against several banks including Crédit Agricole S.A., and its subsidiary Crédit Agricole Corporate Investment Bank (Crédit Agricole CIB), in US Federal District Court in New York.

On 29 December 2018, the same group of individuals, together with 57 new plaintiffs, filed a separate action ("O'Sullivan II") against the same defendants.

On 21 December 2018, a different group of individuals filed a complaint ("Tavera") against the same defendants.

All three complaints allege that Crédit Agricole S.A., Crédit Agricole CIB and other defendants conspired with Iran and its agents to violate US sanctions and engage in transactions with Iranian entities in violation of the US Anti-Terrorism Act and the Justice Against Sponsors of Terrorism Act and seek an unspecified amount of compensatory damages.

In O'Sullivan I, the court dismissed the complaint on 28 March 2019, denied plaintiffs' motion to amend their complaint on 25 February

2020, and denied plaintiffs' motion for a final judgement to allow the plaintiffs to appeal on 29 June 2021. On 9 November 2023, the court stayed the O'Sullivan I case until resolution of certain motions in three Anti-Terrorism Act cases to which Crédit Agricole S.A. and Crédit Agricole CIB are not parties – Freeman v. HSBC Holdings, PLC, No. 14-cv-6601 (E.D.N.Y.) ("Freeman I"), Freeman v. HSBC Holdings plc, No. 18-cv-7359 (E.D.N.Y.) ("Freeman II") and Stephens v. HSBC Holdings plc, No. 18-cv-7439 (E.D.N.Y.).

On 6 April 2020, the O'Sullivan II case was stayed pending resolution of the O'Sullivan I case, and the stay was further extended on 20 December 2023.

The Tavera case has been stayed since 19 February 2019. On 8 November 2023, the stay was extended pending resolution of certain motions in Freeman I, Freeman II and Stephens. The stay was further extended on 21 October 2025.

Crédit Agricole Consumer Finance Nederland B.V.

The conditions for the review of the interest rates of revolving loans marketed by Crédit Agricole Consumer Finance Nederland BV, a fully owned subsidiary of Crédit Agricole Consumer Finance S.A., and its subsidiaries are the subject of borrowers' claims relating to the criteria for revising these rates and possible overpayments of interest.

On 21 January 2019, in two individual cases concerning two subsidiaries of Crédit Agricole Consumer Finance Nederland BV, the Appeals Committee of KIFID (the Financial Services Complaints Authority) in the Netherlands decided that in case the consumers had no or insufficient information on the specific factors that determine the interest rate, the individual interest rate needed to follow the movement of market interest rates on consumer loans.

Crédit Agricole Consumer Finance Nederland BV implemented a compensation plan for the benefit of the borrowers in May 2020 which considers the aforementioned decisions of KIFID. Other institutions in the Netherlands have implemented compensation plans. Crédit Agricole Consumer Finance Nederland B.V. The supervisory board decided to close this compensation plan on 1 March 2021.

CACEIS Germany

CACEIS Germany received from the Bavarian tax authorities on 30 April 2019 a claim for the repayment of the dividend tax refunded to a number of its customers in 2010.

This claim amounted to €312 million. It was accompanied by a demand for the payment of €148 million of interest (calculated at the rate of 6% per annum).

CACEIS Germany (CACEIS Bank SA) strongly challenges this claim that it finds to be totally unfounded. CACEIS Germany filed several claims before the Munich Tax office in order to, on the one hand, challenge the Munich Tax office's claim for the repayment of the dividend tax and, on the other hand, request a stay of enforcement of the payment obligation pending a final decision on the substance. The stay of enforcement was granted for the payment of €148 million of interest and rejected for the repayment of the amount of €312 million. CACEIS Bank SA appealed against the decision to reject. The rejection being enforceable, the sum of €312 million was paid by CACEIS Bank SA which, given the ongoing appeal proceedings, recorded a claim for an equivalent amount in its accounts. As CACEIS Bank SA's arguments were rejected by the Munich Tax office on 25 November 2022, CACEIS Bank SA filed on 21 December 2022 a lawsuit with the Munich Tax Court against the said Munich Tax office's decision and against the claim for the repayment of the dividend tax. As CACEIS Bank SA is confident in its arguments, it has not made any modification to its accounts.

CA Bank Polska

Between 2007 and 2008, CA Bank Polska as well as other Polish banks granted mortgage loans denominated in or indexed to Swiss currency (CHF) and repayable in PLN currency. The significant appreciation of the CHF exchange rate against Polish currency (PLN) led to a substantial increase in the cost of repayment for borrowers.

Given that courts consider that the mortgage provisions which allow banks to unilaterally determine the applicable exchange rate are unfair, the number of cases raised against the banks is constantly growing.

In May 2022, CA Bank Polska opened a settlement programme for the claims raised by the borrowers.

H2O unitholders claim

On 20 and 26 December 2023, members of an association called “Collectif Porteurs H2O” summoned CACEIS Bank before the Paris Economic Activity Court alongside Natixis Investment Managers and KPMG Audit, in the context of an action mainly brought against H2O AM LLP, H2O AM Europe SAS and H2O AM Holding. BPCE, Natixis SA and KPMG SA were subsequently summoned to join the proceedings.

The plaintiffs present themselves as unitholders of funds managed by companies of the H2O group, some of whose assets were hived off into “side pockets” in 2020, as well as holders of life insurance policies invested in units linked to such funds.

Since the action was initiated, the number of plaintiffs – initially 6,077 – has evolved both upwards (voluntary interventions) and downwards (withdrawals) and now stands at approximately 8,800.

The plaintiffs are seeking that the H2O group and all other defendants be held severally liable for the damages allegedly caused to them by the hiving-off of the relevant fund assets.

The amount claimed has also evolved over the course of the proceedings and currently stands at around €610 million.

In order to seek the in solidum liability of CACEIS Bank together with the co-defendants, the plaintiffs allege that it breached its supervisory obligations in its capacity as custodian of the funds.

In a decision dated 17 December 2025, the AMF Enforcement Committee imposed on CACEIS Bank a financial penalty of €3.5 million and a warning for breaches relating to certain controls carried out in its capacity as custodian over seven funds managed by H2O. The Enforcement Committee mentions in its decision, however, that “while these breaches did not allow for the early detection of some of H2O’s failures to meet its own obligations, it remains nonetheless true that the investment decisions taken by the latter in ineligible securities are at the origin of the harm that the unitholders of the funds may have suffered”.

This decision is not final and may be appealed within a two-month period.

Dividend arbitration – Investigation conducted by the French National Financial Prosecutor’s Office

Crédit Agricole CIB, like other banking institutions, was the subject of a preliminary investigation launched in early 2023 by the French National Financial Prosecutor’s Office (*Parquet national financier*) in connection with the “dividend arbitration” case.

Crédit Agricole CIB cooperated with the authorities in the context of this investigation, which demonstrated that it had not established any system or policy aimed at encouraging its foreign clients to carry out securities lending or borrowing transactions or securities derivatives transactions for the purpose of tax fraud. The investigation also showed that Crédit Agricole CIB had put in place internal rules aiming to strictly regulate transactions involving dividend detachment as soon as the provisions of Article 119 bis of the General Tax Code resulting from the 2019 Finance Act came into force.

For the period from 2013 to 2023, the National Financial Prosecutor’s Office considered that a number of securities lending and borrowing transactions, as well as equity derivatives transactions, concluded at market-determined prices, constituted transactions involving dividend arbitration.

In this context, the National Financial Prosecutor’s Office proposed a settlement of this case in the form of a public interest judicial agreement, under which Crédit Agricole CIB agreed to pay a public interest fine of €88.2 million.

This agreement, which does not constitute a criminal conviction and does not imply any admission of guilt by Crédit Agricole CIB, was validated by the President of the Paris Judicial Court on 8 September 2025.

The payment of the public interest fine did not significantly affect Crédit Agricole CIB’s accounts for the 2025 financial year, given the provisions that had been made.

Crédit Agricole Auto Bank

On 7 October 2025, the Financial Conduct Authority (FCA) in the United Kingdom released a draft compensation plan concerning borrowers having concluded a motor finance agreement between 6 April 2007 and 1 November 2024. Included in the plan are all agreements which, according to the FCA, would have led to an unfair relationship between the borrower and their financial institution due to the remuneration modalities of the motor distributor in its capacity as credit intermediary.

This initiative follows a decision from the UK Supreme Court on 1 August 2025 concerning competing institutions challenged by their customers regarding the conditions of their motor finance agreements. In its decision, the Supreme Court called into question the modalities of remuneration of credit intermediaries considering they created an imbalance between the parties.

The draft compensation plan was subject to public consultation until 12 December 2025. The FCA plans to confirm the exact parameters of the compensation plan by March 2026.

The following are notably concerned by the draft plan: CA Auto Finance UK, 100% owned subsidiary of Crédit Agricole Auto Bank, itself a fully owned subsidiary of CA Consumer Finance SA and Ferrari Financial Services, a joint venture between Crédit Agricole Auto Bank and the motor manufacturer Ferrari.

HOME PURCHASE SAVING PLANS

Deposits collected in home purchase savings schemes and accounts during the savings phase

(in millions of euros)	31/12/2025	31/12/2024
HOME PURCHASE SAVINGS PLANS		
Under 4 years old	7,103	10,513
Between 4 and 10 years old	5,864	36,349
Over 10 years old	64,113	37,216
TOTAL HOME PURCHASE SAVINGS PLANS	77,080	84,077
TOTAL HOME PURCHASE SAVINGS ACCOUNTS	14,017	14,062
TOTAL DEPOSITS COLLECTED UNDER HOME PURCHASE SAVINGS CONTRACTS	91,097	98,139

Customer assets, excluding government subsidies, are based on the carrying amount at the end of November 2025 for the financial statements at 31 December 2025 and at the end of November 2024 for the financial statements at 31 December 2024.

Outstanding loans granted to holders of home purchase savings accounts and schemes

(in millions of euros)	31/12/2025	31/12/2024
Home purchase savings plans	613	491
Home purchase savings accounts	220	171
TOTAL OUTSTANDING LOANS GRANTED UNDER HOME PURCHASE SAVINGS CONTRACTS	833	662

Provision for home purchase savings accounts and schemes

(in millions of euros)	31/12/2025	31/12/2024
HOME PURCHASE SAVINGS PLANS		
Under 4 years old	12	25
Between 4 and 10 years old	17	50
Over 10 years old	151	115
TOTAL HOME PURCHASE SAVINGS PLANS	179	190
TOTAL HOME PURCHASE SAVINGS ACCOUNTS	13	7
TOTAL PROVISIONS FOR HOME PURCHASE SAVINGS CONTRACTS	192	196

Home purchase saving plans have three components:

- a savings component linked to an option sold to HPSP (Home Purchase Saving Plan) holders to extend their investment under pre-set rate conditions;
- a commitment component linked to HPSP and HPSA (Home Purchase Saving Account) credits which may be achieved in the future under pre-set rate conditions;
- a credit component linked to HPSP and HPSA loans already made at rate conditions which, at the time they were made, may not have been the same as the market rates.

The utilisation coefficient of loan entitlements had been estimated by experts following the rate increase in 2022. At 31 December 2024, Crédit Agricole Group had decided to freeze the Home Purchase Saving Plan at its 30 June 2024 level, given the uncertainty surrounding the future level of the utilisation coefficient of PEL loan entitlements in view of the stabilisation of the real estate market.

The Group now considers that it has sufficient hindsight to calibrate the utilisation coefficient of loan entitlements, taking into account historical observations.

The Group has also continued to refine its methodology, in particular the methods used to take interest rate scenarios into account (multi-scenario approach).

Age plan is determined based on the date of the midway point in the generation of plans to which they belong.

All of the home purchase savings plans and accounts collected by the Regional Banks are recognised at 100% as liabilities in the consolidated financial statements of the Crédit Agricole Group

Half of the amount of outstanding loans related to home purchase savings plans and accounts is recognised by the Crédit Agricole Group and the other half by the Regional Banks in the tables above.

The amounts recognised under provisions represent the portion of risk borne by Crédit Agricole S.A., LCL and the Regional Banks.

Consequently, the ratio between the provision booked and the amounts outstanding shown on the Crédit Agricole Group's balance sheet is not representative of the level of provisioning for the home purchase savings risk.

Irrevocable payment commitments paid to the Single Resolution Fund

The European regulatory framework intended to preserve financial stability has been supplemented by Directive 2014/59/EU of 15 May 2014, which establishes a framework for the recovery and resolution of credit institutions and investment firms. The system for funding the Single Resolution Mechanism (SRM) was set up by Regulation (EU) 806/2014 of 15 July 2014 for the relevant institutions.

The security deposit corresponds to the guarantees for institutions having recourse to the irrevocable payment commitments set out in Article 70, paragraph 3, of Regulation (EU) 806/2014, which stipulates that the share of those commitments shall not exceed 30% of the total amount of contributions raised in accordance with said article.

In accordance with Implementing Regulation (EU) 2015/81 of 19 December 2014, when a resolution action requires the Single Resolution Fund to intervene in application of Article 76 of Regulation (EU) 806/2014, the Single Resolution Board (SRB) calls on all or part of the irrevocable payment commitments, as made in accordance with Regulation (EU) 806/2014, in order to maintain the

Fund's available financial resources, as set by the Single Resolution Board within the limit of the ceiling set in the aforementioned Article 70, paragraph 3, of Regulation (EU) 806/2014.

The guarantees that come with these commitments will be restored in accordance with Article 3 of Regulation EU 2015/81 of 19 December 2014 once the Fund duly receives the contribution pertaining to the irrevocable payment commitments called upon.

This security deposit, which is classed under sundry accounts receivable in the institution's assets, with no change compared with the previous financial years, is paid in accordance with the agreement on the irrevocable payment commitment and the guarantee mechanism agreed between the Group and the Single Resolution Board. This line item amounted to €809.5 million at 31 December 2025, compared with €803.1 million at 31 December 2024 (See Note 6.10).

The Group does not expect a resolution action requiring a call for contribution for the Group, in the context of the aforementioned mechanism, to take place in the Eurozone, nor does it expect a loss or a withdrawal of its banking authorisation.

6.16 SUBORDINATED DEBT

(in millions of euros)

	31/12/2025	31/12/2024
Dated subordinated debt ⁽¹⁾	25,851	28,903
Undated subordinated debt ⁽²⁾	5	5
Mutual security deposits	224	224
Participating securities and loans	2	2
CARRYING AMOUNT	26,082	29,134

(1) Includes issues of dated subordinated notes (TSR).

(2) Includes issues of deeply subordinated notes (TSS) and undated subordinated notes (TSDI).

SUBORDINATED DEBT ISSUES

The Crédit Agricole Group subordinated debt issues are part of the regulatory equity management, while contributing to the refinancing of all of the Crédit Agricole Group's operations.

The European Directive and Regulation on capital requirements for credit institutions and investment firms (CRD 4/CRR ⁽¹⁾) and their terms of application in French law set out the conditions under which subordinated instruments can qualify as regulatory equity and stipulate the terms and conditions for phasing out the qualification of old instruments that do not meet or exceed those conditions.

All subordinated debt issuances, whether new or old, are likely to be subject to bail-in through their total or partial depreciation or their conversion into capital in certain circumstances and in accordance with applicable French law transposing the European Directive on the reorganisation and resolution of credit institutions and investment firms (BRRD ⁽²⁾).

Subordinated debt differs from senior preferred or non-preferred unsecured bonds by virtue of its ranking in liquidation (principal and interest) contractually defined by their subordination clause, which refers explicitly to applicable French law: subordinated debt is junior to senior non-preferred and preferred unsecured debt. Consequently, subordinated debt instruments are converted into capital or impaired as a priority and in any case before unsecured senior debt instruments, particularly in the event of implementation of the bail-in tool by the competent authorities as part of the resolution of the issuing entity. Likewise, in the event of liquidation of this same issuing entity, the creditors of these subordinated debt instruments will only potentially be paid, if there are still available funds after the preferred and non-preferred unsecured debt instruments are paid.

(1) Directive 2013/36/EU of 26 June 2013 as amended and modified by Directive (EU) 2019/878 of 20 May 2019, (and its transpositions into French law) and Regulation (EU) 575/2013 of 26 June 2013 as supplemented and amended, including in particular through Regulation (EU) 2019/876 of 20 May 2019.

(2) Directive 2014/59/EU of 15 May 2014 as supplemented and amended, including in particular through Directive (EU) 2019/879 of 20 May 2019.

6.17 UNDATED FINANCIAL INSTRUMENTS

The main issues of undated subordinated and deeply subordinated debt classified in Equity – Group share are:

Income tax savings related to interest paid to security holders recognised in net income	136	129	-	-
Issuance costs (net of tax) accounted as reserves	(18)	(18)	-	-
Other	-	-	-	-
UNDATED SUBORDINATED NOTES			-	
Interests paid accounted as reserves	(35)	(9)	(20)	(64)
Changes in nominal amounts	-	-	290	(786)
Income tax savings related to interest paid to security holders recognised in net income	14	16	-	-
Issuance costs (net of tax) accounted as reserves	(6)	-	-	-
Other	-	-	-	-

As undated subordinated and deeply subordinated financial instruments are considered equity instruments issued, the tax effects on the compensation paid are recognised as income tax in the income statement.

6.18 BREAKDOWN OF FINANCIAL ASSETS AND LIABILITIES BY CONTRACTUAL MATURITY

The breakdown of balance sheet financial assets and liabilities is made according to contractual maturity date.

The maturities of trading and hedging derivatives correspond to their date of contractual maturity.

Equity instruments by nature have no contractual maturity; they are classified as “Indefinite”.

(in millions of euros)	31/12/2025					Total
	≤ 3 months	> 3 months up to ≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	Indefinite

(1) Including €6,562 million of accrued debt for 2025, compared with €6,331 million in 2024.

NOTE 7

EMPLOYEE BENEFITS AND OTHER COMPENSATION

7.1 ANALYSIS OF EMPLOYEE EXPENSES

(in millions of euros)	31/12/2025	31/12/2024
Salaries ^{(1) (2)}	(11,104)	(10,636)
Contributions to defined-contribution plans	(1,004)	(960)
Expense to defined-benefit plans	(59)	(64)
Other social security expenses	(3,068)	(2,871)
Profit-sharing and incentive plans	(900)	(836)
Payroll-related tax	(1,026)	(982)
TOTAL EMPLOYEE EXPENSES	(17,163)	(16,350)

(1) As part of the deferred variable compensation paid to market professionals, the Crédit Agricole Group recognised an expense relating to share-based payments of €102.7 million at 31 December 2025, compared with an expense of €110.4 million at 31 December 2024.

(2) Including termination payments of €261 million at 31 December 2025, compared with €286 million at 31 December 2024.

7.2 AVERAGE HEADCOUNT FOR THE PERIOD

Average headcount	31/12/2025	31/12/2024
France	114,137	113,368
International	44,383	43,911
TOTAL	158,520	157,279

7.3 POST-EMPLOYMENT BENEFITS, DEFINED-CONTRIBUTION SCHEMES

“Employers” contribute to a variety of compulsory pension schemes. Plan assets are managed by independent organisations and the contributing companies have no legal or implied obligation to pay additional contributions if the funds do not have sufficient assets to cover all benefits corresponding to services rendered by employees during the financial year and during prior years.

Consequently, the Crédit Agricole Group companies have no liabilities in this respect other than the contributions payable.

Within the Group, there are several compulsory defined-contribution pension schemes, the main ones being Agirc/Arrco, which are French supplementary retirement plans, and some supplementary plans in place notably within UES Crédit Agricole S.A.

ANALYSIS OF SUPPLEMENTARY PENSION SCHEMES IN FRANCE

Business line	Entity	Compulsory supplementary pension plans	Estimate number of employees covered as at 31/12/2025	Estimate number of employees covered as at 31/12/2024

DEFINED-BENEFIT SCHEMES: MAIN ACTUARIAL ASSUMPTIONS

	31/12/2025		31/12/2024	
(in millions of euros)	Eurozone	Outside Eurozone	Eurozone	Outside Eurozone
Discount rate ⁽¹⁾	3.40%	2.73%	3.25%	2.67%
Actual return on plan assets and on reimbursement rights	3.57%	2.76%	5.66%	5.59%
Expected salary increase rates ⁽²⁾	1.90%	1.64%	1.86%	1.77%
Rate of change in medical costs	-	-	-	-

(1) Discount rates are determined based on the average term of the commitment, that is, the arithmetical average of the terms calculated between the valuation date and the payment date weighted by employee turnover assumptions. The underlying used is the discount rate by reference to the iBoxx AA.

(2) Depending on the populations concerned (executives or non-executives).

INFORMATION ON SCHEME ASSETS – ALLOCATION OF ASSETS ⁽¹⁾

(in millions of euros)	Eurozone			Outside Eurozone			All zones		
	%	Amount	Of which listed	%	Amount	Of which listed	%	Amount	Of which listed
Equities	17.7%	450	149	28.6%	467	467	22.0%	918	617
Bonds	54.7%	1,394	371	38.6%	629	630	48.4%	2,023	1,000
Property/Real estate	5.6%	143	-	16.1%	263	-	9.7%	406	-
Other assets	22.1%	562	-	16.7%	272	-	20.0%	834	-

(1) Of which fair value of reimbursement rights.

At 31 December 2025, the sensitivity rates showed that:

- a 50-basis point increase in discount rates would reduce the commitment by -4.53%;
- a 50-basis point decrease in discount rates would increase the commitment by 4.85%.

Crédit Agricole Group's policy on covering employment-related commitments reflects local rules on funding post-employment benefits in countries with minimum funding requirements. Overall, commitments arising from the Group's post-employment obligations were 93% covered at 31 December 2025 (including reimbursement rights).

7.5 OTHER EMPLOYEE BENEFITS

In France, the Group's main entities pay long-service awards. The amounts vary according to practices and collective bargaining agreements in place.

The provisions funded by the Crédit Agricole Group for these other employment-related commitments amounted to €572 million at 31 December 2025.

7.6 SHARE-BASED PAYMENTS

7.6.1 STOCK OPTIONS PLAN

No new plan was implemented in 2025.

7.6.2 DEFERRED VARIABLE COMPENSATION PAID IN SHARES OR IN CASH INDEXED TO THE SHARE PRICE

The deferred variable compensation plans implemented by the Group take two forms:

- equity-settled plans;
- cash-settled plans indexed to the Crédit Agricole S.A. share price.

Since 1 January 2016, all existing and future deferred variable compensation plans are now cash-settled plans indexed to the Crédit Agricole S.A. share price. The impact of the revaluation of the commitment on the basis of the Crédit Agricole S.A. share price, which is not material, was recognised in net income.

This deferred variable compensation is subject to continued employment and a performance condition and deferred to March 2026, March 2027, March 2028, March 2029 and March 2030.

The expense related to these plans is recognised in compensation expenses. It is spread on a straight-line basis over the vesting period to factor in continued employment, and a liability is recorded in employee expenses, the amount of which is subject to periodical revaluation through profit or loss until the settlement date, depending on the evolution of the share price of Crédit Agricole S.A. and on vesting conditions (continued employment and performance).

NOTE 8 LEASES

8.1 LEASES FOR WHICH THE GROUP IS THE LESSEE

The item "Property, plant & equipment" in the balance sheet consists of own and leased assets that do not meet the definition of investment properties.

<i>(in millions of euros)</i>	31/12/2025	31/12/2024
Owned property, plant & equipment	13,358	12,470
Right-of-use on lease contracts	2,083	2,174
TOTAL PROPERTY, PLANT & EQUIPMENT USED IN OPERATIONS	15,440	14,644

The Crédit Agricole Group is also a lessee under lease agreements for IT equipment (photocopiers, computers etc.) with terms of one to three years. These are low-value and/or short-term leases. The Crédit Agricole Group has opted to apply the exemptions provided for in IFRS 16 and not to recognise the right-of-use asset and the lease liability for these leases in the balance sheet.

CHANGE IN RIGHT OF USE ASSETS

The Crédit Agricole Group is the lessee of many assets including offices, agencies and computer equipment.

Information relating to the contracts of which the Crédit Agricole Group is a lessee is presented below:

8.2 LEASES FOR WHICH THE GROUP IS THE LESSOR

The Crédit Agricole Group offers its customers leasing options that take the form of leasing agreements, lease financing with purchase options, finance leasing and long-term leasing arrangements. Lease agreements are classified as finance leases when the terms of the lease transfer substantially all of the risks and benefits inherent in ownership to the lessee.

Other lease agreements are classified as operating leases.

INCOME FROM RENTAL CONTRACTS

(in millions of euros)	31/12/2025	31/12/2024
Finance leases	2,126	2,093
Selling profit or loss	(74)	(50)
Finance income on the net investment in the lease	2,200	2,144
Income relating to variable lease payments	-	-
Operating leases	1,490	1,378
Lease income	1,490	1,378

SCHEDULE OF RENT PAYMENTS TO BE RECEIVED

(in millions of euros)	31/12/2025					
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	Total Lease payments receivable	Unearned finance income	Discounted residual value
Finance leases	11,969	16,669	3,968	32,606	1,739	1,672
						32,540

(in millions of euros)	31/12/2024					
	≤ 1 year	> 1 year up to ≤ 5 years	> 5 years	Total Lease payments receivable	Unearned finance income	Discounted residual value
Finance leases	8,940	19,320	4,794	33,053	1,603	1,178
						32,629

Lease agreements expire on their residual maturity date.

The amount by expiry corresponds to the undiscounted contractual amount.

NOTE 9 FINANCING AND GUARANTEE COMMITMENTS AND OTHER GUARANTEES

Financing and guarantee commitments and other guarantees include discontinued operations.

COMMITMENTS GIVEN AND RECEIVED

(in millions of euros)	31/12/2025	31/12/2024

Securities to be received	6,892	9,460

(1) The amounts reported in this note take into account the correction of a technical error in the consolidation of guarantees received from customers and credit institutions, estimated at -€70,393 million at 31 December 2024, broken down as follows:

- Commitments received from credit institutions of -€402 million;
- Commitments received from customers of -€69,991 million.

As from 13 December 2024, Banque de France has discontinued the Additional Credit Claims Corporates waiver channel within the framework of the exceptional measures put in place in 2011 in response to the financial crisis. Only "State-guaranteed loans" receivables remain eligible for central bank debt waivers.

FINANCIAL INSTRUMENTS GIVEN AND RECEIVED AS COLLATERAL

(in millions of euros)	31/12/2025	31/12/2024

(1) The amounts reported in this note take into account the correction of a technical error in the consolidation of guarantees received from customers and credit institutions, estimated at -€5,237 million at 31 December 2024, broken down as follows:

- Securities and assets received under repurchase agreements of -€5,237 million.

RECEIVABLES PLEDGED AS COLLATERAL

At 31 December 2025, Crédit Agricole S.A. deposited €69.7 billion of receivables (mainly on behalf of the Regional Banks and subsidiaries) for refinancing transactions to the Banque de France, compared to €70.6 billion at 31 December 2024.

At 31 December 2025, Crédit Agricole S.A. deposited €7.6 billion of receivables for refinancing transactions to the Caisse de Refinancement de l'Habitat on behalf of the Regional Banks, compared to €7.1 billion at 31 December 2024, and €1.92 billion of receivables were deposited directly by LCL.

At 31 December 2025, €192.6 billion of Regional Bank and LCL receivables had been pledged as collateral for the secured bond issues of Crédit Agricole Home Loan SFH (CA HL SFH) and Crédit Agricole Financement de l'Habitat SFH (CA FH SFH), financial companies wholly owned by Crédit Agricole S.A. This amount comprises €156.7 billion in Regional Bank receivables (of which €50.2 billion for CA HL SFH and €106.5 billion for CA FH SFH) and €35.9 billion from LCL (of which €12.3 billion for CA HL SFH and €23.6 billion for CA FH SFH).

At 31 December 2025, in the context of transactions with EIB/CEB supranationals, Crédit Agricole S.A. deposited €1.8 billion in receivables on behalf of the Regional Banks.

At 31 December 2025, in the context of refinancing transactions with CDC, Crédit Agricole S.A. deposited €2.4 billion in receivables on behalf of the Regional Banks.

These provisions for which there is no contractual transfer of cash flow will fall outside the scope of the asset transfers referred to in Note 6.6 "Transferred assets not derecognised or derecognised with ongoing involvement".

GUARANTEES HELD

Guarantees held and assets received as collateral by the Crédit Agricole group, which it is allowed to sell or to use as collateral are mostly held within Crédit Agricole S.A. The majority of these are receivables pledged as collateral by the Regional Banks and their main bank subsidiaries to Crédit Agricole S.A., the latter acting as the Central Body with regard to the external refinancing organisations, in order to obtain refinancing. These receivables (property-related, or loans to corporates or local authorities) are selected and rated for their quality and retained on the balance sheet of the contributing entities.

The majority of these guarantees consist of mortgage liens, collateral or guarantees received, regardless of the quality of the assets guaranteed. They are mainly related to repurchase agreements and securities pledged to guarantee brokerage transactions.

Crédit Agricole group's policy is to sell seized collateral as soon as possible. Crédit Agricole group has no such assets at 31 December 2025.

NOTE 10

RECLASSIFICATIONS OF FINANCIAL INSTRUMENTS

10.1 PRINCIPLES APPLIED BY CRÉDIT AGRICOLE GROUP

Reclassifications are performed only under exceptional circumstances and following a decision by the Executive Management of the Group as a result of internal or external changes: significant changes in Crédit Agricole Group's activity.

10.2 RECLASSIFICATION PERFORMED BY CRÉDIT AGRICOLE GROUP

In 2025, Crédit Agricole Group did not carry out any reclassification pursuant to paragraph 4.4.1 of IFRS 9.

NOTE 11

FAIR VALUE OF FINANCIAL INSTRUMENTS

Fair value is the price that would be received at the sale of an asset or paid to transfer a liability in a standard transaction between market participants at the valuation date.

Fair value is defined on the basis of the exit price.

The fair values shown below are estimates made on the reporting date using observable market data wherever possible. These are subject to change in subsequent periods due to developments in market conditions or other factors.

The calculations represent best estimates. They are based on a number of assumptions. It is assumed that market participants act in their best economic interest.

To the extent that these models contain uncertainties, the fair values shown may not be achieved upon actual sale or immediate settlement of the financial instruments concerned.

The fair value hierarchy of financial assets and liabilities is broken down according to the general observability criteria of the valuation inputs, pursuant to the principles defined under IFRS 13.

Level 1 of the hierarchy applies to the fair value of financial assets and liabilities quoted in active markets.

Level 2 of the hierarchy applies to the fair value of financial assets and liabilities with observable inputs. This agreement includes market data relating to interest rate risk or credit risk when the latter can be revalued based on observable Credit Default Swap (CDS) spreads. Securities bought or sold under repurchase agreements subject of an active market, depending on the underlying and the maturity of the transaction are also included in Level 2 of the hierarchy, as are financial assets and liabilities with a demand component for which fair value is measured at unadjusted amortised cost.

Level 3 of the hierarchy indicates the fair value of financial assets and financial liabilities for which there is no observable data or for which some parameters can be remeasured based on internal models that use historical data.

In some cases, market values are close to carrying amounts. These include:

- variable-rate assets or liabilities for which changes in interest rates do not significantly affect fair value since the interest rates for these instruments adjust frequently to the market rates;
- short-term assets or liabilities where the redemption value is considered to be close to the market value;
- demand assets and liabilities;
- transactions for which there is no reliable observable data.

11.1 FAIR VALUE OF FINANCIAL ASSETS AND LIABILITIES RECOGNISED AT AMORTISED COST

IFRS 7 requires the disclosure of information on financial instruments that are not recognised at fair value.

Amounts shown under the “carrying amount” of the financial instruments concerned include accrued interests and debt and, in the case of assets, are net of impairment. Furthermore, the carrying amount in the tables includes the Fair Value of the hedged portion of the micro-hedged items in Fair Value hedging (see Note 3.5 “Hedge accounting”). However, the carrying amount of the items presented in this table does not include the revaluation adjustment on interest rate hedged portfolios.

In order to be recognised at amortised cost on the asset side of the balance sheet, debt instruments must satisfy both of the following criteria:

- be managed in a portfolio whose management objective is the collection of contractual cash flows over the lifetime of the assets and whose sales are strictly regulated and limited;
- give entitlement only to the repayment of the principal and when the payment of interest reflects the time value of money, the credit risk associated with the instrument, the other costs and risks of a conventional loan contract and a reasonable margin, whether the interest rate is fixed or variable (the “Solely Payments of Principal & Interests” or “SPPI” test).

In that sense, disclosures relating to the market value of these instruments must be analysed with special care:

- The values indicated represent an estimate of the market value at 31 December 2025. However, these market values may be subject to variations depending on market data, in particular the interest rate trends and the quality of the credit risk of the counterparties. These fluctuations can lead to a potentially substantial difference between the indicative fair value presented in the table below and the derecognition value, particularly at maturity or close to maturity compatible with a collection management model in which the financial instruments are classified.
- Accordingly, the difference between the indicated fair value and the carrying amount does not represent the institution's going concern realisable value.
- Given the management model consisting of collecting the cash flows of the portfolio's financial instruments, it is recalled that these financial instruments are not managed according to their fair value trends and that the performance of these assets is assessed on the basis of the contractual cash flows received over the lifetime of the instrument.
 - The estimated indicative fair value of the instruments recognised at amortised cost is subject to the use of valuation models, in particular customer loans and receivables and more specifically those whose valuation is based on Level 3 unobservable data.

FAIR VALUE OF FINANCIAL ASSETS RECOGNISED IN THE BALANCE SHEET AT AMORTISED COST

(in millions of euros)	Value at 31/12/2025	Estimated fair value at 31/12/2025	Quoted prices in active markets for identical instruments: Level 1	Valuation based on observable data: Level 2	Valuation based on unobservable data: Level 3
LOANS AND RECEIVABLES	1,363,320	1,349,140	-	69,198	1,279,942
Loans and receivables due from credit institutions	153,596	153,639	-	40,353	113,286
Loans and receivables due from customers ⁽¹⁾	1,209,724	1,195,501	-	28,845	1,166,656
DEBT SECURITIES	127,427	125,237	99,029	11,326	14,882
TOTAL FINANCIAL ASSETS OF WHICH FAIR VALUE IS DISCLOSED	1,490,747	1,474,377	99,029	80,524	1,294,824

(1) For home loans on French markets, the fair value is derived from a discounting calculation using a rate based on ALM data.

The revaluation adjustment on interest rate hedged portfolios on the assets side of the balance sheet was -€10,368 million at 31 December 2025 compared with -€5,026 million at 31 December 2024 and is not included in the carrying amount.

(in millions of euros)	Value at 31/12/2024	Estimated fair value at 31/12/2024	Quoted prices in active markets for identical instruments: Level 1	Valuation based on observable data: Level 2	Valuation based on unobservable data: Level 3
LOANS AND RECEIVABLES	1,334,301	1,330,169	-	64,249	1,265,920
Loans and receivables due from credit institutions	145,459	145,534	-	37,057	108,477

11.2 INFORMATION ON FINANCIAL INSTRUMENTS MEASURED AT FAIR VALUE

Market transactions are valued by management information systems and checked by a team that reports to the Risk Management department and is independent from the market operators.

Valuations are based on the following:

- prices or inputs obtained from independent sources and/or approved by the Market Risk department using a series of available sources (market data providers, market consensus and broker data etc.);
- models approved by the quantitative teams in the Market Risk department.

The valuation produced for each instrument is a mid-market valuation, which does not take account of the direction of the trade, the bank's aggregate exposure, market liquidity or counterparty quality. Adjustments are then made to the market valuations to incorporate those factors, as well as the potential uncertainties inherent in the models or inputs used.

The main types of valuation adjustments are the following:

Mark-to-market adjustments: these adjustments correct any potential variance between the mid-market valuation of an instrument obtained using internal valuation models and the associated inputs and the valuation obtained from external sources or market consensus data. This adjustment can be either positive or negative.

Bid/ask reserves: these adjustments incorporate the bid/ask spread for a given instrument in order to reflect the price at which the position could be reversed. These adjustments are always negative.

Uncertainty reserves: these adjustments constitute a risk premium taken into consideration by any market participant. These adjustments are always negative:

- input uncertainty reserves seek to incorporate in the valuation of an instrument any uncertainty that might exist as regards one or more of the inputs used;
- model uncertainty reserves seek to incorporate in the valuation of an instrument any uncertainty that might exist due to the choice of model used.

In addition, in accordance with IFRS 13 "Fair value measurement", Crédit Agricole Group includes within the fair value calculated for its OTC derivatives (i.e. those traded over the counter) various adjustments linked to:

- default risk or creditworthiness (Credit Valuation Adjustment/Debit Valuation Adjustment);
- future funding costs and benefits (Funding Valuation Adjustment/Initial Margin Valuation Adjustment/Collateral Valuation Adjustment);

Liquidity risk associated with the collateral (Liquidity Valuation Adjustment).

CVA (Credit Valuation Adjustment)

The CVA (Credit Valuation Adjustment) is a mark-to-market adjustment to incorporate the market value of the default risk (risk of non-payment of amounts due in the event of default or deterioration in credit quality) in the value of OTC derivatives of our counterparties. This adjustment is calculated per counterparty based on the positive future exposure of the trading portfolio (taking into account any netting or collateral agreements, where such exist) weighted by the probabilities of default and losses

given default. The methodology used maximises the use of observable input data/market prices (probabilities of default are derived in priority directly from listed CDS where these exist, proxies of listed CDS and other credit instruments where these are deemed sufficiently liquid). This adjustment is always negative and reduces the fair value of the OTC derivative assets held in the portfolio.

DVA (Debit Valuation Adjustment)

The Debit Valuation Adjustment (DVA) is a mark-to-market adjustment that aims to incorporate the market value of the default risk (potential losses to which Crédit Agricole Group may expose its counterparties in the event of default or a deterioration in its creditworthiness) in the value of OTC derivatives. This adjustment is calculated by collateral contract type on the basis of negative future exposure profiles of the trading portfolio weighted by default probabilities (Crédit Agricole Group) and losses incurred in the event of default.

The methodology used maximises the use of data/market prices (use of the Crédit Agricole Group CDS to determine default probabilities). This adjustment is always positive and reduces the fair value of the OTC derivative liabilities held in the portfolio.

FVA (Funding Valuation Adjustment)

The Funding Valuation Adjustment (FVA) is a mark-to-market adjustment that aims to incorporate the additional future funding costs and benefits based on ALM (Asset & Liability Management) funding costs into the fair value of uncollateralised or imperfectly collateralised OTC derivatives. This adjustment is calculated per counterparty based on the future exposure of the trading portfolio (taking into account any netting or collateral agreements, where such exist) weighted by ALM funding spreads.

As regards the scope of cleared derivatives, an FVA adjustment called IMVA (Initial Margin Value Adjustment) is calculated to take into account the future financing costs and gains of the initial margins to be posted with the main derivatives clearing houses until the portfolio matures.

ColVA (Collateral Valuation Adjustment) adjustment

The Collateral Valuation Adjustment (ColVA) is a mark-to-market adjustment that aims to incorporate the additional future funding costs and benefits based on the actual funding costs of these securities (on the repo market) into the fair value of OTC derivatives collateralised by non-sovereign securities. This adjustment is calculated per counterparty based on the future exposure of the trading portfolio weighted by a specific spread.

Depending on the case, this adjustment may be a specific provision or be included in mark-to-market figures via a specific discount curve.

LVA (Liquidity Valuation Adjustment)

The Liquidity Valuation Adjustment (LVA) is the positive or negative valuation adjustment intended to reflect both the potential absence of collateral payments for counterparties with a CSA (Credit Support Annex), as well as the non-standard compensation of CSAs.

Therefore, the LVA reflects the profit or loss resulting from additional liquidity costs. It is calculated on the scope of OTC derivatives with CSAs.

BREAKDOWN OF FINANCIAL INSTRUMENTS AT FAIR VALUE BY VALUATION MODEL

Amounts presented below include accrued interests and debt and are net of impairment.

TOTAL FINANCIAL LIABILITIES MEASURED AT FAIR VALUE	439,850	58,619	356,033	25,198
Transfers from Level 1: Quoted prices in active markets for identical instruments			72	-
Transfers from Level 2: Valuation based on observable data		78		1,751
Transfers from Level 3: Valuation based on unobservable data		-	6,583	
TOTAL TRANSFERS TO EACH LEVEL		78	6,654	1,751

Liability transfers to and from Level 3 mainly involve securities bought/sold under repurchase agreements to credit institutions, trading derivatives and financial liabilities at fair value through profit or loss.

Transfers between Level 1 and Level 2 mainly involve short sales.

Financial instruments classified in Level 1

Level 1 comprises all derivatives quoted in an active market (options, futures etc.), regardless of their underlying (interest rate, exchange rate, precious metals, major stock indexes), as well as equities and bonds quoted in an active market.

A market is considered as being active if quoted prices are readily and regularly available from exchange, brokers, dealers, pricing services or regulatory agencies, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

Corporate, government and agency bonds that are valued on the basis of prices obtained from independent sources, deemed to be enforceable and updated regularly, are classified in Level 1. This represents the bulk of the Sovereign and Agency Bonds and Corporate securities held. Issuers whose bonds are not quoted are classified in Level 3.

Financial instruments classified in Level 2

The main financial instruments classified in Level 2 are:

- securities bought/sold under repurchase agreements;
- debt designated at fair value:
Debt designated at fair value is classified in Level 2 when its embedded derivative is deemed to be classified in Level 2;
- over-the-counter derivatives:
The main OTC derivatives classified in Level 2 are those valued using inputs considered to be observable and where the valuation technique does not generate any significant exposure to a model risk.

Level 2 therefore mainly includes:

- linear derivative products such as interest rate swaps, currency swaps and forward FX. They are valued using simple models widely used in the market, based on directly observable inputs (foreign exchange rates, interest rates), or inputs derived from observable market prices (currency swaps);
- non-linear vanilla instruments such as caps, floors, swaptions, currency options, equity options and credit default swaps, including digital options. They are valued using simple models widely used in the market, based either on directly observable inputs (foreign exchange rates, interest rates, share prices) or inputs that can be derived from observable market prices (volatilities);
- the usual mono-underlying exotic products of the voidable swap type and currency baskets on major currencies:
These products are valued using models that are sometimes slightly more complex, but are shared by the market. The material valuation parameters are observable. Prices are observable in the market, primarily via brokers' prices. Market consensus, if applicable, allow corroboration of internal valuations;
- securities, equity options and future shares listed on a market deemed inactive and for which independent valuation data are available.

Financial instruments classified in Level 3

Financial instruments classified in Level 3 are those which do not meet the conditions for classification in Level 1 or 2. They are therefore mainly financial instruments whose valuation depends on parameters that cannot be observed in a meaningful way and/or which present a model risk.

The initial margin on all new transactions classified in Level 3 is reserved at the date of initial recognition. It is spread into profit or loss over the period considered to be unobservable, which, in certain cases, may be the maturity of the transaction.

Level 3 therefore mainly includes:

- securities bought/sold under repurchase agreements:
Repurchase transactions depending on the maturity of the transactions in question and their underlying assets;
- loans and receivables due from customers;
- securities:
Securities classified in Level 3 are essentially:
 - unlisted shares or bonds for which no independent valuation is available,
 - ABS for which indicative but not necessarily enforceable independent valuations exist;
- debt designated at fair value:
Debt designated at fair value is classified in Level 3 when its embedded derivative is deemed to be classified in Level 3;
- over-the-counter derivatives:
Unobservable income includes complex financial instruments that involve parameters deemed unobservable and thus significantly exposed to model risk.

The aggregate of these principles is mapped for observability map by risk factor/product, underlying (currency, index etc.) and maturity indicating the classification used.

The following are classified primarily in Level 3:

- linear rate or foreign exchange products for very long maturities in the case of major currencies, and for lower maturities in the case of emerging currencies;
- non-linear rate or foreign exchange products for long maturities in the case of major currencies, and for lower maturities in the case of emerging currencies;
- the complex derivatives listed below are not considered to be observable because of a significant model risk and a reduced liquidity that does not permit a regular and precise estimation of the valuation parameters:
 - certain equity derivative products: options on markets that are insufficiently deep, or options with a very long maturity or products the valuation of which depends on non-observable correlations between different underlying shares,
 - non-standard voidable swaps on G10 currencies or certain voidable swaps on emerging market currencies,
 - hybrid interest rate/credit products involving contingent risk on an issuer (sovereign or corporate/financial) of the non-standard credit-linked or repackaged note type, whose valuation depends on several unobservable parameters,
 - certain products for which the underlying element is the forward volatility of an index or is significantly exposed to basis risk between two indexes,
 - multi-underlying products that generate exposures to unobservable correlations among several risk classes (rates, credit, foreign exchange, inflation and shares),
 - securitisation swaps generating an exposure to the prepayment rate. The prepayment rate is determined on the basis of historical data on similar portfolios.

CLOSING BALANCE (31/12/2025)	24,737	3	2,994	-	-	-	4,321	17,419

(1) This balance includes gains and losses for the period arising from liabilities held on the balance sheet at the reporting date for the following amounts:

Gains/Losses for the period from Level 3 assets held at the end of the period	1,778
Recognised in profit or loss	1,914
Recognised in other comprehensive income	(136)

Gains and losses recognised in profit or loss relating to financial instruments held for trading and designated at fair value through profit or loss and derivative instruments are recognised in “Net gains (losses) on financial instruments at fair value through profit or loss”; gains and losses recognised in profit or loss relating to financial assets at fair value through other comprehensive income are recognised in “Net gains (losses) on financial instruments at fair value through other comprehensive income”.

11.3 ASSESSMENT OF THE IMPACT OF INCLUSION OF THE MARGIN AT INCEPTION

(in millions of euros)

	31/12/2025	31/12/2024
Deferred margin at beginning of period	304	359
Margin generated by new transactions during the period	208	245
Margin recognised in net income during the period	(147)	(300)
DEFERRED MARGIN AT END OF PERIOD	365	304

The first day margin on market transactions falling within Level 3 of fair value is reserved on the balance sheet and recognised in profit or loss as time passes or when unobservable parameters become observable again.

NOTE 12

SCOPE OF CONSOLIDATION AT 31 DECEMBER 2025

12.1 INFORMATION ON SUBSIDIARIES

12.1.1 RESTRICTIONS ON CONTROLLED ENTITIES

Regulatory, legal or contractual provisions may limit the Crédit Agricole Group's ability to have free access to the assets of its subsidiaries and to settle the Group's liabilities.

The Crédit Agricole Group is subject to the following restrictions:

Regulatory constraints

The subsidiaries of the Crédit Agricole Group are subject to prudential regulation and regulatory capital requirements in their host countries. The minimum equity capital (solvency ratio), leverage ratio and liquidity ratio requirements limit the capacity of these entities to pay dividends or to transfer assets to Crédit Agricole Group.

Legal constraints

The subsidiaries of the Crédit Agricole Group are subject to legal provisions concerning the distribution of capital and distributable income. These requirements limit the ability of the subsidiaries to distribute dividends. In the majority of cases, these are less restrictive than the regulatory limitations mentioned above.

Contractual constraints related to guarantees

Constraints related to guarantees: The Crédit Agricole Group encumbers certain financial assets to raise funds through securitisation or refinancing with central banks. Once pledged as guarantees, the assets can no longer be used by the Crédit Agricole Group. This mechanism is described in Note 9 “Financing and guarantee commitments and other guarantees”.

Restriction on assets backing unit-linked contracts for the Insurance business

Assets backing unit-linked contracts of the Crédit Agricole Group are held for the benefit of policyholders. Assets on the balance sheet of the insurance subsidiaries of the Crédit Agricole Group are mainly held to satisfy their obligation towards their policyholders. Assets transfers to other entities are possible following the legal conditions. However, in case of a transfer, a part of the profit due to the transfer must be intended for the policyholders.

Other constraints

Some Crédit Agricole Group subsidiaries must obtain prior approval from their regulatory authorities for the distribution of dividends.

For both CA Egypt and CA Bank Polska, dividend payments are subject to prior approval by their respective regulators.

According to Resolution No. 23 of the Central Bank of Ukraine of 25 February 2022, the allocation of profits to the payment of dividends and the actual payment of the dividends (other than dividends on preferred shares) are prohibited for an indefinite period, with the exception of the State banks, whose dividends are allocated to the Ukrainian State budget.

Corporates will be able to repatriate “new” dividends: corporates will be able to repatriate dividends on interests or shares in corporates abroad accrued based on performance results from the period starting on 1 January 2024. This easing of the rules does not apply to the payment of dividends on undistributed earnings from previous periods allocated to retained earnings or reserve capital.

To minimise the risks to macroeconomic and financial stability, the National Bank has set a monthly repatriation limit for “new” dividends at an equivalent of €1 million. Compliance with this requirement will be ensured through the National Bank of Ukraine's automated E-Limits IT system.

12.1.2 SUPPORT FOR CONTROLLED STRUCTURED ENTITIES

Crédit Agricole CIB has contractual arrangements with some consolidated structured entities that equate to commitments to provide financial support.

To meet its funding needs, Crédit Agricole CIB uses structured debt issuance vehicles to raise cash on financial markets. Securities issued by these entities are fully underwritten by Crédit Agricole CIB. At 31 December 2025, the outstanding volume of these issues was €37.4 billion.

As part of its third-party securitisation business, Crédit Agricole CIB provides liquidity facilities to its ABCP conduits. At 31 December 2025, these liquidity facilities totalled €42.7 billion.

Crédit Agricole S.A. provided no other financial support for any structured entities consolidated at 31 December 2025 and 31 December 2024.

12.1.3 SECURITISATION TRANSACTIONS AND DEDICATED FUNDS

Various Group entities conduct securitisation transactions on their own account as part of collateralised refinancing transactions. Depending on the circumstances, these transactions can be wholly or partially placed with investors, sold under repurchase agreements or kept on the issuer's balance sheet as liquid securities reserves that can be used to manage refinancing.

Following the IFRS 9 decision tree, these transactions are considered to form part of deconsolidating or non-deconsolidating transactions: for non-deconsolidating transactions, the assets are retained on the consolidated balance sheet of Crédit Agricole Group.

For more details on these securitisation transactions and on the indication of the carrying amount of the assets concerned and associated liabilities, see Note 6.6 "Transferred assets not derecognised or derecognised with ongoing involvement"

12.2 JOINT VENTURES AND ASSOCIATES

FINANCIAL INFORMATION OF JOINT VENTURES AND ASSOCIATES

At 31 December 2025,

- the equity-accounted value of joint ventures totalled €1,134 million (€1,077 million at 31 December 2024);
- the equity-accounted value of associates totalled €5,386 million (€1,450 million at 31 December 2024).

Material associates and joint ventures are presented in the table below. These are the main joint ventures and associates that make up the "Equity-accounted value on the balance sheet".

	31/12/2025					
(in millions of euros)	% of interest	Equity-accounted value	Share of market value	Dividends paid to Group's entities	Share of net income ⁽¹⁾	Share of shareholders' equity ⁽²⁾
JOINT VENTURES						
S3 Latam Holdco 1	50.0%	350	-	-	25	635

Others		37		8	10	37
NET CARRYING AMOUNT OF INVESTMENTS IN EQUITY-ACCOUNTED ENTITIES		4,822			(351)	3,896
NET CARRYING AMOUNT OF INVESTMENTS IN EQUITY-ACCOUNTED ENTITIES		6,519			(423)	6,537

(1) The share of net income from deferred profit sharing of joint ventures and associates in asset gathering and insurance is classified as revenues in the income statement.

(2) Equity – Group share in the financial statements of the joint venture or the associate when the joint venture or associate is a sub-group.

(3) Includes data from Leasys S.P.A. and Leasys SAS.

The market value shown in the table above is the quoted price of the shares on the market at 31 December 2025. This value may not be representative of the selling value since the value in use of equity-accounted entities may be different from the equity-accounted value determined pursuant to IAS 28. Investments in equity-accounted entities were subject to impairment tests, in case of an indication of impairment, using the same methodology as for goodwill. The sensitivity analyses carried out, particularly on Leasys, did not reveal any indicators of impairment that would justify recognising an impairment loss for the financial year.

	31/12/2024

INVESTMENTS IN JOINT VENTURES AND ASSOCIATES NOT CONSOLIDATED AT INSURANCE LEVEL

Crédit Agricole Assurances has used the simplified option allowed by IAS 28 to measure 28 joint ventures and 26 associates.

Investments in these corporates are therefore measured at fair value through profit or loss in accordance with IFRS 9.

The summarised financial information of Crédit Agricole Assurances' significant joint ventures and associates measured at fair value through profit or loss is presented below:

	31/12/2025				
(in millions of euros)	Interest %	Net asset value	Balance sheet total	Equity	Result

SIGNIFICANT RESTRICTIONS ON JOINT VENTURES AND ASSOCIATES

The Crédit Agricole Group is subject to the following restrictions:

Regulatory constraints

The subsidiaries of the Crédit Agricole Group are subject to prudential regulation and regulatory capital requirements in their host countries. The minimum equity capital (solvency ratio), leverage ratio and liquidity ratio requirements limit the capacity of these entities to pay dividends or to transfer assets to Crédit Agricole Group.

Legal constraints

The subsidiaries of the Crédit Agricole Group are subject to legal provisions concerning the distribution of capital and distributable income. These requirements limit the ability of the subsidiaries to distribute dividends. In the majority of cases, these are less restrictive than the regulatory limitations mentioned above.

Restriction on assets backing unit-linked contracts for the Insurance business

Assets backing unit-linked contracts of the Crédit Agricole Group are held for the benefit of policyholders. Assets on the balance sheet of the insurance subsidiaries of the Crédit Agricole Group are mainly held to satisfy their obligation towards their policyholders. Assets transfers to other entities are possible following the legal conditions. However, in case of a transfer, a part of the profit due to the transfer must be intended for the policyholders.

12.3 NON-CONTROLLING INTERESTS

INFORMATION ON THE SCOPE OF SIGNIFICANT NON-CONTROLLING INTERESTS

The table below presents information on the consolidated subsidiaries and structured entities with significant non-controlling interests in relation to the total equity of the Group or of the sub-group level or where the total balance sheet of the entities held by the non-controlling interests is significant.

	31/12/2025				
(in millions of euros)	% of voting rights held by non-controlling interests	% of ownership interests held by non-controlling interests	Net income allocated to non-controlling interests during the reporting period	Accumulated non-controlling interests at the end of the reporting period	Dividends paid to non-controlling interests
Amundi Group	32%	32%	500	3,412	273
Crédit Agricole Italia Group	14%	14%	108	937	58
Agos SPA	39%	39%	80	507	51
CA Egypt	35%	35%	39	154	28
Other entities ⁽¹⁾	0%	0%	55	1,440	60
TOTAL			781	6,451	470

(1) Including €750 million related to issues of Additional Tier 1 perpetual subordinated bonds carried out on 17 March 2025 by Crédit Agricole Assurances recognised in equity of non-controlling interests. The previous issues have been fully repaid

	31/12/2024				
(in millions of euros)	% of voting rights held by non-controlling interests	% of ownership interests held by non-controlling interests	Net income allocated to non-controlling interests during the reporting period	Accumulated non-controlling interests at the end of the reporting period	Dividends paid to non-controlling interests
Amundi Group	31%	31%	395	3,187	259
Crédit Agricole Italia Group	14%	14%	110	902	49
CACEIS Group	30%	30%	140	1,103	115
Agos SPA	39%	39%	74	486	51
CA Egypt	35%	35%	51	147	15
Other entities ⁽¹⁾	0%	0%	91	1,049	15
TOTAL			860	6,875	504

(1) Including €460 million related to issues of Additional Tier 1 perpetual subordinated bonds carried out on 14 October 2014 and 13 January 2015 by Crédit Agricole Assurances recognised in equity of non-controlling interests.

INDIVIDUAL SUMMARY FINANCIAL INFORMATION ON SIGNIFICANT NON-CONTROLLING INTERESTS

As of 31 December 2025, 111 structured entities exited and 56 structured entities entered the scope of consolidation due to loss or gain of control, respectively.

These changes are explained for -€1.6 billion of the total variation of -€0.9 billion in the “Due to consolidated mutual fund unitholders” item on the balance sheet between 31 December 2024 and 31 December 2025 (the remainder of the variation is related to entities that remained within the scope of consolidation and to entities whose percentage of interest changed during the period).

Scope changes (a)

Inclusions (I) into the scope of consolidation

I1: Breach of threshold

I2: Creation

I3: Acquisition (including controlling interests)

Exclusions (E) from the scope of consolidation:

E1: Discontinuation of business (including dissolution and liquidation)

E2: Sale to non Group companies or deconsolidation following loss of control

E3: Deconsolidated due to non-materiality

E4: Merger or takeover

E5: Transfer of all assets and liabilities

Other (O):

O1: Change of company name

O2: Change in consolidation method

O3: First time listed in the Note on scope of consolidation

O4: Entities classified as Non-current Assets Held for Sale and Discontinued Operations

Branches are mentioned in italic.

(1) UCITS, unit funds and SCIs held by insurance entities.

Note 13

Non-consolidated equity investments and structured entities

13.1 NON-CONSOLIDATED EQUITY INVESTMENTS

These securities, which are recorded at fair value through profit or loss or at fair value through equity that will not be reclassified to profit or loss, are variable-income securities representing a significant portion of the share capital of the companies that issued them and are intended to be held on a long-term basis.

This line item amounted to €27,653 million at 31 December 2025, compared with €27,927 million at 31 December 2024. At 31 December 2025, the main investment in non-consolidated companies where percentage of control is greater than 20% and there is a significant carrying amount is Crédit Logement (shares A and B). The Group's investment represents 32.50% of Crédit Logement's capital and amounts to €482 million but does not confer any significant influence over this entity, which is jointly held by various French banks and corporates.

13.1.1 NON-CONSOLIDATED ENTITIES

Information relating to conventional entities under exclusive control, under joint control and subject to significant influence, and to controlled structured entities not included in the scope of consolidation are available on the Crédit Agricole S.A. website at the time of publication of the Universal Registration Document.

13.1.2 MATERIAL NON-CONSOLIDATED EQUITY INVESTMENTS

Material equity investments accounting for a fraction of capital greater than or equal to 10% and not included in the scope of consolidation are presented in a table available online on the Crédit Agricole website at the time of publication of the Universal Registration Document.

13.2 INFORMATION ON NON-CONSOLIDATED STRUCTURED ENTITIES

IFRS 12 defines a structured entity as an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to the administrative tasks only and the relevant activities are directed by means of contractual arrangements.

INFORMATION ON THE NATURE AND EXTENT OF INTERESTS HELD

At 31 December 2025, the Crédit Agricole Group entities had interests in certain non-consolidated structured entities, the main characteristics of which are presented below on the basis of their type of activity:

Securitisation vehicles

The Crédit Agricole Group, mainly through its subsidiaries in the Large Customers business line, is tasked with structuring securitisation vehicles through the purchase of trade or financial receivables. The vehicles fund such purchases by issuing multiple tranches of debt and equity investments, with repayment being linked to the performance of the assets in such vehicles. Crédit Agricole S.A. invests in and provides liquidity facilities to the securitisation vehicles it has sponsored on behalf of customers.

Asset management

Crédit Agricole Group, through its subsidiaries in the Asset Gathering business line, structures and manages entities on behalf of customers wishing to invest in specific assets in order to obtain the best possible return having regard to the chosen level of risk. Crédit Agricole Group entities may thus either be required to hold interests in such entities in order to ensure a successful launch or to guarantee the performance of such structures.

Investment funds

Entities in the Crédit Agricole Group Asset Gathering business line invest in companies established to meet investor demand in connection with cash management and with the investment of insurance premiums received from insurance company customers, in accordance with the regulatory provisions in the French Insurance Code. Insurance company investments cover commitments to policyholders over the life of insurance policies. Their value and returns are correlated to these commitments.

Structured finance

Lastly, the Crédit Agricole Group, via its subsidiaries in the Large Customers business line, is involved in special purpose asset acquisition entities. These entities may take the form of asset financing companies or lease financing companies. In structured entities, the financing is secured by the asset. The Group's involvement is often limited to the financing or to financing commitments.

Sponsored entities

The Crédit Agricole Group sponsors structured entities in the following instances:

- the Crédit Agricole Group is involved in establishing the entity and that involvement, which is remunerated, is deemed essential for ensuring the proper completion of transactions;
- structuring takes place at the request of the Crédit Agricole Group and it is the main user thereof;
- the Crédit Agricole Group transfers its own assets to the structured entity;
- the Crédit Agricole Group is the manager;
- the name of a subsidiary or of the parent company of the Crédit Agricole Group is linked to the name of the structured entity or to the financial instruments issued by it.

The Crédit Agricole Group has sponsored non-consolidated structured entities in which it does not hold an interest at 31 December 2025.

Gross revenues from sponsored entities mainly comprise interest expense and income in securitisation and investment funds, in which Crédit Agricole Group does not hold any interests at the end of the financial year. For Crédit Agricole Assurances, these amount to €141 million.

INFORMATION ON THE RISKS RELATED TO INTERESTS

Financial support for structured entities

In 2025, the Crédit Agricole Group did not provide financial support to any non-consolidated structured entities.

At 31 December 2025, the Crédit Agricole Group did not intend to provide financial support to any non-consolidated structured entities.

Interests in non-consolidated structured entities by type of activities

At 31 December 2025 and 31 December 2024, the Group's involvement in non-consolidated structured entities is disclosed in the following tables, for each group of sponsored structured entities that are significant to the Group:

	31/12/2025

(1) Non-sponsored structured entities generate no specific risks related to the nature of the entity. Information concerning these exposures is set out in Note 3.1 "Credit risk" and Note 3.3 "Market risk". These are investment funds in which the Group is not a manager, and structured financing entities in which the Group has only granted a loan.

(1) Non-sponsored structured entities generate no specific risks related to the nature of the entity. Information concerning these exposures is set out in Note 3.1 "Credit risk" and Note 3.3 "Market risk". These are investment funds in which the Group is not a manager, and structured financing entities in which the Group has only granted a loan.

MAXIMUM EXPOSURE TO LOSSES

The maximum exposure to losses on financial instruments corresponds to the carrying amount, with the exception of option sale derivatives and CDS (Credit Default Swaps) for which the exposure corresponds to assets for the notional amount and to liabilities for the notional amount less the mark-to-market. The maximum exposure to loss risk on commitments given corresponds to the notional amount and the provision for commitments given in the amount recognised on the balance sheet.

NOTE 14 EVENTS AFTER 31 DECEMBER 2025

There have been no material events subsequent to the reporting period end.

STATUTORY AUDITORS' REPORT ON THE CONSOLIDATED FINANCIAL STATEMENTS

(For the year ended 31 December 2025)

This is a translation into English of the Statutory Auditors' report on the consolidated financial statements of the Company issued in French and it is provided solely for the convenience of English-speaking users.

This Statutory Auditors' report includes information required by European regulation and French law, such as information about the appointment of the Statutory Auditors or verification of the information concerning the Group presented in the management report and other documents provided to shareholders.

This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the General Meeting of Shareholders

CRÉDIT AGRICOLE GROUP

12, place des États-Unis

92127 Montrouge Cedex

OPINION

In compliance with the engagement entrusted to us by your General Meeting of Shareholders, we have audited the accompanying consolidated financial statements of CRÉDIT AGRICOLE GROUP for the year ended 31 December 2025.

As indicated in the "General framework" section of the consolidated financial statements, the consolidated financial statements of the CRÉDIT AGRICOLE GROUP, a network organised around a central body, are prepared on the basis of the network formed by the Local Banks, the Regional Banks and Crédit Agricole S.A., the central body.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities and of the financial position of the Group as at 31 December 2025 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

BASIS FOR OPINION

AUDIT FRAMEWORK

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory auditors' responsibilities for the audit of the consolidated financial statements" section of our report.

INDEPENDENCE

We conducted our audit engagement in compliance with the independence rules set out in the French Commercial Code and in the Code of Ethics for statutory auditors for the period from January 1, 2025 to the date of issuance of our report, and in particular, we did not provide any services prohibited under Article 5(1) of Regulation (EU) No. 537/2014.

JUSTIFICATION OF ASSESSMENTS – KEY AUDIT MATTERS

In accordance with the requirements of Articles L. 821-53 and R. 821-180 of the French Commercial Code (*code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

CREDIT RISK AND ESTIMATE OF EXPECTED LOSSES ON PERFORMING AND NON-PERFORMING LOANS

Description of risk

In accordance with IFRS 9, the Crédit Agricole Group recognises loss allowances in respect of expected credit losses (ECL) on exposures that are performing (Stages 1 and 2) and non-performing (Stage 3).

Given the significant judgement required in determining such loss allowances, in particular in an environment still affected by economic and geopolitical uncertainties, we deemed their estimate to be a key audit matter for the following main entities and risk segments:

- the determination of risk parameters incorporating macroeconomic projections used to assess expected credit losses on performing exposures, as well as any expert-based (management overlay) adjustments where applicable;
- the assessment of a significant increase in credit risk in order to determine the appropriate horizon for the impairment measurement (12-month or lifetime);
- the degree of judgment required in estimating recovery cash flows for defaulted exposures, particularly within Crédit Agricole CIB.

As at 31 December 2025, the loss allowances for expected credit losses related to all eligible exposures amounted to €24.9 billion, including:

- €10.8 billion of loss allowances on performing exposures (€3.3 billion classified in Stage 1 and €7.5 billion for Stage 2);
- €14.1 billion of loss allowances on non-performing exposures (Stage 3).

See Notes 1.2 and 3.1 to the consolidated financial statements.

How our audit addressed this risk

We examined the procedures implemented by the Risk Department to classify loans (Stages 1, 2 or 3) and measure the amount of recorded loss allowances.

We examined the methods used to take into account the economic and geopolitical uncertainties, the macroeconomic forecasts used for the calculation of loss allowances, as well as the related financial information.

We tested the controls we judged as key, implemented by the main entities for the annual portfolio reviews, the updating of credit ratings, the identification of sectors impacted by the macroeconomic context, the identification of performing or non-performing exposures and the measurement of loss allowances.

We also read the main conclusions of the main Crédit Agricole Group entities' specialised committees in charge of monitoring performing and non-performing loans as well as recommendations from supervisory authorities.

Regarding impairment on exposures classified in Stages 1 and 2, we have:

- appreciate the economic scenarios used, and the methods and measurements for the various loss allowance inputs and calculation models with the support of our experts. In particular, we analysed the adjustments made to take into account the impact of the economic and geopolitical context;
- examined the methodology used by the Risk Department to identify significant increases in credit risk since origination and the accounting treatments implemented;
- tested the controls that we deemed to be of key importance in relation to the transfer of the data used to calculate loss allowances or the reconciliations between the bases used for their calculation and the accounting records;
- carried out independent loss allowance calculations based on samples, compared the calculated amount with the amount booked and examined the adjustments made by management where applicable;
- assessed the analyses carried out by management on the Crédit Agricole CIB's exposures with a negative outlook with a focus on sectors hit hard by the uncertain economic and geopolitical environment.

Regarding individually calculated value adjustments on exposures classified in Stage 3:

- we examined the estimates used for the significant impaired counterparties;
- we tested, based on a sample of credit files (whether impaired or not), the elements supporting the main assumptions used to assess expected recovery cash flows, particularly with regard to the valuation of collateral.

We examined the disclosures in relation to credit risk coverage provided in the notes to the consolidated financial statements.

IMPAIRMENT OF GOODWILL

Description of risk

Goodwill is tested for impairment whenever there are objective indications of impairment and otherwise at least once a year. These tests are based on a comparison between the carrying amount of each Cash Generating Unit (CGU) and its recoverable amount, defined as the higher of fair value less costs to sell and value in use.

Value in use is determined by discounting the estimated future cash flows generated by the CGU, as defined in the three-year financial forecasts determined by each entity's management for the purpose of its business monitoring and extended over two years.

We deemed the impairment of goodwill to be a key audit matter. The impairment tests require management to make decisions regarding the key assumptions to be used, in particular for determining financial forecasts and discount rates in the context of economic and geopolitical uncertainties.

Given the difference between the value in use and the carrying amount, past performance and the sensitivity of the values in use to the assumptions used by management, we paid particular attention to the test conducted on the CGU French retail banking – LCL and the CGU Consumer Finance (excluding Agos).

At 31 December 2025, goodwill recorded in the balance sheet amounted to €17.1 billion. See Notes 1.2 and 6.14 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the processes implemented by the Group to assess the need for impairment of goodwill.

We brought in valuation experts to our audit teams to assess the assumptions used to determine the discount rates and the perpetual growth rates used as well as the models used for calculating discounted cash flows.

We tested the calculations based on samples and compared the main assumptions, such as discount rate, with external sources.

We examined the financial forecasts prepared by the management of each entity concerned and used in the model to:

- check their consistency with those that have been presented to the governance bodies (Board of Directors or Supervisory Board) of the entities or sub-groups, and the justification of potential adjustments made;
- assess the main underlying assumptions, including for the determination of the terminal value. These assumptions were assessed in view of economic and geopolitical uncertainties, the former financial forecasts and the actual performance over prior periods;
- conduct sensitivity analyses of the value in use to some of the assumptions (discount rate, cost of risk, cost to income ratio).

We also examined the disclosures provided in the notes to the consolidated financial statements on the results of these impairment tests and the level of sensitivity to various measurement inputs.

ASSESSMENT OF PROVISIONS FOR REGULATORY, LEGAL AND TAX LITIGATION

Description of risk

The Crédit Agricole Group is the subject of litigation procedures, requests for information, investigations, controls and other procedures of a regulatory or legal nature from various institutions in France and abroad.

Various tax investigations are also ongoing in France and some of the countries in which the Group operates (including Germany).

The decision to recognise a provision or a receivable and the amount to be recorded requires, by its nature, the use of judgement, due to the difficulty in assessing the outcome of procedures or uncertainties regarding certain tax treatments.

Given the importance of judgement made by the management when evaluating the financial risks and consequences for Crédit Agricole Group, the assessment of the provision for regulatory, legal and tax litigation constitute a key audit matter.

The investigations, requests for information and actions of certain authorities, as well as the main tax inspections as of 31 December 2025, are presented in Notes 1.2, 6.9 and 6.15 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the process implemented by management to assess the risks arising from these procedures of regulatory and legal nature and tax uncertainties, as well as the provisions or receivables, where applicable, through quarterly inquiries with management and more specifically with the Legal, Tax and Compliance departments of Crédit Agricole S.A. and its main subsidiaries.

Our work involved in particular:

- assessing the assumptions made to determine provisions or receivables based on available information such as documentation prepared by the Legal, Compliance or Tax department or external counsel of Crédit Agricole S.A. and main Group entities, correspondence from regulators and minutes of Legal Risks Committee meetings;
- reading the analyses and conclusions of the Group's legal advisors and their responses to our requests for confirmation;
- regarding more specifically tax risks, examining, with our tax specialists, the responses provided by the Group to the relevant authorities as well as the risk assessment made by the Group;
- assessing, accordingly, the level of provisions or receivables.

Lastly, we examined the related disclosures provided in the notes to the consolidated financial statements.

MEASUREMENT OF CERTAIN CRÉDIT AGRICOLE CIB FINANCIAL ASSETS AND LIABILITIES CLASSIFIED IN LEVEL 3

Description of risk

Within the Large Corporate business line of the Crédit Agricole S.A., Crédit Agricole CIB originates, structures, sells and trades derivative financial instruments, for corporates, financial institutions and large issuers. Moreover, the issue of debt instruments, some of which are "hybrid", to the Group's international and domestic customers contributes to the management of the Crédit Agricole CIB medium- and long-term refinancing:

- derivative financial instruments held for trading are recorded on the balance sheet at fair value through profit or loss;
- "hybrid" debt issued is recognised in financial liabilities at fair value through profit or loss by option.

These financial instruments are classified in level 3 when their measurement requires the use of significant unobservable market inputs. The classification of such instruments by level of fair value and their measurement require judgement from management, in particular regarding:

- the definition of the observability mapping of the valuation inputs;
- the use of internal and non-standard valuation models;
- the valuation of inputs not supported by observable market data;
- the assessment of valuation adjustments designed to take into account uncertainties in the models, inputs used or counterparty and liquidity risks.

Within assets, Crédit Agricole CIB's derivative financial instruments are recorded in the balance sheet of the Crédit Agricole Group as financial assets at fair value which, in level 3, represent €44.5 billion at 31 December 2025.

Within liabilities, Crédit Agricole CIB's derivative financial instruments and structured debt issues are recorded in the balance sheet of the Crédit Agricole Group as financial liabilities at fair value which, in level 3, represent €24.7 billion at 31 December 2025.

See Notes 1.2, 6.2 and 11.2 to the consolidated financial statements.

How our audit addressed this risk

We obtained an understanding of the processes and controls implemented by Crédit Agricole CIB to identify, measure and recognise derivative financial instruments and "hybrid" debt issuances classified in level 3.

We examined:

- the controls that we have deemed of key importance, performed by the Risk department of Crédit Agricole CIB, such as the review of the observability mapping, the independent verification of measurement inputs and the internal approval of valuation models;
- the processes for recording valuation adjustments and the accounting classification of financial products within the fair value hierarchy defined by IFRS 13.

With the support of our specialists in the valuation of financial instruments, we carried out independent valuations and analysed those performed by Crédit Agricole CIB as well as the assumptions, inputs, methodologies and models used. In particular, we examined the documentation relating to developments in the observability mapping during the period.

We also assessed the main valuation adjustments recognised, as well as the justification provided by management for the main differences observed in margin calls and losses and/or gains in the event of the disposal of financial products.

MEASUREMENT OF INSURANCE CONTRACT LIABILITIES

Description of risk

Within the Insurance division of the Crédit Agricole Group, insurance contract liabilities are recorded in accordance with IFRS 17 "Insurance Contracts".

Their measurement is based on the determination of the best estimate of the discounted value of future cash flows necessary to satisfy the contractual obligations towards policyholders, and the adjustment for non-financial risks designed to cover the uncertainty of the amount based on a level of confidence took by the Group, as well as on a contractual service margin representing the unearned profit that the Group will recognize as income as it delivers the services provided for in the insurance contracts (general method and variable fee method).

Given the sensitivity of the above insurance liabilities to the various underlying assumptions (long-term horizon of commitments, policyholder behaviours, discount rates...) and the high proportion of experts judgments, and the complexity of the actuarial methods used, we considered that the measurement of insurance liabilities contracts constituted a key audit matter.

As at 31 December 2025, insurance contracts in issue recorded under liabilities represent €392.1 billion.

See Notes 1.2 and 5.3 to the consolidated financial statements.

How our audit addressed this risk

For the main insurance liabilities, we realized the following procedures with the assistance of our actuarial experts:

- obtaining an understanding of the internal control environment related to the process of determining insurance liabilities, the best estimate of the discounted value of future cash flows required to meet contractual obligations to policyholders under insurance contracts, and the information systems supporting the processing of technical data and their input into the accounting system;
- appreciating the methodology applied by the Group to measure these provisions in accordance with the principles of IFRS 17;
- testing of the controls we considered key in the process of measuring insurance liabilities relating to the methodologies, judgments and assumptions made by management, including the internal control environment for information systems;
- testing, on a sample basis, of the main methodologies, assumptions, underlying data and key actuarial parameters used in determining estimates of discounted future cash flows, the adjustment for non-financial risks and the margin on contractual services;
- assessment of the appropriateness of the discount rate curve used;
- independent recalculation of the estimated future cash flows of certain insurance liabilities;
- assessing the appropriateness of the information disclosed in the notes to the consolidated financial statements.

SPECIFIC VERIFICATIONS

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the Group's information given in the management report of the Board of Directors.

We have no matters to report as to their fair presentation and their consistency with the consolidated financial statements.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

PRESENTATION FORMAT OF THE CONSOLIDATED FINANCIAL STATEMENTS INCLUDED IN THE ANNUAL FINANCIAL REPORT

We also performed, in accordance with the professional standards applicable to the statutory auditor's procedures relating to annual and consolidated financial statements prepared in the European Single Electronic Format, a verification of compliance with this format as defined by Commission Delegated Regulation (EU) No. 2019/815 of 17 December 2018, with respect to the presentation of the consolidated financial statements included in the annual financial report referred to in Article L.451-1-2(I) of the French Monetary and Financial Code, prepared under the responsibility of the Chief Executive Officer.

As regards consolidated financial statements, our procedures include verifying the compliance of the tagging of these financial statements with the format defined by the aforementioned regulation.

The European Single Electronic Format tagging was performed on the consolidated financial statements of Crédit Agricole S.A. included in the annual financial report. Consequently, we are unable to conclude on compliance, in the presentation of the consolidated financial statements of the Crédit Agricole Group included in the annual financial report, with the European Single Electronic Format.

APPOINTMENT OF THE STATUTORY AUDITORS

We were appointed as statutory auditors of Crédit Agricole S.A. by the annual General Meeting of Shareholders held on 19 May 2004 for PricewaterhouseCoopers Audit and on 22 May 2024 for Forvis Mazars S.A.

As at 31 December 2025, PricewaterhouseCoopers Audit was in the twenty-two year of total uninterrupted engagement, and Forvis Mazars S.A. was in the second year.

RESPONSIBILITIES OF MANAGEMENT AND THOSE CHARGED WITH GOVERNANCE FOR THE CONSOLIDATED FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union and for such internal control as Management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, Management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

STATUTORY AUDITORS' RESPONSIBILITIES FOR THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS

OBJECTIVES AND AUDIT APPROACH

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L. 821-55 of the French Commercial Code (*code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management in the consolidated financial statements;
- assesses the appropriateness of Management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein;
- evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation;
- obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

REPORT TO THE AUDIT COMMITTEE

We submit a report to the Audit Committee which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) No. 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L. 821-27 to L. 821-34 of the French Commercial Code (*code de commerce*) and in the French Code of Ethics (*code de déontologie*) for statutory auditors. Where appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

GENERAL MEETING 2026

WEDNESDAY 20 MAY, 10:00 A.M.

WRITTEN QUESTIONS

Shareholders or unitholders of the FCPE fund “Crédit Agricole Classique” wishing to ask any questions in writing may, from the date of receipt of the Notice of Meeting until the fourth business day preceding the date of the meeting, namely **Wednesday 13 May 2026 at midnight (Paris time)**, send them by registered letter with return receipt requested to the Chairman of the Board of Directors of Crédit Agricole S.A. at the address of its registered office, or by email to: assemblee.generale@credit-agricole-sa.fr, along with a certificate of account registration.

The answers to these written questions will be published directly on the website of Crédit Agricole S.A., at the following address: www.credit-agricole.com/en/finance/individual-shareholders/annual-general-meeting/2026-saint-brieuc

QUESTIONS FROM SHAREHOLDERS AT THE MEETING

In addition to the possibility to ask questions before the General Meeting, every shareholder shall have the right to ask one or more questions in writing which will be answered during the General Meeting, under the conditions described below.

Submission of questions

- ▶ Shareholders who want to ask a question should visit the page dedicated to the General Meeting at www.credit-agricole.com/en/finance/individual-shareholders/annual-general-meeting/2026-saint-brieuc, where they will find the link to connect to the chat and complete the submission form. They must enter their title, surname, first name and email address and certify that they are Crédit Agricole S.A. shareholders.
- ▶ The chat room will be open from 20 May 2026 at 10:00 a.m. and will be closed after the Q&A session of the General Meeting. Only questions submitted through this procedure within the allotted time will be processed.

Moderation and answering of questions

Crédit Agricole S.A. will make every effort to answer all questions that are received in this context. However, questions asked in the chat room may be moderated if necessary to avoid any incidents during the meeting. Shareholders are asked to observe the following rules:

- ▶ Only questions related to the agenda of the General Meeting will be answered.
- ▶ We will not answer any questions relating to personal matters, customer focus or commercial issues. Please address such questions to your institution's Customer Relations department.
- ▶ Any comments or questions containing abusive or defamatory language will not be answered.
- ▶ Any questions that are not sufficiently understandable or intelligible will not be answered. It is the shareholder's responsibility to ensure that the question is properly framed and clear.

As many questions as possible will be answered at the meeting after they may be grouped by topic.

ARTICLES OF ASSOCIATION UPDATED VERSION ON 13 NOVEMBER 2025

CRÉDIT AGRICOLE S.A.

A French company ("*société anonyme*") with a share capital of €9,077,707,050

Registered with the Nanterre Trade and Company Registry under number 784 608 416

Registered office: 12, place des États-Unis, 92127 Montrouge Cedex

ARTICLE 1 – FORM

Crédit Agricole S.A. (the "**Company**") is a French company ("*société anonyme*") with a Board of Directors ("*Conseil d'administration*") governed by ordinary corporate law, notably Book II of the French Commercial Code, as well as, where applicable, Book X of the French Commercial Code relating to companies whose securities are admitted to trading on a regulated market or a multilateral trading facility.

Crédit Agricole S.A. is also subject to the provisions of the Monetary and Finance Code, in particular Articles L. 512-47 *et seq.*, and those provisions of former Book V of the Rural Code which have not been repealed.

Prior to the Extraordinary General Meeting of 29 November 2001, the Company was called "Caisse Nationale de Crédit Agricole", abbreviated "C.N.C.A."

The Company was born of the transformation of the Caisse Nationale de Crédit Agricole, an "*Établissement Public Industriel et Commercial*", following the merger of the Mutual Guarantee Fund of the *Caisses Régionales de Crédit Agricole Mutuel* (the Regional Banks); it continues to hold all of the rights, obligations, guarantees and security interests of those legal entities prior to their transformation; it exercises all rights relating to mortgages granted in favour of the State.

ARTICLE 2 – NAME

The name of the Company is: Crédit Agricole S.A.

In all deeds and documents of the Company that are intended for third parties, the corporate name shall be immediately preceded or followed by the words "*Société Anonyme*" or the initials "S.A.", "*régie par le livre deuxième du Code de commerce et par les dispositions du Code monétaire et financier*" ("governed by Book II of the French Commercial Code and the provisions of the Monetary and Finance Code") and by the amount of the share capital.

ARTICLE 3 – OBJECT

Crédit Agricole S.A. has for object to facilitate and promote the activities and development of the *Caisses Régionales de Crédit Agricole Mutuel* and the Crédit Agricole Group. In furtherance of this purpose:

1. Crédit Agricole S.A. operates as a central financial institution and ensures that the Group acts as a single financial unit in its dealings with third parties with the object of optimising the financial management of funds and, in return, the allocation of the financial resources so collected.

Crédit Agricole S.A. collects and manages the excess deposits and savings of the Regional Banks, as well as savings collected by such Banks on its behalf.

Crédit Agricole S.A. grants facilities to the Regional Banks to permit the funding of their medium and long-term loans. It ensures that the transformation risks pertaining to the Company, its subsidiaries and the Regional Banks are assumed. It implements the mechanisms for guaranteeing transactions by the *Caisses Régionales de Crédit Agricole Mutuel*. In its own name and on behalf of the companies in the Crédit Agricole Group, Crédit Agricole S.A. negotiates and enters into domestic and international agreements which may affect the credit of the Group. It executes all nation-wide agreements with the State.

2. In France and abroad, Crédit Agricole S.A. performs all types of banking, financial, credit, investment or securities transactions and related services under the Monetary and Finance Code, guaranty, arbitrage, brokerage and commission transactions, whether for its own account or for the account of others, without infringing on the remit of the *Caisses Régionales de Crédit Agricole Mutuel*.

3. In accordance with the provisions of the Monetary and Finance Code, as the Central Organ of Crédit Agricole Mutuel, Crédit Agricole S.A. ensures the cohesion of the Crédit Agricole Mutuel network, the proper operation of the credit institutions that are a part thereof, and compliance by such institutions with the applicable laws and regulations by exercising administrative, technical and financial supervision thereof; it guarantees the liquidity and solvency of the entire network and all institutions affiliated therewith.

And, as a general matter, Crédit Agricole S.A. engages in all types of commercial, financial, personal and real property transactions and provides all services directly or indirectly related to its purpose, provided that they are in furtherance thereof.

ARTICLE 4 – REGISTERED OFFICE

The registered office of the Company is situated at 12, place des États-Unis, 92127 Montrouge Cedex.

ARTICLE 5 – DURATION

The Company, born out of the transformation described in the last paragraph of Article 1 of these Articles of Association, shall terminate on 31 December 2086 unless extended or dissolved in advance by the Shareholders at an Extraordinary General Meeting.

ARTICLE 6 – SHARE CAPITAL

The share capital of the Company is €9,077,707,050 divided into 3,025,902,350 shares with a par value of €3, all of them paid up in full.

For purposes of these Articles of Association:

- "**General Meeting**" means the General Meeting of Shareholders;
- "**Extraordinary General Meeting**" means the General Meeting convened to vote on extraordinary business;
- "**Ordinary General Meeting**" means the General Meeting convened to vote on ordinary business.

ARTICLE 7 – CHANGES IN THE SHARE CAPITAL: CAPITAL INCREASES, REDUCTIONS AND REDEMPTIONS

A) CAPITAL INCREASES

1. The share capital may be increased by any method and in any manner authorised by law.
2. The Extraordinary General Meeting shall have exclusive authority to decide whether to increase the share capital or to authorise such a decision, subject to the provisions relating to the payment of dividends in shares set out in Article 30 "Determination, allocation and distribution of profit" of these Articles of Association.
3. Pursuant to the applicable laws and regulations, holders of shares have a pre-emptive right to subscribe for shares and securities granting rights to shares in the Company, in proportion to the quantity of shares that they own.
4. In-kind contributions must be approved by the Extraordinary General Meeting, pursuant to the applicable laws and regulations

B) CAPITAL REDUCTIONS

1. Capital reductions are decided or authorised by the Extraordinary General Meeting, which may delegate to the Board of Directors all powers for purposes of carrying out capital reductions.
2. Any capital reduction due to losses is allocated to the share capital among the different shares in proportion to the percentage of share capital they represent.
Losses shall first be charged against the following accounts, in the following order: 1) retained earnings, 2) distributable reserves, 3) other reserves, 4) statutory reserves, 5) any share premiums, 6) the legal reserve, and 7) equity.
3. The Company may carry out capital reductions for reasons other than losses under the conditions stipulated by laws and regulations.

C) REDEMPTION OF THE SHARE CAPITAL

The share capital may be redeemed in accordance with Articles L. 225-198 *et seq.* of the French Commercial Code.

ARTICLE 8 – FORM OF SHARES

The shares may be in registered or bearer form, at the holders' election, subject to applicable statutory and regulatory provisions.

They shall be registered in shareholders' accounts on the terms and conditions provided for by law. They may be transferred from account to account.

ARTICLE 9 – DECLARATIONS REGARDING REACHING THRESHOLDS AND SHAREHOLDER IDENTIFICATION**A) DECLARATIONS REGARDING REACHING THRESHOLDS**

Without prejudice to the ownership threshold disclosures provided by law, any person or legal entity, acting solely or with others, who directly or indirectly comes into possession of a number of shares representing 1% of the share capital or voting rights must inform the Company, by recorded delivery with advice of delivery, at its registered office, within five days of the date on which the shares enabling such person to reach or breach said threshold were registered, of the total number of shares and the number of voting rights it owns, as well as the total number of securities which may grant rights to the Company's equity in the future, any voting rights which may be attached thereto.

The said declaration must be renewed as set forth above each time that the number of shares or voting rights attains a multiple of a 1% threshold (through either a purchase or sale of shares) of the total shares or voting rights.

If a Shareholder has not issued the required declarations as set forth above, he shall lose his right to vote on the shares exceeding the level which should have been reported, as provided for by law, if one or more holders of shares representing at least 2% of the shares or voting rights so request during a General Meeting.

B) SHAREHOLDER IDENTIFICATION

In accordance with applicable laws and regulations, and in order to identify the holders of bearer securities, the Company shall have the right to request at any time, at its expense, that the central custodian of its securities account provide the name, nationality, year of birth or formation, and the address of the holders of securities which provide a present or future right to vote at its General Meetings, as well as the number of securities held by each and the restrictions, if any, which may apply to the said securities.

Based on the list provided by the central custodian, and subject to the same terms and conditions, the Company shall have the right to request, either from said central custodian or directly from the persons on the list who the Company feels may be acting as intermediaries on behalf of third party, the information regarding said securities holders set forth in the preceding paragraph.

If they are intermediaries, said persons must disclose the identity of the holders of said securities. The information should be provided directly to the financial intermediary that maintains the account and said entity must then transmit the information to the Company or to the central custodian.

For registered securities, the Company shall also have the right at any time to request that the intermediary that has registered on behalf of third parties disclose the identity of the holders of said securities and the number of securities held by each of them.

For so long as the Company feels that certain holders of securities (whether registered or bearer), the identity of which has been provided to it, are holding said securities on behalf of third parties, it shall have the right to request said holders to disclose the identity of the owners of the securities as set forth above and the number of securities held by each of them.

After the information set forth above has been requested, the Company shall have the right to request any legal entity which holds more than one-fortieth of the share capital or voting rights of the Company to disclose to the Company the identity of the persons who directly or indirectly hold more than one-third of the share capital or voting rights (which are exercised at the legal entity's general meetings) of the said legal entity.

If a person who has been the subject of a request in accordance with the provisions of the present Article 9.B. fails to disclose the requested information within the legally required period or discloses incomplete or incorrect information regarding its capacity or the holders of the securities, or the number of securities held by each of them, the shares or securities which give rise to present or future rights to the Company's share capital which said person has registered, shall immediately lose their voting rights at any General Meeting until complete information has been provided. Dividend payments shall also be suspended until that date.

In addition, in the event that the registered person deliberately misconstrues the above provisions, the court which has territorial jurisdiction over the Company's registered office may, at the request of the Company or of one or more Shareholders holding at least 5% of the share capital, revoke in whole or in part the voting rights regarding which the information was requested and, possibly, the corresponding dividend payment of the shares, for a period which may not exceed five years.

ARTICLE 10 – VOTING RIGHTS – INDIVISIBILITY OF THE SHARES – RIGHTS AND OBLIGATIONS ATTACHED TO THE SHARES**A) VOTING RIGHTS**

The voting rights attached to the Company's shares are proportional to the share capital that they represent and each share entitles its holder to one vote. The Company's shares (including any that might be freely allocated as part of a capital increase via a capitalisation of reserves, profits or issue premiums) do not carry double voting rights in accordance with Article L. 22-10-46 in the last sub-paragraph of Article L. 225-123 of the French Commercial Code.

B) INDIVISIBILITY OF THE SHARES

The shares are indivisible with regard to the Company.

Voting rights attached to each share are exercised by the beneficial owner at Ordinary General Meetings and by the legal owner at Extraordinary General Meetings.

The joint owners of indivisible shares are represented at General Meetings by one of them or by a single representative. In the event of a dispute, their representative shall be appointed by the Court at the request of the first joint owner to refer this matter to the Court.

The right to the award of new shares following the capitalisation of reserves, profits or any share premiums belongs to the legal owner, subject to the rights of the beneficial owner.

C) RIGHTS AND OBLIGATIONS ATTACHED TO THE SHARES

1. Ownership of a share automatically entails compliance with the Articles of Association and with resolutions duly adopted by General Meetings.
2. Each share gives the holder the same right of ownership in the Company's assets and profits, as defined in Article 31 "Dissolution – Liquidation" and Article 30 "Determination, allocation and distribution of profit" herein.
Each share gives the holder the right to attend General Meetings and to vote therein, under the conditions set forth by law and by the Articles of Association. Each share shall give the holder the right to cast one vote at General Meetings.
3. Whenever it is necessary to hold several shares to exercise a given right, such as in the case of an exchange, consolidation or allocation of shares, or as a result of an increase or reduction of the share capital regardless of whether this is due to accumulated losses, or in the case of a merger or other corporate transaction, the holders of individual shares, or those who do not own the required number of shares, may exercise such rights only if they personally arrange for the consolidation of the shares and purchase or sell the required number of shares or fractional shares, where necessary.

ARTICLE 11 – BOARD OF DIRECTORS**1. THE COMPANY SHALL BE GOVERNED BY A BOARD OF DIRECTORS COMPOSED OF:**

- at least three and no more than 18 directors shall be elected by the General Meeting in accordance with the provisions of Article L. 225-18 of the French Commercial Code;
- one director representing the professional agricultural organisations, shall be appointed in accordance with the provisions of Article L. 512-49 of the Monetary and Finance Code; and
- one or two directors representing the staff, appointed in accordance with Article L. 225-27-1-III-3° of the French Commercial Code;
- one Director representing employee shareholders, in accordance with Article L. 225-23 and L. 22-10-5 of the French Commercial Code, elected by the General Meeting upon the proposal of the shareholders as referred to in Article L. 225-102.

The following individuals may also attend Board Meetings in an advisory capacity:

- non-voting Board Members appointed in accordance with Article 12 of these Articles of Association; and
- one member of the Works Council designated thereby.

In the event that one of the positions held by the directors representing the staff or by the director who represents the professional agricultural organisations becomes vacant, the Board of Directors whose Board Members are elected by the General Meeting may validly deliberate.

The age limit for directors is 65. When a director reaches the age of 65, he will be deemed to have resigned at the end of the next Ordinary General Meeting of Shareholders.

2. DIRECTORS ELECTED BY THE GENERAL MEETING OF SHAREHOLDERS

Directors elected by the General Meeting of Shareholders shall be natural persons or legal entities.

The term of office of directors is three years. However, a director appointed to replace another director whose term of office has not yet expired shall remain in office only for the balance of his predecessor's term.

Directors who are natural persons may not be elected to more than four consecutive terms of office. However, if a director is appointed to replace an outgoing director whose term of office has not yet expired, the director appointed for the remainder of the outgoing director's term may seek a fifth term, for a period not exceeding four consecutive terms of office. He will be deemed to have resigned at the end of the next Ordinary General Meeting following the twelfth anniversary of his first appointment.

A director's duties shall terminate at the end of the Ordinary General Meeting called to consider the accounts for the previous financial year that is held during the year in which such director's term expires.

With the exception of the directors elected by the staff and the director who represents the professional agricultural organisations, the renewal of the directors elected by the General Meeting of Shareholders shall be carried out in such a way as to ensure, to the extent possible, a gradual and balanced expiry of terms of office.

3. DIRECTOR REPRESENTING THE PROFESSIONAL AGRICULTURAL ORGANISATIONS

The term of office of the director representing the professional agricultural organisations is three years. He may be re-appointed or removed at any time by the authority that appointed him.

4. DIRECTORS REPRESENTING THE STAFF

When only one director representing the employees is to be appointed, he or she shall be appointed by the trade union organisation having obtained the most votes in the first round of the elections mentioned in Articles L. 2122-1 and L. 2122-4 of the Labour Code in the Company and its direct or indirect subsidiaries whose registered office is located in France. When two directors representing the employees must be appointed, they shall be designated by each of the two trade union organisations having obtained the most votes in the first round of these elections.

The number of directors representing the employees shall be two when the number of directors mentioned in Articles L. 225-17 and L. 225-18 of the French Commercial Code is greater than eight, and one if it is equal to or less than eight. If, during a financial year, the number of directors mentioned in Articles L. 225-17 and L. 225-18 of the French Commercial Code falls below or reaches eight, the term of office of the second director representing the employees shall continue until its end, but shall not be renewed if the number of directors remains below or reaches eight on the date of renewal. If the number of directors mentioned in Articles L. 225-17 and L. 225-18 becomes again greater than eight, a second director representing the employees shall be appointed under the conditions set out above, within six months of the co-option by the Board of Directors or the appointment by the General Meeting of the new director, it being specified that the latter shall take office at the first meeting of the Board of Directors held after his appointment.

Each director representing employees is appointed for a period of three years. His or her term of office shall expire at the end of the Ordinary General Meeting called to approve the accounts for the previous financial year, held in the year in which his or her term of office expires.

In the event that the seat of a director representing the staff falls vacant as a result of his death, resignation, removal, the termination of his employment contract, or for any other reason whatsoever, the vacant seat is filled for the remaining term of office in accordance with Article L. 225-34 of the French Commercial Code. Until the date of replacement, the Board of Directors may validly meet and deliberate.

In the event that the obligation to appoint one or more directors representing employees lapses (including in the event of the repeal of the legal provisions providing for it), the term of office of the director(s) representing employees shall end on the earlier of the following two dates: at the end of the current term of office or at the end of the Board of Directors' meeting at which the Board of Directors acknowledges that the Company no longer falls within the scope of the law.

Subject to the provisions of this article or the law, the directors representing the employees shall have the same status, powers and responsibilities as the other directors.

If no director or directors representing the employees are appointed in accordance with the law and these Articles of Association, the Board of Directors may meet and deliberate validly.

5. DIRECTOR REPRESENTING EMPLOYEE SHAREHOLDERS

A) PROCEDURES FOR APPOINTING THE CANDIDATE FOR THE POSITION OF DIRECTOR REPRESENTING EMPLOYEE SHAREHOLDERS

Under the conditions defined in Article L. 225-102 of the French Commercial Code, the candidate for appointment as Director representing employee shareholders is designated:

1. on the one hand, by all the elected members of the Supervisory Boards of the said FCPEs for unitholders of company mutual funds (FCPE) invested mainly in Crédit Agricole S.A. shares; and
2. on the other hand, by electors elected by all employee shareholders when they directly exercise the voting rights attached to the shares that they own directly (it being specified that the employees referred to in this paragraph 2) and are those referred to in Article L. 225-102 of the French Commercial Code, i.e. employee shareholders of the Company and of entities or groupings related or affiliated to the Company pursuant to Article L. 225-180 of the French Commercial Code).

The members of the Supervisory Boards referred to in paragraph 1) and the electors referred to in paragraph 2) shall meet within a college (*Collège*) responsible for electing from among themselves the candidate for the position of Director representing employee shareholders and his or her substitute with a view to their election by the General Meeting. The conditions for appointing the electors and the candidate, which are not specified in these Articles of Association, shall be determined by the Board of Directors, and shall be implemented by any person and/or management of Crédit Agricole S.A. to whom it has delegated authority, in agreement with the Chief Executive Officer.

In any event,

- the Board of Directors, when determining the conditions for eligibility to stand for election as a candidate for the positions of electors, must ensure that the number of electors will be such that the composition of the College will be reasonably representative of the respective weighting of shares whose voting rights are exercised directly by employee shareholders and shares whose voting rights are exercised by the Supervisory Boards of the FCPEs;
- the candidate and his/her substitute having received the absolute majority of the votes cast within the College will be proposed to the General Meeting; if, at the end of the vote, no candidate has obtained an absolute majority, then the two

candidates having obtained the most votes will have to present themselves for a second round, at the end of which the one having obtained the absolute majority of the votes cast will be proposed to the General Meeting. The identity of the candidate and that of his or her substitute must be included in the Notice to the General Meeting called to decide on his or her appointment.

B) STATUS OF THE DIRECTOR REPRESENTING EMPLOYEE SHAREHOLDERS

The term of office of the Director representing employee shareholders is identical to that of the Directors elected by the General Meeting in accordance with Article L. 225-18 of the French Commercial Code. However, such Director's term of office shall terminate automatically and the Director representing employee shareholders shall be deemed to have resigned automatically in the event of loss of capacity as a shareholder (individually or through an FCPE), or as an employee of the Company or of a company or economic interest grouping related to the Company within the meaning of Article L. 225-180 of the French Commercial Code.

All candidates must present themselves with a substitute, who is called upon to replace them in the event of the definitive termination, during their term of office, of the duties as Director of the holder with whom they have been appointed. In this case, the substitute is co-opted by the Board of Directors to serve as Director representing employee shareholders until the term set. The co-optation of the substitute by the Board of Directors shall be subject to ratification by the next Ordinary General Meeting. Until the co-optation of the Substitute Director, the Board of Directors will be able to meet and deliberate validly.

If the substitute is definitively unable to attend, the replacement of the latter will be carried out under the conditions provided for in paragraph a. for the appointment of the candidate, at the latest before the Meeting of the next Ordinary General Meeting or, if this Meeting is held less than four months after the definitive impediment of the substitute, before the next Ordinary General Meeting. Until the co-optation of the alternate Director, the Board of Directors will be able to meet and deliberate validly.

In the event that, during the term of office, the report presented annually by the Board of Directors to the General Meeting pursuant to Article L. 225-102 of the French Commercial Code establishes that the shares held within the scope of said article represent a percentage of less than 3% of the Company's share capital, the term of office of the member of the Board of Directors representing employee shareholders shall end at the close of the General Meeting at which the report of the Board of Directors establishing this fact is presented.

ARTICLE 12 – NON-VOTING DIRECTORS

Upon recommendation from the Chairman, the Board of Directors may appoint one or more non-voting directors.

Non-voting directors shall be notified of and participate at meetings of the Board of Directors in an advisory capacity.

They are appointed for a term of three years and may not be reappointed for more than four terms. They may be dismissed by the Board at any time.

In consideration of services rendered, they may be remunerated as determined by the Board of Directors.

ARTICLE 13 – DIRECTORS' SHARES

Each director must own at least one share. If, on the date of his appointment or during his term of office, a director does not own or no longer owns at least one share and fails to correct this situation within three months, he will be deemed to have resigned.

ARTICLE 14 – DELIBERATIONS OF THE BOARD OF DIRECTORS

1. The Board of Directors shall meet as often as the interests of the Company so require, upon notice by its Chairman, by any person authorised for that purpose by the Board of Directors, or by at least one-third of its members to address a specific agenda if the last meeting was held more than two months previously.

If necessary, the Chief Executive Officer may request the Chairman to call a meeting of the Board of Directors to address a specific agenda.

Meetings may be held at the registered office or at any other place specified in the notice of the meeting.

Generally, notice of a meeting shall be given at least three days in advance by letter or by any other means. However, if all of the directors so agree, notice may be given orally and need not be in advance.

Notices of meetings shall set forth the principal items of business on the agenda.

2. The physical presence of at least one half of the directors is required for deliberations to be valid.

At the Chairman's request, employees in positions of responsibility in the group may attend Board Meetings.

A majority of the votes of the directors present or represented is required for a resolution to pass. Each director has one vote and is not authorised to represent more than one of his fellow directors.

The Chairman shall have the casting vote in the event of a tie.

The directors and any individuals requested to attend the Board of Directors' Meetings must exercise discretion with respect to the Board's deliberations and any confidential information and documents described as such by the Chairman of the Board of Directors.

3. Decisions of the Board of Directors may also be taken by written consultation with the Directors, including by electronic means, provided none of them object thereto.

The Chairman of the Board of Directors (or any other person authorised to call a Board meeting) invites the Directors to vote by written consultation on the draft decision(s) submitted to them. The Directors must vote within five days from the sending of the draft decision(s), except where the Chairman sets a shorter period of time (in the case of an emergency and/or having regard to the decisions to be taken).

If they fail to respond within such time and in the absence of an extension of such time by the Chairman, they will be deemed not to have taken part in the consultation.

If one of the Directors objects to the decision being taken by written consultation, the latter must make their objection known to the Chairman of the Board of Directors (or to the author of the consultation) in writing, electronically where applicable; said objection must be received by the Chairman within two days from the sending of the consultation.

ARTICLE 15 – POWERS OF THE BOARD OF DIRECTORS

The Board of Directors determines and ensures compliance with the business focus of the Company.

Except for the powers expressly reserved to the General Meeting of Shareholders and within the limits established by the Company's purpose, the Board of Directors is responsible for all issues related to the Company's operations and business and deliberates on such issues. In its relations with third parties, the Company may be bound by the acts of the Board of Directors which fall outside the Company's object unless the Company can prove that the said third

party knew that the act was *ultra vires* or that it could not have been unaware, in light of the circumstances, that the act was *ultra vires*. The publication of the Articles of Association shall not constitute proof thereof.

The Board of Directors may conduct any inspections or audits that it deems necessary. Each director shall receive the information necessary to accomplish the Board's duties; management shall furnish to any director those documents that the said director deems necessary or appropriate.

The Board may decide to set up various committees to examine issues raised by itself or its Chairman and render an opinion.

The Board shall be responsible for determining the composition and powers of committees which do their work under its authority.

ARTICLE 16 – CHAIRMANSHIP OF THE BOARD OF DIRECTORS

In accordance with Article L. 512-49 of the Monetary and Finance Code, the Board of Directors shall elect a Chairman from among its members who are directors of a *Caisse Régionale de Crédit Agricole Mutuel* and shall fix his term of office, which may not exceed his term of office as a director.

The Board of Directors shall elect one or more Vice-Chairmen whose term shall also be established by the Board, but which may not exceed his (their) term of office as a director.

The Chairman of the Board of Directors represents the Board of Directors. He organises and directs the activities thereof and reports to the General Meeting on its activities.

He is responsible for the proper operation of the Company's entities, and, in particular, insures that directors are able to fulfil their duties.

As an exception to the provisions of the last paragraph of Article 11-1, the age limit for serving as Chairman of the Board of Directors is 67. Subject to this age limit, and as an exception to the provisions of Article 11-2, paragraph 3 of the Articles of Association, a serving Chairman may seek a fifth consecutive term of office.

ARTICLE 17 – GENERAL MANAGEMENT

A) CHIEF EXECUTIVE OFFICER

In accordance with Article L. 512-49 of the Monetary and Finance Code, the Board of Directors appoints the Chief Executive Officer of the Company, it may also terminate his appointment.

The Chief Executive Officer shall enjoy the broadest powers to act in all cases on behalf of the Company. He may exercise his authority within the limits of the Company's object and subject to that authority expressly reserved to General Meetings and to the Board of Directors.

He represents the Company in its relations with third parties.

The Company shall be bound by those actions of the Chief Executive Officer which are *ultra vires* unless the Company can prove that the said third party knew that the act was *ultra vires* or that it could not have been unaware, in light of the circumstances, that the act was *ultra vires*. Publication of the Articles of Association shall not constitute proof thereof.

Provisions of the Articles of Association and decisions of the Board of Directors that limit the Chief Executive Officer's powers are not binding on third parties.

He shall attend the meetings of the Board of Directors.

He shall appoint all employees and fix their compensation, in accordance with the provisions of the Monetary and Finance Code.

He may delegate part of his authority to as many individuals as he deems advisable.

B) DEPUTY CHIEF EXECUTIVE OFFICERS

Upon recommendation of the Chief Executive Officer, the Board of Directors appoints one or more persons responsible for assisting the Chief Executive Officer who shall have the title "Deputy Chief Executive Officer" ("*Directeur général délégué*").

With the consent of the Chief Executive Officer, the Board of Directors shall determine the scope and term of the authority granted to the Deputy Chief Executive Officers.

Deputy Chief Executive Officers shall have the same authority as the Chief Executive Officer with respect to third parties.

In the event that the Chief Executive Officer ceases or is unable to perform his duties, the Deputy Chief Executive Officers shall continue to perform their duties until the appointment of a new Chief Executive Officer, unless the Board of Directors decides otherwise.

ARTICLE 18 – GENERAL PROVISION ON AGE LIMITS

Any officer or director who reaches the age limit set by the Articles of Association or the law shall be deemed to have resigned at the close of the Annual Ordinary General Meeting of Shareholders that follows said anniversary date.

ARTICLE 19 – DIRECTORS' COMPENSATION

The Ordinary General Meeting determines and approves the directors' compensation package.

ARTICLE 20 – STATUTORY AUDITORS

Audits of the accounts shall be exercised in accordance with the law by two Statutory Auditors appointed by the Ordinary General Meeting of Shareholders.

The term of office of the Statutory Auditors shall be six financial years.

Statutory Auditors whose term of office expires may be re-appointed in compliance with the legal and regulatory provisions relating to their terms of office and turnover rates.

The Statutory Auditors may act jointly or separately, but must submit a joint report on the Company's accounts. They shall report to the Annual Ordinary General Meeting of Shareholders.

ARTICLE 21 – SHAREHOLDERS' GENERAL MEETINGS

Collective resolutions shall be adopted at General Meetings which are either ordinary or extraordinary depending on the decisions they are called upon to take.

ARTICLE 22 – NOTICE AND VENUE OF SHAREHOLDERS' GENERAL MEETINGS

General Meetings of Shareholders shall be convened and shall deliberate in accordance with the applicable laws and regulations.

General Meetings of Shareholders may be held at the registered office or at any other place specified in the notice of the meeting.

ARTICLE 23 – AGENDA AND MINUTES OF GENERAL MEETINGS

The person calling the General Meeting shall draft the agenda for the General Meeting in accordance with the applicable laws and regulations.

Minutes must be drawn up and copies or extracts of the deliberations shall be issued and certified in accordance with the law.

ARTICLE 24 – ACCESS TO GENERAL MEETINGS**A) PROXIES**

Any Shareholder, regardless of the number of shares he/she owns, has the right to attend General Meetings, either in person or by proxy, subject to the conditions laid down by law and in these Articles of Association, by providing proof of identity and ownership of the shares, provided that the shares have been registered, either in his/her name or in the name of the intermediary registered on his/her behalf, by 12 midnight Paris time, on the second business day before the General Meeting:

- holders of registered shares must register their shares in the registered share accounts kept in the Company's registers;
- holders of bearer shares must deposit their shares in the bearer share accounts held by the authorised intermediary. This entry or filing is evidenced by a certificate of share ownership delivered by the intermediary or electronically, as applicable.

If a Shareholder cannot attend the General Meeting in person or by proxy, he/she may participate in one of the following two ways:

- cast a vote remotely;

or

- forward a proxy to the Company without naming a proxy holder,

in accordance with the applicable laws and regulations.

B) PARTICIPATION IN GENERAL MEETINGS

If the Shareholder has requested an admission card or a certificate of share ownership, or has cast his/her vote remotely or sent a proxy, he/she may no longer choose to take part in the General Meeting in another manner. However, he/she may sell all or part of his/her shares at any time.

If ownership is transferred before 12 midnight CET on the second business day before the General Meeting, the Company shall invalidate or make the necessary changes to the remote vote, the proxy, the admission card or the certificate of share ownership, as appropriate. To that end, the authorised intermediary, acting as account holder, shall notify the Company or its agent of such a transfer and forward the necessary information to it.

The authorised intermediary shall not issue a notification of transfer of ownership taking place after 12 midnight CET on the second business day before the General Meeting, nor shall the Company take such a transfer into consideration.

Shareholders in the Company who are not domiciled in France may be registered in an account and represented at General Meetings by any intermediary that has been registered on their behalf and given a general power of attorney to manage the shares. When opening its account, however, the intermediary must have declared its status, as an intermediary holding shares on behalf of third parties, to the Company or the financial intermediary acting as account holder, in accordance with the applicable and regulatory provisions.

Following a decision by the Board of Directors published in the notice convening the meeting, Shareholders may participate in General Meetings by videoconferencing, or by any other means of telecommunication or remote transmission, including the internet, in accordance with the legal and regulatory provisions in force. The Board of Directors shall determine the terms governing participation and voting, ensuring that the procedures and technologies used meet the technical criteria required to ensure that the General Meeting's deliberations are continuously and simultaneously relayed and that the votes are accurately recorded.

Provided that they comply with the relevant deadlines, Shareholders who use the electronic voting form provided on the website set up by the entity in charge of the General Meeting's formalities shall be counted as being present or represented at the General Meeting. The electronic form may be completed and signed directly online using any procedure, including a username and password combination that has been approved by the Board of Directors and complies with the requirements set out in the first sentence of the second sub-paragraph of Article 1367 of the French Civil Code.

A proxy or vote issued before the General Meeting using such electronic means and the subsequent acknowledgement of receipt thereof shall be deemed to be irrevocable and enforceable against all parties, it being understood that if the ownership of shares is transferred before 12 midnight CET on the second business day before the General Meeting, the Company shall invalidate or make the necessary changes to the proxy or vote issued before that time and date, as appropriate.

ARTICLE 25 – ATTENDANCE LIST – OFFICERS OF THE GENERAL MEETING

1. An attendance list setting out the information required by law is kept for each General Meeting of Shareholders.

This list, which must be duly initialled by all Shareholders present or their proxies, and to which are attached all proxy forms given to each of the proxies and any ballots cast remotely, shall be certified as accurate by the officers of the General Meeting.

2. The Chairman of the Board, or in his absence a Vice-Chairman or a director expressly authorised for that purpose by the Board of Directors, shall chair General Meetings of Shareholders.

If a General Meeting of Shareholders is convened at the request of one or more Statutory Auditors, one of the Statutory Auditors shall chair the General Meeting.

Whenever the person entitled or designated to chair is absent, the General Meeting of Shareholders shall elect its Chairman.

The officers of the General Meeting appoint a secretary who needs not be a Shareholder.

The officers of the General Meeting are in charge of verifying, certifying and signing the attendance list, ensuring that the debate is conducted in good order, resolving problems which may arise during the General Meeting, checking the ballots cast and verifying that they are not void, and ensuring that minutes of the General Meeting are drawn up.

ARTICLE 26 – QUORUM – VOTING – NUMBER OF VOTES AT GENERAL MEETINGS

The quorum at General Meetings is calculated on the basis of the total number of shares, less those shares not entitled to vote in accordance with the provisions of the law or of the Articles of Association.

In the case of remote voting, only ballots received by the Company prior to the General Meeting within the time periods and under the conditions prescribed by the applicable laws and regulations shall be counted.

In the event of a proxy vote without naming a proxy holder, the Chairman shall add a vote in favour of the resolutions presented or approved by the Board of Directors and a vote against all other resolutions.

Except in the special cases provided for by law, each Shareholder at a General Meeting shall have the right to cast as many votes as shares he holds for which all capital calls have been met.

The Company shall have the right to request from an intermediary registered on behalf of a Shareholder who is not domiciled in France, but which has a general power of attorney to manage the securities of that Shareholder, to provide a list of Shareholders which it represents and whose votes will be exercised at a General Meeting.

The votes or proxies exercised by an intermediary which has not disclosed that it is acting in that capacity in accordance with applicable laws and regulations or the Articles of Association, or which has not disclosed the identity of the securities holders, shall not be counted.

ARTICLE 27 – ORDINARY GENERAL MEETINGS

1. All decisions which do not amend the Articles of Association are taken by the Ordinary General Meeting of Shareholders.

The Ordinary General Meeting must meet at least once a year within the period prescribed by the applicable laws and regulations to consider and vote on the accounts for the prior financial year.

Its powers include the following:

- to approve, modify or reject the accounts submitted to it;
- to decide on the distribution and allocation of profit in accordance with the Articles of Association;
- to discharge or refuse to discharge directors;
- to appoint and dismiss directors;
- to approve or reject temporary appointments of directors by the Board of Directors;
- to authorise the purchase of shares under share buyback programmes established under the conditions stipulated by Articles L. 22-10-62 *et seq.* of the French Commercial Code (or equivalent regulations applicable as of the date of the relevant transaction);
- to appoint the Statutory Auditors;
- to consider and vote on the special report of the Statutory Auditors concerning transactions subject to prior authorisation by the Board of Directors.

2. The deliberations of the Ordinary General Meeting of Shareholders convened following the first notice shall be valid only if the Shareholders present, represented or voting remotely at the General Meeting hold, in the aggregate, at least one fifth of all voting shares.

There is no quorum requirement for the General Meeting following the second notice.

In order to pass, resolutions require a majority of the votes of the Shareholders present, represented or voting remotely.

ARTICLE 28 – EXTRAORDINARY GENERAL MEETINGS

1. The Extraordinary General Meeting of Shareholders shall have exclusive authority to amend any of the provisions of the Articles of Association. However, it shall not increase the obligations of the Shareholders other than through transactions, duly authorised and carried out, which are the result of an exchange or consolidation of shares.

2. The deliberations of the Extraordinary General Meeting of Shareholders convened following the first notice shall be valid only if the holders of shares present, represented or voting remotely at the General Meeting hold, in the aggregate, at least one fourth of all voting shares, or one fifth of all voting shares following the second notice. If this last quorum is not met, the second Extraordinary General Meeting may be postponed to a date not later than two months after the date for which it was scheduled.

In order to pass, resolutions require a two-thirds majority of the votes of the holders of shares present, represented or voting remotely.

3. Notwithstanding the foregoing provisions, and as permitted by law, an Extraordinary General Meeting which approves a capital increase through the capitalisation of reserves, profits or share premiums shall be subject to the same quorum and majority voting requirements as an Ordinary General Meeting.

ARTICLE 29 – FINANCIAL YEAR

The financial year shall begin on 1 January and end on 31 December of each year.

ARTICLE 30 – DETERMINATION, ALLOCATION AND DISTRIBUTION OF PROFIT

1. Five per cent of the profit for a financial year less any accumulated losses shall be posted to the legal reserve until the reserve reaches one-tenth of the share capital.
2. The balance, increased by retained earnings, if any, shall constitute the distributable profit which the Ordinary General Meeting of Shareholders shall:
 - allocate to one or more ordinary or extraordinary, optional reserve accounts, with or without a specific purpose;
 - distribute to the Shareholders as a dividend.
 The Ordinary General Meeting may also decide to distribute amounts from reserves distributable by the Shareholders.
3. The Ordinary General Meeting or, in the case of an interim dividend, the Board of Directors, may, for a given financial period, decide to pay or not to pay a dividend to the Shareholders, in order to comply with the Company's prudential requirements.
4. The Ordinary General Meeting may grant each holder of shares, within the limits and under the conditions that it shall determine, for all or part of the dividend distributed or interim dividend, an option for payment of the dividend either in cash or in shares to be issued.

ARTICLE 31 – DISSOLUTION – LIQUIDATION

1. The Company shall be in liquidation as from the time that it is dissolved, for any reason whatsoever. Its legal personality shall subsist for purposes of such liquidation and until completion thereof.
The shares may continue to be traded until liquidation has been completed.

Dissolution of the Company shall be effective as against third parties only as from the date on which the notice of dissolution is published in the Paris Trade and Company Registry.

At the end of the life of the Company or if it is dissolved in advance by an Extraordinary General Meeting of Shareholders, said Meeting shall fix the rules governing liquidation. Voting in accordance with the quorum and majority voting requirements applicable to Ordinary General Meetings, it shall appoint one or more liquidators whose powers it shall determine, and who shall carry out their responsibilities in accordance with the law. Upon appointment of the liquidators, the functions of the directors, the Chairman, the Chief Executive Officer and the Deputy Chief Executive Officers shall cease.

Throughout the duration of liquidation, the General Meeting of Shareholders shall continue to exercise the same powers as it did during the life of the Company.

2. The liquidator shall represent the Company. He shall be vested with the broadest powers to dispose of its assets, even informally. He is authorised to pay creditors and distribute the remaining balance.

The General Meeting may authorise the liquidator to continue pending business or to undertake new business for the purpose of the liquidation.

The par value of the shares shall be reimbursed proportional to their share of the Company's share capital, and any liquidation dividend shall be distributed.

ARTICLE 32 – DISPUTES

Courts having jurisdiction under ordinary law shall resolve any dispute which may arise during the life of the Company or during liquidation following dissolution, either among the Shareholders, the managing and governing bodies and the Company, or among the Shareholders themselves, in connection with corporate business or compliance with the provisions of the Articles of Association.

INFORMATION ON THE COMPANY

SUMMARY TABLE OF AUTHORISATIONS IN EFFECT AND THEIR USE IN 2025

Type of authorisation	Purpose of authorisation	Validity of authorisation	Ceiling	Use during 2025

Cancellation of 15,128,677 shares with a par value of €3 each carried out on 13 January 2025 (SBB 2024) And cancellation of 22,886,191 shares with a par value of €3 each carried out on 13 November 2025 (SBB 2025)

SHARE BUYBACKS BY THE COMPANY IN 2025

The twenty-ninth resolution of the Ordinary General Meeting of Crédit Agricole S.A. of 14 May 2025 authorised the Board of Directors to trade in Crédit Agricole S.A. ordinary shares, in compliance with the General Regulation of the French Financial Market Authority (AMF) and with Article L. 22-10-62 of the French Commercial Code (*Code de commerce*).

The key provisions of this resolution, which is still valid, are as follows:

- the authorisation was granted for a period of 18 months;
- the Company may not, under any circumstances, hold more than 10% of the share capital;
- the number of shares purchased may not exceed 10% of the total number of ordinary shares at the date on which said buybacks are carried out;
- the maximum purchase price is €30;
- in any event, the maximum amount the Company may allocate to the buyback of its ordinary shares is €4.6 billion.

INFORMATION ON THE USE OF THE SHARE BUYBACK PROGRAMME, PROVIDED TO THE GENERAL MEETING IN ACCORDANCE WITH ARTICLE L. 225-211 OF THE FRENCH COMMERCIAL CODE (*CODE DE COMMERCE*)

The Board of Directors informs the General Meeting of the following transactions relating to the share buyback programme for the period from 1 January to 31 December 2025.

Transactions carried out as part of the share buyback programme in order to:

- cancel a certain number of shares;
- make an active market for the shares under a market-making agreement with an investment services provider, in compliance with the AMAFI (French Association of Financial Markets Professionals) Code of Conduct;
- deliver bonus shares to Group executives.

Number of shares registered in the Company's name at 31/12/2024	16,247,289
<i>To be used to cancel shares purchased</i>	15,128,677
<i>For market-making under a market-making agreement</i>	1,118,612

Percentage of the share capital held by the Company at 31/12/2025	0.01%

(1) Regarding the coverage of commitments to employees and corporate officers, these are shares sold or transferred to beneficiaries following the exercise of options on Crédit Agricole S.A. shares, or sold on the stock market for the surplus coverage recorded at the closing date of the plans, and shares bought and delivered or sold under deferred compensation plans as performance shares; for the market-making agreement, these are shares bought and sold under the contract during the period in question.

(2) Shares purchased to cover commitments to employees and corporate officers are recognised as investment securities and valued at acquisition cost, less any impairment; shares purchased with a view to their cancellation are recognised as financial investments and valued at market value; shares purchased under the market-making agreement are recognised as trading securities and valued at market value at each reporting date.

DESCRIPTION OF THE CRÉDIT AGRICOLE S.A. SHARE BUYBACK PROGRAMME FOR 2026 AND SUBSEQUENT YEARS

Pursuant to Article 241-2 of the AMF General Regulation, this document constitutes the description of the share buyback programme to be approved by the Ordinary General Meeting of 20 May 2026.

I. NUMBER OF SHARES AND PERCENTAGE OF SHARE CAPITAL DIRECTLY OWNED BY CRÉDIT AGRICOLE S.A.

At 31 January 2026 Crédit Agricole S.A. directly owned 352,249 shares, representing 0.01% of the share capital.

II. BREAKDOWN BY PURPOSE OF THE TREASURY SHARES HELD

At 31 January 2026, the shares held by Crédit Agricole S.A. broke down as follows:

- no shares intended to be used to cover commitments to employees and corporate officers;
- 352,249 shares held under a market-making agreement for market-making;
- no shares held with a view to their cancellation.

III. OBJECTIVES OF THE SHARE BUYBACK PROGRAMME

The purpose of the authorisation to be granted by the shareholders at the Combined General Meeting of Shareholders of 20 May 2026 is to allow Crédit Agricole S.A. to trade in its own shares, either on the stock market or over the counter, for any purpose permitted or that may become permitted by the applicable regulations and laws.

In particular, Crédit Agricole S.A. may use this authorisation:

1. to set up stock option plans for some or all of the Company's employees and/or some or all of the eligible corporate officers of the Company or of companies or groupings affiliated or which will become affiliated with it, under the conditions defined by the provisions of Article L. 225-180 of the French Commercial Code;
2. to allot or transfer shares to eligible corporate officers, employees and former employees of the Company or of the Group, or to certain categories thereof, as part of an employee profit-sharing or employee savings scheme, as provided for by law;
3. to award bonus shares under a bonus share plan, as provided for by Articles L. 225-197-1 et seq. and Article L. 22-10-59 of the French Commercial Code, to some or all categories of eligible corporate officers and employees of the Company, and/or of companies and economic interest groupings affiliated to it, as defined by Article L. 225-197-2 of the French Commercial Code, and, more generally, to honour obligations related to programmes to award Company shares to such employees and corporate officers, notably as part of the variable compensation of employees who are financial market professionals and whose activities have a material impact on the Company's risk exposure, in which case for such employees these awards are contingent on meeting performance conditions;

4. to ensure coverage of securities conferring rights to acquire Company shares;
5. to make an active secondary market or to ensure the liquidity of shares under a market-making agreement with an investment services provider, in compliance with market practices permitted by the AMF;
6. to cancel all or part of the shares purchased through the buybacks.

IV. MAXIMUM PERCENTAGE OF THE SHARE CAPITAL, MAXIMUM NUMBER AND CHARACTERISTICS OF SHARES ELIGIBLE FOR BUYBACK AND MAXIMUM PURCHASE PRICE

1. MAXIMUM PERCENTAGE OF THE SHARE CAPITAL THAT CAN BE PURCHASED BY CRÉDIT AGRICOLE S.A.

Crédit Agricole S.A. is authorised to acquire no more than 10% of the total number of shares making up its share capital at the date the buybacks are made. However, the number of shares purchased by the Company and held with a view to subsequently using them for payment or for exchange in a merger, spin-off or contribution of assets may not exceed 5% of the Company's share capital.

In addition, the maximum total amount that Crédit Agricole S.A. may allocate to the buyback of its shares during the term of the share buyback programme is €4.6 billion.

The Board of Directors shall ensure that these buybacks are carried out in accordance with the regulatory prudential requirements as set by law and the European Central Bank.

2. CHARACTERISTICS OF THE ELIGIBLE SHARES

Class of shares purchased: shares listed on Euronext Paris (Compartment A).

Name: Crédit Agricole S.A.

ISIN code: FR0000045072.

3. MAXIMUM PURCHASE PRICE

The purchase price for Crédit Agricole S.A. shares under the share buyback programme may not exceed €35 per share.

V. DURATION OF THE PROGRAMME

In accordance with Article L. 22-10-62 of the French Commercial Code (*Code de commerce*) and the 36th resolution to be submitted to the Ordinary General Meeting of 20 May 2026, this share buyback programme replaces the unused portion of the programme approved by the Ordinary General Meeting of 14 May 2025, and may be implemented until it is renewed by a future General Meeting and, in any event, for a maximum term of 18 months as from the date of the Ordinary General Meeting, i.e. until 20 November 2027 at the latest.

ACQUISITIONS MADE BY CRÉDIT AGRICOLE S.A. OVER THE PAST THREE FINANCIAL YEARS

MAIN ACQUISITIONS COMPLETED

04/04/2023	Italy	Crédit Agricole Consumer Finance finalised its acquisition of 100% of FCA Bank by acquiring the stake held by Stellantis (50%).	Acquisition financed by core equity.

N.B.: we cannot disclose certain information about investment amounts without breaching confidentiality agreements or revealing information to our competitors that could be detrimental to the Group.

ACQUISITIONS IN PROGRESS

On 9 January 2026, the ECB notified Crédit Agricole S.A. that it was authorised to exceed the 20% threshold for its stake in Banco BPM's share capital, thereby confirming the Bank of Italy's position. Crédit Agricole S.A. then exercised its right to physical settlement of the Banco BPM shares, bringing its aggregate position in Banco BPM to 20.1%.

NEW PRODUCTS AND SERVICES

The Group entities regularly offer new products and services to customers. Information is available on the Group's websites.

MATERIAL CONTRACTS

In the initial public offering of Crédit Agricole S.A., CNCA (now Crédit Agricole S.A.) signed an agreement with the Regional Banks in 2001 aiming notably at governing internal relations within the Crédit Agricole Group. The main provisions of this agreement are set out in Chapter 4 of the Registration Document filed by Crédit Agricole S.A. with France's *Commission des opérations de Bourse* on 22 October 2001 under number R. 01-453. The agreement notably provided for the creation of a Fund for Bank Liquidity and Solvency Risks (*Fonds pour risques bancaires de liquidité et de solvabilité* – FRBLS) designed to enable Crédit Agricole S.A. to fulfil its role as corporate centre by providing assistance to any affiliated members that might experience difficulties. To allow for changes in the way the FRBLS works due to the affiliation of Crédit Agricole Corporate and Investment Bank with the Crédit Agricole network,

Crédit Agricole S.A. approved a new regulation, at its 13 December 2011 Board of Directors Meeting, which sets new rules for the contributions paid by Crédit Agricole S.A. on behalf of its affiliates.

The fund was originally allocated €610 million in assets. At 31 December 2025, it totalled €1,625 million, having been increased by €86 million in the course of the year.

Furthermore, since CNCA's reorganisation as a mutual company in 1988, the Regional Banks have committed to making up any shortfall suffered by creditors should Crédit Agricole S.A. become insolvent or experience similar financial difficulties as a result of a court-supervised liquidation, or once dissolution-related formalities are complete. The Regional Banks' potential commitment under this guarantee is equal to the sum of their share capital and reserves.

MATERIAL CHANGES

The financial statements for financial year 2025 were approved by the Board of Directors at its meeting of 3 February 2026. Since that date, there has been no material change in the financial or commercial position of the Company and Crédit Agricole S.A.

PUBLICLY AVAILABLE DOCUMENTS

This document is available on the website at www.credit-agricole.com/en/finance and on the website of the French Financial Market Authority (*Autorité des marchés financiers* – AMF), www.amf-france.org/en.

All regulated information as defined by the AMF (in Title II of Book II of the AMF's General Regulation) is available from the Company's website: www.credit-agricole.com/en/finance. The Crédit Agricole S.A. Articles of Association are reproduced, in full, in this document.

The agenda and draft resolutions presented to the Ordinary and Extraordinary General Meeting on Wednesday 20 May 2026 are available at <https://www.credit-agricole.com/en/finance>.

INFORMATION ON INACTIVE BANK ACCOUNTS

Under Articles L. 312-19 and L. 312-20 of the French Monetary and Financial Code, based on Law No. 2014-617 of 13 June 2014 relative to unclaimed assets on inactive bank accounts, named Law Eckert which came into force on 1 January 2016, every credit institution is required to publish annual information on inactive bank accounts. Crédit Agricole S.A. has no inactive bank accounts. No transfer to the Caisse des Dépôts et Consignations has been made.

INFORMATION ON ACCOUNTS PAYABLE AND RECEIVABLES

Under Article L. 441-14 of the French Commercial Code (*Code de commerce*), companies whose annual financial statements are certified by a Statutory Auditor are required to disclose in their management report the balance of amounts due to suppliers by payment term, as set out in Article D. 441-6 of Decree No. 2021-211.

This information does not include any banking operations or related transactions.

ACCOUNTS PAYABLE PAYMENT TERMS

The number of invoices received by Crédit Agricole S.A. outside its banking and related activities is considered immaterial.

CUSTOMER PAYMENT TERMS

The number of invoices issued by Crédit Agricole S.A. outside its banking and related activities is considered immaterial.

INFORMATION ON THE CRÉDIT AGRICOLE S.A. ENTITIES

The information about Crédit Agricole S.A. entities required by Article 7 of Law No. 2013-672 of 26 July 2013 on the separation and regulation of banking activities and by Order No. 2014-158 of 20 February 2014 supplemented by Implementing Decree No. 2014-1657 of 29 December 2014 and modified by Decision

No. 2016-741 DC of 8 December 2016, implementing Article L. 511-45 of the French Monetary and Financial Code, are detailed below.

This published information, regarding employees and financial information, relates to entities and activities included in the scope of consolidation ⁽¹⁾ in each State or territory.

TRANSACTIONS WITH RELATED PARTIES

The main transactions entered into with related parties are disclosed in the consolidated financial statements at 31 December 2025 in the “General framework – Related parties” section.

Moreover, please note that no agreements other than the related-party agreements cited in the Statutory Auditors’ report were entered into, directly or through intermediaries, between, (i) the

Chief Executive Officer, any one of the Deputy Chief Executive Officers or Directors or shareholders holding more than 10% of the voting rights in Crédit Agricole S.A., and (ii) another company in which Crédit Agricole S.A. holds, directly or indirectly, more than half of the share capital unless, where appropriate, these agreements relate to ordinary arm’s length transactions.

STATUTORY AUDITORS' REPORT ON RELATED PARTY AGREEMENTS

Annual General Meeting held to approve the financial statements for the year ended 31 December 2025

*This is a translation into English of a report issued in French and it is provided solely for the convenience of English-speaking users.
This report should be read in conjunction with, and construed in accordance with, French law and professional standards applicable in France.*

To the Annual General Meeting of Crédit Agricole S.A.,

In our capacity as statutory auditors of your Company, we hereby present to you our report on related party agreements.

We are required to inform you, on the basis of the information provided to us, of the terms and conditions of those agreements indicated to us, or that we may have identified in the performance of our engagement, as well as the reasons justifying why they benefit the Company. We are not required to give our opinion as to whether they are beneficial or appropriate or to ascertain the existence of other agreements. It is your responsibility, in accordance with Article R. 225-31 of the French Commercial Code (*Code de commerce*), to assess the relevance of these agreements prior to their approval.

We are also required, where applicable, to inform you in accordance with Article R. 225-31 of the French Commercial Code (*Code de commerce*) of the continuation of the implementation, during the year ended 31 December 2025, of the agreements previously approved by the Annual General Meeting.

We performed those procedures which we deemed necessary in compliance with professional guidance issued by the French Institute of Statutory Auditors (*Compagnie nationale des commissaires aux comptes*) relating to this type of engagement. These procedures consisted in verifying the consistency of the information provided to us with the relevant source documents.

AGREEMENTS SUBMITTED FOR APPROVAL TO THE ANNUAL GENERAL MEETING

AGREEMENTS AUTHORIZED AND CONCLUDED DURING THE YEAR ENDED 31 DECEMBER 2025

In accordance with Article L. 225-40 of the French Commercial Code (*Code de commerce*), we have been notified of the following related party agreements which received prior authorization from your Board of Directors.

WITH CRÉDIT AGRICOLE'S REGIONAL BANKS

FRENCH TAX CONSOLIDATION AGREEMENT

RELATED PARTIES

Mr. Dominique Lefebvre, Mr. Raphaël Appert, Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mr. Pascal Lheureux, Mr. Olivier Desportes, Mr. Olivier Auffray, Mr. Éric Vial and Mrs. Gaëlle Regnard, Mrs. Nicole Gourmelon, Mrs. Christine Gandon, Chairman or directors of your Company and Chairmen or Chief Executive Officers of Crédit Agricole's Regional Banks.

NATURE AND PURPOSE

At its meeting of 21 January 2010, your Board of Directors authorized the extension of the Crédit Agricole S.A. tax group, pursuant to paragraph 5 of Article 223-A of the *Code général des impôts*, with this extension applying mandatorily to all Regional Banks and Local Banks subject to corporate income tax at the standard rate, as well as, on an optional basis, to their subsidiaries.

The arrangement was governed by an agreement binding the central body and each of the entities joining the group as a result of its expansion, effective 1 January 2010. The agreements are renewable by mutual and express consent of all the entities concerned for successive five-year periods.

At its meeting of 10 February 2021, your Board of Directors authorized the renewal of the tax group agreement under the same terms and principles as those agreed upon in 2016, for a term of five years beginning 1 January 2020. It therefore expired at the end of 2024.

Your Board of Directors, at its meeting of 29 October 2025, authorized the signing of a new tax group agreement, effective for a five-year term beginning 1 January 2025.

CONDITIONS

Since 2010, the tax consolidated group's agreement between Crédit Agricole S.A. and the Regional Banks have been based on two principles: (i) legal principle of neutrality (no Regional Bank shall pay more tax than it would have paid if it were not part of the tax group), (ii) contractual principle of dividend gain reallocation (since 2016, 100% of the dividend-related tax gain has been redistributed).

This new agreement must structurally address the issue of any exceptional corporate tax contributions or surcharges, where the rate varies depending on the taxpayer's revenue. This situation may result in a surcharge for the parent company due to the rate differential between the surcharge paid by Crédit Agricole S.A. (at the highest rate) for the Crédit Agricole Group tax group and the contribution paid by the Regional Banks. This new agreement sets out the rules for sharing this surcharge between the regional banks and Crédit Agricole S.A.

The surcharge is shared on a 50/50 basis between Crédit Agricole S.A. and each Regional Bank, up to the amount of tax savings resulting from intra-group dividends.

Your company, in its capacity as the head of the tax consolidation group, has paid €191 million in respect of the exceptional corporate tax contribution in 2025. The amount recognized by your company, after taking into account internal reallocations to members of the tax consolidation group, including the Regional Banks, amounts to €41 million.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

This agreement enables your company to reallocate the impact of exceptional corporate tax contributions within the tax consolidation group.

WITH SACAM MUTUALISATION, S.A.S. RUE LA BOÉTIE, S.A.S. SÉCUR, S.A.S. MIROMESNIL, SACAM AVENIR, SACAM DÉVELOPPEMENT, SACAM INTERNATIONAL, SACAM PARTICIPATIONS, SACAM NEOPRO, SACAM FIRECA, SACAM IMMOBILIER, SACAM MACHINISME, SACAM ASSURANCE CAUTION, SACAM TRANSITION ÉNERGIE, SACAM SANTÉ & TERRITOIRES, SACAM NEWCO 3, CRÉDIT AGRICOLE LOGEMENT ET TERRITOIRES

TAX CONSOLIDATION AGREEMENT

RELATED PARTIES

Mr. Éric Vial, Chairman of your Company and Chairman of SACAM Mutualisation, S.A.S. Rue La Boétie, S.A.S. Ségur, S.A.S. Miromesnil, SACAM Avenir, SACAM International, SACAM Participations, SACAM Neopro, SACAM Fireca, SACAM Immobilier, SACAM Machinisme, SACAM Assurance Caution, SACAM Transition Énergie, SACAM Santé et Territoires, SACAM Newco 3, Crédit Agricole Logement et Territoires and Mr. Raphaël Appert, director of your Company and Chairman of SACAM Développement.

NATURE AND PURPOSE

At its meeting of 21 January 2010, and reaffirmed at its meeting of 15 December 2015, the board of directors of your Company authorized the tax consolidation agreements between your company and the companies S.A.S. Rue La Boétie, S.A.S. Ségur, S.A.S. Miromesnil, and the federal holding companies (SACAM Avenir, SACAM Développement, SACAM International, SACAM Participations, SACAM Fia-net Europe, SACAM Fireca, SACAM Immobilier, SACAM Machinisme, and SACAM Assurance Caution).

These agreements, entered into for a term of five years, provided that half of the tax savings realized on dividends received by these entities would be reallocated to them.

At its meeting of 13 December 2016, the board of directors of your Company authorized the signing of an amendment to the tax consolidation agreements entered into with the aforementioned entities, which now provides for the full reallocation of tax savings.

The Board of Directors meeting of 10 February 2021 authorized the renewal of the tax consolidation agreements on the same terms as those signed in 2016 for a term of five years beginning 1 January 2020, with the aforementioned entities, and adding the companies newly integrated into the tax group in 2020, S.A.R.L. Adicam and S.A.S. Crédit Agricole Logement et Territoires.

Your Board of Directors, at its meeting of 16 December 2025, authorized the renewal of these agreements under the same terms as the previous agreements, with the addition of a clause providing for the automatic renewal of the agreements upon the expiration of a five-year period.

A new tax consolidation agreement was signed effective 1 January 2025, between Crédit Agricole S.A. and SACAM Transition Énergie, SACAM Santé et Territoires, and SACAM Newco 3, following the entry of these three companies into the tax consolidation group, under the same terms as the agreements entered into with the other SACAM companies.

CONDITIONS

Tax consolidation agreements govern the allocation of corporate income tax liability within the tax consolidation group and provide for the full reallocation of the corporate income tax savings on intra-group dividends received by its members, generated by the tax consolidation regime.

The total amount of tax savings for 2025 resulting from intra-group dividends paid under the agreements between your company and the members of the tax group amounts to €43.7 million.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The agreement sets forth the mutual obligations of your company and the members of the tax consolidation group.

WITH SACAM AVENIR

BFORBANK SHAREHOLDERS' AGREEMENT

RELATED PARTIES

Mr. Dominique Lefebvre, Chairman of your company and Chairman of SACAM Participations, President of SACAM Avenir, which holds 50% of the capital of BforBank.

NATURE AND PURPOSE

BforBank was created as a joint-stock company on 22 December 2008. After 11 years of existence, the Company has transformed its business model by moving towards a range of day-to-day banking services serving as a business provider for the Crédit Agricole Group's other banking businesses (credit, insurance, securities accounts, etc.) and targeting the French and European markets. The target clientele, both in its domestic market and on a European scale, has been extended to reach younger populations, among others.

As BforBank's investment plan evolved, SACAM Avenir (holding 50% less one share of BforBank) and Crédit Agricole S.A. (holding the rest of BforBank's capital) wanted to replace the existing shareholders' agreement with a new one.

CONDITIONS

The purpose of the agreement, concluded for a period of 10 years, is (i) to define the rules of governance of BforBank, (ii) to organize the relations between the shareholders and (iii) to determine the conditions they intend to comply with in the event of the transfer of all or part of their stake in the capital of the company.

At its meeting on 17 June 2025, your Board of Directors authorized the conclusion of the shareholders' agreement of BforBank, which was signed on 19 June 2025.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The shareholders' agreement sets out the procedure and organization for financing the development of BforBank in order to ensure the flexibility needed to meet evolving needs in a market marked by the rise of digital players.

WITH SACAM IMMOBILIER**AMENDMENT TO THE CRÉDIT AGRICOLE IMMOBILIER SHAREHOLDERS' AGREEMENT****RELATED PARTIES**

Mr. Éric Vial, Chairman of your company and Chairman of SACAM Participations, President of SACAM Immobilier, which holds 50% of Crédit Agricole Immobilier's capital.

NATURE AND PURPOSE

Crédit Agricole Immobilier is a company owned 50/50 by your company and SACAM Immobilier. The shareholders' agreement of Crédit Agricole Services Immobiliers (CA-SIM), a subsidiary of Crédit Agricole Immobilier, was amended on 22 July 2025, No. 2, in order to adapt it following (i) the transformation of the limited liability company, -SIM, into a simplified joint stock company and (ii) the consequential abolition of the Board of Directors, the Audit Committee and the Strategic Committee of Crédit Agricole Services Immobiliers.

As a result, it has been agreed, through a new Crédit Agricole Immobilier shareholders' agreement, to make the necessary adjustments so that there is no contradiction with the shareholders' agreement of its subsidiary Crédit Agricole Services Immobiliers.

CONDITIONS

The purpose of the new CA Immobilier Pact is to declare that the operations carried out by CA- SIM which were subject to prior opinion of the CA Immobilier Board of Directors are now subject to a decision of the Board of Directors. The other principles of the old pact remain unchanged.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The new Crédit Agricole Immobilier pact brings the latter into line with the changes decided for its subsidiary Crédit Agricole Services Immobiliers with the aim of simplifying and ensuring consistency in its governance.

WITH THE COMPANY SACAM SANTÉ ET TERRITOIRES**CRÉDIT AGRICOLE SANTÉ & TERRITOIRES ("CAST") SHAREHOLDERS' AGREEMENT****RELATED PARTIES**

Mr. Dominique Lefebvre, Chairman of your company and Chairman of SACAM Participations, shareholder of SACAM Santé et Territoires, which holds 50% of the capital of CAST.

NATURE AND PURPOSE

CAST was created as a simplified joint-stock company on 11 August 2023 with the objective of improving access to health solutions in the regions and/or supporting the demographic transition and the adaptation of society to the challenges related to ageing, while facilitating the intervention of health players and maintaining autonomy, by supporting technological and organizational innovations in these areas and/or by fluidifying the paths of patients and seniors.

CAST has been transformed into a public limited company with a board of directors and its statutes adapted accordingly in order to provide for a legal form more adapted to its development and growth prospects. The share capital has been 50% open to SACAM Santé et Territoires, owned by Crédit Agricole Mutuel's Regional Banks (the "Regional Banks") and a shareholders' agreement is concluded.

CONDITIONS

The purpose of the agreement signed on 13 May 2025 is to (i) define the rules governing the Company since it became a public limited company, (ii) organize relations between shareholders and (iii) determine the conditions they intend to respect in the event of a transfer of all or part of their stake in the Company's capital.

The agreement is for a period of 15 years.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The shareholders' agreement allows, on the one hand (i) to involve the Regional Banks in the development and monitoring of the strategy of CAST's new energy and transition advisory business, to contribute and embody the territorial dimension as well as develop the network/distribution dimension of this new business and, on the other hand, (ii) to organize the financing in equal parts of the Company's development to enable it, in particular, to acquire stakes in the share capital of renewable energy developers and in renewable energy production assets through strategic investment funds.

WITH WORLDLINE**WORLDLINE S.A. SHARES SUBSCRIPTION COMMITMENT LETTER****RELATED PARTIES**

Mr. Jérôme Grivet, Deputy Chief Executive Officer of your company and Director of Worldline S.A.

NATURE AND PURPOSE

To back the execution of its transformation plan and enhance its financial flexibility, Worldline S.A. ("Worldline") announced on 6 November 2025 that it was considering a capital increase of €500 million through:

- I) a reserved capital increase of approximately €110 million at a price per share of €2.75 (the "Reserved Capital Increase") to be subscribed by Bpifrance, Crédit Agricole S.A. and BNP Paribas (the "Anchor Investors"); and
- II) a subsequent rights issue of circa €390 million (the "Rights Issue" and together with the Reserved Capital Increase, the "Capital Increase") open to all shareholders on a pro-rata basis. The Anchor Investors have committed to subscribe circa €135 million to the Rights.

Your company, shareholder of Worldline with a 7% stake, has agreed to support Worldline in this transaction to ensure the success of the transformation plan presented by Worldline's new management. This commitment by Crédit Agricole S.A. materialized by the signing of a share subscription commitment letter.

CONDITIONS

The share subscription commitment letter sets out the terms and conditions of Crédit Agricole S.A.'s participation in the Reserved Capital Increase, which would increase its stake to 9.5% of Worldline's capital, and in the Right Issue. It notably provides that Crédit Agricole S.A.'s subscription commitment is subject to the fulfilment of customary regulatory conditions for this type of transaction.

Your company's commitment to subscribe to the Reserved Capital Increase resulted in the recognition at 31 December 2025 of a provision of €13 million in the annual financial statements and an expense of €13 million in the consolidated financial statements of Crédit Agricole S.A. and the Crédit Agricole Group.

At its meeting on 13 November 2025, your Board of Directors approved the regularization, as a regulated agreement, of the shares subscription commitment letter signed on 5 November 2025.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

This share subscription commitment letter provides tangible support to a critical payment infrastructure operator for the European market, which is also a supplier and partner of the group and many of its clients, at a time when Worldline is implementing a transformation plan aiming at achieving sustainable and profitable growth, allowing it to regain a valuation level consistent with those of its peers.

AGREEMENTS AUTHORIZED DURING THE YEAR ENDED 31 DECEMBER 2025 AND CONCLUDED SINCE CLOSING**WITH THE CRÉDIT AGRICOLE REGIONAL BANKS, AND THE COMPANIES SACAM PARTICIPATIONS, CRÉDIT AGRICOLE TECHNOLOGIES & SERVICES, ADICAM****VAT GROUP AGREEMENT OF THE SINGLE TAXABLE PERSON "ASU CRÉDIT AGRICOLE VAT GROUP"****RELATED PARTIES**

Mr. Dominique Lefebvre, Mr. Raphaël Appert, Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mr. Pascal Lheureux, Mr. Olivier Desportes, Mr. Olivier Auffray, Mr. Éric Vial, Mrs. Gaëlle Regnard, Mrs. Nicole Gourmelon and Mrs. Christine Gandon, directors of your company, and Chairmen or Chief Executive Officers of Regional Banks and co-contracting entities.

NATURE AND PURPOSE

Your company had opted with effect from 1 January 2023 for the creation of a single taxable person for the purposes of value added tax pursuant to the provisions of Article 256-C of the General Tax Code. Your company, a member of the single taxable person, had also agreed to be appointed as the representative of the single taxable person. This single taxable person is called the "ASU Crédit Agricole VAT Group". The VAT group agreement between Crédit Agricole S.A. and the Regional Banks and their subsidiaries expired on 31 December 2025.

Your Board of Directors on 16 December 2025 authorised the signing of a new agreement as of 1 January 2026, for an annual period and accompanied by a tacit renewal.

The purpose of the agreement is to set out the reciprocal commitments of the parties, i.e. the representative of the single taxable person and each member, but also to specify the operation of the Crédit Agricole VAT Group.

CONDITIONS

The agreement provides that entities that are members of the VAT group that find losses of VAT deduction or additional payroll tax as a result of their membership of that group must be compensated. These compensations are made possible by deducting deductible VAT gains from member entities, directly linked to their membership of the VAT group. The residual net gain recognized after deduction of gains and payment of compensation is then shared among the entities that are members of the group. The agreement provides that the residual annual net gain recorded in the VAT Group will be distributed between the entities of the Crédit Agricole S.A. division and those of the mutual division according to a distribution specific to the organisation of the Crédit Agricole Group. Crédit Agricole S.A., in its capacity as representative of the single taxable person, manages all the flows relating to compensation and reallocation of gains, via an equalisation fund, which is a cash account created ad hoc and whose mode of operation is set out in the agreement.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The agreement is of primary interest to Crédit Agricole S.A. in that it obliges the members of the single taxable person for VAT purposes to recognise the existence of the equalisation fund and its operation and also the principle of feeding this fund, paying compensation and sharing the residual net gain according to a specific methodology. It also has the advantage of specifying the reciprocal obligations of the representative of the single taxable person for VAT purposes and the members of the single taxable person.

WITH CATS, CAAS, CACF, CACIB, CAGS, CAPS, LCL AND FNCA**AMENDMENT NO. 2 TO THE CRÉDIT AGRICOLE GROUP INFRASTRUCTURE PLATFORM SHAREHOLDERS' AGREEMENT
RELATED PARTIES**

Mr. Olivier Gavalda, Chief Executive Officer, and Mr. Dominique Lefebvre, Mr. Raphaël Appert, Mr. Olivier Auffray, Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mrs. Gaëlle Regnard, Mrs. Nicole Gourmelon, Mrs. Sonia Bonnet-Bernard, Mrs. Carol Sirou, directors of your company, joint directors with the entities concerned.

NATURE AND PURPOSE

The companies CAAS, CACF, CACIB, CAGS, CAPS, CATS, LCL and FNCA signed a shareholders' agreement on 8 June 2018, which concerned in particular the governance rules of Crédit Agricole Group Infrastructure Platform. The signatory partners of the pact and Crédit Agricole Group Infrastructure Platform signed an amendment to the pact on 1 September 2020 to make changes to the governance rules.

The signatory partners of the pact and Crédit Agricole Group Infrastructure Platform have agreed to enter into an amendment No. 2 to the pact in order to adapt the pact following the end of the specific shared costs regime applicable to the Grouping of Means agreement (tax regime known as 261 B) and to update the name of the function "Crédit Agricole Group CIO" in the article relating to the composition of the Board of Directors.

CONDITIONS

Amendment No. 2 takes effect retroactively from 1 July 2025 and does not constitute a novation of the initial agreement, the remainder of which remains unchanged. Amendment No. 2, authorised by the Council on 29 October 2025, was signed in February 2026.

REASONS JUSTIFYING WHY THE COMPANY BENEFITS FROM THIS AGREEMENT

The proposed amendments align the governance of Crédit Agricole Group Infrastructure Platform with the current organisation of Crédit Agricole S.A. and adapt the shareholders' agreement to the changes in the tax framework applicable to Crédit Agricole Group Infrastructure Platform's activities following the modification of the specific shared costs regime.

AGREEMENTS PREVIOUSLY APPROVED BY THE ANNUAL GENERAL MEETING**AGREEMENTS PREVIOUSLY APPROVED DURING PREVIOUS FISCAL YEARS, CONTINUED DURING THE YEAR**

In accordance with Article R. 225-30 of the French Commercial Code (*Code de commerce*), we have been notified that the implementation of the following agreements, which were approved by the Annual General Meeting in prior years, continued during the year ended 31 December 2025.

WITH SACAM PARTICIPATIONS, CRÉDIT AGRICOLE TECHNOLOGIES ET SERVICES, CA-GIP, CACIB, AMUNDI, CRÉDIT AGRICOLE PAYMENT SERVICES, ADICAM, AND LCL**VAT GROUP AGREEMENT OF THE SINGLE TAXABLE PERSON "ASU GROUPE TVA CRÉDIT AGRICOLE"****RELATED PARTIES**

Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mr. Olivier Auffray, and Mrs. Nicole Gourmelon, directors of your company, and Presidents or managers of the companies that are members of the TVA Crédit Agricole group.

NATURE AND PURPOSE

By letter dated 18 October 2022, your Company opted for the creation of a single taxable person for value added tax purpose, with an effective date from 1 January 2023, in accordance with the provisions of Article 256-C of the General Tax Code.

Your Company, a member of the single taxable person, has also agreed to be appointed representative of the single taxable person. This single taxable person is called the "ASU Groupe TVA Crédit Agricole".

Each member has previously agreed by mail for the creation of the Crédit Agricole VAT group as well as for the appointment of your Company as a representative of Crédit Agricole VAT group. Each member has also accepted that your Company exercises, as a representative, the option to create the Crédit Agricole VAT group.

The purpose of the agreement is to set how the Crédit Agricole VAT group operates. It also provides details on calculation methods and operation of the compensation paid to members and to your Company considering the creation of the Crédit Agricole VAT group. It specifies the terms and conditions of compensation for members who have no individual financial interest in joining the Crédit Agricole VAT group but also sets out the rule of distribution of the annual residual net gain which may be recognized by the single taxable person.

The agreement expired on 31 December 2025.

CONDITIONS

The agreement sets out how the equalization fund will operate, enabling Crédit Agricole S.A., as the sole taxable person's representative, to manage all flows relating to compensation and reallocation of profits. The equalization fund is a cash account.

The agreement provides that the residual annual net gain recognized in the VAT Group will be distributed between the entities of the Crédit Agricole S.A. division and those of the mutualist division according to a breakdown specific to the organization of the Crédit Agricole Group.

WITH WORLDLINE**CAWL JOINT VENTURE SHAREHOLDERS AGREEMENT****RELATED PARTIES**

Mr. Olivier Gavalda, Chief Executive Officer and Mr. Jérôme Grivet, Deputy Chief Executive Officer of your company, and directors of Worldline, and Mr. Olivier Desportes, director of your company and director of Estey SAS.

NATURE AND PURPOSE

Your Board of Directors has authorized, during its meeting on 20 June 2023, the conclusion of a framework partnership agreement (the "Framework Agreement") between your Company, Worldline, Crédit Agricole Payment Services, LCL, the 39 Crédit Agricole Mutuel Regional Banks, Réunion Telecom and C2MS, signed on 28 July 2023.

Your Board of Directors authorized, during the same meeting, the conclusion of a shareholders' agreement with a view to setting up a joint venture, named CAWL (the "Joint Venture").

The purpose of the shareholders' agreement signed on 19 March 2024 between your Company, Worldline, Estey SAS and the CAWL is to organize the parties' relations within the joint venture and define their respective rights and obligations as shareholders.

CONDITIONS

The shareholders' agreement provides for:

- the conditions under which the parties cooperate within the Joint Venture;
- the rights and obligations of the parties in relation to the governance of the Joint Venture;
- the rights and obligations of the parties involved in holding and transferring the shares making up the Joint Venture's capital.

The term of the shareholders' agreement is thirty years, renewable by tacit agreement for successive ten-year periods.

WITH CRÉDIT AGRICOLE PAYMENT SERVICES, LCL, AND CRÉDIT AGRICOLE'S REGIONAL BANKS**ESTEY SAS SHAREHOLDERS AGREEMENT****RELATED PARTIES**

Mr. Dominique Lefebvre, Mr. Raphaël Appert, Mr. Olivier Auffray, Mr. Hugues Brasseur, Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mrs. Christine Gandon, Mrs. Nicole Gourmelon, Mr. Pascal Lheureux, Mr. Louis Tercinier and Mr. Éric Vial, Directors of your Company and Chairmen, Chief Executive Officers of directors of Regional Banks party to the agreement.

NATURE AND PURPOSE

Pursuant to the Framework Agreement signed on 28 July 2023, your Company, Crédit Agricole Payment Services, LCL, and Crédit Agricole's 39 Regional Banks created a Holding company ESTEY SAS ("ESTEY SAS"). Its object is to hold all of Crédit Agricole's Group holdings into the Joint Company CAWL with Worldline, specialised in electronic payment services for retailers in France.

In this context, the shareholders of ESTEY SAS and the Fédération Nationale du Crédit Agricole have agreed to sign a Shareholder's Agreement whose purpose is to organize their relations as Shareholders within ESTEY SAS (the "Shareholder's Agreement"). The conclusion of this Shareholders' Agreement was authorised by your Board of Directors at its meeting of 12 December 2023.

CONDITIONS

The Shareholder's Agreement, signed on 12 March 2024, defines the governance of ESTEY SAS and its intervention in the Joint Company's governance, with Worldline. It also structures the financing of the company as well as the transfer of shares and the conditions surrounding the departure of a shareholder. It has been signed for a period of 30 years, renewable by tacit agreement for successive periods of 10 years.

WITH SACAM TRANSITION ÉNERGIE AND CRÉDIT AGRICOLE TRANSITIONS & ÉNERGIES ("CATE")**CRÉDIT AGRICOLE TRANSITIONS & ÉNERGIES ("CATE") SHAREHOLDERS AGREEMENT****RELATED PARTIES**

Mr. Dominique Lefebvre Chairman of the Board of Directors of your Company and Chairman of SACAM Participations, Shareholder of 50% of CATE, and Mr. Olivier Gavalda, Chief Executive Officer of your Company and Director of CATE.

NATURE AND PURPOSE

CATE was created as a simplified joint-stock company on 12 April 2021 with the objective of supporting the transformation of economic actors towards decarbonization and adaptation to climate change and promoting the development of renewable energies and their uses. CATE has been transformed into a public limited company with a Board of Directors, and its articles of association adapted accordingly in order to provide for a legal form more adapted to its development and growth prospects. The share capital has been 50% open to SACAM Transition Énergie owned by Crédit Agricole Mutuel's Regional Banks (the "Regional Banks")

At its meeting of 18 June 2024, your Board of Directors authorized the conclusion of a shareholders' agreement signed on 26 June 2024.

CONDITIONS

The purpose of the agreement is to (i) define the rules governing CATE as soon as it becomes a public limited company, (ii) organize relations between shareholders and (iii) determine the conditions they intend to respect in the event of a transfer of all or part of their stake in CATE capital.

The agreement is for a period of 15 years.

WITH CACEIS**FRAMEWORK AGREEMENT WITH SANTANDER INVESTMENT S.A.****RELATED PARTIES**

Mr. Jérôme Grivet, Deputy Chief Executive Officer of your Company and Director of CACEIS, and Mr. Xavier Musca, Deputy Chief Executive Officer of your Company, Chairman of the Board of Directors and Director of CACEIS.

NATURE AND PURPOSE

Banco Santander S.A. held, through its subsidiary Santander Investment S.A., a 30.5% stake in CACEIS.

Crédit Agricole S.A. has decided to buy back its entire stake in CACEIS from Santander Investment S.A. At its meeting of 8 October 2024, your Board of Directors authorised the conclusion of a framework agreement (the "**Framework Agreement**"), signed on 19 December 2024. CACEIS is a party to the framework agreement signed on 19 December 2024.

CONDITIONS

The purpose of the Framework Agreement is to determine:

- I) the terms and conditions governing the sale to your Company of the shares held by Santander Investment S.A. in CACEIS;
- II) the terms and conditions of certain other agreements, including but not limited to:
 - the extension of the existing cooperation agreements between CACEIS and Santander Asset Management, a subsidiary of Santander, and the signing of new cooperation agreements,
 - the continuation of service agreements by Santander to CACEIS Spain.

On 4 July 2025, your company acquired 30.5% of the CACEIS shares held by Santander for €1.3 billion, and now holds 100% of the capital of CACEIS.

This transaction results in an increase of €1.3 billion in the shares in affiliated companies in the annual financial statements and in the reclassification of the net income share of minority interests for the first half of 2025 to income group share for €79 million in the consolidated financial statements of Crédit Agricole S.A. and the Crédit Agricole Group as of 31 December 2025.

WITH CA INDOSUEZ**FRAMEWORK AGREEMENT WITH CA INDOSUEZ (IN RELATION WITH THE ACQUISITION OF DEGROOF PETERCAM)****RELATED PARTIES**

Mr. Éric Vial, and Mrs. Marie-Claire Daveu, Directors of your Company and CA Indosuez.

NATURE AND PURPOSE

As part of the acquisition by CA Indosuez of a majority stake in Banque Degroof Petercam, your Company, CA Indosuez Wealth (Europe) S.A. (which was replaced by CA Indosuez) and CLdN Finance S.A., minority shareholder of Banque Degroof Petercam, signed a liquidity contract (the "**Liquidity Contract**") on 2 August 2023 in order to determine the liquidity mechanisms for CLdN Finance S.A.

The Liquidity Contract provides for the possibility for CLdN Finance S.A. to exercise a right of exchange ("**Put**") on the shares of Banque Degroof Petercam that it holds ("**CLdN Shares**") for shares of your Company ("**CASA Shares**"), thus entailing a transfer of the CLdN Shares to CA Indosuez or any other "Affiliate" company (as defined in the Liquidity Agreement), including your Company.

In this context, your Company and CA Indosuez have agreed to sign an agreement in principle (the "**Agreement**") aimed at formalising your Company commitment to exchange shares in respect of the Put at the time of its exercise by CLdN Finance S.A. The conclusion of this Agreement was authorised by your Board of Directors at its meeting of 17 December 2024.

CONDITIONS

The Agreement formalizes your Company commitment to receive the CLdN Shares and to deliver the CASA Shares in exchange according to the terms defined in the Liquidity Agreement, thereby releasing CA Indosuez from its commitment under the Put. It also specifies the procedures for notifying the exercise of the Put and for exchanging shares.

The Agreement was signed on 18 December 2024.

WITH WORLDLINE, CRÉDIT AGRICOLE PAYMENT SERVICES, LCL AND CRÉDIT AGRICOLE'S REGIONAL BANKS**FRAMEWORK PARTNERSHIP AGREEMENT WITH WORLDLINE****RELATED PARTIES**

Mr. Olivier Gavalda, Chief Executive Officer of your company and Mr. Jérôme Grivet, Deputy Chief Executive Officer of your company and of the directors and of Worldline, Mrs. Nicole Gourmelon and Mr. Dominique Lefebvre, Mr. Raphaël Appert, Mr. Olivier Auffray, Mr. Hugues Brasseur, Mr. Pierre Cambefort, Mr. Jean-Pierre Gaillard, Mr. Pascal Lheureux, Mr. Louis Tercinier and Mr. Éric Vial, Chairmen or Chief Executive Officers of Regional Banks that are parties to the agreement, also directors of your company.

NATURE AND PURPOSE

On 20 June 2023, your Board of Directors authorized the signing of a framework partnership agreement between Worldline, your Company, Crédit Agricole Payment Services, LCL, the 39 Regional Banks of Crédit Agricole and AVEM (the "Framework Agreement").

The signing of this Framework Agreement is part of the partnership project between your Company and Worldline, which was the subject of a non-binding exclusive negotiation agreement signed between your Company and Worldline on 18 April 2023 (press release dated 19 April 2023).

The ambition of your Company and Worldline is to establish a strategic partnership in the field of merchant electronic payment services in France in the form of a commercial, industrial and capital partnership organized around a joint company (the "Joint Company") intended to be jointly owned by the partners (directly and/or indirectly via their respective affiliates concerned).

The Framework Agreement formalizes the implementation conditions and operational principles of the partnership. The signing of the Framework Agreement is subject to the related party agreement procedure due to the common directors to Worldline and your Company.

CONDITIONS

The partnership materialize through the creation of a joint company, which would be majority-owned (50% of the share capital plus one share), and fully consolidated by Worldline. The Framework Agreement shall specify the terms of the partnership and in particular the respective commitments of the Parties under the successive phases of the partnership as described below:

- the first phase (2023-2024) took the form of a commercial partnership enabling the needs of French and foreign traders established in France to be met as quickly as possible through joint commercial responses, in particular through the creation of a joint company;
- the second phase (starting in 2025) would take the form of a merchant electronic payment services industrial partnership combining acceptance and acquisition services, through the joint company, after obtaining the regulatory approvals necessary for its activity and subject to the fulfilment of certain technical conditions defined in the Framework Agreement.

The Framework Agreement also defines the reciprocal exclusivity commitments between the parties, the scope of the partnership as well as the characteristics of the joint company and its relationships with the partners.

The Framework Agreement was signed on 28 July 2023.

WITH CAAS, CACF, CACIB, CAGS, CAPS, CATS, LCL AND FNCA**CRÉDIT AGRICOLE GROUP INFRASTRUCTURE PLATFORM SHAREHOLDERS' AGREEMENT****RELATED PARTIES**

Messrs Philippe Brassac, Olivier Gavalda and Xavier Musca, Chief Executive Officers and Deputy Chief Executive Officer of your Company, Sonia Bonnet-Bernard, Nicole Gourmelon, and MM. Dominique Lefebvre, Raphaël Appert, Olivier Auffray, Pierre Cambefort, Jean-Pierre Gaillard, Louis Tercinier, and Éric Vial, directors of your Company and interlocking directors or senior executives with the relevant entities.

NATURE AND PURPOSE

Authorized by the Board of Directors held on 14 May 2018, the plan to create Crédit Agricole Group Infrastructure Platform was accompanied by two related party agreements authorized by the Board of Directors of your Company at the same meeting, one relating to the Memorandum of Understanding, the other on the Shareholders' Agreement.

Under the terms of the Memorandum of Understanding, some of the parties have agreed to set up a new company, Crédit Agricole Group Infrastructure Platform, which carries the project relating to the merger of certain infrastructure and IT production activities of Credit Agricole group.

Crédit Agricole Group Infrastructure Platform was formed to acquire on 1 January 2019, SILCA and the IT production activities of CATS, Crédit Agricole CIB in France and CAAS. It is intended to accommodate the IT production activities of other Crédit Agricole group entities. The associated parties together hold 100% of Crédit Agricole Group Infrastructure Platform's share capital and voting rights.

In this context, the parties wished, through this shareholders' agreement, to:

- complete the rules of governance of the company provided for in the Articles of Association;
- organise their relations as Shareholders;
- determine the conditions they intend to comply with in the event of a transfer of all or part of their stake in Crédit Agricole Group Infrastructure Platform's capital.

The shareholders' agreement relating to Crédit Agricole Group Infrastructure Platform sets out, in particular, the following specific governance rules for Crédit Agricole Group Infrastructure Platform: a Board of Directors made up 50/50 between Crédit Agricole Regional Banks and their subsidiaries or IT production entities and Crédit Agricole Group with a President from S.A.S. Rue La Boétie, also Chairman of the Board of Directors appointed on the proposal of the Regional Banks and a Chief Executive Officer appointed on the proposal of Crédit Agricole Group.

Statutory Auditors' report on related party agreements

Noting, in addition to the presence of common Managers and Directors, that the governance rules described above do not reflect the planned capital distribution between Crédit Agricole Regional Banks and their subsidiaries (36%) and Crédit Agricole group (64%), this Agreement was considered to constitute a regulated agreement within the meaning of the provisions of the French Commercial Code. It was authorized by the Board of Directors at its meeting on 14 May 2018.

CONDITIONS

The shareholders' agreement specifies the governance rules of Crédit Agricole Group Infrastructure Platform, both as regards the management body in its executive functions and in its supervisory functions, as well as of the subsidiary to be set up provided for in the memorandum of understanding. agreement. It organizes, in particular, the rules relating to the financing of Crédit Agricole Group Infrastructure Platform and the transfer of securities, as well as the possible conditions of exit of a shareholder and the conditions under which the services of the company will be provided.

The Shareholders' Agreement was signed on 8 June 2018.

AMENDMENT TO THE CAGIP SHAREHOLDERS' AGREEMENT**RELATED PARTIES**

Messrs Philippe Brassac and Xavier Musca, Chief Executive Officer and Deputy Chief Executive Officer of your Company, and Messrs Dominique Lefebvre, Raphaël Appert, Pierre Cambefort, and Jean-Pierre Gaillard, directors of your company and interlocking directors of the relevant entities and/or having an indirect interest in the Loan Agreement by virtue of their duties within the Crédit Agricole Group.

NATURE AND PURPOSE

CAAS, CACF, CACIB, CAGS, CAPS, CATS, LCL, and FNCA signed the Shareholders' Agreement on 8 June 2018, which notably concerned Crédit Agricole Group Infrastructure Platform's governance rules.

The signatory partners and Crédit Agricole Group Infrastructure Platform have agreed to conclude a draft amendment to the Shareholders' Agreement in order to make changes to the rules of governance. This amendment was signed on 1 September 2020.

CONDITIONS

The following modifications were made to the Shareholders' Agreement:

- Article 1.1 – Defined terms;
- Article 2.4.1.(a) – Composition of the Board of Directors;
- Article 2.4.2.(c) – Vice-Chair of the Board;
- Article 2.4.6.(b) – The Board of Directors Quorum;
- Article 2.4.9.1.(c) – Composition of the Audit and Finance Committee;
- Article 2.4.9.1.(d) – Chairmanship of the Audit and Finance Committee;
- Article 2.4.9.2.(c) – Composition of the Risk and Safety Committee;
- Article 2.5 – Technical Committees.

The proposed modifications facilitate the functioning of Crédit Agricole Group Infrastructure Platform's Board of Directors and the appointment of presidents of the specialized committees.

WITH THE FÉDÉRATION NATIONALE DES SYNDICATS D'EXPLOITANTS AGRICOLES (FNSEA)**FRAMEWORK AGREEMENT RELATED TO THE SOCIAL PROJECT****RELATED PARTIES**

Mrs. Christiane Lambert, director of your Company and President of the FNSEA until 13 April 2023, and Mr. Arnaud Rousseau, director of your Company and President of FNSEA since 13 April 2023.

NATURE AND PURPOSE

On 1 December 2021, Crédit Agricole group announced that its Social Project would include the launching of a program for environmental and social action consisting of ten commitments around three pillars: preventing climate change and promoting the transition to a low-carbon economy, strengthening social cohesion and inclusion, and furthering the agricultural and agri-food transitions.

As France's leading bank for agriculture and agribusiness, your Group aims to support these sectors in their efforts to combat climate change. To assist it in planning, preparing and deploying this program, your Company, in its capacity as the central body of Crédit Agricole Group, is considering using the expertise, skills and know-how of FNSEA, France's largest agricultural trade association.

CONDITIONS

The purpose of the Framework Agreement is to set forth the general principles for the provision of the following services by the FNSEA on behalf of your Company and the entities of Crédit Agricole Group:

- conducting and providing surveys and consulting services on employment in the agricultural sector (€250 thousand);
- subscription to a comprehensive legal consulting service (€130 thousand);
- subscription to a document database of expertise on agricultural issues (€160 thousand);
- subscription to the Actuagri document database (€150 thousand);
- communication partnership services (€250 thousand).

WITH CACIB**TAX CONSOLIDATION AGREEMENT****RELATED PARTIES**

Mr Olivier Gavalda, Chief Executive Officer, and Ms. Carol Sirou and Ms. Sonia Bonnet-Bernard, directors of your company and directors of CACIB.

NATURE AND PURPOSE

At its meeting of 10 February 2021, the Board of Directors renewed the tax consolidation agreement between Crédit Agricole S.A. and CACIB agreed in 1996, which among other things set forth the allocation of the corporate income tax liability between Crédit Agricole S.A., on the one hand, and CACIB and its consolidated subsidiaries on the other. This tax consolidation agreement between Crédit Agricole S.A. and CACIB and its consolidated subsidiaries was renewed for the period from 2020 to 2024, with effect as of 1 January 2020.

Under this agreement CACIB is entitled to the tax savings realised by the Crédit Agricole Group up to the amount of its individual taxable loss as recognised by the Group. At its meeting of 15 November 2016, the Board of Directors authorised the execution of an addendum to the tax consolidation agreement between Crédit Agricole S.A. and CACIB that entitles the latter to the tax savings arising from the taxable loss of the entire sub-group, as recognised by Crédit Agricole S.A. in its capacity as the head of the tax group.

CONDITIONS

At its meeting of 16 December 2025, your Board of Directors approved the tacit renewal of this agreement as of 1 January 2025 for a period of four years.

The provisional amount of tax savings for the year 2025 is €226.5 million due to the tax loss of the CACIB sub-group. The amount of the final compensation for the previous year amounts to €115.9 million.

SHARED FINE AGREEMENT**RELATED PARTIES**

Philippe Brassac, Chief Executive Officer of your Company and Chairman of CA-CIB, Mrs. Carol Sirou and Mrs. Sonia Bonnet-Bernard, directors of your company and directors of CACIB.

NATURE AND PURPOSE

On 7 December 2016, the European Commission jointly condemned your Company and Crédit Agricole CIB to a fine of €114.654 million following a Commission investigation concluding that there was an agreement between seven banking institutions on interest rate derivatives in euros by agreeing on the fixing of the reference interest rate that is EURIBOR.

The charges allegedly took place between September 2005 and May 2008. As soon as the Commission's decision was delivered, your Company announced that it would appeal to the General Court of the European Union. The motion to quash was filed on 17 February 2017.

As the appeal was not suspensive, your Company had to pay the full amount of the fine before 5 March 2017. Under the terms of an agreement concluded with Crédit Agricole CIB, your Company has agreed to pay the entire penalty on behalf of the two jointly condemned institutions and deferring the distribution between the two companies of the fine payment to the decision of the judicial authorities of the European Union.

CONDITIONS

At its meeting of 20 January 2017, your Board of Directors authorized the draft agreement between your Company and Crédit Agricole CIB under the terms of which:

- pending a decision having the authority of *res judicata* in the last instance, your Company assumed and paid the sum of €114,654,000 for the penalty;
- the distribution final terms of the final amount of the possible penalty to be agreed at a later date by mutual agreement between your Company and Crédit Agricole CIB, once a decision having the force of *res judicata* in the last instance has been adopted.

The agreement was authorized in identical terms by the Board of Directors of Crédit Agricole CIB on 10 February 2017. It constitutes a formal measure to organize the distribution of the joint and several sentences, without prejudging the results of the appeals initiated.

In accordance with the delegation granted by their respective boards, it was signed on 27 February 2017 by the Chief Executive Officer of your Company and of Crédit Agricole CIB. The penalty was settled within the legal deadlines, i.e., before 5 March 2017. On 20 December 2023, the General Court of the European Union issued its decision, which reduces the amount of fine to €110,000,000, and excluded certain conduct issues that were attributed to your Company and Crédit Agricole CIB.

On 19 March 2024, your Company and Crédit Agricole CIB have decided to appeal the decision before the European Union Court of Justice. The European Commission has also appealed the decision for the annulment of the European Union Tribunal's decision.

WITH CRÉDIT AGRICOLE REGIONAL BANKS OF AQUITAINE AND ANJOU ET DU MAINE**LOAN AGREEMENTS****NATURE AND PURPOSE**

On 19 May 2016, your Board of Directors authorized the signing of the loan contracts granted as part of the “Eureka” transaction between your Company and Crédit Agricole Regional Banks, with the choice for them between different reimbursement options, it being specified that, regardless of the option chosen by a Regional Bank, the average cost of its financing remained equal to 2.15% per annum under the following conditions:

- total loan of €11 billion at a fixed rate of 2.15% over ten years;
- semi-annual early repayment option from the fourth year, subject to a twelve-month notice.

At its meeting of 2 August 2017, your Board of Directors authorized the signing of amendments to these loan agreements. The amendments to the senior loan contracts modified the structure of the financing granted by your Company, which offered Crédit Agricole Regional Banks to buy back the early repayment option, this buyback taking the form of a rate reduction in return of the setting by each Regional Bank of a firm repayment schedule.

CONDITIONS

The refinancing schedule offered to Crédit Agricole Regional Banks has been the subject of a fairness certificate from an external firm.

Crédit Agricole Regional Banks had the option of keeping the initial financing structure or replacing it with one or more financing on the maturities of their choice from the table below (depending on the market conditions in force on 4 July 2017). The proposed yield drop was between 35 basis points and 56 basis points, corresponding to the estimated management cost of 50 basis points for your Company from the outset.

Loan maturity	Bullet fixed rate (%)
3 August 2020	1.80
3 August 2021	1.64
3 August 2022	1.59
3 August 2023	1.60
3 August 2024	1.67
3 August 2025	1.75
3 August 2026	1.84

The amendments were signed on 10 October 2017. The total amount of financing offered to Crédit Agricole Regional Banks concerned by the regulated nature of these agreements is €3.391 billion.

As of 1 September 2025, all loans having expired, all agreements are terminated.

WITH CACEIS**ADDENDUM NO. 2 TO CACEIS SHAREHOLDERS' AGREEMENT SIGNED ON 20 DECEMBER 2019****RELATED PARTIES**

Mr. Jérôme Grivet, Deputy Chief Executive Officer of your Company and Director of CACEIS and Mr. Xavier Musca, Deputy Chief Executive Officer of your Company and Chairman of CACEIS Board of Directors.

NATURE AND PURPOSE

On 20 December 2019, a shareholders' agreement was concluded between your Company, Banco Santander, S.A., Santander Investment, S.A., CACEIS, CACEIS Bank and CACEIS Bank Spain to define the terms and conditions of (i) governance of CACEIS group and (ii) transfers of shares of CACEIS group companies. This shareholders' agreement was amended on 15 November 2021 (hereinafter both together designated as the “Shareholders' Agreement”)

The Addendum No. 2 to CACEIS shareholders' agreement was signed on 19 December 2023.

CONDITIONS

The addendum aims at amending the Agreement so that the minimum number of Board of Directors' meetings of CACEIS, CACEIS Bank and CACEIS Bank Spain, S.A.U. would be reduced to four meetings per calendar year.

The addendum also aims at amending the Agreement by removing the obligation to set up a CACEIS Bank Spain, S.A.U. strategic committee. It further provides that, in the event of a change in applicable laws, related parties to the Agreement will ensure that directors set up a strategic committee.

As of 7 July 2025, the date of the acquisition of Santander Investment's stake in CACEIS by Crédit Agricole S.A., the CACEIS shareholders' agreement, as well as its amendment, expired.

DEFINITIONS

ACCRETION

A transaction is described as "accretive" when it increases the portion of net asset value (e.g. net book value per share) or earnings (e.g. earnings per share) attributable to each share in the company.

ALIGNED ASSETS

Eligible assets listed in the Climate Delegated Acts become aligned assets if they meet the following criteria:

- contribute substantially to one or more of the environmental targets;
- do not cause significant harm to any of the other environmental targets;
- respect certain minimum social guarantees.

ALM ASSET AND LIABILITY MANAGEMENT

Management of the financial risks borne by an institution's balance sheet (interest rate, currency, liquidity) and its refinancing policy in order to protect the bank's asset value and/or its future profitability.

APM INDICATOR ALTERNATIVE PERFORMANCE INDICATOR

APM indicators are financial indicators not presented in the financial statements or defined in accounting standards but used in the context of financial communications, like the underlying Net Income Group Share or the Return on Tangible Equity, as per example. They are used to develop a better understanding of the Company's actual performance. Each APM indicator is defined in relation to accounting data.

ASSET ENCUMBRANCE

Asset encumbrance corresponds to assets used to secure, collateralise or back up a credit facility for any type of transaction.

ASSET MANAGEMENT

Management of negotiable or other assets, for the manager's own account or for third-party (institutional or retail) investors. In third-party asset management, assets are managed in funds or in the framework of management mandates. Specialised products are offered to meet the range of customer expectations in terms of geographical and sector diversification, short-term or long-term investing and the desired level of risk.

ASSETS UNDER MANAGEMENT

Operating activity indicator not reflected in the Group's consolidated financial statements, reflecting the assets marketed by the Group, whether they are managed, advised or delegated to an external fund manager. Assets under management are measured for each fund by multiplying the net asset value per unit (as calculated by an external appraiser in line with the applicable regulations in force) by the number of units/shares outstanding. Amundi fully consolidates all the assets under management by its joint ventures.

AT1 ADDITIONAL TIER 1 CAPITAL

Additional Tier 1 capital eligible under Basel 3 made up of perpetual debt instruments without any redemption incentive or obligation. It is subject to a loss absorption mechanism where the CET1 ratio falls below a given threshold, fixed in their prospectus.

BASEL 3

Regulatory standards for banks, which replace the previous Basel 2 agreements by increasing the quality and quantity of the minimum equity that banks are required to hold against the risk they take. It also introduces minimum standards for liquidity risk management (quantitative ratios), defines measures attempting to curb the financial system's pro-cyclicality (capital buffers varying according to the economic cycle) and tightens the requirements on institutions considered as systemically important. In the European Union, these prudential standards have been implemented through Directive 2013/36/EU as amended (versions CRD4 to CRD6 – Capital Requirements Directive) and Regulation (EU) No. 575/2013 as amended (versions CRR to CRR3 – Capital Requirements Regulation).

BASIS POINT (BP)

A basis point is equal to 0.01% or 1/10,000.

CCA COOPERATIVE ASSOCIATE CERTIFICATE – CERTIFICAT COOPÉRATIF D'ASSOCIÉS

Unlisted securities, which may be traded over the counter and may be issued only by cooperative companies. They may be subscribed by the mutual shareholders of the issuing Regional Banks and affiliated Local Banks. A CCA does not carry voting rights but gives its holders rights to a share of the net assets and to receive dividends.

CCI COOPERATIVE INVESTMENT CERTIFICATE – CERTIFICAT COOPÉRATIF D'INVESTISSEMENT

Securities quoted on the stock exchange that do not carry voting rights and may be issued only by cooperative companies. A CCI gives its holders rights to a share of the net assets and to receive a dividend payment.

CENTRAL BANK POLICY RATE

Interest rate set by a country's or currency zone's Central Bank to regulate economic activity. Principal tool in a central bank's arsenal for fulfilling its role of regulating economic activity: inflation in the case of the European Central Bank (ECB); inflation and growth stimulation in the case of the US Federal Reserve (Fed).

COLLATERAL

A transferable asset or a guarantee that provides security for the repayment of a loan, should the recipient of the loan fail to meet their repayment obligations.

CORPORATE GOVERNANCE

Any mechanism that can be implemented to achieve transparency, equality between shareholders and a balance of powers between management and shareholders. These mechanisms encompass the methods used to formulate and implement strategy, the operation of the Board of Directors, the organisation framework between different governing bodies and the compensation policy for executives and executive managers.

COST/INCOME RATIO

The cost/income ratio is calculated by dividing operating expenses by revenues, indicating the proportion of revenues needed to cover operating expenses.

COST OF RISK

The cost of risk reflects additions to and reversals from provisions for all bank-related risk, particularly credit and counterparty risk (loans, securities and off-balance sheet commitments).

COST OF RISK/OUTSTANDINGS⁽¹⁾

Calculated by dividing the cost of credit risk (over four quarters on a rolling basis) by outstandings (over an average of the past four quarters, beginning of the period). Can also be calculated by dividing the annualised cost of credit risk for the quarter by outstandings at the beginning of the quarter. Similarly, the cost of risk for the period can be annualised and divided by the average outstandings at the beginning of the period.

Since the first quarter of 2019, the outstandings taken into account are the customer outstandings, before allocations to provisions.

The calculation method for the indicator is specified each time the indicator is used.

CRÉDIT AGRICOLE GROUP

This group consists of Crédit Agricole S.A., the Regional Banks and the Local Banks.

CRÉDIT AGRICOLE S.A.

Listed company of Crédit Agricole Group. This group has Crédit Agricole S.A. Parent Company as its parent company. Its consolidation scope perimeter includes subsidiaries, joint ventures and associates that it holds directly or indirectly.

CRÉDIT AGRICOLE S.A. PARENT COMPANY

The legal entity that acts as the corporate centre and head of the Crédit Agricole network and ensures that the Group acts as a single financial unit.

CREDIT RATING

Measurement of credit quality in the form of an opinion issued by a rating agency (Standard & Poor's, Moody's, Fitch Ratings etc.). The rating may apply to a specific issuer (business, government, public-sector authority) and/or specific issues (bonds, securitised notes, secured bonds etc.). The credit rating may influence an issuer's borrowing terms (interest rate it pays, its access to funding) and its market image (see Rating agency).

CREDIT SPREAD

Actuarial margin (difference between a bond's yield to maturity and that on a risk-free borrowing with an identical maturity).

CSRD CORPORATE SUSTAINABILITY REPORTING DIRECTIVE

The European CSRD was published on 16 December 2022 in the *Official Journal of the EU*. This text, which provides for the creation of detailed European Sustainability Reporting Standards (ESRS), aims to frame and harmonise corporate publications.

CVA CREDIT VALUATION ADJUSTMENT

Expected loss arising from the risk of a counterparty default which aims at building in the possibility that the full positive market value of instruments may not be recovered. The methodology used to determine the CVA is based largely on the same type of market parameters that market participants use.

DILUTION

A transaction is described as "dilutive" when it reduces the portion of net asset value (e.g. net book value per share) or earnings (e.g. earnings per share) attributable to each share in the company.

DIVIDEND

Portion of net income or reserves paid out to shareholders. The Board of Directors proposes the dividend to be voted on by shareholders at the Annual General Meeting, after the financial statements for the year ended have been approved.

⁽¹⁾ Alternative performance indicator.

DOUBTFUL LOAN

A doubtful loan is a defaulting loan. The debtor is considered to be in default when at least one of the following two conditions has been met:

- a payment generally more than ninety days past due, unless specific circumstances point to the fact that the delay is due to reasons independent of the debtor's financial situation;
- the entity believes that the debtor is unlikely to settle its credit obligations unless it avails itself of certain measures such as enforcement of collateral security right.

DVA DEBIT VALUATION ADJUSTMENT

Symmetrical to the CVA and represents the expected loss from the counterparty's perspective on passive valuations of financial instruments. It reflects the impact of the entity's own credit risk on the valuation of these instruments.

EAD EXPOSURE AT DEFAULT

Exposure at default: this is the Group's exposure should the counterparty default. The EAD includes on- and off-balance sheet exposures. Off-balance sheet exposures are converted into balance sheet equivalents using internal or regulatory conversion factors (draw-down scenarios).

EL EXPECTED LOSS

Loss likely to be incurred depending on the quality of the counterparty in view of the structure of the transaction and any risk mitigation measures, such as collateral. It is computed by multiplying the exposure at default (EAD) by the probability of default (PD) and by the loss given default (LGD).

"ELIGIBLE" AND "NON-ELIGIBLE" ASSETS

Eligible assets are assets listed in the Climate Delegated Acts as being able to meet at least one of the six environmental targets (climate change mitigation, climate change adaptation, sustainable use and protection of water and marine resources, transition to a circular economy, pollution prevention and control, protection and restoration of biodiversity and ecosystems). Other assets are called "non-eligible".

EPS EARNINGS PER SHARE⁽¹⁾

This is the net income Group share, from which the AT1 coupon has been deducted, divided by the average number of shares in issue excluding treasury shares. It indicates the portion of profit attributable to each share (not the portion of earnings paid out to each shareholder, which is the dividend). It may decrease, assuming the net income Group share remains unchanged, if the number of shares increases (see Dilution).

FCP FONDS COMMUN DE PLACEMENT - MUTUAL FUND

Type of UCITS that issues units and does not have legal personality. By acquiring units, investors gain co-ownership of the securities, but do not have any voting rights. They are not shareholders. An FCP mutual fund is represented and managed from an administrative, financial and accounting perspective by a single management company, which may delegate these tasks.

FCPE FONDS COMMUN DE PLACEMENT D'ENTREPRISE - EMPLOYEE MUTUAL FUND

Employee savings vehicle used by companies offering this type of arrangement to their employees. Savers hold units in FCP mutual funds that are allotted in return for their payments and any top-up payments made by their employer (employer contribution).

FINTECH FINANCE, TECHNOLOGY

A FinTech is a non-banking company that uses information and communication technologies to deliver financial services.

FREE FLOAT

Percentage of a listed undertaking's share capital held by non-core shareholders. Non-core shareholders means any shareholders likely to buy or sell the shares at any time without having to worry about the effects of their decision on the control of the business and not bound by a contract limiting their right of disposal (e.g. shareholders' agreement). Shares held by retail investors (including employees) and by institutional investors (SICAV and FCP mutual funds, pension funds, and insurance companies) are included in the free float. In contrast, the investment held by a majority shareholder is not included in the free float.

FRED FIDES, RESPECT, DEMETER

Initiative to implement, manage and measure the progress made by the Corporate Social Responsibility (CSR) programme. FReD has three pillars with 19 commitments that aim to bolster trust (*Fides*), grow individuals and the corporate ecosystem (*Respect*) and protect the environment (*Demeter*). Since 2011, the FReD index has measured the progress made by Cr dit Agricole S.A. and its subsidiaries in the area of CSR on an annual basis. PricewaterhouseCoopers conducts an annual audit of this index.

FSB FINANCIAL STABILITY BOARD

The Financial Stability Board's remit is to identify vulnerabilities in the global financial system and establish principles serving as a basis for the regulation and oversight of financial stability. It is made up of the governors, finance ministers and supervisors of G20 countries. Its primary objective is to coordinate at international level the work of the national financial authorities and of the international standard-setters in the regulation and supervision of financial institutions. Founded at the G20 meeting in London in April 2009, the FSB is the successor to the Financial Stability Forum set up by the G7 in 1999.

GAR GREEN ASSET RATIO

Proportion of assets invested in sustainable economic activities according to the classification of the European Green Taxonomy.

GFANZ GLASGOW FINANCIAL ALLIANCE FOR NET ZERO

Umbrella body of various international net zero alliances. Set up in 2021 ahead of the COP26 climate change conference in Glasgow, it aims to coordinate the efforts made within the financial sector to achieve the climate-related goals of the Paris Agreement. The alliances under the GFANZ umbrella include the Net-Zero Banking Alliance (banks), the Net-Zero Asset Managers Initiative (asset managers) and the Net-Zero Asset Owner Alliance (institutional investors).

GOODWILL

Amount by which the purchase price of a business exceeds the value of the net assets revalued at the time of acquisition. Every year, goodwill must be subject to an impairment test, and any reduction in its value is recognised in the income statement.

GOI GROSS OPERATING INCOME

Calculated as revenues less operating expenses (operating expenses, such as employee expenses and other administrative expenses, depreciation and amortisation).

GREEN BONDS

Bonds issued by a qualified entity (business, local authority or international organisation) to finance projects or activities with an environmental benefit. These instruments are for example used in connection with the financing of sustainable agriculture, renewable energy and energy-efficient real estate.

HPSP HOME PURCHASE SAVING PLANS

The Home Purchase Saving Plan provision represents the provision set up for payment into housing savings plans that benefit from an attractive interest rate and may be closed in the short term by their holders.

⁽¹⁾ Alternative performance indicator.

HQLA HIGH-QUALITY LIQUID ASSETS

Assets are categorised as High-Quality Liquid Assets (HQLA), as defined by Capital Requirements Directive (CRD) IV, if they can be converted into cash quickly and easily without – or with minimum – loss of value, and, in general, if they can be mobilised in the central bank to obtain financing. The main characteristics of High-Quality Liquid Assets are: 1) low risk and volatility, 2) ability to be valued with ease and certainty, 3) low correlation with higher-risk assets, and 4) listed on a recognised and sizeable developed market. The stock of High-Quality Liquid Assets, for the portion not already used as collateral, constitutes the numerator of the short-term liquidity ratio (Liquidity Coverage Ratio [LCR] – required liquidity in a stress scenario for a month), according to the same regulation.

IFRIC 21 ADJUSTMENT

The IFRIC 21 adjustment allows expenses recognised in the accounts to be deferred in their entirety as soon as they become due (the obligating event being determined by accounting standards) so that only the portion relating to the current quarter is recognised, that is, one quarter of the total for a quarter.

IMPAIRED LOAN

Loan which has been provisioned due to a risk of non-repayment.

IMPAIRED (OR NON-PERFORMING) LOAN COVERAGE RATIO

This ratio divides the outstanding provisions by the impaired gross customer outstandings.

IMPAIRED (OR NON-PERFORMING) LOAN RATIO

This ratio divides the gross customer outstandings depreciated on an individual basis, before provisions, by the total gross customer outstandings.

INSTITUTIONAL INVESTORS

Businesses, public-sector bodies and insurance companies involved in securities investment, for example, investing in the shares of listed companies. Pension funds and asset management and insurance companies come under this heading.

ISSUER SPREAD

Actuarial margin representing the difference between the actuarial rate of return at which the Group can borrow and that of a risk-free loan of identical duration.

LCR LIQUIDITY COVERAGE RATIO - ONE-MONTH LIQUIDITY RATIO

This one-month ratio aims to enhance the short-term resilience of a bank's liquidity risk profile. The LCR obliges banks to hold sufficient risk-free, highly liquid assets (see HQLA) to cover outflows, net of inflows, assessed under stressed assumptions, to see it through a crisis period of 30 days without relying on any support from Central banks.

LEVERAGE RATIO

A voluntarily simple ratio that is intended to control the size of establishments' balance sheets. To do this, the leverage ratio compares the prudential Tier 1 capital, the balance sheet and the off-balance sheet after restatement of certain items.

LGD LOSS GIVEN DEFAULT

Ratio between the loss experienced on an exposure on a counterparty at default and the size of the exposure at default.

LOAN BOOK HEDGES (CREDIT PORTFOLIO MANAGEMENT - CPM)

The impact of loan portfolio hedges of the Large Customer Division is based on market movements in credit risk hedging and the level of reserves linked to the market movements.

MREL MINIMUM REQUIREMENT FOR OWN FUNDS AND ELIGIBLE LIABILITIES

The MREL ratio is defined in the European Bank Recovery and Resolution Directive and corresponds to a Minimum Requirement for Own Funds and Eligible Liabilities (MREL) that must be available to absorb losses in the event of a bank resolution.

MUTUAL SHAREHOLDERS

Holders of mutual shares, which make up the capital of the Local Banks. The Local Banks, through the mutual shareholders, own the share capital of the Regional Bank with which they are affiliated. They receive returns in respect of their mutual shares, the interest rate of which is capped by law. The mutual shareholders come together once a year at the Annual General Meeting at which they approve the financial statements of the Local Banks and elect its directors. Each mutual shareholder has one vote at these General Meetings, irrespective of the number of mutual shares that she/he owns.

MUTUAL SHARES

Portion of the capital of a Local Bank or Regional Bank. Mutual shares receive an annual interest payment. units are reimbursed at their par value and give no right to reserves or to liquidation proceeds.

NATURE, BIODIVERSITY AND NATURAL CAPITAL

Nature is a broader concept than biodiversity; it includes non-living elements of the physical world, such as water, land, minerals and air. Biodiversity is part of nature and refers to all living things. According to the Convention on Biological Diversity (CBD), the three levels of life are: ecosystems, species and genetic resources. Natural capital is a store of renewable and non-renewable resources which, in combination, provide services to humanity.

NBV NET BOOK VALUE NOT REVALUED⁽¹⁾

The Net Book Value not revalued corresponds to the equity Group share from which the amount of the AT1 issues, the unrealised gains and/or losses on OCI Group share and the pay-out assumption on annual results have been deducted.

NBV PER SHARE NET BOOK VALUE PER SHARE/NTBV PER SHARE NET TANGIBLE BOOK VALUE PER SHARE⁽¹⁾

One of the methods for calculating the value of a share. This represents the Net Book Value (see below) divided by the number of shares in issue at end of period, excluding treasury shares.

Net Tangible Book Value per share represents the Net Book Value after deduction of intangible assets and goodwill, divided by the number of shares in issue at end of period, excluding treasury shares.

NET INCOME GROUP SHARE

Net income/(loss) for the financial year (after corporate income tax). Equal to net income less the share attributable to non-controlling interests in fully consolidated subsidiaries.

NET INCOME GROUP SHARE ATTRIBUTABLE TO ORDINARY SHARES⁽¹⁾

The net income Group share attributable to ordinary shares represents the net income Group share from which the AT1 coupon has been deducted, including issuance costs before tax.

NET INTEREST MARGIN

Net interest margin, sometimes referred to as net interest income, is the difference between revenues generated by interest-bearing assets and the cost of managing liabilities.

NON-FINANCIAL RATING AGENCY

Organisation specialised in qualitatively and quantitatively assessment of economic actors according to environmental, social and governance criteria, and using a specific form of rating.

⁽¹⁾ Alternative performance indicator.

NPS NET PROMOTER SCORE

Index measuring how likely customers are to recommend their bank to their family and friends. Based on polling conducted every quarter, this index reflects the number of customers who are critical of, neutral on or willing to promote the bank.

NSFR NET STABLE FUNDING RATIO – ONE-YEAR LIQUIDITY RATIO

Ratio intended to promote longer-term resilience through the introduction of additional incentives for banks to fund their activities using more stable resources of finance (namely with longer maturities). This structural liquidity ratio covering a one-year period has been designed to limit the funding of long-term assets by short term resources.

OPERATING INCOME

Calculated as gross operating income less the cost of risk.

P/E RATIO PRICE/EARNINGS RATIO

Ratio of the share price to Earnings Per Share (EPS). For shareholders, it represents the number of years' earnings needed to recoup their initial investment. It is an indicator used to compare the value of different stocks, for example, within the same business sector. A high P/E rating reflects expectations of strong earnings growth or a situation where a company's value is not fully reflected in its earnings (e.g. it may have substantial cash holdings). If a company has a P/E of 15, it is said to capitalise its earnings 15 times.

RAISON D'ÊTRE

Crédit Agricole Group's *Raison d'Être*, adopted as a permanent measure within the framework of the Group's project finalised in 2019, engages and permeates all Group activities and businesses. It does not fall under the scope of application of Article 1835 of the French Civil Code (*Code civil*), which states that "the articles of association may specify a *raison d'être*, consisting of the principles that the company adopts and for which it intends to allocate resources in the pursuit of its business activity"

RATING AGENCY

Organisation specialised in assessing the solvency of issuers of debt securities, i.e. their ability to honour their repayment obligations (principal repayments and interest payments over the contractual period).

RESOLUTION

Shortened form of "resolution of crises and bank failures". In practice, two types of plan need to be drawn up for every European bank: 1) a preventative recovery plan prepared by the bank's senior managers, and 2) a preventative resolution plan put in place by the competent supervisory authority. Resolution occurs before bankruptcy of the bank, to plan its ordered dismantling and avoid systemic risk.

REVENUES

Difference between banking income (interest income, fee and commission income, capital gains from market activities and other income from banking operations) and banking operating expenses (interest paid by the bank on its funding sources, fee and commission expenses, capital losses arising on market activities and other operating expenses incurred by banking).

RISK APPETITE

Level of risk that the Group is willing to assume in pursuit of its strategic targets. It is determined by type of risk and by business line. It may be stated using either quantitative or qualitative criteria. Establishing the risk appetite is one of the strategic management tools available to the Group's decision-making bodies.

ROTE RETURN ON TANGIBLE EQUITY⁽¹⁾

RoTE (Return on Tangible Equity) is a measure of profitability on tangible equity. It relates the annualised net income Group share, excluding impairment of intangible assets and goodwill and net of AT1 coupons, to the average Group share of equity adjusted for intangible assets, unrealised gains and/or losses, AT1 debt stock and the planned distribution for the following financial year.

RWA RISK-WEIGHTED ASSETS

Assets and risk commitments (loans etc.), held in a bank's balance sheet, prudentially weighted based on the risk of loss they carry and used, when added together, as the denominator for major solvency ratios.

SICAV (SOCIÉTÉ D'INVESTISSEMENT À CAPITAL VARIABLE) – OPEN-ENDED INVESTMENT COMPANY

A type of UCITS which enables investors to invest in a portfolio of financial assets without holding them directly and to diversify their investments. It manages a portfolio of stocks or other assets and may specialise in a specific market, an asset class, an investment profile, or a specific sector. From a tax perspective, a SICAV unit is like a share.

SOCIAL BONDS

Bonds issued by a qualified entity (business, local authority or international organisation) to finance a project or activity with positive social outcome. These instruments are for example used in connection with the financing of projects relating to regional economic development, social inclusion and autonomy, and access to healthcare services.

SOLVENCY

Measures the ability of a business or an individual to repay its debt over the medium to long term. For a bank, solvency reflects its ability to cope with the losses that its risk profile is likely to trigger. Solvency analysis is not the same as liquidity analysis. The liquidity of a business is its ability to honour its payments in the normal course of its business, to find new funding sources and to achieve a balance at all times between its incomings and outgoings. For banks, solvency is governed by the CRD4 Directive and CRR regulation. For an insurance company, solvency is covered by the Solvency 2 Directive (see Solvency 2).

SOLVENCY 2

European directive on insurance and reinsurance undertakings intended to ensure that they comply at all times with their commitments towards policyholders in view of the specific risks incurred by such businesses. It aims to achieve an economic and prospective assessment of solvency based on three pillars – quantitative requirements (Pillar 1), qualitative requirements (Pillar 2) and information for the public and the supervisor (Pillar 3). Adopted in 2014, it was transposed into national law in 2015 and came into force on 1 January 2016.

SRI SOCIALLY RESPONSIBLE INVESTMENT

Systematic and clearly documented incorporation of environmental, social and governance criteria in investment decisions.

SUBORDINATED NOTES

Issues made by a company, the returns on and/or redemption of which are contingent upon an event (conditional upon payment of a dividend or achievement of an outcome).

STRESS TESTS

Exercise consisting of simulating extreme economic and financial conditions in order to study the ramifications on banks' balance sheets, profit and loss and solvency so as to measure their ability to withstand these kinds of situations.

⁽¹⁾ Alternative performance indicator.

SYSTEMICALLY IMPORTANT BANK

Crédit Agricole Group (but not Crédit Agricole S.A.) was featured in the list published by the Financial Stability Board (FSB) in November 2012, updated in November 2024, and includes 30 global and so-called systemically important banking institutions. A systemically important bank has to put in place a basic capital buffer of between 1% and 3.5% in relation to Basel 3 requirements.

TLAC TOTAL LOSS ABSORBING CAPACITY

Designed at the G20's request by the Financial Stability Board. It aims to assess the adequacy of the loss-absorption and recapitalisation capacities of systemically important banks (G-SIBs).

TREASURY SHARES

Shares held by a company in its own capital. Shares held in treasury do not carry a voting right and are not used in EPS or NBV per share calculations as they receive no dividend and have no right to reserves.

TSDI UNDATED SUBORDINATED NOTES

Undated subordinated notes have no specified maturity date, with redemption being at the behest of the issuer beyond a certain date.

TSS DEEPLY SUBORDINATED NOTES

Undated subordinated issue giving rise to perpetual returns. Their perpetual maturity arises from the fact that they do not have a contractual redemption date, with redemption taking place at the option of the issuer. Should the issuer be liquidated, these notes are redeemed after all the other creditors have been repaid.

UCITS UNDERTAKINGS FOR COLLECTIVE INVESTMENT IN TRANSFERABLE SECURITIES

A UCITS is a portfolio of negotiable securities (equities, bonds etc.) managed by professionals (asset management companies) and held collectively by retail or institutional investors. There are two types of UCITS – SICAVs (open-ended investment companies) and FCPs (mutual funds).

VAR VALUE-AT-RISK

Synthetic indicator used to track on a day-to-day basis the market risks taken by the Group, particularly in its trading activities (VaR is calculated using a 99% on 10 days-confidence interval, over one day, in line with the regulatory internal model). Reflects the largest exposure obtained after eliminating 1% of the most unfavourable occurrences over a one-year history.
